McAndrew game on; report awaited

By Anne Flaxer
Staff Writer

The Saluki opening home football game will play in McAndrew as scheduled, a University official said Monday, though a final report on the structural safety of the stadium won't be released until later this week.

University officials on Wednesday reviewed a "preliminary" report of a study that Hansen Engineering Inc., of Springfield, conducted for the administration.

"It is expected to arrive by Wednesday," said Neville Janney, Eslter and Associates Inc., the engineering company's source. "If any, would be taken.

Swinburne said. "I'm anticipating something close to a capacity crowd Saturday. Although it's still early in the season this is going to be a very key game as far as the standing -'

The Salukis were ranked 18th in a Division I-A pre-season poll. Eastern was ranked sixth.

Hansen Engineering's $25,000 study is the final part of the administration's effort to determine the structural safety of McAndrew's east stands.

Questions arose in 1979 when police reported visible movement of the support beams on Nov. 3. The initial study conducted shortly afterward by Wiss, Janney, Elstter and Associates Inc., indicated that further studies were needed.

In September 1981 a report from Engineers Collaborative, the firm which built the east stands in 1979, said the stands were safe.

However, William F. Brower Jr., associate professor in engineering and mechanics and materials, said earlier this week that the chances may be as high as "one in a thousand" that the stadium could collapse under the stress created by a capacity crowd surging up and down in union.

Three-hundred union members, and their families gathered at Crab Orchard Lake Monday as part of a national Labor Day celebration to reaffirm labor's goals.

In Carbondale and 140 other cities AFL-CIO affiliates rallied under the theme "Across America - We Will Be Heard."

Herbert Donow, an English professor at SIU-C and president of the Jackson County Central Labor Council, said union members had come together to express their dissatisfaction with President Reagan's economic policies.

Donow said union members across the nation will make their presence felt in the 1984 political races.

"We'll support candidates who support more jobs," he said. The downward spiral during President Reagan's election, which he called "a mistake," will take several years to reverse, he said.

At the picnic many of the union members were wearing a variety of Democratic presidential candidates buttons on their lapels.

"We want free trade, but we also want fair trade," John, vice president of the International Ladies' Garment Workers Union, said in his speech to the workers.

He criticized the flooding of the clothing market by countries which exploit their workers, such as Haiti, China, and some South American countries that have no child labor laws and pay their workers "16 or 18 cents an hour."

Clay warned of the possible intrusion of the Chinese in international multi-fiber agreements, which could cost workers' jobs. He also criticized the Caribbean Basin agreements, which he said will cost jobs in steel, rubber shoes, tools, auto parts and other industries.

Clay blasted the promise of
FCC expected to OK proposal giving AM stations more time

By John Schrag

A 50-year-old regulation limiting nighttime broadcast time for radio stations are on the air may be changed this week, much to the delight of some Southern Illinois broadcasters.

On Tuesday or Wednesday, the Federal Communications Commission will begin hearings that could approve a proposal giving "daytime" AM radio stations an additional four hours of broadcast time a day, according to Matt McCann, program director at WCIL-AM in Carbondale.

The proposal, McCann said, would allow the stations - which now may only broadcast from sunrise to sunset - to go on the air two hours prior to sunrise and remain on the air two hours after sunset.

The sunrise to sunset regulation applies to AM stations, like WCIL-AM, which broadcast at the same frequency as larger, metropolitan "clear channel" stations which were granted the sole broadcast rights in a region. WCIL-AM, for example, broadcasts at 1520 kilohertz - the frequency of KDKA-AM in Pittsburgh, which is authorized by the FCC to broadcast 24 hours a day.

McCann said he had hoped for an extension in the past, but the FCC had been noncommittal. "He said that while he hopes eventually all stations will be able to broadcast 24 hours a day, he thinks the four-hour extension is "an important first step.""

"We will definitely take a step in the right direction," he said. "We feel that while the regulation made sense in 1934, the monopsony given to clear channel stations is unnecessary in 1983."

George Dodds, owner of WGQH-AM radio station in Marion, said he also hopes the FCC will grant the extension.

His station, which broadcasts at 1560 kHz, must go off the air at sunset because WIBO-AM in Baton Rouge, La., is the clear-channel station at that frequency.

"I'm pinching my breath a little," Dodds said. He expects the extension to go through.

"We will be overjoyed if this happens," he said. "But we hope that something could eventually be done to allow us a 24-hour broadcast." Dodds said that because his station is the only one in the area to offer an "all-Christian" format, the FCC is doing an "injustice" to the public by forcing him to stop broadcasting at sunset.

"My philosophy is that if you're performing a service that no one else performs," he said, "in this business you should be allowed to do it all day."

WQDN-AM in Du Quoin and WIBO-AM in Metroplis also limit their broadcasts to daytime, but no one in the stations on Monday knew if it was because of FCC regulations. Other AM stations, such as WMIX in Mount Vernon, WHPI in Herrin and WEQQ in Harrisburg, may broadcast 24 hours a day, but must reduce their power after sunset.

WHCO-AM, in Sparla, is licensed for 24-hour broadcasts, but chooses to use a sunrise-to-sunset schedule, a station official said.

McCann, who has been to Washington, D.C., to lobby for a change in the daytime regulation, said that if the FCC decides to extend the broadcasting extension, there is a chance that Congress will mandate such a change.

Challenger home after ‘fabulous mission’

EDWARDS AIR FORCE BASE, Calif. (AP) - Challenger returned home to a concrete carpet of lights early Monday, and its six-day trip drew high praise from many of the shuttle program, who called it "just a fabulous mission."

"The cleanest mission yet," Lt. Col. David H. Abrahamson, the program chief, said after that shuttle and the five-man crew did the first night shuttle landing at 12:40 a.m. PDT.

It was a triumphant end for a near-flawless eighth flight that began with the first night launch of a shuttle, from Cape Canaveral, Fla.

McGovern considers candidacy

WASHINGTON (AP) - Former Sen. George McGovern, the Democratic Party’s 1972 presidential nominee, says he will decide in the next two weeks whether to become a presidential candidate in 1984.

In an interview published Sunday in the Washington Post, McGovern said he is considering running for president to focus attention to liberal ideals he has long advocated. McGovern said he has spoken to party leaders and sought to form a campaign staff.

