"Supercop" compares turbulent '60s with calmer SIU of today

By BILL THOBBURN

"Police, students clash; several hurt" was the headline on Page 1 of the Daily Egyptian on Thursday, May 3, 1979. The protest ended long ago, but the student demonstrations of the late 1960s and early 1970s are now working to SIU officials, police officers, and other administrators as a backdrop.

The police officers have changed a lot, and some are still coping. One of them says, "Supercop," who has worked for the University police force for almost nine years. Nelson "Supercop" Ferry still remembers the days and protests, but he now fondly looks back on beginning days as a police officer.

When Ferry was hired by SIU in March 1970, he was 21 years old. He was one of 20 police officers hired that year to keep the peace. "I was kind of a "beat-up for the riots," according to one police officer.

They were called the "Elite 20" by their superiors. They were even more so than the police outside, he said, who did some of the worst damage to the city. "Elite 20" has made up to 108 arrests in three days.

Ferry officially started working as an SIU police officer the first week of school. During the first three weeks police arrested hundreds of demonstrators, and many police and students were injured in the altercations.

"I didn't even know anybody on the police force," Ferry said. "They just told us to get our robots and fight them. They didn't like the police as a whole, only on the force for one day at the time."

He said that his first experience with protesters was "Supercop," which has changed since the First Amendment demonstrations and Black Power demonstrations during the spring of 1970. All but those three, he said, live in the same community.

Boy's growth abnormality treatable

By J. Todd Alshief and Ellen Hiddle Student Writers

Most people take normal growth for granted, but not Kurt Helton. For him, every inch of growth is a struggle.

Kurt, who lives in St. Louis with his parents, Mr. & Mrs. Mitchell Helton, was of average size, measuring 28 inches. By the time he was almost 3, however, Kurt had grown only six inches more. 

"I was aware of the cause for Kurt's slow growth," his pediatrician said. Kurt's parents to a growth specialist who diagnosed Kurt as having a children's growth disorder called hypopituitarism.

Hypopituitarism is caused by a lack of sufficient amounts of growth hormone secreted by the pituitary gland.

"Kurt is not alone. Over half a million children in the United States have various growth disorders. Kurt then started taking a drug of the growth hormone secreted by the pituitary gland. At age 8, in the new 48 inches tall, which his doctor says is just short of average for a boy his age. Without the growth hormone, Kurt would not have grown 28 inches in 5 years.

"Mrs. Helton suggests that if a child grows less than 5 inches per year, parents should know that their child might have a growth problem and should contact their family doctor. Should a problem exist, the normal growth curve and a pediatric endocrine service for use by Children's Hospital under the supervision of Dr. Virginia Wisdon. Mrs. Helton said that early diagnosis is of utmost importance. "Many times a doctor fails to diagnose a growth disorder in a child because many things can contribute to slow or abnormal growth."

"Many times, once the child is finally diagnosed, his homes have fused together and it is too late to help the child," Mrs. Helton said. "Mrs. Helton and Kurt both feel that being small is a big problem. It's a handicap in some way." Mrs. Helton said, "not being able to reach a light switch or a door knob can be constant frustrations.

"Kurt's doctor, Virginia Wisdon, tells Kurt that he should pay attention to all the people walking around the street all the shapes and sizes of normal people. So he can see he doesn't have to look exactly like his peers to be a successful adult."

"The Helton's are actively involved with the Human Growth Foundation. It is a national non-profit organization dedicated to helping children with growing problems and their families. The funds for growth research, provide information to families of growth deficient children, encourage the donation of pituitary glands for growth hormone extraction, and alerts parents to growth patterns in children which may require treatment."

"One of the charges of the organization is to solicit as many pituitary donors as possible. Mrs. Helton said, the growth hormone can only be extracted from the pituitary gland and only after the donor's death. The patients just don't want to admit their child has a problem. If they would try, the help of the Human Growth Foundation. I think it would be helpful for them to know how supportive we can be," Dr. Wisdon said.

Each year, Kurt Helton gives a talk to his classmates about his special problem. He willingly explains how his mother gave him an injection of the growth hormone."

A victim of hypopituitarism, Kurt Helton was 2½ years old when this photograph was taken, only 5 inches shorter than at birth. Today, at age 8, Kurt has grown to be a normal height of 48 inches by taking growth hormones. Every other day he takes the hormone and the liquid growth hormone as he explains. Kurt said, "I give up front of the class and explain, most of the kids don't make fun of him."

