Economic boost
Bush plans moratorium for regulations
By Todd Wehvaert
Politics Writer

President George Bush has unveiled plans for a 90-day moratorium on federal regulations as part of a plan for the country’s economic recovery. But some critics already are calling the plan an economic slight-of-hand.

The plan calls for a 90-day halt on costly regulations for corporations in hopes of spurring new growth in the nation’s beleaguered industrial complex. Though the moratorium will not hold up regulations with congressional deadlines or emergency bans from the Federal Drug Administration.

The moratorium may affect regulations like the Clean Air Act, Americans with Disabilities Act and the Truth in Labeling Act. The moratorium, which will be announced in the president’s State of the Union address next week, will ask that every federal agency look closely at new regulations and cancel the ones deemed unnecessary or costly for business.

But critics question the worth of the moratorium as a short-term solution to the long-term economic recovery of the nation. "This is a typical thing for Bush to do," said SIUC economics professor Paul Trescott. "It is spur-of-the-moment, lip-smoothing, superficial thing to do. It looks good but it doesn’t get at the sources of our economic troubles. A 90-day ban on federal spending now that would be good news."

The moratorium will save corporations money in the short-term by giving them more time to make the changes to comply with ECONOMY, page 5

Students share dreams to crown honoring King
By Sherri L. Wilcox
General Assignment Writer

Carbondale junior high student Kristie Felder has a dream. She dreams one day all her friends will get along together, and she will be able to talk to a group of white kids without being called a "wandering gorilla" and without being told she is ashamed of her race.

"I dream that one day, the southwest side of town will not be known as the white side and the northeast side of town will not be known as the black side," she said. "We call this the United States, but we are still separate." Felder shared her dreams Monday with a standing-room-only crowd at Grinnell Hall, a room-only crowd gathered at a memorial breakfast in honor of slain civil rights leader Martin Luther King Jr.

They were dreams of a Lincoln Junior High School student, but they were echoes of a man who died a violent death, promoting nonexistent means to correct civil injustices.

Spending patterns depend on consumers—prof
By Christy Gutowski
General Assignment Writer

Relief from the nation’s weak economic state may lie in the hands of consumers whose spending patterns trigger the economy, a SIUC economics professor said.

The nation’s economic status is highly dependent on consumption spending, which affects the demand for products and retail and service industries, said Magda Kandil, an economics professor. "When there is a reduction in demand for goods and services, this has a negative affect on the ability of the economy to get going with production," she said.

Jennifer and Jan Hove of Steeleville are one of many families changing their spending habits this year because of the poor economy. "I try not to come to Carbondale too often," she said. "It’s an hour away from my house and shopping gets expensive."

SIUC student Ken Peterson said he also is apprehensive about spending money. "I don’t really have a lot of money to spend," he said. "I can see myself getting a little strapped about how I’ll spend the semester."

And many businesses are suffering the consequences. Although Christmas receipts are not yet available, early reports indicate lower sales than expected, said Mike Vessell, labor market economist for the Illinois Department of Employment Security.

Kandil said sales receipts are used to detect if the consumer is regaining the confidence to spend. Government also can influence consumer spending.

It is particularly important in CONSUMERS, page 5
Dawgs dominate Braves at Arena
90-68 win lifts conference mark to 6-0
By Todd Eschman
Sports Writer
The Dawgs proved their Missouri Valley Conference domination by slugging the Bradley Braves 90-68 last night at the Arena in Carbondale.
SIUC improved to 13-2 on the season and 6-0 in the conference. The Dawgs stood alone atop the MVC and extended their lead over the Braves.
SIUC’s last two losses of the season came when they were outscored. But Blossom and Jordan didn’t allow the Dawgs to open a bigger lead.
"Defense made the difference in the second half," Herrin said. "We rebounded much harder in the second half and played a little more aggressively.
"We learned that we are getting to make more rebounds when we can be more aggressive—especially da Silva."
Da Silva finished with six rebounds and ranks among league leaders in that category. SIUC slowly opened the lead to 15 at the 10 minute mark with a layup by da Silva.
Nickie Pavlovic opened the Dawgs first 20-point lead of the game with a 3-pointer with six minutes left.
The Dawgs held on for the victory with 5,328 fans were entertained with the wave and Chicago Bulls mascot Benny.
Senior forward Kelvan Lawrence, who missed 10 weeks with a broken ankle, returned to the lineup.
In 13 minutes, he scored six points and gathered two rebounds. Lawrence also saw action Saturday but was held scoreless in 11 minutes.
"I felt a little better tonight than I did last Saturday," Lawrence said. "I need to get more rhythm back in my shooting but I feel that I can contribute by keeping up my defense.
"Lawrence said it is good to be getting to play again."
"It was very hard sitting on the bench watching my team win games and knowing I should've been out there," Lawrence said. "It took a while for me to get back into it.
"But Saluki coach Doug Ingram said it was behind most of the day."
"We were basically never in the hunt," he said. "I scored out well with Roberti Wenger winning the 1,000, but then Iowa won the next seven events."
The Saluki women, now 5-5, kept close behind Iowa and nabbed first in eight events.
Senior Tonia Mahara won the 100, 200 and 500 freestyle events.
Freshman Kelly Krogh took the 1,000 free with a 10:35.2, and freshman Sara Schmidtkofer won the 200 backstroke with a 2:02.72.
Seniors Nancy Schmidtkofer and Julia Hosier finished first in the 50 free and the 100 butterfly respectively.
The Saluki also won the 400 medley relay.
Ingram said the women had a better fight but still couldn’t conquer the Hawkeyes.
"We got off to a really good start winning the first two events (the 400 medley relay and 1,000 free)," he said. "But then Iowa’s depth soon made the difference."

