Students' election bid at a loss

Incumbent will spend 3rd term in mayor's seat

By Shawnna Donovan
De Gare: Government Affairs Editor

Carbondale voters gave incumbent mayor Neil Dillard another term with 1,544 votes as his main opponent, Mark Robinson, was defeated with 833.

Write-in candidates Matt Parson and Andrew Eustis lost early on as Parson received 103 votes, and Eustis gathered 31.

The late vote totals, due to tabulating votes in ballots kept the suspense until 11:00 p.m. on Tuesday, Robinson slated out the lead but conceded the win at the 2nd Avenue Coffeehouse just before 11 p.m.

Neil Dillard, who has been mayor since 1987, could not be reached for comment Tuesday night.

Robinson said he was surprised by the results, because he thought the race would be close.

"We destroyed him," he said. "I won by a margin of 700 votes.

Parras, who has been mayor since 1987, could not be reached for comment Tuesday night.

Parras said he will continue to run for office despite the loss.

"I will continue to serve the community of the city," he said. "I won't run in two years for city council." he said.

Parras, gathered with write-in-city council candidates Lawrence Henderson and Anna Belle Bell, said the results were disappointing.

"The voters have lost their trust in the city," Parras said.

Election numbers show increase

Student interest higher: Campus precincts have better turnout after low attendance at primaries

By Kellie Huffer
Daily Egyptian Reporter

A record number of students voted during yesterday's election for mayor and city council with 921,261 votes cast, or an increase of 500 since the February primary.

In Carbondale precincts 21-24, both predominantly student precincts, stretching from University Hall to Hill 6, Wall St. to St. Francis Xavier Church, West Walnut Street 291 ballots were cast at 2,301 registered voters.

In precinct 21, University Hall, 31 votes were cast, and 22, the Newman Center, 31 votes, precinct 22, Grinnell Hall, 65 votes, precinct 24, Evergreen Terrace, 61 votes, precinct 25, Lenz Hall, 50 votes, and precinct 26, St. Francis Xavier Church, 53 votes.

The mayor's race was a write-in race, with a total of 1,238 votes cast.

Neil Dillard, incumbent mayor, won re-election with 1,238 votes, followed by Mark Robinson, write-in candidate, with 35 votes.

The write-in candidates did not have a chance, but Morris said their efforts did not go unnoticed, and representation of student vote in city council would be increasing over the next four years.

"One of the things that really surprised me was the student involvement, their concern about what we were doing," Morris said.

There was the realization (by the students) of 'what a little voice can be,' and that was important to the students becoming aware of that, and that concerned about what's going on is very important to them. And a student should take a lesson from it.

Parras said that the city had gained several seats for students, and that was a big win.

"It's a win at least," Parras said. "I don't think it's a victory because we'd have a victory in Carbondale."

World
2 MORE JAPANESE CULT.COMPOUNDS RAIDED - TOKYO - The wake of the government's plans to deal severely with the Jodo Shinshu Sect, a religious group, Japanese police raided two more cult compounds Tuesday. Police began with warrants entered by an association that claims the government's plans are unconstitutional. The group is expected to launch a full-scale investigation this morning after two weeks of searches at other cult facilities. Authorities are looking for evidence linking the cult to the March incident in which 18 members were arrested and accused of demanding cult members pay the equivalent of $5,000 in "lavage", or spiritual purifying payments. The group was led by a cult member named Shinozaki, who has been arrested and faces charges of similar crimes.

CLINTON STOPS SECRET FUNDS TO GUATEMALA
WASHINGTON - President Clinton Monday demanded a secret flow of secret funds to guerrillas in Guatemala be halted. The funds were used to support rebel groups against General Rios Montt's government and to miejscowks of former President Jacobo Arbenz. The official version of an agreement between the United States and Guatemala's government for the last several years is that the United States would provide $100 million to Guatemala, including $50 million in military aid and $50 million in economic aid. But the official version has been contradicted by Guatemala's leader, General Rios Montt, who has said that the United States had provided $200 million in secret military aid to guerrillas in Guatemala, including $100 million in direct and indirect aid to the guerrillas. The Clinton administration has denied the official version of the agreement between the United States and Guatemala.

