High winds, drifting snow hit Midwest

By Jeff Wilkinson
Staff Writer

Frigid winter weather roared into Southern Illinois Sunday as part of a deadly cold front that immobilized much of the Midwest and South. At least seven people and stranded thousands throughout the Plains states.

In Carbondale, it was the high winds, at times reaching 40 mph, that were causing hazardous conditions.

State police said the high winds made the job of clearing the roads next to impossible as drifts quickly reformed to clear the highways.

"Temperatures in Carbondale hovered in the teens, but at times dropped to 20 below zero with wind chill. Blowing snow caused visibility to drop from one quarter of a mile to zero at times as the storm crossed Southern Illinois at about 15 mph," said Associated Press.

"The Associated Press reports a travelers advisory was posted for Illinois, but the National Weather Service in Chicago said the most severe weather occurred south of a line from Peoria to Kankakee.

"The blowing snow and heavy winds caused the cancellation of classes for Carbondale Dist. 59," said the Associated Press.

"Schools in DuQuoin said no one had been treated for exposure or weather-related injuries by 5 p.m. Sunday."

Southern Illinois University police reported about "a dozen or so" accidents by 5 p.m. Sunday and expected more Monday morning.

Carbondale Memorial Hospital officials said no one had been treated for exposure or weather-related injuries by 5 p.m. Sunday.

"SIU-C Security said roads on campus were plowed and salted throughout the day Sunday, but "we don't know how much good it will do because the sail is blowing away."

"The snow flurries and high winds were expected to end Sunday night with low temperatures dropping to 5 to 15 below zero. Monday temperatures are expected to remain in the mid-teens with highs of 5 to 10 degrees.

Oliveira deported by Canadian officials

By Jeff Wilkinson
Staff Writer

Former SIU-C student Michael Oliveira, charged with the 1982 murder of SIU-C professor Sion Ravel, was deported Friday to the United States from Canada.

Oliveira, who was last seen in Carbondale in March 1982, was convicted of murder in December 1982 and then was sentenced to an undated firing, he said. This result of "circumstances beyond their control."

"In theory, the $2.5 collected from all students raises about $75,000 a year," Swinburne said. Under the plan, the funds collected from international students would not be matched by the ISSC.

Swinburne said the plan would result in a decrease of about $4,000 in funds available under the regularly established International Student Grant program. "Under the proposal, awards from the scholarship fund will be based on need analysis conducted by the Office of International Services with the cooperation of the Office of Student Work and Financial Assistance."

The proposal states that no award will exceed the cost of out-of-state tuition for one semester.

A proposal to change the collection and use of the $2.5 Student-to-Student fund by international students is being reviewed by campus constituency groups.

If approved by the Board of Trustees later this spring, the Student-to-Student fund collected from on-campus international students would be used to cover account separations from the fees collected from all other on-campus undergraduates and would provide scholarship money for needy international students.

Bruce Swinburne, vice-president for student affairs, said the proposal was drafted to remove "the inequity" for international students in the fee collection and requirements of the scholarship award program.

Swinburne said that although international students are technically eligible to participate in the Student-to-Student program, the provision requiring students to file a Family Financial Statement each year to substantiate need has resulted in the inability of international students to benefit from the awards.

If approved, the plan would put the Student-to-Student funds collected from international students in a separate account under the control of the Office of Student Work and Financial Assistance. Swinburne said the money would then be used as an emergency scholarship fund for international students who are facing financial crises as a result of "circumstances beyond their control."

Lebanese leaders quit; troop pullout pact may be scrapped

BEIRUT, Lebanon (AP) — Prime Minister Shafik Wazzan and his eight-man Cabinet resigned Sunday, and President Amin Gemayel said he might scrap the release of prisoners as a drawal agreement with Israel as demanded by his opponents.

Wazzan, a Sunni Moslem, said he was stepping down to allow formation of a national coalition government that might help end Lebanon's factional bloodshed.

After accepting the resignations, Gemayel appointed Maronite Christian, well known to his supporters, to replace the discredited president.

The Cabinet reversal today, along with Gemayel's appointment of Dr. Michael Kane as prime minister, may improve chances of ending Lebanon's 15-month civil war.

The agreement, however, has nothing to do with foreign troops in Lebanon. Gemayel's statement today that a new government would be formed within 72 hours was widely seen as a way to please the United States and hold off potential criticism of Gemayel's rejection of the release pact.

The agreement was reached last week in Beirut by leaders of the Christian Phalange Party and other Christian groups who agree to Governor Samuel J. Abou-El-Fadl as prime minister.