**Iliinois drops in per capita income**

WASHINGTON (AP) - Illinois dropped from fourth to ninth in the nation in per capita personal income amid sluggish growth in the three years ending in 1982, Commerce Department figures showed Monday.

The nation’s fifth largest state remained among the wealthiest but lost a key seat in growth to the energy-producing states of the South and Southwest as well as New England, with its burgeoning high-technology defense industries, a report from the department’s Bureau of Economic Analysis showed.

**Chad says Libya bombed garrison**

N’DJAMENA, Chad (AP) - Libyan fighter-bombers raided the Chadia government garrison at Oum Chalouba in a 90-minute dive-bombing attack Monday, the government said.

There was no immediate report on the extent of the casualties.

Information Minister Soumaila Mahamat said the attack by Soviet-made MIG and Sukhoi fighter-bombers was a "vengeful revenge" for the defeat suffered by Libyan-led rebel forces who tried to oust the government garrison at Oum Chalouba on Friday.

STUDENT CENTER
University Farms face losses in wake of hot and dry weather

By Patrick Williams  Staff Writer

Ca. Bondale's hot, dry sum-
mer has taken a toll on Uni-
vity Farms, killing animals, shrinking crop yields and spoiling research. Sixty thousand dollars is a "fair estimate" of what the summer's weather could cost the 2,000-acre, largely self-supporting farm, said Gilbert Kroening, dean of the School of Agriculture.

"Each farmer is going to suffer a loss this year, and we're no different," the weather plus no favorites, said Jim Hubbard, farm foreman at the agronomy research center.

Early in July at the swine research center, two hogs and one sow, worth a total of about $1,200, died from the heat, said Robert Arthur, assistant professor in animal industries. Since swine have no sweat glands, Arthur said, their bodies are unable to dissipate heat well, especially when the humidity gets high. The heat builds up in their bodies and they die from the equivalent of heat stroke.

After the initial losses, the swine center was able to prevent further deaths by using a drip irrigator to keep the animals cool.

But the irrigator was unable to stop damage to research swine, as well as beef and dairy cattle, east less when the weather is hot, skewing data on nutrition research and milk production.

"You really don't get the correct figures," said Dee Woody, assistant professor in animal industries.

Arthur said the weather also affects reproduction rates, so that in the next four months when sows start farrowing there will be fewer animals for research and sale.

But the bulk of the farm's damage has been in the corn crop, off anywhere from 40 to 60 percent. Since the farm's corn is used to feed the research animals, more feed will have to be purchased to make up the loss. And because less corn is being produced nationally, prices for feed will be high.

Some hope still remains for the soybean crop, though, if rain falls in the next eight to ten days. Farm Manager Elden Shaffer said a "good three inch rain over two or three days could really help."

Shaffer estimated soybean yields in early beans are down 20 to 22 bushels per acre from a "typical" yield of 30 to 45 bushels per acre.

Hay production is also off about 30 percent.

To cover the damage, herd sizes may have to be cut. Heat alone wasn't responsible for the damage to row crops. Shaffer said. Early spring rains delayed planting, so the plants suffered from the later drought while immature and over a longer part of their life cycle.

And because of low organic content in the soil, Southern Illinois' soil is less tolerant to dry weather, Kroening said.

Although rain in the next few days could help allay some of the farm's loss, there is fear that nature may wait until early October, harvest time, when dry weather is needed, to deliver rain.
Global response best

WARS HAVE BEEN started for less significant incidents than the Korean jetliner story — and it is perhaps a testament to the restrains imposed by the nuclear age that such a situation did not develop.

When the Soviet Union shot down a Korean jet with a U.S. congressman and dozen of other Americans aboard, the question was raised: in the present scope of world affairs, how should economic sanctions be applied to the statuesque barometer of the poor. That question in its broadness raises only more questions. Was this a prelude to any situation in this way calculated? If so, to what extent? If not, was it a mistake? Did anyone in the Soviet Union consider the possibilities for internal repercussions before allowing their fighter to fire?

U.S. POLICYMAKERS have been grappling with the latter question, and it is a decision on the first one. And the Soviets haven't been much help in that effort.

The government line in the Soviet Union continues to be a denial. Their airplane took off at 3:40 a.m., a few minutes after the Korean jet — and that jet was a spy plane at any rate, the Soviets maintain.

The government of South Korea, however, changed drastically. While the jetliner incident in itself may or may not reflect the Soviet government's treatment of the issue in the afterthought the flight between Seoul and Beijing was canceled. It would be foolish to believe that the Soviet government would, with any sincerity, admit a mistake. At best, the U.S. might even — and this is an incident that didn't happen — even and that is certainly.

ALL THIS VAGUENESS — in the details of the shooting, in the Soviet government stance, in the extent of support from some U.S. allies — has led to the formation of a pipeline embargo, an Olympics boycott, restriction of cultural and scientific exchanges — and have failed to change Soviet positions in international affairs. And military force is the wrong trump card to play in a nuclear scenario.

WHAT THE U.S. must do is seek the cooperation of other nations in the world. The shooting down of a passenger jet with passengers from a diversity of nations is, after all, not an incident of importance only to the United States.

While it would be counterproductive to permanently ice relations between the superpowers, some temporary worldwide sanctions — such as an airline boycott on an international scale — could at least make the Soviets consider in relation to the rest of the world and make the Soviets less trigger-happy.

Higher ed subsidies ignore poor, too

According to the staff editorial in the Sept. 1 Daily Egyptian, the index of leading 31 economic indicators was used to show that there's a recovery, well, that's another story. How about the barometer is no good, so, that's another story. That's supposed because the federal budget cuts of $17 billion - or much as the "rich." This of course suggests the question, "What poor selected federal money that could be cut back?"

One that quickly comes to mind is higher education subsidies. Why it after study has shown to benefit higher income individuals more that really ought to remember the last Daily Egyptian analysis, this is, is cuts for higher education.

The Egyptian staff might respond by saying, "Well, most students I know certainly aren't that rich. But couldn't we be "rich" — oil wells, a Rolls.

**Letters**

WHY SEND OUR CHILDREN TO SCHOOL DURING HOTTEST MONTH OF THE YEAR?

Heat ... Area Schools Close Early. Hundreds Of Heat-Related Deaths. Record-High Temperatures ... 14 Straight Days Over 90 Degrees ... on and on the headlines scream of scorching weather!