His goal is to become as tall as his father, who is 5 feet 8 inches tall. And his doctor says, through continued injections of the hormone, Kurt should reach his goal.
Campus Briefs

"Henry V," the film adaptation of Shakespeare's play starring Laurence Olivier, that was scheduled for Monday, will be shown at 7:30 p.m. Tuesday in Davis Auditorium. The film is sponsored by the English Department.

The Black Togetherness Organization is sponsoring a trip to the Parliament-Funkadelics show at 8 p.m. April 2 at the St. Louis Coliseum. Tickets for the concert are $12.50, which includes $8.50 for tickets and the rest is for round-trip transportation. Tickets are on sale and can be purchased at any of the organization's functions.

"College Survival Kit: How to Manage Stress in a College Environment," a workshop sponsored by the Student Wellness Resource Center, will be held from 1 to 4 p.m. Monday in the Student Center Saline River Room. Admission is free.

The Student Wellness Resource Center is sponsoring a "Whole Health Film Festival" from 10 a.m. to 5 p.m. Monday in the Student Center Auditorium. The showing will be repeated from 6:30 to 9:30 p.m. Monday in Davis Auditorium.

The Jackson County Red Cross Board is holding an "Appreciation Tea" for all people who volunteered help and blood. The tea will be at 7:30 p.m. April 9 at the First Presbyterian Church Parlor, Elm at University St. in Carbondale. If unable to attend call 457-4429.

Career Planning and Placement and the Society for the Advancement of Management will sponsor a half-hour film on interviewing from 8 a.m. to noon Monday in the dean's suite conference room. The film will also be shown from 6:30 to 11 p.m. Tuesday in the same room.

BRIEFS POLICY—Information for Campus Briefs must be delivered or mailed to the Daily Egyptian newsroom, Communications Building, Room 1247, two days prior to publication. The item must include time, date, place and sponsor of the event and the name and telephone number of the person submitting the brief. Briefs will be run only once.

Pilot study for pop in bottles debated

By Terri Tangney
Staff Writer

But before the student government gets what it wants, SIU will be drinking vending machine pop out of bottles. However, Harry Wirth, director of Service Enterprises, and John Meister, director of Pollution Control, haven't decided if this plan would be practical on campus.

Curriculum, Instruction and Media 509, "Foundations in Environmental Education" wants to see their pilot study accepted. The pilot study proposes to equip vending machines with returnable glass bottles because the class contends that glass is more ecologically conservative than the metallic cans currently being used.

Wirth feels the pilot study has a good chance of getting approved. If so, it would be in effect by late August of this year and would last until August 1980, when new contracts for the next contract will open up. The current contract is held by the Illinois Vending Service, who subcontracts pop vending to the Coca-Cola Bottling Co.

Meister has said that bottles are better and more practical. Wirth said that if the class would specify a certain number of bottles to the machine under certain conditions of commission and return, the contract could run for four years.

If the study were approved, Wirth said, the plan would be to use returnable bottles. Wirth said, "I'm neutral. I'm not biased one way or the other, but I'm willing to do it if it's brought by the responsibility of the University to test new ideas.

Wirth feels the pilot study has a good chance of getting approved. If so, it would be in effect by late August of this year and would last until August 1980, when new contracts for the next contract will open up. The current contract is held by the Illinois Vending Service, who subcontracts pop vending to the Coca-Cola Bottling Co.

"For instance, a study that bottles are better and more practical," Wirth said. "But the class would specify a certain number of bottles to the machine under certain conditions of commission and return. Each contract runs for four years.

"The purpose would be determined by the findings of the pilot study," he said, adding he found that after visiting the U of I campus, Wirth was talk the class, "I'm neutral. I'm not biased one way or the other, but I'm willing to do it if it's brought by the responsibility of the University to test new ideas.

Hardcore' lacks character depth, emotional intensity

By John Carter
Narrator

George C. Scott alone cannot carry a movie in 'Hardcore.' He needs help from somewhere: the supporting actors, the script, or the director. In 'Hardcore' he doesn't get anything but a point, and though he does his best with it, the result is a good movie totally lacking in emotional intensity.