NO CONFIDENCE THREATENS REFORM PROGRAM
Kiev, Ukraine - Parliament on Tuesday defeated the prime minister's re-election proposals, ending the pro-reform government. The vote marks a major setback for the reforms introduced by President Leonid Kuchma, who is seeking a second term in office. The parliament voted 173 to 123 to confide the prime minister's resignation, with 57 abstentions. The vote was the first time that the parliament has failed to support the government since Kuchma came to power in 1994. The vote was expected, given the split in the parliament between a pro-reform bloc and a pro-reconstruction bloc. The pro-reform bloc, led by Acting Prime Minister Mikhail Khodorkovsky, has been pushing for reforms to strengthen democracy and reduce corruption. The pro-reconstruction bloc, led by President Kuchma, has been pushing for reforms to strengthen the economy and reduce inflation. The vote is likely to complicate Kuchma's re-election campaign, as he faces a tough race against opposition leader Vitaliy Klitschko.

PATHWAYS OF SECONDHAND SMOKE DESCRIBED - The most comprehensive report of its kind to date, researchers have detailed the exact mechanisms by which secondhand smoke can damage the lungs of non-smokers. The Center for Disease Control and Prevention listed 16 different chemicals in the smoke that can cause damage to the lungs of non-smokers. These chemicals are found in the smoke of cigarettes, cigars, and pipes. The chemicals are a mixture of tar, nicotine, carbon monoxide, and other chemicals found in the smoke. The chemicals can cause damage to the lungs by causing inflammation, irritation, and damage to the lungs.

DRUG SLOWS PROGRESSION OF LOU GEHRIG’S - The experimental drug melphalan has shown some success in slowing progression of the devastating muscle-wasting Lou Gehrig’s disease, researchers say. The drug was tested in a clinical trial involving 24 patients with Lou Gehrig’s disease. The patients were randomly assigned to receive either melphalan or a placebo. The patients who received melphalan showed a slower rate of decline in muscle strength over the course of the study. The patients who received a placebo showed a faster rate of decline.

Corrections/Clarifications
In the April 4 edition of the Daily Egyptian, in reference to the front page story “Elevator shaft: Student worker got stuck after taking out trash,” a clarification: Mike Jarvis was joking when he said he clocked out Feb. 27, not March 3. He was actually working the day he was trapped. The elevator was called March 5. The elevator has not been in service since.

Six compete for student trustee position

By Dave Mack
Daily Egyptian Reporter

Students will have three times the candidates to choose from in this year’s student trustee election. Six candidates have been approved by the student trustee election commission compared to the two candidates that were on the ballot last year.

"Six people is an incredible turnout," said William Karrow, chairman of the student trustee election commission. "Hopefully, we’ll have three times the voter turnout.

Student from Burundi fears for family’s safety

By Michael D. DeFord
Daily Egyptian Reporter

Recent fighting and instability in Burundi has one SIUC student fearful he will never see his family again.

Merel Hayvayimana, a graduate student in agriculture business economics from Burundi, said fighting among rival African tribes has put his family in immediate danger.

"I am very afraid of what is going on in Burundi," he said. "Many people were killed last year, and there are people who are still being killed, and those people are innocent people."

Hayvayimana said he received a letter from his family during Christmas break telling him not to be surprised if he never saw them again because of the fighting.

"I think fighting among African tribes is getting worse. Last week when 150 members of the Hutu clan were massacred in Gisoza, a village in Burundi, the death toll could go as high as 450 in killings over the last two weeks," he said.

Most of the victims were women and children. Last year, Rwanda’s military killed more than 320,000 people, mostly of the Tutsi minority.

According to Hayvayimana, Burundi faces the same problems as Rwanda. Last year, he said the Hutus want sole power of Burundi, power which the Tutsis hold.

"In Burundi, the Hutus have told me that I should share it with the Tutsis," he said. "Their objective is to kill the Hutus and take the power from the army."

Group plans downtown revitalization

By Dave R. Izak
Daily Egyptian Reporter

"They’ve put together many things which the city follows, such as the downtown development plan, the revitalization of the town square, and the new city hall and civic center."

Jeff Doherty, Coralville city manager

UPTOWN Inc. holds for local business and property owners as well as some city officials to the form of the planned downtown development plans. "They’ve put together many things which the city follows, such as the downtown development plan, the revitalization of the town square, and the new city hall and civic center."

Doherty said "We have seen all these ideas and UPTOWN Inc. has every year, so we have had a lot of support from the city, especially the city’s downtown development committee and businesses.

When thinking ofSomeone to oversee the downtown area, the city should realize that UPTOWN Inc. is on line right now," Flanagan said. "Flanagan said the group is ready to plan and organize the development, and private individuals toward goals of revitalization, of the downtown area."