I've experienced them, as I do, at 90, but stuffy school rooms, unable to concentrate, and send two children to schools with equal conditions. Why do we send our children to school during the hottest month of the year when it's unnecessary?

This problem of Illinois schools starting earlier and earlier each year has worried me for a long time — first as a parent and now as a graduate student. Each year our schools move the starting date up — day by day, week by week. This year schools in our area started as early as August 1, the second week of August.

If we keep moving in this direction, schools will soon start the first week of August, then the last week of July, soon ... However, there is a solution, a simple solution.

All we have to do is follow Missouri's recent lead, and wait until after Labor Day to start school. School could continue longer in the spring. We all remember how cool the end of May and the first of June were. What about current students' looking for schools' opening to increase state tourism revenues. This is illogical. As it is now, families are prevented from taking trips over Labor Day Weekend, the need of vacation make because of the schools' early opening.

But my principal reason for wanting this change is that our children are being cheated of the best possible education this early August starting date and the resulting poor condition and early dismissals.

Surely Illinois legislators, educators, school board members, citizens, and parents are as concerned with this problem as their colleagues in Missouri.

I hereby challenge you to do something about this regrettable situation before the term begins.

— James Johnson, Pinckneyville.

**Animals still have role in world economy**

**EVEN IN THIS age of nuclear propulsion and space travel, we cannot understand the value of the present crop production. The strength of energy — energy that promotes work — compared to environmental maintenance objectives.**

Millization has pushed man toward an ever-increasing use of animal power in the developing world. The use of conventional power sources as draught animals. But in many developing countries, cattle and hogs are almost the only source of energy available. It is the same. The use of animal power is which, in many cases, the most appropriate source of energy for agricultural and rural transport.

A DELEGATE noted in the 1980 World Bank conference on new and renewable resources of energy, and said that "the situa­tion sits are now aware of the necessity of using animal power as an alternative. Such a transaction is inevitable."

— Page 4, Daily Egyptian, September 6, 1983

**JACK PRASRI**

Staff Writer

In 1982, 126 nations agreed in a similar conference that high priority should be given to the development of animal power. At the meeting in Copenhagen, the Conference on Animal Power, including the power provided by the use of animals, including donkeys, camels and elephants.

Director General Edward Story of the Food and Agricultural Organization said that "the basic question is how far the addi­tion energy can be supplied with new and renewable sources."

AMONG THE possible sources cited, "draught animals power can be exploited more rationally, thus post­poning the need to introduce power-driven machinery in the farm." Man has used animal power for millennia. It played an important role in the development of the world's power and transport in Europe and America. Today, China cultivates about 100 million hectares, and 50 percent of that is done by draught animal power. India has an animal draught force of 80 million working animals which help to pull two-thirds of the land and carry two-thirds of the rural transport.

Although Asia has two-thirds of the world's draught animal population, their potential is far from being fully exploited. The FAO estimates show that draught animal power of 10 million working animals in Asia and developing countries is the world's major source of draught animal power, which never appears in their planning exercises. Most countries do not even keep statistics of draught animal power.

$250,000 per annum? Is that a household's combined yearly income of $250,000 sufficient? Would any of these households make less than, and only slightly more than $250,000 yearly? Why, those rich rascals — that really ought to put them on easy street.

The moral of this story is that poor people have no newsroom shouldn't throw cowboy hats, and all those people are "rich" — oil wells, a Rolls, rich rascals — that really ought to put them on easy street.

— Eugene Doherty, First Year, Law.
It's a dog's life — and not just in Pentagon

WASHINGTON — They were just a noisy crowd. But Weinberger would not have that happen. The dogs would not be here this summer when com- plaints were made about the number of homeless people in a lab to train surgeons in the Pentagon. The animals, welfare groups, as well as dog zealots, rallied behind Rep. Tom Pappas to pass the law he found the idea of ex-pelling them from the Pentagon "a shocking waste of animal lives and $7 million."

Unlike in these defenses for an increased weapons budget, there was once had reasonable arguments for the Pentagon's case.

The dogs to be killed were swarming over security shelters. Man's best friend was already friendly. At the nearby lab, each breath of humans — including artificial breathing with dogs before being wounded — were to prevail. Reputable psychologists teaching methods. The $70,000 per dog contrasted with the $370,000 the Pentagon wanted to protect these kennels for twelve German shepherd owners. "The defense, Minn. Myer, Va. Congress said no.

ASIDE FROM these arguments, Weinberger could hardly have imagined he would be the courage. The "world's most lethal living weapons of mass destruction and lives and taxes" monos that upset Lantos and his co-sponsors is almost nothing compared with the wastage of American resources.

A STUDY DONE by the Pet Food Institute found that only 64 percent of the owners even try to give their pets quality care. The rest, 36 percent — ranged from the lazy owners who let their animals roam the streets, and "the dog's life is high and bank and defer at will, to the disinherited owners who find more problems than pleasures in their charges.

The same argument that protectors of dogs were cheating themselves for care of the dogs to the Pentagon to hell, another kind of caretakers, they are being played out in Commack, Long Island. A woman was driving her dog, a cocker spaniel, when a stray dog sprit to ground, but it is not burnt and allowed. Missed the dog but losing control of her car, she moved into the path of a 10- wheel Mack truck. The car was hit, the children were killed and the mother hospitalized in critical condition. The dog, never touched, lived. Its owners have been distraught.

This TRAGEDY didn't earn the national headlines given to the planned Pentagon wound lab. The harm that recklessly dog owners and communities have become dog-killers. As official of the Humane Society of the United States reports that 25 million dogs are killed the personnel or commit-mitment to control dogs. Owners are often well organized to resist全民健身.

In the rare city that can take statistics on the dog waste and passes a scoot.aw, get a scat.ath and poll animals know that they or the police and not the citizens offended by the squatters are in charge. When Boston's scoot law was passed, an editorial in the Boston Globe said that the city it 60,000 dogs to be killed every year. Every man, woman, and 16 "inspectors" assigned to the project. According to the Globe those that "merely exercised peer pressure were given the yard work, and the others were fired by the other people nearby: rape, women (especially those of us who live in crowded towns with very diverse, transient populations), can't be made free from the threat of rape.

