By Ray Robinson and Jacqui Kornstra

The four finalists for the SIU president position all have new visited Carbondale and Edwardsville, have a great deal in common.

All are white males, in their 40s. All have high-level administrative experience at large universities. And three of the four are currently academic vice presidents. The fourth, Kenneth Shaw, was acting president of SIU later. But the opinions the candidates expressed during their visits revealed some sharply divergent ideas about how SIU, a newly restructured system-wide administration should be run.

Donald C. Swan, academic vice president of the University of California System, said the chancellor's role in the system should be to "restrain, respecting the traditions of both campuses.

"If a strong external spokesman must occasionally take an external role, then it will be necessary internally..." Adele Swan, said he would like to see lines of communication between the chancellor and campus constituency groups.

Long said he would like to see the chancellor's office structured so it would not be easy for lower administrators to become involved in dealings with the legislature and governmental bodies such as the Illinois Board of Higher Education.

"The chancellor should provide a buffer for external interference, but also a system of external interference when there is need for intervention within the institution," said Adele Swan, SIU's vice president for academic affairs of the University of Miami ( Fla.).

"I believe he should centralize the administration and involve the vice presidents." The report said Swan would like to see the reduction of administrative levels at the University of Miami (Fla.) for another year.

"The report said that Swan would like to see the chancellor's role in the university's decision to centralize the administration of the entire system.

The report was supportive of the SIU administration's decision to restructure the governance system of the university by overhauling the system. It noted the concern expressed by faculty and students which "dealt more with their perceived lack of involvement in the decision, rather than with the decision itself."

SIU-C will maintain its accreditation of a state university for the next 10 years as a result of a post-confirmation recommendation submitted by North Central's 10-member board. The report covered all administrative level of the University last week.

Swan also said he would like to see the SIU's academic quality and financial exigency as an important outcome of the report in the accreditation report. There were 10 divisions of time.

"The team could have recommended that SIU's academic quality as an important outcome of the report for the SIU Board of Trustees and the University's financial exigency as an important outcome of the report for the Board of Trustees."

Copies of the team's report were sent to the North Central Association of Colleges and Schools and to the administration. Richard Millman, assistant to the president, said that while the report noted weaknesses in the University's operations, the overall evaluation was positive and on the university's participation in the University's operation, he said.

"I believe the system will be easy for the chancellor to run, but it will be necessary internally..." The report also noted that Swan would like to see the chancellor's role in the system.

City OKS $5,000 grant for reclamation company

By Cindy Michaelson
Staff Writer
Resource Reclamation, Inc., a non-profit organization in Carbondale, has received a $2,000 grant to upgrade its service and begin long-range planning with the city's Energy Advisory Commission.

The City Council approved the $2,000 contract Monday night for equipment purchases and instructed RRI to report its activities to the energy commission.

RRI collects recyclable materials within the city and provides marketing services showing energy and monetary savings from those services.

According to Councilwoman Susan Mitchell, the allocation is part of the city's plan to evaluate the costs and benefits of a recycling program.

"Resource Reclamation should be commended for their perseverance over the years." However, it is necessary that the continued growth and improvement of this service be measured," Mitchell said in a prepared statement to the council.

Michael proposed that RRI be responsible for reporting past and future data pertaining to recycling collection and marketing sources.

An evaluation of current recycling operations in terms of specific benefits to citizens, and a set of goals and objectives for RRI's activities was also requested by the council.

"The recycling program is vital to the city as we undergo the transition from an era of overconsumption and waste to one of conservation and renewable energy. Recycling is an appropriate technology which we are fortunate to have locally," Mitchell said.

In other action Monday night, the council—authorized enforcement of rules and regulations when the beach being constructed at Cedar Lake opens. Last week, a group of homeowners living near the beach presented a 2-page report detailing its objections to construction of the beach.

The group listed problems ranging from environmental concerns to inadequate law enforcement if the beach opens.

The council adopted the group's report and agreed to continue monitoring any further development at Cedar Lake.

Scheduled a public hearing for July 16 on a proposed sewer rate increase. The formula to apply the increase chosen by the council could raise SIU's sewer disposal bill as much as $200,000 annually, according to an SIU official.

- Instructed the Citizens-Advisory Committee to study participation in meetings of city boards and commissions. "The CAC will then report those findings to the council for purposes of evaluating the need for the various boards and commissions.

- Decreased the number of liquor licenses to 52 from 59 last year.

Drug arrest

By Andrew Zimmer
Staff Writer
Snyder Bruce Herrin, 23, Carterville, was arrested Tuesday night and charged with seven counts of unlawful delivery of drugs, the Williamson County Sheriff's office reports.

Herrin, who lives at 211 Michigan, was arrested by agents from the Southern Illinois Enforcement Group and the Illinois Department of Criminal Investigations in his home when he attempted to sell drugs to the agents.

He was charged with three counts of unlawful delivery of LSD, three counts for marijuana, and one count for MDA, a hallucinogenic. Authorities would not disclose the amount seized. Herrin is being held on bond at Williamson County Jail.

The report of bicycle thefts continued Tuesday, according to SIU security. Four more thefts were reported, and two of those occurred on campus. Brenda Gumm of 116 S. Wall St. reported her bike stolen from a Woody Hall bike rack sometime after 2:15 a.m. The bike was valued at $119.

Mike H. in 416 S. Washington St. reported a bicycle stolen from a rack near Life Science II sometime between 5:00 and 11:00 p.m. Tuesday.

Eight bicycle thefts, all belonging to students have been reported to security police since Sunday.

University OK'd by accreditors

(Continued from Page 1)

The report also attributed low faculty morale to factors present on many other campuses in the country, such as concern over salary levels and declining enrollments.