UPTOWN Inc. is a group of citizens who work in conjunction with the city and business owners of downtown, White said Illinois Avenue, bounded by Oak Street to the north and Grand Avenue to the south. Their goal is the revitalization of the area.

City Manager Jeff Doherty said the group has been extremely helpful in the city’s efforts to make what a favorable citizens’ group can accomplish if they work hard ."
Law chance to curb potential sex crimes

NEW LEGISLATION SIGNED BY ILLINOIS GOV.

Jim Edgar is commendable, for the positive step it takes in attempting to curb the number of sex offenses in the state. The bill, signed March 21, is scheduled to go into effect in 1995. It will require convicted sex offenders to register in person with law enforcement officials annually for 10 years following their release from prison. It also requires out-of-state offenders to provide DNA samples to police when they move to Illinois.

While the bill will not provide a complete solution to the tragedy of sex offense in Illinois, it is a move in the right direction.

By allowing police to know the whereabouts of a known offender, the law potentially can prevent past offenders from committing another sex crime because of the possible fear of knowledge that the authorities are watching with them both eyes open.

SOME OPPONENTS TO THE NEW LAW CLAIM it is a violation of the privacy of people who already have

paid for their crime through a jail sentence or through rehabilitation programs. While this argument may seem relevant, other points must be considered.

Many experts on sexual offense as well as women's representative groups claim that lessons learned by an offender through prison or rehabilitation often are not enough to prevent their return to a life of crime. It seems that in and of itself, the law actually may provide for a type of rehabilitation.

By requiring former offenders to file with police on an annual basis for a decade after their prison sentence is over, the one-time felons will be continually reminded of the privacy of a victim that they shattered and the terrible pain that they brought to innocent individuals' lives.

THE NEW LAW IS CERTAINLY NOT A CURE-ALL for sexual offenses, however. According to figures provided by the Carbondale Women's Center Rape Action Committee coordinator, a repeat rapist on average commits up to 25 assorted acts every 10 years.
Burundi
continued from page 3

Many deaths among Tutsis go unreported, while the deaths of Hutus are "always reported," Havyarimana said. "We don't have a police force," he said. "We don't have a justice system," Havyarimana said. "There is no law in this country." Havyarimana said that the government of Burundi is very upset with the United States, and that the country is "not interested in doing business with the United States," he said.

Use of info technology linked to productivity, study shows

Agribusiness respondents also cite complications

By Dave Katzman
Daily Egyptian Reporter

"Increased use of information technology has had a significant impact on productivity, according to a study conducted by an STUC agribusiness professor.

The report, based on the input of 104 respondents who use information technology more than twice the national average, shows the increased use of these technologies in their business.

"Information technologies include computerization, cellular phones and cellular phones," said Annette H. Harris, an associate professor at the university. "The study included the help of John Peter, a computer science student.

"Information technologies include computerization, cellular phones and cellular phones," said Annette H. Harris, an associate professor at the university. "The study included the help of John Peter, a computer science student.

Harris said the study, which included the help of John Peter, a computer science student, was based on the types and extent of information technologies and the kinds of issues raised by the incorporation of these technologies in their business.

"We have a total of data that we can go back to in 1984 to find that the use of information technology is on the rise," Harris said. "That's why we decided to do this study to find the extent of information technology in the workplace.

Another appeal filed to delay motor voting

But district judge orders Illinois implementation

By Stephanie Mooka
Daily Egyptian Reporter

Hearings are set for Monday to delay the state's implementation of the new motor voter law, which is designed to encourage voter registration among drivers and to provide social service facilities and through the mail.

District Judge Mark A. Winter denied a motion Monday to delay his order forcing the state to comply with the 1995 National Security Amendment, which is designed to encourage voter registration.

State's attorney spokesman for Gov. Jim Edgar, said state officials planned to appeal the decision through the 7th U.S. Circuit Court of Appeals.

Hearings are set for Monday to delay the state's implementation of the new motor voter law, which is designed to encourage voter registration among drivers and to provide social service facilities and through the mail.

Use of info technology linked to productivity, study shows
Agribusiness respondents also cite complications

By Dave Katzenman
Daily Egyptian Reporter

Increased use of information technology leads to increased productivity, according to a study conducted by the Illinois State University Farm Economic Council.

The report, based on the input of 101 agribusinesses, showed that respondents who used information technology were more than twice the annual sales volume than those who did not adapt the technology to their work.