But what can we do about it? By no means she is the only woman of the freedoms we have won and live in constant fear behind doors. That would be a ridiculous reactionary way of dealing with the problem. We should instead continue to enjoy our freedom, but wisely.

In the United States, where the birth rate for dogs exceeds the birth rate for children, the animals are not to blame. Responsible owners take more species are protected by a society that gives animals few rights. In this case, allowing owners to go leashes means that the cost of us are forced to go to the dogs too.

Or better yet, we can take self-defense courses and kill two birds with one stone: get exercise, make ourselves stronger and less vulnerable to rape. The Recreation Center offers many very inexpensive martial arts courses.

But just as we can be liberating enough to help our- selves, we can also be in- telligent enough to realize that we must help too. As far as I'm concerned, only fanatical feminists would assert that women can't walk without men, just as only fanatical male chauvinists would say that men can do without women. Most women want equality, which involves giving and taking to achieve balance, rather than superiority, which involves only taking to achieve dominance.

Some people may think me old-fashioned, but here goes: I still believe that women have a tendency to be comforters and men be protectors. And I don't think a woman should be too proud or too stubborn to accept the protection of a man especially if he is good and ad- visable that she should do so.

Just as traveling with a large group of women can reduce the odds of rape or more them can travel with one or more men. Next time a male friend offers to walk or drive you home from anywhere at night, think of the practicality and safety of his offer and please accept it! You might be saved from the terror and emotional and physical pain of rape that way.

One more thing, I think the Daily Egyptian has the im- portant responsibility of helping to make its readers (both male and female) aware of the intolerable number of rapes or attempted rapes that occur in Cairo. Instead of giving rape stories the obligatory few inches of space per week, why not place them prominently on the front page, so that no one will read inside the paper? That way, even those people who tend to read only the front page will see the stories, and all readers will realize that the DE considers the high incidence of rape in Carbondale serious enough to pay attention to.
B.J. Thomas, Oak Ridge Boys provide evening of family fun

By Lisa Nichols
Staff Writer

From the moment they took the stage Sunday night, The Oak Ridge Boys had the audience clapping and singing along. Their performance was an appropriate climax for "Family Day" at the Du Quoin State Fair. Indeed, it was people of all ages who flocked to the grandstand to enjoy the award-winning country-rock singing group.

Warning up for The Boys was B.J. Thomas, most popular in the 1970s for such hits as "Raindrops (Keep Fallin' On My Head)" and "Hooked on a Feeling." The crowd was very receptive to Thomas' performance of his hits, including "Rock and Roll Fiddlers," "Old Fashioned Love," "Somebody Done Somebody Wrong Song" and "Any Kind of Love."

Thomas hadn't changed a bit since the '70s, he had that same shoulder-length hair and the same deep, rich voice. He put on a fine show, but it was The Oak Ridge Boys who packed the stadium and who everyone was waiting to hear. And the Boys, who received a Grammy Award in 1963 for the Best Country Performance by a Duo or Group, lived up to their reputation of great showmanship as they entertained the crowds at the Du Quoin Fair for the second year in a row.

It was evident that The Oak Ridge Boys enjoyed what they were doing as they energetically bounced around on the stage, harmoniously singing the popular songs which helped make them famous. The Boys and their band seemed unafraid of the hot lights and the bugs attracted by them, although at one point singer Joe Bonsall quipped, "I feel like I'm standing in somebody's garbage—I think it's my colleagues!" The stagehands quickly sprayed the stage with bug spray, and the Boys jokingly sang and dodged the fumes simultaneously during their next song.

Like a lot of country performers, the Oak Ridge Boys began their music career singing gospel songs. But it was after their switch to country and country-rock in the middle of the 1970s that the four gained prominent recognition. In addition to their Grammy nods, The Boys have won a series of awards including "Vocal Group of the Year" by both the Country Music Association and the Academy of Country Music. Their most recent hit, "A Love Song" from their "American Made" LP, rose to the top of the country charts this summer. They started off the show singing a medley of some of their hits, including "Sail Away," "Come On In" and "You're the One." The crowd went wild every time Richard Sterban belted out one of his notorious bass parts in a song.

The Boys' next number was "Talkin' Bout Love," a song about love with the line "I'm just a little bit out of touch," which they turned into a three-part harmony. The audience joined in and sang along as they enjoyed the performance of The Boys more upbeat hits, including "C'Mon Come Back, Sallie," "Heart on the Line (Operator, Operator)," "American Made" and "Dig a Little Deeper in the Well."

But, as expected, the real show-stopper was "Elvira," which was a hit on both the Country and Pop charts. The crowd was on its feet, singing along to the chorus, the bass parts of Sterban.

Following the final number, "Bobbie Sue," the crowd went wild again, clapping and even throwing flowers to The Oak Ridge Boys to show appreciation for the evening of good family fun.

Radical lyrics, upbeat reggae featured on new UB40 album

By Liz Myers
Staff Writer

When UB40 formed in 1978 in Birmingham, England, none of the band members could play the instrument they had selected. They must have learned fast because their inexperience doesn't affect the high, catchy reggae sound they now produce.

UB40's "1980-1983" is the band's first release in the U.S. and the LP's first ever release as an eight-man band combines their previous English hit single work from two import albums, "Signing Off" and "Present Arms," with some material never before released.

"One In Ten," initially released on "Present Arms," a DEP international label release, is a masterfully mixed cut of throbbing bass and alternating sax work that examines the state of being a number on a list, or as UB40 says, "a statistical reminder of a world that doesn't care."

The haunting lyrics of "One In Ten" refers to the unemployment rates in England, to which all of the band is familiar with in lieu of the fact that each member was without work prior to birth of the band. Even their names, UB40, were chosen from the reference number on an unemployment card.

All and Robbie Campbell's vocals are strong and clearly distinguishable setting UB40 apart from traditional reggae music, but the horn sections on this release are perhaps the LP's greatest asset.

Brian Travers on saxophone and Norman Hassan on trumpet add the music fresh, with a light jazz influence which may start a new trend in the reggae movement.

"Don't Do The Crime...If You Can't Do The Time" is an enjoyable dance tune that provides a lighthearted look at turning away from a life of crime.

Art Alley exhibit opens Tuesday

Photography by "Rip" Stokes and Andrew Leach and watercolors by Celine Chu will be featured in Art Alley on the second floor of the Student Center Sept. 6 through 30.