By Cyndi Oberle
Sports Writer
On a team with many young members, Robert Weger and Rob Siracusa stand alone as winners.
The freshman and sophomore were the only two Salukis on the MVC men’s swimming and diving team to win events in a dual meet Sunday against the nationally ranked University of Iowa.

Of the team’s 33 swimmers and divers, 24 are underclassmen, but the other swimming and divers comes in the high middle and the Dawgs fell to the No. 8 Hawkeyes 142-93.
The SIUC women’s team fared a little better, but it still lost 136-124 to No. 19 Iowa.
Weger captured first in the 500-yard freestyle with a time of 4:36.42 and in the 1,000 free with a 9:38.31. Weger also finished third in the 200 butterfly.
Siracusa won the three-meter diving event and placed second in the one-meter diving event.
With the loss, the men’s squad fell to 7-3 in head-to-head meets.
Saluki coach Doug Ingram said SIUC was behind most of the day.
"We were basically never in the hunt," he said. "I scored out well with Roberti Wenger winning the 1,000, but then Iowa won the next seven events."

Maintaining a 3.9 grade point average and starting for the SIUC volleyball team is not an easy task, but Saluki spiker Martha Finhaber does just that.
In 1991, Finhaber set an SIUC single-season record for assists with 1,378. She led the Gauay in assists for the entire year, and closed her career ranked as No. 2 on SIUC’s all-time list with 2,433.
Finhaber was selected to two all-tournament teams and ranked nationally for her assist average three times. The 1991 season marked the 2nd consecutive season she tallied more than 1,000 assists.
Finhaber was named to the GTE Academic District V Volleyball team Nov. 29. The nomination was a long time coming for her, as she was a 4.0 student in high school.

Martha Finhaber
"That season lacks a lot."
"But I think the most important award of my career is its a lot for the academic program as well as the volleyball team at SIUC," she said.

Courier progresses quietly in noisy Australian Open

MELBOURNE, Australia (UPI) — Jim Courier has reached the quarterfinals of the Australian Open in just the fashion he had hoped with hardly anyone noticing.
Courier, a 21-year-old Floridian who reached the second week of play at Flinders Park in 6-3, 6-1, 6-3 over Swiss Tennis Resort, and takes on another unseeded foe, Israeli Amos Mansdorf, in a quarterfinal match Wednesday.
Despite his second seeding, Courier has enjoyed almost a cloak of privacy thanks to the

ALGERIA EXPELS IRANIAN AMBASSADOR — Iran said Monday that the Algerian authorities have imposed restrictions on its embassy staff in Algiers, and that its ambassador there was returning home for consultations, Tehran radio reported. The state radio report broke a 24-hour silence from Tehran after Algiers said it was denouncing the Iranian ambassador and recalling its own envoy in the Islamic Republic.

IRAN CONSIDERS CUT IN OIL PRODUCTION — Iran, the second-largest producer in the Organization of Petroleum Exporting Countries, said Monday that it is ready to cut oil production by 50,000 barrels per day to prop up prices and urged the rest of the countries to do the same. "We are ready to reduce production if a collective decision is reached during OPEC’s meeting in Geneva," Iran’s parliamentary petroleum commission chairman Saeedzadeh said.

JAPAN OFFICIAL CRITICIZES U.S. WORKERS — The speaker of Japan's House of Representatives said U.S. companies fail to sell cars in Japan because Americans are lazy and many are illiterate, a major daily newspaper reported Monday. "U.S. workers won’t work hard, but they want to receive high salaries," Yoshio Sakuratsuchi told constituents Sunday in Shimane prefecture, according to the daily Yomiuri Shimbun.

POORLY EQUIPPED GUERRILLAS PREVAIL — Rifles hanging low, guerrilla fighters stride through the morning mist, feeling the effects of a four-day fiesta in celebration of the arrival of peace. Guerrillas of the leftist Farabundo Marti National Liberation Front, of FMLN, held out on Mount Guazapa, just 15 miles north of San Salvador, through a decade of attacks by better-equipped and numerically superior government troops.

Downtown receives needed facelift

By Teri Lynn Carlock
City Writer

The City of Carbondale has spent more than $12,000 the past month for repairs to a downtown area usually not targeted for improvement.

Tom Redmond, downtown coordinator, said in the past, most loans for the city were approved for the area around the town square.

"Out of our $50,000 budget last year, only $12,000 was spent on the downtown area," he said.

BUT THIS PAST month, repairs have been concentrated on South Illinois Avenue and Grand Avenue. The city has been making major repairs on sidewalks, stairs and handicap ramps.

"Sidewalk repairs have been made in front of Discount Den, the U.S. Army recruiting office, China House and Jimmy John's," Redmond said.

"The sidewalk in front of Jimmy John's was in very bad condition," he said.

DON MONTY, director of community development, said sidewalks in the downtown area were repaired in the '70s, and some repairs were made in other areas in the '80s.

"This is the first time a systematic approach is being taken," he said. "We are in an effort to make downtown improvements because it is something that must be taken care of."

ROBIN PENGRESS, engineering technician for the city, said the city has expanded the repairs of sidewalks a lot more in the last four to five years.