In response to the criticism, Millman said "The only way to get morale up again is through stable leadership to show the faculty that what happened in 1974 will not happen again." He said the creation of the chancellor's office was designed as a move toward stabilizing leadership.

The administration was described as "dedicated, hard-working and imaginative" and progress in overcoming tensions between the administration and faculty was said to be "moving slowly but surely."

The report cited the General Studies program as a problem area among academic programs which were described as "dying and thriving." An emphasis on departmental autonomy inhibited the development of a sound general education program, according to the team's report.

In a reply to the report, the vice president for academic affairs, Bruce Herrin said a committee had been appointed to study possible improvements in the General Studies program even before the "North Central" visit. That group's report is due this summer.

The team described SIU's physical facilities as "good to excellent," but they also noted a slowdown in building maintenance, which involves a calculated risk, since neglect can only add to the ultimate cost of campus upkeep.

Jackson, an economics major, the Graduate School, agreed, saying the University is not maintained as well as it was around 1970.

He said the slowdown was due to cutbacks in Physical Plant personnel and funds.

Pentagon to sell arms to Taiwan

WASHINGTON (AP) - For the first time since the United States broke its ties to Taiwan, the Pentagon has formally notified Congress it plans to sell arms to that island country. Since most of the $240.6 million in proposed sales were agreed on before the United States broke the ties, the package is exempt from a one-year moratorium on arms sales to Taiwan.

The proposed package includes equipment to build 48 F-5 fighter planes, 500 Maverick guided air-to-ground missiles, 48 Maverick modification kits, laser target-finder equipment, about $60 million worth of spare parts for older aircraft, F-5s, and Sidewinder air-to-air missiles. The formal "letter of offer" was sent to Congress Tuesday.

Carter spends 4th at mountain retreat

CAMP DAVID, Md. (AP) - President Carter spent the Fourth of July at Camp David where he planned to put the finishing touches on an energy speech he will deliver to the nation Thursday.

The president and his wife, Rosalynn, flew by helicopter to

the Catoctin Mountain retreat Tuesday afternoon.

Also at the presidential retreat were the Carter's oldest son, Jack, his wife, Judy, and their 3-year-old son, Jason.

Specialists to cap Mexican gusher

MEXICO CITY (AP) - Specialists plan a new attempt today to cap a blazing oil well - the southern part of the Gulf of Mexico that has been spewing oil and natural gas for more than a month, the governmental monopoly PEMEX said.

There is a remote chance that the new attempt will bring "positive results," a PEMEX news release said.

The new attempt was to be a repeat of a previous effort when cement was used to close some damaged blowout prevention valves. The valves were closed, but a new leak occurred. Its location was found by using an underwater television camera, the announcement said.

The burning well is located in the Bay of Campeche 50 miles off the coast and the shrinking oilwell of Ciudad del Carmen. It has been gushing more than 30,000 barrels of crude oil daily.

Blimp destroyed in thunderstorm

MOUNT PLEASANT, Iowa (AP) - The Goodyear blimp "Mayflower" lay in ruins Wednesday after being blown from its mooring mast during a severe thunderstorm and rolling into a corn field.

Ron Bell, a pilot and public relations officer with the blimp, said operations are to try to salvage the $3.5 million airship would begin immediately. He said it would take at least 90 days to rebuild the blimp.

"It's a total loss, except for what we may salvage and rebuild," Bell said, adding that the damage to the craft would run close to $3.5 million. He said no one was injured.

Goodyear has three blimps in the United States and one in Europe.

Chancellor urges car development

BONN, West Germany (AP) - Chancellor Helmut Schmidt Wednesday challenged the West German auto industry to lead the world in developing "completely new" economical and environmentally safe cars.

Schmidt made the proposal to Parliament in an 80-minute report on the recent seven-nation economic summit meeting in Tokyo and his government's plan to deal with energy problems.

"In the long run we must develop a completely new automobile that saves energy and is environmentally safe."

Kennedy burning bridges behind him

The Democrats need no longer worry. The Democratic Presidential Selection Committee has decided that every Democrat will agree is "a dream candidate".

I asked Committee Chairman Homer T. Pettibone to describe this dream candidate's qualifications and the highest office in the free world.

The first of all," said Chairman Pettibone, "is he beloved by every pew member of every poor minority group in the country.

"He's poor."

"And he's a fabricious rich. But as the son of multimillionaire, he's never had to work a day in his life. So he's had plenty of leisure time to study the problems of the poor."

"That makes sense. What about his youth? Did he compile a brilliant academic record?"

"Did he ever? He was expelled from his freshman class in getting a theory to take a language exam in his name."

"That's good!"

"It's great. It shows he won't get into the sky-in-the-sky ideals stand in the way of his pursuit of excellence while at the same time he proved he really knows how to do things."

"That's a plus," I agreed. "Since we said the SALT II treaty, I'll bet the people in the country are up with anyone who knows how to cheat. But what about his experience?"

"Oh, he's got one all right. When he was 30, he saw in the Constitution he was old enough to run for senator. And he won on his first try despite his wealth. His good looks and a adamant refusal to change his name."

"Like a man with strong family ties," I said. "Did he do well in the Senate?"

"You bet. After only six years in office, I've fellow Democratic senators showed what they thought of him by electing his assistant majority leader."

"But he refused to know him in that office."

"Yes, two years later they again showed what they thought of him by throwing him out. But he displayed his finest quality less than 18 hours before the first man walked on the moon by being the last to inaugurate the off of a bridge on the way to somewhere from a drinking party."

"What, quality 7?"

"A sense of timing. If it had been a slow news day? And by not reporting anything he showed 'e was not one to act precipitously. But he never crossed his bridges until he came to, or put it another way..."