Information technology includes computer programs, cellular telephones and telefax.

Kim Harris, an associate professor of economics at the university, said he adapted the study with the help of John Pile, a former graduate student.

Harris said the study, which spanned one year from conception to composition, was based on the types and extents of technologies and the kinds of issues raised by the incorporation of these technologies in the workplace.

"We now have a baseline of data that we can go back to in three years from now and track where the use of information technology is," he said.

The results of the respondents, who affirmed that information technology has made them more productive, are cited in the study.

"A salesperson needs more to go on (than words), to touch a variety of services," he said. "There is more credibility in the eyes of a customer." Harris said, "Information Technology and the Sales Effort," was submitted for consideration at a national conference at Indiana University in April.

A "pooling" study, Harris said, is being conducted with the help of the Illinois Cooperative Extension Service.

Harris said the research mirrors trends he sees in the agriculture industry. "We are now seeing agricultural companies merging, downsizing and reorganizing," he said. "It's my belief that technology is making a lot of this possible." Companies are now able to do the same amount of work or more work with the same people by employing information technology in their service." "A salesperson chooses the next study, Harris told the Daily Egyptian, "that we're testing information technology questions," he said.

Another appeal filed to delay motor voting

But district judge orders Illinois implementation

By Stephanie Moletti
DE Assignments Editor

Illinois filed yet another appeal Thursday to delay the implementation of the Federal Motor Voter Act.

On March 28, U.S. District Judge Milton Shadlow ruled Illinois must comply with the law which requires states to provide voter registration at drivers' license offices and social security facilities and through the mail.

Shadlow's order also states that Monday to delay his order on the state to comply with the 1993 National Voter Registration Act, which is designed to encourage voter registration.

Illinois law, a spokesman for Gov. Jim Edgar, said state officials are delaying compliance until they appeal the decision through the 7th U.S. Circuit Court of Appeals.

However, the state still plans to pursue the appeal filed Friday with the appellate court, Robinson said.

Rudy Michaelson, executive director of the state Board of Elections, was appointed to coordinate Illinois' implementation of the legislation
A bill proposing a unitary registration system, combining registration for federal, state and county elections through the Motor Voter Act, is being heard in the state legislature.

The legislature still has that bill, he said. "No one knows if they will ever get anything out of the court rulings." The unitary system is being considered to help voters more quickly register for the correct election.

Voters have 30 days to prepare an outline of implementation plans.

The state's work in implementing the motor voter legislation "didn't go as planned," Michaelson said.

A bond of work has already been done — we will not be starting from scratch," he said.

And state officials are also asked for an expedited hearing of the appeal, which requires the court to hear the appeal within 60 days.

Illinois was one of four states, including California, Pennsylvania and North Carolina, sued by the Justice Department in February for refusing to comply with the law.

The state of Illinois is in the process of implementing the Motor Voter Act of 1993, which requires states to provide voter registration at drivers' license offices and social security facilities and through the mail.

The Illinois State Board of Elections was appointed to coordinate the state's implementation of the legislation.

A bill proposing a unitary registration system, combining registration for federal, state and county elections through the Motor Voter Act, is being heard in the state legislature.

The legislature still has that bill, a spokesman for Gov. Jim Edgar said. "No one knows if they will ever get anything out of the court rulings." The unitary system is being considered to help voters more quickly register for the correct election.

Voters have 30 days to prepare an outline of implementation plans.

The state's work in implementing the motor voter legislation "didn't go as planned," a spokesman for Gov. Jim Edgar said.

A bond of work has already been done — we will not be starting from scratch," he said.

And state officials are also asked for an expedited hearing of the appeal, which requires the court to hear the appeal within 60 days.

Illinois was one of four states, including California, Pennsylvania and North Carolina, sued by the Justice Department in February for refusing to comply with the law.

Visiting writer pleased with road taken

By Kristi Delaney
Staff Columnist

It's a high school student, Stuart Dybek, who is pleased with the road taken.

Dybek, originally wanted to be a doctor, but his interest led him to writing. His decision to leave medicine and pursue writing was hard for him but he felt he had to make it.

"When you are young, it is a very unwise decision," he said. "I was the first to go to college. On the family, and knew I didn't want to go to medical school." He would not have a job when he went out.

"Writing was not the first route to success," he added. "Since that decision, Dybek has won awards from the Guggenheim Foundation, the National Endowment for the Arts, and the National Book Critics Circle and a special citation from the Library of Congress."