"The cost of sidewalk repairs are taken out of the local improvement budget for the city," Pengress said.

"The Carbondale City Council votes on how much money to allow for repairs, then local contractors bid on the job," he added.

REDMOND SAID L. E. Cecil Construction Co. revived the job of doing

Larry Haakes, owner of Haakes Awning of Carbondale, puts the finishing touches to the awning on Bleyer's Sports Mart Saturday.

BUT THE RAIN, snow and cold weather have slowed down the installation of the awning, said Marcy Ambler, employee of Bleyer's Sports Mart.

"The workers are in the process of putting it up but have run into some problems with water from the melting snow running off of the roof," she said.

THE AWNING should be installed completely by this week after the lighting also is connected.

Monty said along with the repairs, the city also has purchased eight trees.

These were placed along the Illinois Avenue, he said.

"The trees will improve the image of Carbondale," he added.

"The trees are designed to make it look as attractive as possible," he said.

Interim director
of news service
strives to excel

By Christine Leninger
Administration Writer

Susan Davis has some big shoes to fill.

The SIUC graduate has taken over as acting director of University News Service.

Former director, Pete Brown, retired Dec. 31 after a 35-year career at SIUC.

Davis remembers Brown as an extraordinary writer with a high standard and "God-given" talent of editing.

"Pete could edit one word in the lead of a news story that would change it enough to make the whole story sing," Davis said.

News service is a division of University Relations that produces news stories about the University and distributes them to local newspapers.

Davis said she can only hope to uphold the quality of work Brown established.

But Kathryn Jaehing, News Service public information specialist, said Davis has strengths of her own.

"I don't think people can compare Pete and Susan because Pete's strength was editing whereas Susan is exceptional at finding new ways to meet upcoming challenges of the business," Jaehing said.

University Relations Executive Director Jack Dyer said a search committee will be formulated soon to find a replacement for Brown.

Slashing education: short-term solution

JUST WHEN THE YEAR of the bad budget seemed over, the dilemma has resurfaced.

Education and the Democrats have emerged smiling from the budget talks, saying an agreement with no new taxes is great. But juggling taxpayers’ funds through rescission and reallocations is no way to solve the problem either. While people breathe a momentary sigh of relief, they should start preparing for the tuition increases and hiring freezes: The real costs of the budget cuts. Instead of the $100 million cut to elementary and secondary education proposed by Edgar, only a measly $60 million will be amputated from school budgets.

Surely, $40 million was saved, but school boards will have to propose raising taxes to help fund school districts or cut budgets in upcoming years. In a time when too many children in this country should be receiving the best education in history, this state is moving backward.

And the cuts did not stop with elementary and secondary education. Political leaders agreed higher education should lose all of the $49 million cut recommended by Edgar.

THE POLITICIANS ARE CUTTING EDUCATION so there will be no new taxes. Instead of more taxes, the future holds another round of tuition increases, hiring freezes and cuts in classes. Meanwhile the politicians spend millions on bureaucratic operations that have no effect on the state or only delay an inevitable outcome.

Already politicians have cost taxpayers nearly $3 million with the court battle over a state redistricting map. Legislators are elected to represent their people, not to find sure-fire ways to remain in office and become a cog in an increasingly expensive wheel.

THE BUDGET AGREEMENT is nothing more than a transferring of blame. Passing the problems down to a lower level will keep the blame at a lower level. When the cuts come, SIUC President John C. Guyon and other administrators will look like the scapegoats, not the State University of Southern Illinois.

When a class required for graduation closes because it is too costly, or when college becomes too expensive, remember to blame those who cut education funding.

The politicians of both parties have to realize there is no magical solution to this problem. Edgar refuses to borrow any more money than is absolutely necessary to pay past bills. It is time to swallow some pride, admit mistakes and make some actual headway into this lake of red ink.

IF IT TAKES A TAX INCREASE TO SAVE education then increase taxes. If some politicians must face reduced staffs, cut services and restrict halloweens, then do it. The continued whittling away of education budgets eventually will strike the bone. It is time for politicians to be honest with their constituents and for citizens to be honest with themselves. This budget crisis is going to hurt Illinois education for a long time.

Getting this continuing matter of the budget over with now may save the future. Every time it seems this situation cannot get any worse, it does.
ECONOMY, from Page 1

with the new regulations. The new food labeling act can cost the food industry $3 billion dollars to change more than 237,000 labels, but the moratorium also may have an adverse effect on consumers.

Some regulations reduce costs to the consumers, but there are a lot of unnecessary regulations that put burdens on small business, said assistant economics professor Michael Shibley. "The regulations be judged on their individual merit.

Some of Bush's critics believe this is an attempt to blame the economic recession on the government regulations and that the regulations may increase problems for consumers.

I think it is a shame to draw more attention to the regulations rather than an actual plan for economic recovery, Th. may hurt consumers. Regulations like the fair labeling for food products, if we put off for 90 days that 90 days of information that the consumer doesn't have to make informed choices.

The new ban would not be the first time a president has asked for more regulations. Some president Ronald Reagan slashed heavily into regulations set by the Jimmy Carter administration, but Bush will be stopping regulations that both the Reagan administration and the Bush administrations passed.

The estimated $25 billion a year Federal Clean Air Act is one of the most expensive regulations passed on to businesses.

"That piece of regulation (the Federal Clean Air Act) was passed by the Bush people. We've put the damage from the Clean Air Act may cost up to 10 times the amount of benefits we receive," Trentesc said. "The more deregulation we have the better our chance for people to screw up."