"Well, all presidents are driven. So I suppose a voice for him would be a vote for safer highways. But they say that behind every great man is the love of a good woman. Has this dream candidate known the love of a good woman?"

" Doesn't Frankel, though, we were a little disappointed is, now vociferously to be the principal's wife?"

"And what about his politics? Are they the dull, old, middle-of-the-road variety?"

"No. He believes in throwing money at problems like poverty and health care. He's actually a liberal. I mean obviously he says he would have voted for a dream candidate?"

"Every single poll shows he would swamp any other candidate. Democrat or Republican," said Chairman Pettibone. "He is, after all, obviously the best man for the job. I think that says a lot.

"Look, I'm not saying he wouldn't make a good president," I said. "But how can you claim a rich, cheery, irresponsible philanthropist who expouses unpopular liberal causes would make a dream candidate?"

The vote came following an immediate appeal by Democratic Senator Prober, sponsor of the bill, who painted the alternative as an "amateurish" and "authoritarian" soft" and "thousands less evacuations as a result of rampant spreading of the virus" and "madness"—will prove to be effective.

If he must not bow down eloquently which has always come easy to this former Fuller brush salesman. Dissipation is not a strong concern, much less a holy passion, among Graham's flock. Will he dare offend them? Will he risk being ostracized by the powerful as he shifts from his customary pap that denounces sin to the more popular and less denounces specific weapons and specific perversions."

In brief, is Graham up to being not only a smooth New Testament evangelist th"s to his adversaries?/"—Copyright 1979. The Washington Post Co.

DOONESBURY

George F. Will

Has Billy Graham finally seen the light?

WASHINGTON—Is Billy Graham, America's convert-maker, in the midst of a religious conversion?

It appears so. In putting on the new man, Graham's hour of decision suggests that his conversion has nothing to do with sanctifying defecting sin but with a more painful and perplexing transition moving from the ranks of the name to the aware.

This is the new Graham, Father confessor to Lyndon Johnson and court chaplain to Richard Nixon — two of this century's most fanatic believers in war—has long lavished his blessings on the peace movement. He has called it both an anti-communist and a leftist. His tone is now different. In a recent sermon, Evening News, Graham said: "I'm in favor of disarmament and I'm in favor of trust. I'm in favor of people coming together to reduce, but to eliminate. Why should any nation have a nuclear weapon?"

As I look back—and I'm sure many people will disagree with me on this—but as I look back, I think Mr. Truman made a mistake in dropping that first atomic bomb, which I never developed it.

These words are from the man who caused this war whoop in 1965 during the debate on troop escalation in Vietnam. "We have to have our men. We have to have our police forces, whether it is in a great city or police on an international scale to keep those madmen from taking over our way of life, and spare our liberties."

After all, Graham has not come so far as to call for unilateral disarmament, being born again into this new thinking has aligned him with a large number of peace groups. They delight in his conversion.

Raymond Wilson, a Quaker who created, in 1963, The Friends Committee on National Legislation, says that with Graham's large following among the evangelical wing of American Protestantism, "He'll be a big help. He always has been a converted man, but now he's also a concerned man. He's more than welcome in the peace movement."

According to a senator who regularly talks with Graham, the evangelist began to push for peace in the darkness of that period, which is the Communist countries of eastern Europe, which he visited in 1977. The existence of church and state open Graham to an aspect of the East-West standoff that he hadn't considered before: Communism might still be the work of the devil, but it isn't so bad as to take the global risk of nuclear annihilation to stop it. As Graham told CBS, "We don't realize the proliferation of these weapons and the arms race of $600 billion that we're spending on arms in the world. Injustice, Madness."

Graham, who at 60 has been a national figure since 1948, comes late to his current awareness. Until now, his world view as that of the man who claimed Bible-thumper has been marked by country boy naïveté. He let himself be used by the rich, famous and powerful. Dutilly, he has reported that when he said, "I know his friends."

He said of Lyndon Johnson: "He was a very rich man but I knew that. Most times I was with Johnson it was in his bedroom. He'd lie in bed and read the newspapers and watch his three television sets. Every time I'd ask him to pray, he'd get out of bed and down on his knees in his presence. That's how much respect he had for prayer."

It's been worse. In a 1964 article in Nation's Business, he gushed about the joys of capitalism: "Thousands of businessmen have discovered the satisfaction of having God as a working partner. It puts integrity into their organizations, sincerity into their sales and spiritual and monetary profits into their hearts and abroad."

Thirty years of such fawning flackery aside, it may well be that Graham's new-found fervor for peace—moving from a view that "we must maintain the political military establishment on earth" to calling such a show of force "foolish" and "madness"—will prove to be effective.

If he must not bow down eloquently which has always come easy to this former Fuller brush salesman. Dissipation is not a strong concern, much less a holy passion, among Graham's flock. Will he dare offend them? Will he risk being ostracized by the powerful as he shifts from his customary pap that denounces sin to the more popular and less denounces specific weapons and specific perversions."

Marketing senior rents skates for city's downtown sidewalks

By Leanne Wansma

News Editor

For four hour or special half-day rates, Carbondale residents will soon be able to roller-skate down South Illinois Avenue, or roll easily down the winding streets located on campus.

Steve Johnson, senior in marketing, decided to cash in on the gas shortage with an outdoor roller-skating rental shop. Skate Street, 722 S. Illinois Ave., is scheduled to open in the middle of July.

Johnson said he originally had the idea to open Skate Street in Carbondale when he saw how well the mother company in Madison, Wisconsin was doing. The University of Wisconsin has a campus located in Madison. How timely, part owner of the Madison Skate Street, said the company was established to bring one of the top leased to the Midwest. "Each usually originate in the East or West and seem to take longer to come to the Midwest," she said. Skate Street, Inc. has a half months ago in Madison. "It has been a very well there," Johnson said.