"Writing is an interesting job. Unlike magazines, until a book is published, you have a chance to make a living," he said. "A book is the best vehicle." He continues to work on "self-help" projects.

"Writing is an interesting job. I am not a writer, but I am a writer," he added.

The road to success is a long one, but a necessary one. "Writing is not easy," he said. "It is a hard road, but it is a road worth taking."

### Write-in procedure gets mixed reactions

By Sean J. Walker

The Carbondale mayor and city council elections Tuesday gave voters a chance to write in their candidates, and many found that it was easier to do this than they had expected.

Betsi Knowles, an undecided voter from Carbondale, was precint 25, and it was easy to write in a candidate on the ballot, but there should have been more lines in order to write in more than one candidate.

"On the ballot it explained how to do a write-in vote, but there was only room to do one," she said. "There was no way we could have made a list and box another candidate's name."

"Overall, I think it went well," said Jackson County Clerk Irene Carlson.

Jackson County Clerk Irene Carlson said phones were ringing off the hook, and a few had complaints about the write-in vote.

"We had questions about people concerned with the use of write-in votes, " she said.

Carbondale's write-in candidates were not always listed in alphabetical order, and there were cases when voters didn't have the names they expected to write in on the ballot, but that would be campaigning if they did.

Carbondale's write-in candidates were not always listed in alphabetical order, and there were cases when voters didn't have the names they expected to write in on the ballot, but that would be campaigning if they did.

**A people were really upset that we didn't have the names of write-in candidates at the polls, but that would be campaigning if we did, and that is illegal.**

Irene Carlson, Jackson County Clerk

straight in and matched with the number of votes to ensure accuracy.

Jim Lackore, an election judge at Precinct 26, said people asked a few questions about write-in votes, but there were no problems when it came to vote.

"I think we had a good number of votes that were cast and we had some people who asked how to fill out a ballot for a write-in candidate," he said.

Karrie Kimble, a freshman from Springfield who wrote in a candidate, said she didn't use the write-in vote, but wanted to.

"I think it would help," she said. "I felt like a police vote was better... I love to work in explaining how to write in a candidate."

"I wanted to be able to vote on the first time, I would have been easier for people who wanted to vote."

Terry Chimenti, an election judge at Precinct 26, said people asked for an explanation of the write-in vote and a lot of people asked how to write in a candidate.

"I think they would have voted if they knew how to write in a candidate," she said. "They didn't know how to write in a candidate, but they didn't vote."

Carbondale's write-in candidates were not always listed in alphabetical order, and there were cases when voters didn't have the names they expected to write in on the ballot, but that would be campaigning if they did.

Irene Carlson said the write-in votes were tallied at the individual precincts.

### Ballot box: Jamie Terry, a sophomore in biological science and German, from Carbondale, votes for mayor and city council Tuesday afternoon in Lurie Hall.

### Elections continued from page 1

"Voting is something you do because it is important for the future," he said.

"It's like taking a test, it's something you have to do and students need to do it for their own reasons," he said.

While dining halls tended to draw more students, some saw the benefits in voting.

"I think it's really important to vote, and I think it's really important to vote," he said. "I have a close friend who has never voted before, so I hope they vote."

National
Study cites shortage of inner-city instructors

By William C. Phillips III
Daily Egyptian Reporter

As SIUC associate professor’s research shows urban schools, already in desperate need of trained teachers, will face a shortage in the future. And the shortage of teachers may be the greatest source of educational inequality for poor and minority students, said Sharna L. Gilbert, an associate professor.

“Teachers are very concerned about their own safety.”

Sharna Gilbert
Curriculum Professor

Forsay in SIUC’s Department of Curriculum and Instruction.

Gilbert said the enormous need for teachers in urban schools has resulted in alternative hiring methods, some where an individual with a background in business or police work has a good chance of getting a job teaching as long as they commit to continue in the field. But many find it difficult to teach in inner-city schools, according to Gilbert’s research and that of others.

Urban stays don’t last long

“Most of the teachers that are experienced do not want to teach in urban schools or they do not stay long,” Gilbert said. “There are a few who stay, but not many.”

Dean Brian Bucas, dean of the College of Education, said he believes there are enough prospective or current candidates who prefer to teach in areas closer to home.

“We are concerned with the area they work in,” he said. “If you do not live in an urban area you are less likely to teach in that area,” he said. Gilbert’s survey of 193 prospective teachers showed most teachers come from rural settings and plan to return to similar settings to pursue their careers.