The plot has strong potential. It is emotionally appealing, needs duct to profound conflict and deals with an essentially practical situation. It is also simpler in that it follows, accurately it seems, the steps and emotions of a father searching for his estranged, 16-year-old daughter.

Such scenes as these pop out of nowhere, and the rest of the movie depends on these important moments the development has so ignored. The film moves slowly, but there are a lot of dispensable and slow moments.

Season Hubley, who portrays a young prostitute helping Scott find his daughter, is practically the only supporting actor worth her salt. She is sufficiently involved in the movie and seems to know how far to stretch her character's license.

Peter Boyle plays a private investigator and is generally a disappointment. He comes across as a streetwise detective, but the script keeps him tightly bound to the character who is no more much an interventionist, than a battleaxe.

The lack of depth and intensity almost dooms the movie from the outset. It develops too slowly, promising too much that is never delivered. When the climax has been reached, and the action begins to fall away, there is a conspicuous failure to win the entire movie.

Music from a Sesame Street album fills the room. Children laugh and giggle. As the 14-month-old infant's belly is rubbed, his blue eyes sparkle and he starts to giggle.

The Infant Care Center in the Home Economics Building provides quality care for 14 infants and toddlers, according to Barb Eichholz, researcher for the Department of Human Development.

In the third year of the program, seven children are cared for in the morning and seven in the afternoon. Eichholz said, "There is a definite need for the program. There is a waiting list. Usually when a woman finds out she is pregnant, she signs up on the list." The morning session at the nursery is from 8 a.m. to noon and the afternoon session is from 1 p.m. to 5 p.m.

There is one primary caregiver available on the floor at all times, plus four student personnel to meet the children's needs and state licensing requirements," Eichholz said.

The state license for the center also requires that five of the seven children be infants 15 months old or less, and two be toddlers 15 to 30 months old, she said. The student personnel must be graduate students, or seniors currently enrolled in the Child and Family 407. Eichholz said. Each student spends eight hours a week in the lab and one hour a week in class.

The room is filled with toys and has five cribs, a kitchenette and a slide inside. Other bright objects hang from the ceiling. The students entertain the students by a variety of stimulation activities to heighten the kids' senses. The students tie bells on the baby's bottom, put rattles in their hands, play the radio, phonograph or tape player, shake rattles behind the children's heads and talk to the toddlers from different distances.

"We come in here and have a good time with the children," Jan Grob, a senior in child and family, said. "They keep us really busy." The children are taught how to finger paint, blow bubbles and tie their shoes. If the weather is nice, the children play outside. The infants can nap on cribs or cots. Eichholz said.

Food and diapers are furnished by the center, but not their bottle formula, she said.

"We're happy with the program," said Barb Eichholz, a labor of love for many. The Department of Child and Family, a part of the Division of Human Development, provides the space and graduate assistants to operate the center. The program is funded by itself. The fee for half-time care is $20 a week.

There is only one other infant care center in the area. Eichholz said. "Once toddlers are 30 months old, they can be moved to the preschool in the Home Economics Building. Eichholz meets with the children's parents once a month for general discussion. She said. In March and April, Eichholz will meet with them twice a month for a special discipline discussion.

The discussions will focus on new approaches to discipline, she said. "It's not a 'no lose' method for handling children by Thomas Gordon, she said.

Eichholz said she hopes the program will expand in the future and hopes the space available in the Mitchell Gallery at the center can be used for the program after the gallery leaves.

"Other programs are also hoping for the space," she said. "So we're not counting on it." The parents all said they were happy with the program except for one mother who expressed concern over the space limitation.

"I'm worried that there isn't enough room for the baby to play in since the room is small," one mother said concerning her 14-month-old daughter. Eichholz said that the children will probably be staying outside more during the summer months.

Thomas Shaner relaxes...
Sandra Lutcher, graduate student in child and family, always seems to find enough love to go around in her job as a primary care giver.

Actor's son shot trying to stop thief

LOS ANGELES (AP) — The 17-year-old son of actor Chuck Connors was critically wounded in the stomach recently when he tried to stop a man trying to steal a car from a Los Angeles area car dealership, police said.

Police said three civilians chased and captured a young man after he drove off in a car from one house to another.

The unhappy man was tried to stay in the car and be taken to a car in the lot.

The stolen car was later found in a house, according to police.

Two officers are accused of an injury to the first officer, his family said in a statement.