Johnson was walking downtown State Street in Madison, saw the shop, went in, and immediately knew it was a good idea for Carbondale. Being a roller-skating is going to hit as big here as it has on the West Coast. It doesn't cost any money in gas to go roller-skating. People are very, very, very conscious of Sundays and it's great exercise.

Johnson, who is originally from St. Charles, Ill., said he was supposed to graduate in the fall. By the time he decided to go into business, he prolonged his education until the spring.

"I've had a lot of assistance helping me out. It's a large jump from practically no responsibility to owning your own business," he said.

Johnson's partner Tim Lexyold, 22, also of St. Charles, backed Johnson financially.

For approximately $10,000, Skate Street Inc., 360 State St. in Madison, supplied Johnson with 100 pairs of boottkates, an advertising program, liability insurance and safety equipment such as elbow and knee pads, helmets and gloves.

Skate Street Inc. also put Johnson through a training program which taught him how to service rental roller-skates, and how to mount wheels, or almost any pair of firm leather boots. Rollerskates, tennis shoes, rollerblades, baby equipment and "skandalas," heels with wheels, will also be available for sale at Skate Street. Johnson claims to be able to mount almost any type of leather shoe.

Anyone will be able to rent roller-skates after they have signed a consent form releasing Skate Street any responsibility in the case of an accident. People under 10 are required to have their parents sign a consent form. Roller-skating in Carbondale will be confined to the downtown area, in the forms of identification or $75 will be required as a deposit on the skates.

"SUI is one of the top 10 universities in the country for handicapped students. That also makes it one of the top 10 universities because everything is accessible," Johnson said.

"I think it's a really good idea for getting people around. The only problems I see are present related to somewhat poor condition of the road. Carbondale Mayor Hans Fischer said.

"In explaining his views of what the center should be, Riedel said, "The future social sciences lie in being relevant, without sacrificing the values of scholarship and scientific rigor."

"The center points us in the direction of national development. The center, which is the only problems I see are present related to somewhat poor condition of the road. Carbondale Mayor Hans Fischer said.

The Center for the Study of Crime, Delinquency and Corrections has two new things that will give it a new look. One is a new director and the other is a $10,000 federal grant for curriculum development in planning.

Riedel, who received his doctorate from the University of Pennsylvania and is currently acting director of the center since Jan. 15, succeeding Lawrence Benne, received the grant. The grant, to be used in the graduate area, will be used to turn out graduate students and undergrads collection in problems, policy and issues, and at the same time do research of the very high that the center should be, Riedel said. Riedel is a goal of national recognition for the center.

Japonese climbers killed in Alaska

GLEN ALLEN, Alaska (AP) — At least two Japanese climbers have been found dead on the side of a mountain near Sanford after a Hokkaido University climbing team ran into a snow and rescue team was dispatched to recover the bodies after they were discovered 5:30 p.m. Tuesday, the search and rescue spokesmen said. A high-altitude rescue team had described the area where the bodies were found, about 25 miles northeast of Sanford, as dangerous and crevasse-loaded.

Two of the men were found in a tent at the 12,500-foot level. The third was discovered at the 14,000-foot level, Ms. Cornell said.

The climbing team was from the Alpine club of Hokkaido University in northern Japan and had been due to return from the expedition June 29, she said.

Morning Thunder: tasty treat

By John Carter
Entertainment Editor

The musical diet of Carbondale can become quite bland at times. After a few years (or even a couple of weeks) of the same rock & roll rehab, there's not a whole lot to go back for. It's like seeing the same vanilla chocolate chip cookie that you chew and chew and finally buy to top out. The cookie is nothing else to do with it. Occasionally: a dash of bluegrass, bluegrass or jazz is offered; but this is usually only a dash—nothing substantial.

Morning Thunder, a relatively new Carbondale band, is something more substantial. The band draws material from a variety of influences and sources, and the result is a tasteful blend of rock & roll, pop, and a few more titles that generally don't describe the band's repertoire. It is a band that is as comfortable with a Bonnie Raitt tune as something from The Cars, not to mention Steely Dan, Janis Mitchell, Van Morrison, Bob Seagull, and more.

Activities

The band has been together for a couple of months, playing in public for the last month or so, most recently at Hangar 1 last Thursday night. There the band displayed a rowdy, expressive and nearly overwhelming voice that enthralled already enthusiastic audience.

The rest of the band is just as entertaining. Kirk Seifkas' lead guitar work is quick, exact and stylized. Alfredo Jahn also does a good deal of lead and backup singing, plays rhythm guitar with an ear for accentuating Seifkas lead. Dave Kiliman, drums, carries along the beat with authority.

After this week's work the band is scheduled to play at Silverball Thursday and Friday nights, they will take a couple of weeks off to learn new material, including some of their own creations. It should make for an interesting reappearance. Now, if they only bungled up a bit ...

Look fires art, editorial staffs cutting ties with Rolling Stone

NEW YORK: (AP) — Look, the glossy picture magazine that came back to life in February after leaving the newsstands for seven years, has ended its association with Rolling Stone and fired its art and editorial director.

"I couldn't understand any real reason for doing it," said Jan Wenner, Rolling Stone's editor and publisher, hired by Look last May. "It made no sense to me. I was totally against it."

The August issue due to appear in mid-July would be published on schedule, the magazine said, but no mention was made of future issues.

The magazine's owners were not immediately available for comment. Jim Dunning, publishing director at both magazines before being fired from Look on Tuesday, said Rolling Stone tried to buy Look from Daniel Filipacchi, Look's publisher, but that its offer of more than $1 million was rejected.

A source close to the magazine said Look has been losing about $250,000 a month since May. Between February and May, the source claimed, the magazine lost $1 million a month.