The exhibit is sponsored by the Student Center Craft Shop and the Student Programming Council Fine Arts Committee. There will be an opening reception Tuesday night in the Art Alley.
Campus Briefs

PUBLIC RELATIONS
Student Society of America will hold its first meeting at 7 p.m. Tuesday in the Mississippi Room.

OFFICIALS FOR intramural floor hockey will meet from 5 to 6 p.m. Tuesday in the Golf Room.

PARTICIPANTS IN the intramural sports badminton singles tournament may register by 11 p.m. Tuesday at the Recreation Center Information Desk. A $1 fee per participant is required.

BETA ALPHA PSI, an accounting honorary fraternity, is having a new member night at 5:30 p.m. Tuesday in Rehn 18.

CERTIFIED SCUBA divers may participate in Scuba Nights from 5 to 9 p.m. every Tuesday in the north diving well of the Recreation Center swimming pool. Participants should bring their own gear. No registration is needed.

AUDITIONS FOR "Dimensions," a minority a cappella program on Channel 6, will be held at 7 p.m. Tuesday in Communications 1046.

SFC TRAVEL and Recreation committee will meet at 5 p.m. Tuesday in Activity Room D.

SOUTHERN THURSTEN'S Disc Golf Club will have a singles membership and organizational meeting at 4 p.m. Tuesday at the Recreation Center disc golf course. Deal shot will be played.

AMERICAN ASSOCIATION OF Airport Executives will meet at 5:30 p.m. Tuesday in Tech A 214.

PI SIGMA EPILON, professional co-educational fraternity, specializing in sales, marketing and sales management, will have a general meeting at 7 p.m. Tuesday in Lawson 227.

WORKS OF art by Doris Templemeyer are being shown from 9:30 a.m. to 4:30 p.m. new through Sept. 30 at the Carbondale Park District, Hickory Lodge, 1115 W. Sycamore.

DONUTS AND coffee will be served at the opening reception of the writing center from 9 to 11 a.m. Wednesday in Faner 227.

SOUTHERN THURSTEN'S Disc Golf Club will have a singles membership and organizational meeting at 4 p.m. Tuesday at the Recreation Center disc golf course. Deal shot will be played.

PI SIGMA EPILON, professional co-educational fraternity, specializing in sales, marketing and sales management, will have a general meeting at 7 p.m. Tuesday in Lawson 227.

Businessman sees yogurt shop as first part of a major chain

By Dan Devine
Staff Writer

Bob Jansen said he brought his first business into the world "completely blindfolded," perhaps a bit recklessly, and with no clear understanding of how much capital was needed to finance the operation.

But now, more than a year later, the Cultured Creams Yogurt shop has climbed out of its crib and taken its first tentative steps toward self-sufficiency.

Jansen, a SIUC graduate student, estimates that he has recovered 10 to 15 percent of his original investment already -- "which is very good," and feels confident enough of survival to indulge in some long-range planning.

"I've always had a desire for investments," he said. "Financial success must come through investments. It's not possible really to rely on just one source of income."

By investments, Jansen does not mean putting money in the bank and waiting for the interest payments. "You're never going to get anything at that point," he said.

Instead, the 25-year-old aspiring entrepreneur raised everything after noticing the yogurt shop last summer. He had been taken with the uniqueness of the operation and would have to be more cautious.

Jansen, who is interested in the shop in August of 1962, and after a winter of small business range planning, he said.

He gained a sense of purpose, learned more about small business than he ever could have learned in his masters in business administration, learned more things.

"I've probably learned more this summer about small businesses than I ever could have learned in my masters program," he said. "I was going into the industry completely blind. There's been a lot of learning. I'll go into business again, I'll be much wiser."

Pricing was the second course in small business -- "real-
Women's Services plans workshops

By Dave Saitens
Staff Writer

"Creative Divorce" is the first of nine workshops Women's Services will sponsor this fall for students and residents of the Carbondale area.

Beginning Wednesday, the workshops will be presented in the Quigley Hall lounge. The workshop will be Wednesday for nine weeks, with each session starting at noon and running about two hours.

The workshops will be conducted by staffers from Women's Services, the Counseling Center, the Student Wellness Center, and qualified individuals from the Carbondale area. Sally Prane, staff member of the Women's Center, will direct the program.

"Creative Divorce" will be

"It's very easy to underprice your product," he said. "I was doing that early."

In his hours at the shop this summer, he said he picked up other routine, practical bits of knowledge - how to handle customers, advertising, budgeting, employee-management relations.

"I've had turnover like any other fast food operation," he said. "Once I lost the entire staff within a few days."

Between the Cultured Creams Yogurt Shop and his job at 7-Eleven, Jansen may be working only 90 hours a week. He said he works from 8:30 a.m. to 11:30 p.m. six days a week and takes it easy on Sunday, working only part of the day. Jansen is also trying to do work on one class, a 500-level management class for his master's degree.

"It's difficult," he said. "I'm without question at my limit. Since April I've pushed myself to the limit. I do what's necessary to keep the business going.

"People have more capabilities than they think I've just become more efficient with my time."

Jansen got some of his training in time-management and business thinking from his degree in philosophy. He said it helped him develop a critical and analytical way of thinking.

"It's probably helped me more than my business degree," he said.

With his ambitions of operating a major chain of yogurt shops, Jansen may see himself as becoming the Ray Kroc of frozen yogurt. But most of the time his ambitions are more modest.

"I think I'm going to survive the year," he said. "Next year can only be better. I'm pretty optimistic about long-term survival of the shop."

Illinois Open Meetings Act hinders council, member says

By Paula J. Finlay  Staff Writer

Carbondale City Council member John Kelley said the Illinois Open Meetings Act that he sponsored last year covers 25 years ago to ensure that public business would be conducted in the open.

The law was strengthened in 1980 to require that when the majority of a quorum of public body discussions were open to public business, the public must be notified and allowed to attend.

But the law can cause problems for small groups such as the Carbondale City Council. Kelley told a journalism class last Tuesday in the case of the five-member council, three members make up a quorum and can conduct the business. The law prohibits two members from consulting each other about issues before the council, except during council meetings.

"That is a severe problem of the act," Kelley said.