CONSUMERS, from Page 1

Jack-on county, which has one of the highest portions of governmentally employed people working within the country and state, said Patrick Curry, field representative for the Small Business Incubator.

"With the federal prison, the three state operated prisons, hospitals, the Veteran's Administration hospital and other government funded institutions, as a whole more people are working for government than in the private sector."

The estimated 25 billion a year Federal Clean Air Act is one of the most expensive regulations passed on to businesses.

TUITION, from Page 1

scholarships and grants, but the law requiring state universities to offer the waivers without the BHME including the tuition waivers with the scholarships, Capie said. "The state waivers will not be included in the scholarship pool.

About 60 children of SUIC faculty and administrativ-rected as nonviolent and 25 children of civil servants have applied for the 50-percent tuition waivers.

Mary Platt has been assistant for the Personnel Records Center, said she had to tell how many of the students will receive the waiver because it depends on what other forms of aid are available.

The law requires Illinois universities to offer children of state university employees an opportunity to apply for half-price tuition.

The tuition waivers went into effect Jan. 1 and are good "only at the state university system in which the parents work," said Donald Wilson, SIU vice chancellor for finance.

A child of an SUIC employee, for example, could use the waiver at SIUC or SIUE but not at the University of Illinois because the U of I is in a different system.

It will be two or three years before SUIC can determine whether the new program is a cost-benefit or not, Wilson said.

Walter Sundberg, professor of plant biology, said the tuition waivers clearly have a benefit even in tough times.

It is an inexpensive way to offer to the family, especially in these times when the state does not have money to offer the faculty raises," Sundberg said.

But Larry Matten, chairman of the plant biology department, said "benefit package more like what businesses offer would have been better."

The University could create benefit packages with a list of options, such as dental care, day care and parking incentives and then let the faculty choose the options they would most like to have.

Not all faculty members can take advantage of the new tuition benefit because most are older with children who already have finished school, Matten said.

Under the program, an employee's step-child, natural or adoptive child is eligible for the waiver, according to regulations established by Acting Chancellor James Brown.

Undergraduates under the age of 25 at the beginning of the school year qualify for the waivers, and a parent also must have been an employee at SUIC for at least seven calendar years.

An academic year counts as a full calendar year whenever it gives the employee credit for a full year in the state University Retirement System.

A student can receive a waiver for eight semesters, but the parent must be employed by the University when each semester begins.

The waivers will not be given to children of graduate assistants, student workers or adjunct professors, a professor who is not in an SUIC but not on the payroll.

The University could create benefit packages with a list of options, such as dental care, day care and parking incentives and then let the faculty choose the options they would most like to have.

Not all faculty members can take advantage of the new tuition benefit because most are older with children who already have finished school, Matten said.

Under the program, an employee's step-child, natural or adoptive child is eligible for the waiver, according to regulations established by Acting Chancellor James Brown.

Undergraduates under the age of 25 at the beginning of the school year qualify for the waivers, and a parent also must have been an employee at SUIC for at least seven calendar years.

An academic year counts as a full calendar year whenever it gives the employee credit for a full year in the state University Retirement System.

A student can receive a waiver for eight semesters, but the parent must be employed by the University when each semester begins.

The waivers will not be given to children of graduate assistants, student workers or adjunct professors, a professor who is not in an SUIC but not on the payroll.
Survey: Two of 35 homes exceed safe radon level in Jackson County

By Kara Grover
General Assignment Writer

A radioactive gas called radon can be an invisible killer.

When the gas seeps into a home, it can increase a person's chance of lung cancer by 1 percent and health experts say even 1 percent is too high.

A survey sample of 35 homes in Jackson County were tested by the Illinois Department of Nuclear Safety for radon at the end of the winter heating season in 1990 and 1991.

Two of 35 homes had levels of radon greater than 4 picocuries a liter, a level considered dangerous by Environmental Protection Agency.

Dr. Paul Bennett, a physician at Carbondale Family Medicine, said chances of lung cancer increase when the level of radon and exposure is increased.

"I don't want to worry about is lung cancer. There is some suggestion that it is a leukemic," he said.

If you live in a house that has elevated levels of radon, your chances are 1 percent, he said.

SIUC museum to showcase work from Memphis artists

By Rore Byrd
Entertainment Writer

About the only thing artists Veda Reed and Burton Callicott have in common is a love for capturing Memphis' contemporary landscapes, but their differing perspectives complement each other in an exhibit at the SIUC museum.

"The show comes from different directions, but they are kindred spirits when it comes to their response to their environment," said John J. Whitlock, SIUC museum director.

"They both pay a lot of attention to earth, sky, wind and light," Whitlock said.

Veda Reed is a professor of painting and associate dean for academic affairs at the Memphis Academy of Art. She will show five large oil paintings completed since 1986.

"But that's not zero and you have to pay attention," said Whitlock.

Scientists estimate about 5,000 to 20,000 lung cancer deaths a year in the United States may be attributed to radon.

Animal studies show that lung cancer incidence increases in a linear fashion with cumulative exposure to radon, even at low doses.

People who smoke and are exposed to radon are at an increased risk for lung cancer.

As a gas, radon and its decay products move up through the soil and enter homes through cracks in the foundation, walls and other openings.

Radon usually is concentrated in the basement and the lowest livable areas of the home.

By breathing, the radon decay products can become trapped in the lungs.