SNAKEBITES
WASHINGTON (AP) — About 45,000 snakebites are reported each year in the United States, one-fifth of them poisonous.

Plays invite audience participation

By Jordan Gold
Staff Writer

Audience participation is just as important as the play in the Theatre Department's Playshop Theatre this summer.

Part of Theatre 311-B and Theatre 511, the workshop will feature four plays, three of which are full-length. Each will be shown twice. The final version will be shown to the student audience. The workshop is intended to critique the plays and criticism will provide the impetus for the final version. The final version will be shown to the public.

According to workshop supervisor, Dr. Christian Moss, theatre professor, there are 38 people in the workshop. These people come from playwrights, actors, under­graduates and graduate students.

On July 7 at 3:00 p.m. in the Communications Building Laboratory Theatre, the first play, "The Nursery," will be shown. Written by Karen Johnston, the play is a twenty to thirty minute non-verbal caprice which dramatizes the life of a woman. The second performance will be July 7 at 7:30 p.m.

At 7:30 p.m. on July 9 in the Lab Theatre, the first full-length play will be shown. "Alligator Arms and the Deep Blue Sea" is a story about a rooming house in Florida that has its usual quota of problems until the little, old state becomes vacant. This event changes the lives of everyone in the house. Written by Brian Toussaint, it will be shown at 7:30 p.m. in the Lab Theatre. The second performance will be at 7:30 p.m. on July 27.

David Davis' "The Mustache Affair" will be shown July 10 at 3:00 p.m. in the Lab Theatre. Set in the '50's, the play is based on a true incident. It concerns a young woman who is all set to live a normal life when she begins to grow a mustache. The second performance of the play will be at 7:30 p.m. on July 31 in the Lab Theatre. Davis is a character sketch of a woman who has attempted to rape a man. The play is set in a mental institution.

Tom Brierton, Credit Union to perform at concert series

By Jordan Gold
Staff Writer

Tom Brierton, a banjo player and guitarist, will perform along with Credit Union at 8 p.m. Thursday in the Sunset Concert Series at Turley Park.

The 22-year-old Brierton has been playing guitar for ten years. His style varies from ragtime and jazz to classical. He also plays twelve-string slide guitar in the style of Leo Kottke.

Brierton has been playing banjo for three years. He plays three-finger picking and strumming styles of banjo with ragtime and classical tunes.

A student in Cinema at SIU, Brierton has become interested in the technical end of moviemaking and will start a two-year program in electronics technology in the fall.

Turley Park is located just east of Murdale Shopping Center on Old West Main F. and in the case of inclement weather, the concert will be held in the Student Center Ballrooms.

Concert to feature barbershop music

By Joan Baker
Staff Writer

 ordinarily, you wouldn't expect to see four young gentlemen crooning harmonies at your local tavern. If you frequent the right bars, you may come across them. If you go to the Sunset Concert Thursday night, you'll be certain to hear them. They will be performing at Turley Park just east of Murdale shopping mall, at 8 p.m.

The group referred to is a barbershop quartet known as the Credit Union. Unusual as the name sounds, it had very basic origins.

According to Dennis Anderson, spokesman for the group, the name Credit Union was chosen out of desperation when the quartet was under pressure to find an original name.

"We came up with the Credit Union because a group member was a bank employee," Anderson said. "It's hard to develop a routine that isn't boring and tiresome." The members of Credit Union are Willie Koehlenberger, baritone; Steve Cox, tenor; Anderson, lead singer; and Bob Owen, bass.

Cox is a graduate student in recreation, and Anderson is an assistant professor in administration of justice.

The Credit Union joined musical forces last summer through a 33-member barbershop chorus that they are still members of.

"We started singing in the chorus, one thing led to another and it finally led to this arrangement," Anderson said.

As an essentially non-profit organization, the group donates proceeds to a specific charity, the Lopedge Center of Wichita, Kan., a speech and hearing center for children. The group upholds the motive, "Singing that they shall speak."

Writers win awards for new plays

By Jordan Gold
Staff Writer

The Theatre Department has announced the winners of the Playwrights Workshop New Play Competition for 1979.

In a long play competition, first place went to Rolando Ortiz for "Requiem for a Private Eye." Honorable mention went to Mary Nitts for "In Country of the Blind," and Mary Espinosa for "The Visitation."

"Mr. and Mrs. G.B.S." looks at the lives of Charlie Townsend, Harris Shaw and her husband. Sammy Bernardo, from a rather unusual angle.

Karren Woz is an MFA student in playwriting. "Molly's Rock" is also quite original. Molly is a girl who sits in a rock and talks to strangers who pass her by. The story takes place after the Civil War and is a proponent for women's rights.

The group upholds the motive, "Singing that they shall speak."

Could solve bombings
Tagged explosives lead to bomb planter’s arrest

By Barry Brodrey
Associated Press Writer
CHICAGO, Ill. (AP) — The love quarrel of two Virginia families and a sprinkler of unexploded microcrystal plastic chips may mark one of the biggest breakthroughs in crime solving since fingerprinting.

When Nathan A. Allen, 45, a steel worker at the Bethlehem Steel plant at Sparrows Point, Md., climbed into his parked car after work one day last May, two sticks of dynamite were hidden beneath the driver’s seat. When Allen turned the ignition a tiny sprinkler of liquid exploded and blew him through the window of the car and into his death.

But for what federal agents say was a totally unexpected bit of good fortune, the dynamite would also have blown the Allen case into a limbo where thousands of unsolved bomb cases languish.