Kelley was elected in April to a four-year term on the council and said that he would like to see the City Council to adopt an amendment to change the definition of the quorum to four members for the time being at least. "I'm going to push actively for this," he said.

Kelley said the amendment is a "basic good government issue that I strongly support," but he is not sure such action is crucial. He said his view is to put this on the back burner.

The application of the law to two city council members "causes a basic political problem," Kelley, a SIU-C law professor, said.

A politician does three things, according to Kelley: "to persuade people to join his side, then he makes compromises with the compromiser," Kelley said.

"It's very difficult, if not impossible, to conduct a public meeting," Kelley said.

SIU-C graduate state fied director for Mondale bid

William R. Tapella, a 1981 graduate of SIU-C, was appointed state-wide field director in the New Hampshire campaign for the Mondale for President Committee.

"I feel very fortunate not only to be given this opportunity but to be able to work for a man I believe is truly concerned with the problems of Americans," he said.

Tapella's parents, William and Pat Tapella, live in Herrin.

"The public interest is denied by elected representatives not being able to do what elected representatives are elected to do," he said.

The quality of discussion at open meetings is adversely affected because council members don't know where the others are standing, and if they know where they might now know why, Kelley said.

"It's just very, very difficult," he said.

Another discussion problem results from Carbondale's city manager format because the city manager is not a member of the council and can confer with council members, Kelley said.

"He can count, persuade and compromise but the City Council members can't," he said. "Anybody but the elected representatives of the people can be politicians."

Kelley said there are three exceptions to the open meetings act that commonly apply to local government when they are allowed to go into a closed session: certain personnel matters, consideration of real property, and litigation being taken against or by the body.

These closed meetings are covered by two protections for the public. Kelley said. No action can be taken in a closed session and minutes must be kept open to the public, he said.

Kelley stressed that he does not approve of "closed door" politics.

"It is a significant evil. It does happen and it has happened in the past," he said.

The open meetings act overturns the practice, Kelley said. However, he believes it is "unfortunate" that the act limits small bodies, and that was "unintended" by the law, according to Kelley.

Kelley believes the act is perfectly self enforcing. Kelley made. The act makes the responsibility of the members of the public body "to observe the letter of the law to enforce it," and he said Carbondale's "blue ribbon" council does that.

"I do think the council is an excellent one," he said.
Scientists believe extinctions occur on 26 million year cycle

Los Angeles (AP) - Massive extinctions among living creatures occur about every 26 million years, and the cause most likely is one of space rather than as a result of evolution on Earth, two University of Chicago scientists say.

Challenging the accepted theory that recent life forms evolved gradually and steadily, the professors argue that the "evolutionary clock" may be reset periodically - with drastic consequences.

Their findings were published in Sunday's editions of the Los Angeles Times.

Such occurrences as the death of dinosaurs about 65 million years ago appear to be part of a cycle of annihilations, said Professor David M. Raup, chairman of geophysical sciences, and Professor John Sepkoski Jr.

"Paleontologists and evolutionary biologists have been absolutely locked into a dogma of gradualism (slow, constant change), but this is changing very rapidly," Raup said.

The professors presented their findings at a recent conference at Northern Arizona University. The statistical analyses are being checked by mathematicians and may be presented in a paper for the Proceedings of the National Academy of Sciences this fall.

Raup said, sorting through masses of data, the professors calculated that 10 times in the last 250 million years disasters killed off 400 to 2,000 species, or 25 percent to 96 percent of the life on Earth.

The timetable averages out to about one extinction every 26 million years, putting the next event in about 15 million years.

"Normal, evolution eliminated 200 to 300 species over the course of a million years. It hasn't been fashionable to look for cycles," said Raup. "It has been thought that mass extinctions were a highly complex set of interactions that ought to be random in time."

To explain the theoretic cycle, Raup suggested that the sun somehow "backfires" every 26 million years, although no evidence has been found to indicate this happens.

Another theory is that the solar system swings through one of the Milky Way galaxy's denser spiral arms, and is affected by other stars, dust.

It's not clear how life forms could evolve gradually and steadily, as evolutionists have assumed, but the professors argue that the mass extinctions are a result of catastrophic events that are part of the solar system's evolution.

"In the 26 million year period, it could mean the evolution and survival of species is that from time to time, all bets are off."

Get down to business faster. With the BA-35.

If there's one thing business students have always needed, it's an affordable, business-oriented calculator. The Texas Instruments BA-35, the Student Business Analyst.

Its built-in business formulas let you perform complicated finance, accounting and statistical calculations - the ones that usually require a lot of time and a stack of reference books, like present and future value calculations, amortization and balloon payments.

The BA-35 means you spend less time calculating, and more time learning. One keystroke takes the place of many.

The calculator is just part of the package. You also get a book that follows most business courses, the Business Analyst Guidebook. Business professors helped us write it, to help you get the most out of calculator and classroom.

Deaths in hospitals from heart attacks are undiagnosed

By Sharon Cohen
Association Press Writer

CHICAGO — Despite advanced technology, almost half the heart attacks occurring in hospitalized patients are not diagnosed before death — a "surprisingly" low accuracy rate that hasn't improved in 40 years, a new study suggests.

The study of 100 consecutive cases of autopsy-proved heart attacks showed the correct diagnosis was not made in 47 percent of the cases.

Heart attack was the cause of death in two-thirds of the victims. All the study cases were patients who were hospitalized, though not necessarily for heart ailments.

Through the study, published in Friday's Journal of the American Medical Association, focused on just one hospital — Baptist Memorial Hospital in Memphis — the level of accuracy is "presumed to be a nationwide phenomenon," said Dr. Edwin Zarling, the report's chief author.

The failure to diagnose 47 percent of fatal acute myocardial infarctions was "appalling," the study said. It noted the low accuracy level is "particularly disturbing because half of the cases were treated by cardiologists."

Cardiologists, however, had the highest level of correct diagnosis among specialists — 60 percent, the study said.

Zarling, now an assistant professor of medicine at the University of Illinois at Chicago, said in a telephone interview that the diagnostic accuracy found in the study is similar to that discovered in research decades ago.

Although there have been technological advances, Zarling said, the rate of proper diagnosis isn't improving because "heart attacks are known to be difficult to diagnose initially."

The study focused on acute heart attacks, defined by Zarling as those compose attacks that are diagnosed within one month of occurrence. They are fatal about 30 percent of the time, he said.