As these decay products continue to break down, they release small bursts of energy, which can damage lung tissue and lead to lung cancer.

Official surveys showed 4,127 homes in the state and found that Southern Illinois ranked lower than its northern counterparts.

Of the 35 homes surveyed in Jackson County, the most radon found in a home was 6.6 percent. The average was 1.6 percent and the minimum was 0.07 percent.

Gerhard Jaspers, radiation safety officer at SIUC, said opening a basement window, blowing a fan and sealing any crawl spaces can reduce radon in a home.

The two most popular types of "do-it-yourself" radon detectors are the alpha-track detectors and the charcoal cassettes.

Alpha-track devices use a special detector element that records the alpha particle emissions, and charcoal cassettes use a quantity of charcoal to absorb the radon, which is then sealed and sent to a laboratory for analysis.

The IDNS has a list of contractors in Illinois doing mitigation work to reduce the levels of radon.

For more information, contact the IDNS at 1-800-325-1245.

Study: Recycling in wooden pallet industry growing

CARBONDALE, ILL. — Recycling has become a significant factor in the wooden pallet industry, according to a study done by foresters from Southern Illinois University at Carbondale.

"Ten years ago, the recycling, of pallets used for warehousing shipping was a new concept," said John Phillips, associate professor of forestry at SIUC's College of Agriculture.

He conducted a study which surveyed the U.S. pallet industry in 1990 and compared results to industry figures for 1985 and 1986.

"The study showed that 41 percent of the firms in the survey recycled pallets. In addition to producing new ones," Phillips said.

He said 10 percent recycled about 900,000 used pallets in 1990.

That same year companies made about 460 million new pallets.

Although the number of recycled pallets remains low, Phillips says the growing trend will help efforts to conserve the nation's hardwood resources.

Phillips and Dwight McCurdy, professor of forestry, surveyed 3,222 pallet firms for the study.

They also learned Illinois is one of the largest pallet producers in the nation.

$17,000 donation to SIUC to benefit troubled industry

By Jeremy Finley
General Assignment Writer

AMAX Coal Industries has donated $17,000 to the SIUC Coal Research Center to fund research and education to help the troubled coal industry.

AMAX realizes the coal industry has become "soft," and good, trained people are needed to boost the industry again, said Mike Mitchell, manager of the AMAX Southern Illinois real estate operations.

The coal industry has suffered partly because of the concern the Illinois coal air legislation has created, and the money donated will hopefully help train and educate people to help build up the industry again," Mitchell said.

The donation has been divided between $6,000 for scholarships, $4,500 for mining and engineering programs, and $2,500 for the coal affiliates program and $4,000 for drilling simulator training.

The drill simulator training is a very popular and important program at the center because of the hands-on training, said Dianne Phrogrammon, spokeswoman for the Coal Research Center.

SIUC is a very important center of education for the industry, said John Mead, director of the coal center.

Remembering the dreamer

Man was born into barbarism when killing his fellow man was a normal condition of existence. He became endowed with a conscience. And he has now reached the day when violence toward another human being must become as abhorrent as eating another's flesh.

Nation continues fight to solve civil injustices

By Brian Gross
Special Assignment Writer

Martin Luther King Jr. left a simple message in his legacy for civil rights — violence is not the answer.

But the answers his followers seek for civil rights issues today are not always black and white.

On the day the nation celebrated Martin Luther King Jr.'s birthday, history recalls a year in which a former Ku Klux Klan leader announced his candidacy for president.

Affirmative action programs have come under fire by whites crying reverse discrimination, and the president is pressed to fill a quota on the Supreme Court by nominating Clarence Thomas.

Edward Jones, director of University Housing, said King probably would not be a proponent of affirmative action if he were alive today, but the civil rights leader would understand the need for it as a balance to prejudices and racism.

"In the long run affirmative action would provide fairness," Jones said.

"Some day there may be no need for affirmative action, I wish there was no need, but there is a need, and I think that would be King's position today," he said. "As long as there's prejudice, there's a need for a watchdog.

Julius Thompson, a professor in Black American Studies at SIUC, said King would not have seen affirmative action as something to solve all the problems of discrimination.

"There's no question to me he would have viewed affirmative action as only one approach, one goal in an attempt to solve some problems growing out of racism and segregation," Thompson said.

But the civil rights battle is not over.

The civil rights movement of the 1960s broke the back of legal segregation, but the custom of segregation continues, Thompson said.

"In many ways parts of America are still segregated," Thompson said. "With custom and tradition, you run up against a racial roadblock." King is only the second U.S. citizen, after George Washington, to be honored with a national holiday, but his image and role for new generations of Americans still are being defined, and the way he is viewed by historians still is evolving.

History books still provide only a summary of King's impact and contributions.

Television presentations and news spots also are lacking because their two-minute spots cannot do justice to depicting King and his role, Thompson said.

"It's been almost 25 years, and as time moves on, events shift," he said. "It's important people be reminded and remember the contributions of a Martin Luther King, a Gandhi or a Lincoln, and to look back and recall the difficulties and obstacles. It's the task of students, teachers, scholars and artists to present that responsibly."
History prof shot and killed by masked gunman in Israel

Renowned archaeologist called a compassionate man

NORMAN (UPI) — A history professor shot and killed by a masked gunman in Israel was remembered Monday as a "compassionate man," dedicated to his work.

Albert Glock, 67, was killed Sunday while he was dropping off a package at the home of a graduate student in the village of Birzeit, police said.