A search of the parking lot where Allen died turned up traces of the explosive used in the bombing. An examination at the laboratory of the Bureau of Alcohol, Tobacco and Firearms revealed microscopic pieces of colored plastic. Tests four hours later, authorities say, firearms agents traced the plastic used in the bombing to a batch purchased by James L. McFillin of Martinsburg, W.Va. McFillin was being held without bond on federal charges involving the manufacture of explosives and faces the death penalty if convicted of second-degree murder of Allen by Richard Hattaway, an assistant U.S. attorney.

The tiny pieces of plastic that led to McFillin’s arrest are just the tip of the iceberg. The discovery in the Allen case is a spectacular, but unlooked-for, information of a continuing firearms bureau project to curb bombings in the United States.

The unsolved explosive cases are almost impossible to solve. The weapon not only injures or kills its victim, but also, invariably, itself. In 11 of 12 cases, as made, federal agents say.

Every year bombs cause hundreds of deaths and injuries around the nation, according to Charles Nixon, a firearms bureau spokesman. Bombs are a favored weapon of terrorists, drug dealers, labor factions, organized crime and even quarreling lovers, and their use is mounting at an alarming rate, Nixon said.

In an effort to trace explosives, the firearms bureau began the Taggart Identification Program in 1971. Federal scientists conceived of the taggants as a means of literally color-coding every stick of dynamite or lump of explosives produced in the United States.

Since 1977 taggants have been inserted into 7 million pounds of dynamite — a minute amount, Nixon said. In 1978 alone 27 billion pounds of dynamite were manufactured in the United States, he said.

When taggants were found in the remains of Allen’s pickup, the firearms bureau matched the color combination against their records. The trail led, through an explosives manufacturer, to Jematin Explosives Co. in Martinsburg. Records at the small company showed the sticks involved were from a batch of five 1-pound sticks.

Only 24 hours after the tagging, firearms agents located McFillin, who the agents contend purchased two of the sticks and signed for them as required by law.

Interviews with relatives revealed that McFillin was Allen’s uncle, according to Charles Nelson, head of the firearms bureau office in Baltimore. Nelson said McFillin had accused Allen of having sexual relations with his wife. Sandra McFillin, 30, brother of James.

We probably would never have made an arrest, the taggants were the key. They were beautiful,” Nelson said. “Explosive cases are extremely hard to solve. We routinely interview hundreds of people in each case, but it doesn’t do much good. But the taggants were still showing up in the parking lot a week and a half later. And that saved a rainstorm and a change of shift at the steel plant three times a day,” he said. The chance of taggants helping in any other investigation is in doubt, Nixon said. Legislation introduced into Congress to require the tagging of explosives has bogged down under opposition from the National Rifle Association and some explosives companies, Nixon said.

The firearms bureau is perfecting a new form of taggants that is intended to frustrate efforts to smuggle explosives aboard aircraft. Small vials of inert gas will be placed in explosives and will trigger alarms at airports.

Prices of small Fords raised

DETOIT (AP) — For the fourth time since the new 1979 models were introduced, Ford Motor Co. has raised the prices of its passenger cars.

For the second time this year, Ford will raise the suggested retail price of autos sold in the U.S. by $499, or 1.2 percent. The increase is less than the 2.5 percent announced by General B. Mackenzie, vice president of sales and marketing.

The increase brings total 1979 price increases to 5.5 percent, a Ford spokesman said.

The largest increase is on the compact Ford Fairmont-four-door, which was boosted to a base price of $4,229, an increase of $240.

The increase will apply to all 1979 passenger cars except the Maverick, Ford Ltd and Thunderbird; Mercury Marquis and XR-7; and Lincoln Continental, Mark V and Mark III.

Those are the largest cars the company makes. It claims that buying public turning to smaller, more fuel efficient cars, the company decided to avoid an increase that might lessen their desirability.

By Bob Springer
Associated Press Writer
SPRINGFIELD, Ill. — A circuit court judge has delayed by more than a month the start of a perjury trial against a Chicago woman charged in connection with Gov. James R. Thompson’s tax-dodging investigation.

Chief Criminal Judge Ben Miller of Sangamon County set the week of Aug. 27 to begin the trial of Marilyn Lucas, a Thompson secretary for the State Republican Convention in Chicago, said William Trapp, the assistant state’s attorney handling the prosecution.

Mrs. Watson was to have gone on trial Monday. She is charged with lying to the state Board of Elections during its hearings last August into allegations that the governor’s campaigns in 1976 and 1978 were riddled with known fraud and forgery.

Mrs. Watson, a notary, had told the elections board that to her knowledge everyone who had signed petition pages as on-access was present before her when she notarized them.

Her attorney, Andrew M. Raucci, said he has filed a motion asking Judge Miller to throw out the charges against Mrs. Watson.

A hearing date on that motion is set for Sept. 11. Raucci is the lawyer hired by Thompson’s campaign committee last August to defend the former governor’s relations before the elections board.

Thompson has spent nearly $250,000 to collect more than 497,000 petition signatures to get his tax-and-spend proposition put on the ballot.

Career Planning and Placement Summer Workshops

conducted on a weekly basis through July 26
Resume Writing- Thursday, 10-11 a.m. • Woody Hall B-217
Interview Skills - Wednesday, 1-2 p.m. • Woody Hall B-142

Government Employment - as needed

The Career Planning and Placement Center, Woody Hall B-204, will be open during the summer semester from 7:30 a.m. to 4:30 p.m., Students, alumni, and especially August grads are invited to utilize counseling, testing, and placement services.

BEFORE Graduation
While you are exploring career connections
Consider NORTHERN TELECOM

EXPERTS AGREE that telecommunications will be the fastest growing segment of the electronics industry during the 1980’s resulting in more choices available to qualified personnel today than ever before. You can pretty well count on being able to find a match for your own requirements in job function and pay scale. But that won’t be enough! EXCEPTIONAL GROWTH is a way of life at NORTHERN TELECOM.