The dealer's of the Los Angeles area police involved protecting both the school and the business on the list.

GM named in class action suit

CHICAGO (AP) — General Motors, which paid Chevrolet in the 1980s for its cars, was sued Thursday for allegedly putting transmissions designed for small cars into big cars.

The suit was filed in 1977, 1978 and 1979.

GM said it would not comment until it learned details of the suit.

China Syndrome’ terrifying, entertaining, fast-paced thriller

Mike Reed

"China Syndrome" is one of the rare films that is both perfectly entertaining and terrifying at the same time. Entertaining because it's a fast-paced thriller that derives its best from its brilliant cast and script. Terrifying because at times it all seems a bit too real!

In a tragic irony, Bridges, who co-"wrote" the screenplay, could have been seen earlier this year in a second-rate movie about the dangers of atomic energy. But instead undertook the more substantial challenge of analyzing the alarming bureaucratic power structures that could make such a catastrophe possible. This commitment makes the film's ultimate success all the more rewarding. The film's unusual title comes from the all-too-plausible theory that if such a plant were to somehow spring a defective cooling system, its red hot uranium core would begin burning its way to China and into a pocket of underground water causing an explosion which would shower the United States with enough radiation to render the area the size of Pennsylvania uninhabitable.

That premise nearly becomes reality one day when a local Los Angeles news team visits such a nuclear power plant to film a routine feature on energy. Reporter Kermit Wells (Jane Fonda) is in love with the manly engineer who trails the strange rumbling in just an earthquake, but her camera-man (Dougla...)

In order to establish the credibility of TINGLES as a design studio, we offer the following special $2.00 off hair shaping TINGLES

705 S. Illinois Ave 245-3232 Linda, Margie, Janise, George

Applications are now available for Daily Egyptian Advertising Sales Representatives for Summer Semester.

Applications may be picked up in the Display Advertising Department, Communications Building, Room 1262.

All applications are due back Friday, April 6 at 4 p.m. — no late applications will be accepted.

THE $1.09 BREAKFASTS

3. WAFFLES
One waffle served with two strips of bacon or two pancakes.

4. PANCAKES
Three pancakes served with two strips of bacon or two pancakes.

206 South Wall Street, Carbondale

(Any morning, Monday through Friday 6:00 a.m. to 11:00 a.m.)

Nobodt makes better breakfasts than Golden Bear and, nobody gives you more for your money. Nobody.

1. EGGS
Two Grade A extra large eggs served with hash browns, butter and toast, and jelly.

2. FRENCH TOAST
Four half slices served with two strips of bacon or two pancakes.

Daily Egyptian, April 2, 1979, Page 15
The raku technique produces bowls in earthy tones.

The Chinese ideogram shown above means raku, enjoyment, ease, pleasure, quiet and happiness. Last Wednesday, members of the Student Center Craft Shop shared these feelings when they held an outdoor raku ceramics workshop.

In 18th century Japan, Chojuro, the son of an immigrant brickmaker, began a ceramics technique that was revolutionary. His methods of glazing and firing were very simple.

Sen-no-Rikyu, an influential tea master, so admired the simplicity of Chojuro’s tea bowls he regarded him as the first raku, and consequently, founder of the raku dynasty.

Ever since Toyotomi Hideyoshi, a feudal lord, prevented Chojuro’s son, Jukar, with the ideogram stamped on a gold seal, both the family and the technique have taken their name from the ideogram.

With the raku technique, pots are made, dried, bisque fired, to take the moisture out, glazed, put into a raku kiln, an open flame kiln, to be fired, put into sawdust or newspaper, and then cooled in water. The sawdust makes the pot and gives the glaze a coppery sheen or causes it to crackle.

Michael Louis, graduate assistant at the Student Center Craft Shop, said that a contemporary approach to the raku technique will be taught in four sessions at the shop. Session One will be at 5 p.m. to 7 p.m. on April 2 and 4. Session Two will be from 7:30 p.m. to 9:30 p.m. on April 2 and 4. Session Three will be at 5 p.m. to 7 p.m. April 3 and 5, and Session Four will meet from 7:30 p.m. to 9:30 p.m. on April 3 and 5.

The sessions are open to students and to the faculty and their families. There is a $12 course fee and $5 materials fee.

Mark Norling (left), and Mark Kolinski, a raku instructor, add more sawdust.