The gunman fired two shots at close range, fatally wounding the professor.

Glock was born in Gifford, Idaho, but moved to central Illinois in the late 1960s when his father, Ernst, became pastor of the Washburn-LaRosa Lutheran Church in Washburn.

His mother, Meta Mettalic Glock, was a native of Bloomingmont.

Glock founded the Christ Lutheran School.

"He came and was our pastor for five years," said Mabel Larsch of Christ Lutheran Church. "He did a lot of work to start the church."

"Dr. Glock's work on the archaeology of Palestine earned him the respect of the archaeological world and helped to preserve a Palestinian heritage under constant threat of extinction."

— Bir Zeit University

DeAnn Weber described Glock as "a compassionate man."

"He was very involved in his work. He was a very kind person," Weber said.

Glock specialized in Byzantine, Mameluke and Ottoman history and worked on archaeological digs to save in the northern West Bank.

Glock was head of the Center for Palestinian Archaeology at Bir Zeit University and had been there for 16 years.

The school has been officially closed by Israeli authorities for the past four years during the intifada, or Palestinian uprising. Nevertheless, some 2,000 students still attend classes in makeshift off-campus classrooms.

Police said the motive for the slaying was unclear.

They could not say whether it was connected to the continuing violence in the occupied territories, in which 533 Palestinians have been killed by other Palestinians.

Dr. Glock's work on the archaeology of Palestine earned him the respect of the archaeological world and helped to preserve a Palestinian heritage under constant threat of extinction," the Bir Zeit University said in a statement.

Gamsakhurdia returned and many feared would return in angry daily rallies. But many of Gamsakhurdia’s strongholds appeared to be succumbing to the provisional government and the Military Council, which drove the president from power, according to Georgian officials and Russian news reports. The military Council’s move into areas claimed by Gamsakhurdia appeared to represent a turning point in the conflict, and Monday’s rumors changed in tone from speculation that Gamsakhurdia’s whereabouts in western Georgia to where he might flee.

Military Council emissaries entered Zugdidi - the town Gamsakhurdia was using as his base of support - for talks with Gamsakhurdia supporters in an effort to resolve the dispute without bloodshed, the news agency Interfax reported.

The gradual move into Gamsakhurdia territory by the Military Council has come without a resumption of the fighting that many feared would result when Gamsakhurdia returned and urged his followers to wage a civil war.

But Russian television reported that several dozen Gamsakhurdia supporters were detained for violating the State of Emergency rules and there were scuffles at rallies in western Georgia, where the president’s backers held noisy rallies.

Leading Gamsakhurdia opponents, many of them former members of his government, complained that the president had become a dictator and launched their fight to oust him when he refused their demands to negotiate. Meanwhile, in northern Georgia, the Ossetian minority voted overwhelmingly to secede from Georgia and join neighboring Russia.

Gamsakhurdia had been waging war against the Ossetians, who want to be linked to Northern Ossetia across the border in Russia.

Air quality at Morris Library may be inadequate—official

By Casey Hampton
General Assignment Writer

Morris Library can no longer provide adequate indoor air quality because it has outgrown itself, the University Safety Officer said.

"With the advancement of the computer age and the increased population, the library must meet excessive demands," said Safety Officer John Hicks. "The library is outgrown itself."

The basement and first two floors of Morris Library were built in 1956 with the additional five floors added eight years later.

The library originally was built to accommodate a volume of one million books and a student population of 15,000.

The library has grown to a volume of two million books and now serves a student population of 34,000.

This growth is the primary factor in the poor air quality of the library, Hicks said.

Library worker Mike Williams said he is plagued with a recurring dry throat from working in the library.

"It's more of a hassle than anything," said the freshman in mechanical engineering from Minooka. "I find myself constantly running to the water fountain to help my throat."

Students and employees affected by poor air quality may experience a wide range of symptoms, including eye, nose and throat irritation, mental fatigue, headaches, nausea, dizziness and coughing.

The Public Employee Safety Division of the Illinois Department of Labor estimates that poor indoor air quality causes most people to suffer a respiratory illness more than once a year.

Thyrsa Russell, interim safety officer at Morris Library, attended a specialized safety meeting last fall concerning indoor air quality.

The meeting increased her awareness of the health problems related to the air quality within buildings, she said.

"Poor air quality can make people extremely ill," Russell said. "But I think the main symptom in the library is just irritation."

The air quality in the library is not too bad, but the building lacks fresh air, Russell said.

No windows in the library open except the ones in a few offices on the first floor.

As a result of officials being more "energy-conscious," the amount of fresh air brought into the building has been restricted, Hicks said.

And air circulation nearly is impossible in certain areas because of blockages, book racks and partitions.

These obstructions lead to dead air spaces, Hicks said.

"The library is outdated and I do not see any immediate solutions—they have been looking at it for decades," Hicks said, "It's like searching for a needle in a haystack."

The library also cannot regulate its air temperature, and excessive heat or cold can aggravate the symptoms created by air quality.

"There's nothing more we can do that has not already been done besides being aware of the system," Russell said. "We try to do what we can."

University economists work to help farmers

URBANA—Agricultural economists at the University of Illinois and the University of Arkansas are creating a research tool to help farmers, rural business owners and their lenders avoid repetition of the 1980s credit crisis.

The Center for Farm and Rural Business Finance recently received federal funding which will be added to monies already contributed by the Illinois Farm Development Authority and the private sector.