NORTHERN TELECOM is a world leader in the engineering, manufacturing and marketing of commercial telecommunications equipment. This did not happen by accident — we’ve been anticipating growth in telephone requirements for over 50 years, employing the most talented people in the industry. Our plans to TRIPLE the size and scope of our Digital Switching Division, whose operations are located in North Carolina and Florida over the next four years should be indication enough of our ability to offer you clearly defined paths to career opportunities.

If you are preparing for a career in any of the following areas, we’d like you to meet with our campus visit on July 9.

INDUSTRIAL TECHNOLOGY
COMPUTER SCIENCE
DATA PROCESSING
CUSTOMER ENGINEERING

Agriculture scholarship offered

By University News Service

A national scholarship for agriculture students at SIU has been established by a professor in the School of Agriculture. J.K. Lenroot, professor of plant and soil sciences, and his wife, Ruth Lenroot, have recently completed negotiations with Alpha Zeta, national agriculture honorary society, to administer the scholarship program.

The $200 scholarship is to be awarded annually to a member of Alpha Zeta at the SIU School of Agriculture. It is based solely on scholarship and contributions to Alpha Zeta.

Lenroot, an active member of Alpha Zeta for 40 years, and his wife, Betty, began planning for the scholarship nearly three years ago. The award, the National Leasure Scholarship, was announced for the first two years while negotiations with Alpha Zeta on terms of the scholarship program were being worked out.

Lenroot said the award, as now established, gives students at SIU an extra incentive to do well in school and in agriculture. He said the program was possible due to the support of both Alpha Zeta and SIU administrators.

Lenroot also said that SIU students are frequently outstanding in their work, but that the scholarship program will provide an added incentive for them.

Oldest U.S. resident Charlie Smith gets cowboy hat for 137th birthday

RAPTOW, Fla. (AP) — There weren't any fireworks, but Charlie Smith was still glad to be around for the Fourth of July roll around.

The man some consider the country's oldest resident turned 137 years old Saturday, July 4, and celebrated the birthday cake and opening gifts in generally good health.

He'll be joined by his son Chester, daughters and some residents of the Bartow Con­trol Center, where he has been a resident for years.

He's slowed down a bit and his mind wanders, but the former slave, cowboy and fruitpicker "still enjoys being active," center administrator Ruth Aiple said Tuesday.

Smith, who says he remembers being abducted from his native Africa aboard a slave ship and wandered, but the former slave, cowboy and fruitpicker "still enjoys being active," center administrator Ruth Aiple said Tuesday.

He loves cowboy clothes more than anything else," said Center Administrator Ruth Aiple Tuesday. "He's the only one I know that still enjoys being active." Social Security officials first came across Smith when he was 113 and still picking fruit in Florida orange groves.

Earlier this year, the Guinness Book of World Records removed him from its listing as America's oldest person because of a marriage certificate dated Jan. 2, 1910, on file in Arcadia, Fla. The document listed a Charlie Smith and gave his age as 35, which would make him 104.

Miss Aiple said a marriage document is not reliable, and the center's officials believe the Social Security documentation is correct.

Smith has been confined to a wheelchair since his right foot was amputated because of gangrene caused by circulatory problems two years ago. But he "has been taking himself for a ride up and down the hall," Miss Aiple said.

Killing of dog causes police walkout

NAPA, Calif. (AP)—Angry police officers who called in sick to protest the release of a man who allegedly killed the city's only police dog have returned to work after a 12-hour walkout.

Vern, a 13-year-old dog of German shepherd and husky ancestry, had worked 13 months to see the Fourth of July roll around, Sunday, less than 24 hours after the master's 35-year-old walker was struck by a man chased into an amusement park by police responding to a vandalism call.

Police Chief Ken Jennings said police "still feel a great deal of frustration," but would work anyway, along with sympathetic sheriff's deputies. It appeared no punitive action was planned because of the walkout, which began Monday night.

"He wasn't only a pet, he was my partner and friend," said Vern's handler, Officer John O'Donnell. "He saved my life this time around. Vern will be hard to replace." O'Donnell said Vern — short for November — had been credited with 14 arrests and assisted in 10 others.

After Vern was wounded Saturday, officers subdued and arrested Reese, 31, a student at Napa College. He was booked for investigation of felony assault on a police officer and assault with a deadly weapon and assault with intent to kill.

But Monday afternoon Reese was released on his own recognizance, and shortly thereafter the phone calls began.

Reese's lawyer, Mr. Jennings said Reese "will feel a great deal of frustration," but would work anyway, along with sympathetic sheriff's deputies. It appeared no punitive action was planned because of the walkout, which began Monday night.

But Monday afternoon Reese was released on his own recognizance, and shortly thereafter the phone calls began.

Police officers who serve the city of 48,000 about 35 miles north of San Francisco made the first calls, leaving supervisors and detectives to handle the emergency cases. A department spokesman said almost all the six to seven officers on each of three shifts had called in sick.

**Baker's anti-SALT statement could mean trouble for treaty**

By Donald M. Rothberg
Associated Press Writer

WASHINGTON (AP) — Sen. Howard H. Baker Jr., R-Tenn., his toughest statement on the SALT treaty doesn't change the arithmetic of the Senate debate. But it raises difficult tactical questions for supporters of the treaty.

The biggest question for President Carter now is whether the Republican leader safely be ignored.

Politically, the White House would like nothing better than to see this very vocal and waist-high need for approval of the arms control treaty without dealing with Baker, who hopes to take the seat Baker vacated in the 1979 election.

The magic number is 67. Assuming all 100 senators vote in the resolution of ratification, it would provide the two-thirds majority required for approval.

pro-treaty lobbyists have always listed Baker as "leaning against.