The American Heart Association says 1.5 million people suffer heart attacks each year in the United States. Heart attacks are the leading cause of death in the nation — with 560,000 people expected to die this year from attacks.

Stress Management — Session 1 meets 3 to 5 p.m. Tuesdays for three consecutive weeks. Register by calling the Wellness Center.

Weight Management Group — Session 1 meets 3 to 5 p.m. Tuesdays for six consecutive weeks, beginning Thursday. Register by calling the Wellness Center.

Women's Self-Defense — Ten-week class. Session 1 meets 6 to 9 p.m. Tuesdays. Session 2 meets 10 a.m. to 1 p.m. Saturdays, Sept. 10 to Nov. 13. Register at the first class.

Introduction to Yoga — Participants requested to bring pad or blanket and wear loose, fitting clothing. Session 1 meets 6 to 8:30 p.m. Mondays for five consecutive weeks beginning Monday. Register by calling the Wellness Center.
Decision to make early pit stop wins stock car race for Roper

By Joe Paschen

Staff Writer

In a stock event sanctioned by the United States Auto Club and Automobile Racing Club of America, like the 100-mi. event Sunday afternoon at the Du Quoin State Fairgrounds track, drivers must make mandatory pit stop sometime during the race.

USAC stock point standings leader Dean Roper decided to take his early. It turned out to be a wise decision.

The Fair Grove, Mo., native won the first place prize money $1,100 with an average speed of 90.101 miles per hour, over the one-mile dirt oval. Roper's victory was his third for the season and he also added 270 points to his series leading total.

The second place finisher came Du Quoin's Sunday second at USAC. Butch Jaeger recovered from a third in the first point standings at the fairgrounds. Shriver advanced to the quarterfinals. Shriver's advancement was a substantial lead, closely followed by Joe Wallace's green Regal. Wallace was a lap behind the leaders and was attempting to overtake them.

It turned out to be the top five points. Shriver finished third at five at the finish of Sunday's stock race. Garner's second place finish earned him $2,400 and 210 points to move him into second place in the season's series point standings. Menchel collected $1,900 and moved up to fourth place in the point standings. Wallace won $1,340 for fifth in total points, and O'Brien won $1,150 to fall from second to third in the point standings.

Next on the USAC stock schedule later this fall is a 40-lap event over the half-mile oval at El Dorro in Ohio. If Roper finishes at or near the top in this race, he can start making more room in his trophy case and in his bank account.

Jaeger makes quarterfinals in Open

NEW YORK (AP) – Andrea Jaeger recovered from a sloppy start after putting on a pair of sweat pants in 48-degree heat, and defeated special 17-year-old Celine Chu 6-4, 6-2, Monday to advance to the quarterfinals of the Women's Open Tennis Championships.

Jaeger, the tournament's No. 3 seed, will meet fifth-seeded Pam Shriver in the quarterfinals, Shriver advanced with a 6-2, 6-2 victory over Lisa Berger.

The day's opening match paired two baseline players and it was a point-and-a-half game to the end. Both players used seven minutes and 13 strokes before Gadusek's shot fell short beyond the baseline, giving Jaeger the point.

Gadusek, the two-time open champ, won the set, and during the second set, Jaeger ripped into a pair of long, black pants and rallied to win the next two sets.

Observer, a semifinalist in this tournament last year when she upset her doubles partner, Martina Navratilova, had an easy time with the 17-year-old Brender. Gadusek's match was played on one of the outer courts at the National Tennis Center, while Gadusek and Jaeger were battling on the stadium's center court.

Triathlon slated for Saturday

A public triathlon sponsored by St. Eun's Touch of Nature Environmental Study Center and Student Recreation Center is slated for Sept. 10 at Touch of Nature.

The triathlon, which is set to begin at 8 a.m., includes a one-kilometer swim, a 3.5-kilometer run and a 13-kilometer bicycle event.

Touch of Nature is located southeast of Carbondale near Little Grassy Lake. The $5 entry fee may be paid at the Recreation Center. More information is available at 535-3531.

Maureen is playing better than she did last spring," said Auld. "She's moving the ball around the court more and she is becoming a more aggressive player. I'm pretty pleased with the way she's been playing." Good-natured off the court, Maureen turns into a fighter when a tennis racket is placed in her hand. She has demonstrated the ability to battle back in matches where she finds herself down. "You can never count her out of a match," Auld said.

Despite her success at No. 6 singles, moving up in the Saluki lineup will not be easy for Maureen. Alessandra Molinari (22-12 at No. 2 singles last year), Mary Pat Kramer (32-13 and GCAC finalist), Heidi Eastman (GCAC champion at No. 4 singles, 24-16 win-lose mark) and Stacy Sherman (GCAC finalist) return to form the nucleus of a solid lineup that will be difficult to haggle. Amanda Allen, Kris Stauffer, Suzanne Gaioian, and Kathy Harvey will provide depth. "This team's depth will be one of our strongest assets," said Auld.

Adding depth — the hard (walk-on) way — is what Kathy and Maureen will do quite well for the defending GCAC champion tennis team.

Rugby, from Page 20

were so exhausted, and so was Western, that we looked like old ladies out there." Despite the heat, the Saluki white team beat the Western B team 3-0. Junior Kevin Reynolds did the only scoring for the Salukis with a penalty kick. "He really powered that ball," McCurdy said.

Even though the ruggers have lost Rolls, McCurdy is still looking forward to an excellent year. "We really played well, despite the heat," McCurdy said. "I think that winning our first game will be the key to our team's success this season."

"These games against Western proved what we can do, and what we can't. I'm looking forward to practice Tuesday so we can go over everything, and really tighten up as a rugby squad."

The Salukis are making arrangements to go to the Charleston this weekend for a three team tournament against Eastern Illinois and Illinois State.

Shrivers advances to quarterfinals

NEW YORK (AP) — Unseeded Pam Shrivers became the first player to advance to the quarterfinals of the United States Open tennis championships with a 6-2, 6-2 victory over Johanna Langqvist.

Shrivers, a semifinalist here last year when she upset her doubles partner, Martina Navratilova, had an easy time with 17-year-old Boder in a match played on one of the outer courts at the National Tennis Center. The seeded players' cake-walk ended abruptly Sunday with three of them — Vitas Gerulaitis, Steen Denton and Wendy Turnbull — tumbling out of the tournament.