Researchers associated with the center will undertake investigations and analyses of a variety of topics related to availability and use of financial capital by agricultural and rural businesses. These results will be shared with producers, lenders and policy makers.

"This letter covers a whole spectrum of potential application, not only research on financial management at the individual farm level but also policy-oriented issues," said Ed L. Line, U of I professor of financial management who is one of the center's researchers.

"We've always had bits and pieces of information before from the USDA and other sources but nothing that focused across the entire spectrum of the problem." Len Gardner, legislative director for the Illinois Farm Bureau, an early and consistent supporter of the center idea, traced the impetus for the idea back to the farm crisis of the early 1980s.

"At that time, all sorts of solutions were being proposed to farm credit and other problems. But as we looked around, we were concerned that there was no one place to look at these problems, the proposed solutions and their effects in a comprehensive manner." Gardner said.

David Breeze, senior vice president of the First Trust and Savings Bank, Taylorville, believes the center's output will help meet changing demands facing farmers, lenders and others in rural communities.

"As agriculture becomes more sophisticated, it will become more important for farmers and lenders to become more sophisticated in their lending policies," he said.

"We will see greater demand for use of computer analysis and industry guidelines in the preparation of balance sheets. We will also see more emphasis on how to accrue wisely.

Research from the center adapted to its educational outreach efforts will allow farmers and lenders to have the benefit of the latest developments in the credit area. Such knowledge, he said, can be vital.

"We want to avoid a repetition of the early 1980s when some of our producers became overextended, which created severe problems for them and their lenders," he said.

"We can learn from our past. We don't have to repeat the hardships of the past."

"Individual farmers will benefit directly from the center, said Dell Banner, a U of I agricultural finance and law professor who is also active in the center."

"Information produced by the center's researchers should help farmers become better informed borrowers," he said. "Lenders will have a solid, ongoing research base to which to turn for information, too.

"Over the past 21 years, that contract has never established a life-of-contract high in the December through March period. History would suggest that new highs are coming. The most likely time to establish a high is in the December through August time period."

"The projection of wheat exports was increased by 25 million bushels to a total of 1.15 billion bushels."

"On the basis of the Dec. 1 wheat stocks report, the projection of wheat feeding during the current marketing year also was increased by 25 million bushels."

"Higher prices are expected to result in less wheat used for food purposes," said Good. "Food use of wheat is now projected at 780 million bushels, 16 million bushels less than used last year. (June 1) are not projected at 390 million bushels, the smallest carryover in 4 years."

"The USDA's December survey indicated that 502 million bushels of winter wheat were seeded in 1991. That is 830,000 acres less than the plantings last year and about four million acres less than expected."

"The largest reductions in acreage came in soft wheat areas of the Midwest and Southeast. Acreage in Kansas and Oklahoma has experienced a 2% change from last year."

"Tightening supplies, fewer acres, uncertainty about crop conditions, and continuation of export subsidies are expected to push wheat prices higher," Good said.

"It is difficult to predict how high because of the managed nature of exports."
Aikman is a master's degree in education administration from the University of Illinois and a doctoral degree in curriculum and instruction from SIUC.

He served in the U.S. Navy in World War II and the Korean War.

In June 1988 Aikman received the Lyndall B. Cook Award, the only award presented by the Board of Trustees of SIUC, in recognition of his public service.

In October 1988, he received the Inaugural Illinois University Distinguished Alumnus Award.

He serves as a member of the Board of Trustees of the State Universities Retirement System, a member of the Illinois Board of Education, and as President of the Jackson-Perry County Regional School Board Trustees.

Today's puzzle answers are on page 18
Top seeded Seles prepared to play little known German

MELBOURNE, Australia (UP) — Even with Steffi Graf home nursing an illness, Germany still has a chance to win the women's singles of the Australian Open.

Anke Huber still isn't well known to international fans, but many Germans consider her to be the next great women's player. Just how well she is progressing may be indicated Tuesday when she plays top-seeded Monica Seles in the quarterfinals.

The two also played here last year in the quarterfinals, and Huber, nervous and inexperienced, was overwhelmed by Seles, 6-3, 6-1.

"She is now a player of top 10 class," German Federation Cup coach Klaus Hafas said of Huber's improvement over the past year. "She has power in her groundstrokes from both sides and she is a fighter."

Huber, seeded 12, ousted No. 6 Jana Novotna in the fourth round after trailing by a set. Last year she recorded upset wins over Martina Navratilova and Gabriela Sabatini. "I lost very early last year so I just want to play a good game against her," Huber said of the Seles match. "I feel no extra pressure with Steffi not here."

No. 1 has all the pressure and I like having no pressure."

Sabatini has lost only 11 games in her four matches.

Ewing, Knicks top Pacers, end three-game losing skid

NEW YORK (UPI) — Patrick Ewing scored 25 points and grabbed 14 rebounds Monday, helping the New York Knicks break a three-game losing streak with a 116-91 victory over the Indiana Pacers.

Mark Jackson gave the Knicks the lead for good at 93-91 with a baseline jumper with 4:12 left. John Starks scored 11 of his 23 points for New York in the fourth quarter.

Xavier McDaniel added 16 points for the Knicks, while Gerald Wilkins had 13 and Anthony Mason 11. For Indiana, Chuck Person scored 22 points, Reggie Miller had 21, DeShawn Screan 17 and Vern Fleming 14.

Person had 1 chance to pull the Pacers to within a point with 2:19 remaining, but he made only 1 of 2 free throws.