It will take intensive dealing to get the 67 votes — if, in fact, they can be obtained.

were Baker in the pro-treaty camp, the administration lobbying of Republicans could follow the traditions of both operating through the party leader.

The Tennessee senator would act as the broker bringing together the White House and his fellow Republicans on Capitol Hill. Both could accept for reservations or understandings that would satisfy questions now being raised about the treaty.

Without Baker, the administration would be a Senate Republican to fill that role. Perhaps Sen. Jacob Javits, a conservative, senior Republican on the Foreign Relations Committee, could do it. Javits is highly respected, but his liberal views could undermine his effectiveness among his more conservative colleagues.

It would provide the two-thirds majority required for approval.

The Senate debate over the treaty, which is required for approval.

Boy with bat kills man, steals bike

CHICAGO (AP) — No one paid attention to the theft.

Nothing happened, but when a Chicago police officer investigating a baseball bat near the bicycle and helmet belonging to an 82-year-old Louis Sanger, who was knocked off his bicycle in the head. Knocking him off the bike, police said. The attacker hit off the bike, police said. The attacker

With a vicious swing of his bat, Sanger drove off on a collision course with the helmeted old man.

"Sanger was smacked with a baseball bat near the bicycle and helmet belonging to the man," police said.

When 82-year-old Louis Sanger pedaled his imported 'rench bike to a bench to rest, his routine ride along the shaft path, the youth approached.

With a vicious swing of his bat, Sanger smashed into the man. Knocking him off the bike, police said. The attacker hit off the bike, police said. The attacker

Smith's experience to aid team

By Tim Brad

Skeet shooter Terry Smith will face more competition as small forward during the 1978-80 season. As a junior last year, he was the second-most scored by the Virgin Islands and won his second national championship in the 12-gauge Remington Model 1100 by knocking 98 of 100 birds out of the air.

The concentration is a key, and Becky admits that's not always easy. "My temper does get in my way," she said. "If I miss one or get mad about it, chances are I'll miss the next one, too. I try to grip on my emotions all the time."

When she is not shooting in competition, Becky serves as a referee and edits the Peoria Skeet & Gun Club newsletter. "When she has taught classes at the Peoria Skeet & Gun Club, but admits some participants treat her like an intruder in a male sport."

"Few men think they can learn anything from a woman, she laughed.

Women's Skeet Shooter of the Year

By the Associated Press

Becky Stutzman, 27, of Peoria, Illinois, was named the Women's Skeet Shooting Champion for the year 1978. She is currently ranked as the best female skeet shooter in the world.

Stutzman, who has been shooting competitively since the age of 16, has won numerous national and international championships.

Her father, Al Stutzman, was also a competitive shooter, and it was his encouragement and support that helped Becky develop her skills. She started shooting at the age of 12 and has been a professional competitor since 1990.

Stutzman's achievements include winning the Women's Skeet Shooters Association National Championship in 1999, 2000, and 2001. She also won the Women's Skeet Shooters Association World Cup Championship in 2002.

In addition to her competitive successes, Stutzman has been a strong advocate for women's rights in shooting sports. She has spoken out against gender bias and has worked to promote equal opportunities for women in the sport.

Her dedication and hard work have earned her the respect of her peers and she is widely regarded as one of the best female shooters in the world.

Stutzman currently resides in Peoria, Illinois, and continues to compete at the highest levels of the sport. She is a true inspiration to young female shooters and serves as a role model for all those who aspire to greatness in the world of competitive shooting.

Students interested in administrative positions in government and other public-related organizations will find SIU's Master of Public Affairs Program an excellent opportunity for career preparation and practical experience, says John Foster, professor in political science and director of the MPA program.

"The program is designed to prepare students for middle- and upper-level management careers in government," Foster said. "We are to the public sector what the MBA (master of business administration) program is to the private sector."

The five-year program, administered through the Political Science Department, combines academics with practical training through internships with government agencies.

"The internship is perhaps the most important educational experience for pre-entry candidates," Foster said, "and provides a major, continuing relationship between the program and organizations outside the University."

All master's students were set up during 1977-78, he said, in local agencies such as community development and the city manager's office in Carbondale, the city clerk in Murphysboro, and regional planning and development in Harrisburg. In addition, one internship was started with the Department of Health, Education and Welfare in Washington.

The program is one of 18 MPA programs in Illinois. While only 13 students were enrolled in this program when it officially began Fall 1977, enrollment has climbed to 50 students as of Spring 1979.

Foster, teaching off in the 50-student range, said he would like to keep the enrollment around 50 students in order to keep the personal faculty-student relationships we now enjoy and to keep the state and local job markets, which are our primary placement areas, open.

Foster is particularly proud of the MPA program's contribution to the Presidential Management Intern Program, a two-year program which was part of President Carter's Civil Service Reform. Designed to implement new personnel practices in the federal government.

Students interested in this nationwide program must compete with applicants from nearly 130 MPA programs around the country.

"We are very proud of our applicants from SIU," Foster said. "Last year three out of four students who competed were chosen for the internship."

The MPA program has received a number of grants from state and local agencies to conduct research. A $10,000 grant from the Illinois Department of Personnel is being used to produce an instructional video tape for state officials on using the performance-appraisal system, a system designed to measure the performance of state employees for awarding pay increases.

A grant from the SIU Coal Extraction and Utilization Center has the MPA faculty and two graduate students conducting research on a coal conversion project. Illinois ten-staters already have such a tax, and the research being done will determine what this tax could do for Illinois.

ARTHURS HOT MANY WASHINGTONIANS Say it today, nearly 32 million Americans—1 in 7—have arthritis severe enough to require medical attention, and 250,000 of them are children.

Over all, the disease strikes 1 in 2 families, says the Arthritis Foundation.