External factors important

A factor that discourages teachers from working in urban areas is having to deal with the problem of keeping students in school and the problems the children face in their domestic lives, Gilbert said. Urban schools also have a half-life because of the rapid pace of change in the area, she said.

“Some families are plagued with gangs, drugs and weapons,” Gilbert said. “Teachers are very concerned about their own safety,” she said.

The looming shortage of urban education is being challenged in part by the many universities which are changing the way they train prospective teachers, she said.

“Some universities are trying to get young students to understand other cultures,” Gilbert said. “The programs encourage student teachers to examine other cultures and then apply what they have learned by participating in volunteer work in urban communities.”

Hacking: Kent Kiveln, a senior in business economics from Fillmore, enjoys a session of Hacking Buck outside his Alpha Gamma Rho fraternity house Tuesday afternoon.
Council
continued from page 1
A young candidate gives me a good basis to look to the future," he
said. "If I plan to live in this town for a long time, and my
children will be around, I hope to see some of the decisions that
will make Carbondale a better place to raise a family, but
18, 20, 30, even 40 years from now.

Keill said the campaign
involved a lot of time and energy,
but he enjoyed it.

"I think running for office is
times," he said. "It was fun, but
the time running my own business was pretty time
consuming."

Barbara Smith, who appeared to
lead Neil in the last primary held on June 11th, said she
would continue to actively support her
candidate. "I'll be continuing to work hard
on the planning commission," she
said.

Purifoy said the most memo-
rable moments of the campaign
for him were in January and February as he
walked from door to door meet-
ing voters.

"Meeting the different people and
finding out what their issues were was a highlight for me," she
said. "I did a lot of walking with
long underwear, and my ears were freezing."

City council candidate Robert
Bob) Starlitski retired fourth among the candidates received 706 votes.

Starlitski said the voting
turnout was not really representa-
tive of Carbondale as a whole,
and he would continue to work for
the disadvantaged minorities
in the city.

"I have worked 40-50 hours a
week since my retirement for
Carbonide," he said. "Somebody

I hope to awaken the sleeping
giants."

Write-in student candidates
Lorenzo Henderson received 155
votes and Anna Holme Lund-
stein went away with 12.

Henderson said the campaign
had been a learning experience.
"It taught us to be better
prepared," Henderson said.

"We had no idea about the
people we would meet and deal
with," he said.

In some respects it was disap-
pointing — we were trying to do
something good for the town, and
yet, it was a disappointment."

Henderson and Lundstein
agreed they would have had a
better chance in the elections if
they had been on the ballot, although
Lundstein said a challenge is always a good thing.

"We would have had a
larger turnout if people could
have just checked a box instead of
debating us," Henderson said.

"We'll never forget this campaign."

"The most memorable
moment was when we all decided to run
together," she said. "We had a lot of
hopes and dreams and all that
wisely stuff, but we also

Mediterranean expedition: 15 days of fun, travel for credit

By Dave Katzman
Daily Egyptian Reporter

Imagine traversing Italy from the north to the south, encountering archaeologists, explorers, historians, and maritime experts of years gone by and examining marine life. Now, imagine getting class credit for it!

David Brusseau, an adjunct professor in plant biology, will be leading 15 students to Italy this summer through the hands-on course titled "Italy: Roman and Greek Studies." The course will involve visits to Rome, Florence, Venice, and other historic sites.

The course will offer an opportunity to explore the landscapes and cultures of Italy, focusing on the study of Italian art and architecture. It will include visits to famous landmarks such as the Colosseum, the Pantheon, and the Vatican City.

The course will be divided into several parts: the first part will focus on the Roman Empire and its influence on modern times, while the second part will concentrate on the Greek culture and its contributions to modern society.

The course will include lectures, discussions, and hands-on activities such as archaeological excavations, cultural tours, and visits to art museums. Students will have the opportunity to interact with local experts and gain insight into the daily life of ancient Rome and Greece.

The course will begin on June 1st and will last for 15 days. Students will be required to participate in at least 80% of the activities and will be assessed through quizzes, presentations, and a final project. The final project will consist of a comprehensive report on the cultural and historical significance of the sites visited, as well as a reflection on the impact of history on contemporary society.

The course is open to all levels of experience and will be a unique opportunity for students to gain a deeper understanding of the history and culture of ancient Rome and Greece.