INTRAMURAL BASKETBALL will be offered through the Recreation Center. One may pick up a rule booklet and complete the registration/registration form at 6 p.m. Jan. 27 in the Recreation Center Alumni Lounge.

AEREAIC HEALTH and fitness is a no-cost, year-round program that encourages lifetime exercise and fitness through walking, running, swimming, cycling and aerobic dance. One may register at the Recreation Center Information Desk by Jan. 30. For details call 455-1279.

BRIEFS POLICY — The deadline for Sports Briefs is a one week before print date. The brief should be typewritten, and must include time, date, place and outcome of the event and the name and number of the person submitting the item. Briefs should be directed or mailed to the Daily Egyptian Sports Desk, Communications Building, Room 242. A brief will be published only as onlyirectory allows.

Get Your Team Together Now!
FIRNHABER, from Page 20 —

qualified for her to be selected nationally. She was one of the 48 athletes voted on by 1,600 sports information directors across the country.

Coach Sonya Locke said the NCAA put a lot of consideration into making sure athletics and academics can mix.

"Whenever we have someone who was named, it is a good reflection... on the SIUC academic program in general," Locke said. "Before the NCAA made all the time restrictions on practices and games, we still had students named All Americans."

Locke said Firnhaber worked hard to balance her time during the semester.

"She has a great understanding of her time limitations and her priorities," Locke said. "She managed to keep a high grade point average as a difficult time when we were on the road. Athletes have to miss class and take some tests early."

To be named an All American, an athlete must have at least sophomore status and maintain a 3.2 GPA. The student athlete also must not be either a starter or an important reserve on the team.

Firnhaber is the first SIUC volleyball player to earn the honor consecutive years.

She was the only one on the 1991 GTE team that was selected last season.

As a two-time honoree, she joins SIUC's Sharon Leidy, who was an at large honoree in 1984 and 1985, and senior softball player Cheryl Veronkey, who was named in 1990 and 1991.

In the history of SIUC's women's sports program only eight female athletes have been selected First Team Academic All Americans.

Mish Parkinson, women's sports information director, said SIUC traditionally has done very well academically in volleyball. Firnhaber is the fourth volleyball player to have the honor.

"The sports information directors look for a combination of athleticism, which is shown in statistics, and a good GPA," Parkinson said. "Martha had the credentials on the court and in the classroom. There are not many very many volleyball players with that high's GPA."

OPEN, from Page 20

Courier was the beneficiary of similar anonymity at the U.S. Open last fall when Jimmy Connors made his remarkable run to the semifinals before losing to Edberg. Courier played an almost flawless match, breaking Becker six times and conceding just 10 unforced errors to his opponent's 40.

"Today's match was a little easier than my first two matches, but you still you have to fight the whole way," he said.

Mansdorf's match with Aaron Kriskatn ended abruptly when an upset stomach forced the 300th-ranked American to retire, trailing 6-2, 4-5, 1-6, 7-6 (7-4), 4-1.

In a night match Monday, Dutch player Jan Krajicek fired 19 aces to overpower Swede Christian Bergstrom, 7-5, 7-6 (8-6), 6-3.

In what might turn out to be a battle of the aces, Krajicek, ranked 45 in the world, will meet fourth-seeded German Michael Stich in the quarterfinals.

Stich delivered 13 aces in his 3-6, 6-4, 7-6 (7-5), 6-4 victory over Australian Wally Masur.

French skier wins slalom; Schweiss makes giant mistake

PIANCALVIO, Italy (UPI) — Carole Merie of France, capitalizing on a big error by Deborah Compagnoni, Monday won a giant slalom for her third World Cup victory of the season.

Merie's 5th career victory came after she clocked the second fastest time in the first leg and was quickest over the second leg for a combined time of 2 minutes, 20.82 seconds.

"I didn't feel like racing today," Merie said. "I was in a bad mood when racing both legs. The conditions were far from perfect. The snow was too wet for me. Compagnoni was really fast and it was my luck to win from her error."

Swiss star Vreni Schneider was runner-up in 2:22.10. Third went to American Eva Twarodek in 2:23.25—her best showing this season—after a strong second leg.

Americans Dawn Roffe and Julie Pashco finishing fourth and sixth, respectively. Those results, coupled with Twarden's finish, completed a good day for the U.S. team.

WORK SMARTER, NOT HARDER.

We're working smarter, too. So you don't have to work harder.

For us, it means an ongoing relationship with educators and professors, striving to understand what's needed to help them make math concepts come alive.

It means continually working with students like you, discovering firsthand what you expect from the calculator you select.

The result? Calculators that are highly recommended by your teachers and peers. Calculators that are perfectly matched to your major and your coursework.

The TI-81 is a perfect example. It offers the most comprehensive, easy-to-use graphing features available with extensive programming capabilities.

The BA II PLUS™ For business students, this is the one to get. It handles time-value-of-money and offers cash flow analysis for internal rate of return (IRR) and net present value (NPV). Plus a whole lot more.

No matter what your major, no matter what the course, there's a TI scientific or business calculator that's right for you. Do the smart thing: make one of them a part of your professional personality now, and for the years to come.

You'll be on your way to working smarter. Instead of harder.

Try the entire line of TI scientific and business calculations at your local TI retailer.

Texas Instruments

The TI-36 SOLAR, a general purpose workhorse powered by ANYLITE™ solar cells so you never need batteries.