Sister duo making sport a family matter

By Daryl Van Schoorren
Staff Writer

Like her big sister Maureen, Kathy Harney tries doing things the hard way. Two years ago, Maureen Harney made the SIU-C women's tennis team as a fresh- man walk-on. Kathy has followed her sister from her hometown of Peoria to the SIU- C campus with the same thing in mind. She too will try to serve and volley her way to a spot on the defending champiosn GCAC tennis team as a walk-on.

Earning a place on the 1983-84 tennis team will not be easy. The team won 25 matches and lost nine last year. Although number one singles player Lisa Warren graduated, the rest of the 1982-83 cast is back this year.

Maureen was a key member of that team, winning an impressive 35 singles matches while losing eight en route to sharing the conference championship at No. 6 singles. Her career record stands at 66-14, putting her within striking distance of the all-time SIU women's tennis record for wins (76) and winning percentage (.799). Those marks belong to Sue Briggs-Krismanits, who captured two state championships and a midwest championship during her career in 1975-78. Briggs- Krismanits said we're not getting any advantage in three seasons, however.

Maureen said she was not even aware she was within reach of the record until she was told so recently.

"Oh, I don't even want to think about that," she said when informed of the record. "It would be nice, but I'm more concerned with playing one match at a time and winning for the sake of our team."

As a freshman, Kathy is just concerned about finding a place in the starting lineup.

"Kathy needs playing time," tennis Coach Judy Auld said of the newcomer. "She needs to concentrate and work on her consistency. But I still anticipate that with more practice she'll definitely be a factor."

Kathy, who traveled to the state high school tournament four straight years at Peoria Bergan high school, needs to improve her game at the college level.

"I'm working on my overheads and volleys, and I'm trying to be more aggressive on the court," Kathy said. Does she receive any counsel from Maureen?

"Yes, she helps me out," Kathy said with a smile. "Maureen knows me well enough that she can see when I need it. And I appreciate any help I can get."

"I'm not the only sisters, there isn't any sibling rivalry. Although each has enjoyed considerable success in the game, I know the day their mother signed them up for a youth tennis class in Peoria park district, they said a competitive spirit between them makes them work harder."

Fielders win opener, thump rival Billikens

By Jim Lexa
Staff Writer

The SIU-C field hockey squad picked up its first straight victory over St. Louis in a 3-0 win in its season opener Monday.

The Salukis, who were playing without starters Patty Laut'r (sprained ankle), left inner, and Jennifer Barry (infection and flu) right wing, scored three goals within 14 minutes in the second half after playing a scoreless first half.

"It was a slow first half, a midfield game," Saluki Coach Julia Liller said. "In the second half, I felt we really put it together."

With 14:14 gone in the second half, left wing Sharon Leidy scored the team's first goal, 1-0, on the left side of the goal, received the flat pass from Cindy Deflin. Leidy then shot the ball into the net before goalie Shelly Black could recover.

Almost three minutes later, Sue Solimpie scored an unassisted goal to give the Salukis a 2-0 lead.

Then, with 10:12 gone in the half, Deflino rebounded her own shot off of Black's goal pads and scored the final goal of the game.

Liller felt the importance of the game's first goal.

"We just needed the first goal to get things going," Liller said. "Once we got one, I felt that we were going to get more."

"We let down a little after the goal, but it was more relaxed now we know we can do it," Liller predicted that her team would not have one player doing all the scoring.

"We had balanced scoring today, which I believe will continue through the season," Liller said.

The Salukis, although winning the game, were not perfect. The squad had 12 penalty corner plays and could not score a goal off the opportunities.

Liller said last week that the team needed work on the corner play and their thoughts have not shifted to offense.

"I'm still not pleased with the corners," said Liller, who now has 180 wins against 71 losses and 32 ties after starting her 19th season at SIU-C. "We only got two good shots off out of 12 and none went in."

Work and stopping the ball are what need the improvement on that play, Liller said.

"We can't speed up our hits if we don't stop the ball accurately," Liller said. "We've got to work on that because we're not getting any advantage and we should be getting a lot more advantage on that play."

Liller, whose midfield is an area of concern for her because of four new starters there, said she thought they played a better second half. In the first half they were just trying to get the feel of their positions and of the other team, she said.

Liller said her two injured players will be ready to play in the next couple of weeks, even though they won't be at full strength.

"St. Louis Coach Kelly O'Connell said even though her team is now 6-3, she is not planning any changes to try to improve her game at the college level."

This game was also St. Louis' third game of the weekend.

Men rugcers dump Western

By George Peppas
Staff Writer

The Saluki Ruggers went to Macomb and played a hard game of rugby Satur- day, against Western Illinois, but maybe it was a little too hard.

Despite whitewashing Western, 34 to 0, on a sun-baked rugby pitch, the Salukis lost veteran Kelly Rollins for the remainder of the season with a broken collarbone. According to SIU coach Mac McCurry, the break in Rollins' right collarbone will take six to nine weeks to heal.

"We lost one of the key players to our team," McCurry said. "Even if his shoulder repairs in six weeks, the doctors have informed him to stay away from rough play until January. I'm not sure he'll play the rest of the season, either."

According to McCurry, Rollins took a pitch from Don Berda early in the first half. As Rollins was swaying around the right end, one of the Leathernecks defenders hit Rollins low and apomed him. Rollins came down flat on his shoulder.

"Thank God he didn't land on his head and break his neck," McCurry said.

Nonetheless, the Salukins' maroon squad played an ex- cellent game against Western. Midway through the first half, Berda scored a penalty kick to give the Salukis a 3-0 lead. Still in the first half, the Salukis passed their lead to 34

on hookerback Dan O' Neal's try and Berda's extra point kick. O'Neal, junior from Peoria, took a pitch from McCurry and busted through a wall of Leathernecks into the try zone. After(/O'Neal) made those guys look like bowling pins," McCurry said. "He rolled himself through and it was definitely a strike."

The Salukis added another try, from Berda, early in the second half. His extra point kick was no good, but it didn't matter because the Leathernecks were giving nowhere.

"It was so hot out there that everyone was ready to die," McCurry said up. "Midway through the second half, we see RUGBY, Page 19