The agreement also includes a promise to form a government

PROVIDENCE, R.I. (AP) — Despite its troubles, the island's 17 troopDonald K. Jackson is in the news again. The former Assistant United States Attorney is in contention for the job of Rhode Island State's Attorney, a position he held from 1980 to 1982.

Jackson was the focus of a civil rights lawsuit filed by the American Civil Liberties Union in 1980, which alleged that he had improperly influenced the release of prisoners from the Adult Correctional Institutions.

The lawsuit was settled out of court, but the controversy continued to follow Jackson as he sought higher office.

In a recent interview, Jackson said that he had learned from his past mistakes and was determined to serve the people of Rhode Island with integrity and fairness.

Jackson is a graduate of Harvard Law School and has a long history of public service, serving as a judge in Massachusetts and as a federal prosecutor.

He is currently the executive director of the Rhode Island Bar Association, a position he has held since 1992.

Jackson said that his experience as a lawyer and judge has prepared him well for the challenges of the Attorney General's office.

Jackson is a member of the Rhode Island Democratic Party and has been endorsed by several prominent political figures, including Governor Lincoln Chafee.

In the upcoming election, Jackson is expected to face a tough challenge from Republican candidate Robert F. Kennedy Jr., who has been a strong critic of the state's attorney general in recent years.

Jackson said that he is confident of his ability to win the election and serve the people of Rhode Island.

He said that he would bring new energy and ideas to the Attorney General's office, including initiatives to reduce crime and increase public safety.
City council to take action on rental housing suggestions

By Bruce Kirkham
Staff Writer

Recommendations by the Citizens Advisory Committee on rental housing in Carbondale will come before the Carbondale City Council Monday night.

The recommendations were part of a comprehensive study by the CAC of the rental housing market in Carbondale. Council members voiced general agreement with the CAC’s recommendations when they were presented Jan. 23.

The CAC recommendations include increasing the frequency of inspections of rental housing units so that each unit is inspected every two years. Landlords would have the option of early voluntary inspections. The CAC also recommends that the city prepare legislation that would require landlords to post in the rental unit a certificate of compliance with the inspection program.

The CAC recommended that the city continue a program of enforcement of behavioral standards for tenants such as noise, alcohol and parking laws, and enforcement of zoning ordinances concerning occupancy of housing in single family zones.

The CAC project concluded that the number of problems with Carbondale rental housing can be reduced through a consumer awareness program and recommends that the city work with SIU-C to provide such a consumer awareness program.

The CAC also recommends that the city work with the Landlord Tenant Core Committee to draft a model lease for voluntary use by landlords and tenants.

The council will take action to amend an ordinance that governs the use of portable signs in Carbondale. The change in the ordinance would place restrictions on billboard-type signs with changeable lettering mounted on vehicles. The amendment would redefine a portable sign as any sign that is not painted or magnetically attached to a vehicle with copy that is not changeable. The definition also states that signs less than five square feet in surface area and not of changeable copy attached to vehicles are not considered portable signs.

City ordinances specify that signs classified as portable cannot be displayed more than 30 days per year. The Carbondale Planning Commission voted 4-3 to reject the change in the ordinance.

Per-call phone bills start March 1

By Terry Lavecke
Staff Writer

General Telephone of Illinois has announced Usage Sensitive Service billing will be implemented permanently March 1 in Murphysboro and eight other communities.

The billing system computes local service charges by the number of outgoing calls completed, the duration of each call, the time and day each call is placed and the distance involved in each call.

Phone users in the communities affected by the new billing system have been sent bills under this format since March 1983 for comparison with the flat rate service charges currently assessed. Belleville, Chatham, Cherry Valley, Mahomet, Metropolis, Morton, New Milford and Washington are the other communities affected.

The one-year comparison billing period showed, beyond a doubt, that USS was a fairer way for customers to pay for local telephone service,” said Larry Henry, GTI’s state vice president and general manager, in a press release. The Illinois Commerce Commission approved charges for Usage Sensitive Service in December 1982 when the system was implemented in Champaign, Jacksonville and Tuscola. Residential customers will pay $3 and businesses will pay $6 for access to the telephone network. Three cents are charged for each completed call and a half-cent for each minute the call lasts.

A 50 percent discount is offered for every call placed between 9 p.m. and 8 a.m. on each day and Sunday. The ICC also established a ceiling of $50 for residential customers and $40 for businesses.
Registering to vote a step toward change

"IF WE'RE OLD enough to die for our country, we're old enough to vote!"

This was the cry that rang across college campuses during the 1980s as students protested, picketed and petitioned for the right to vote.

On July 1, 1971, their wish was granted in the form of an amendment to the U.S. Constitution which granted all 18-year-olds the right to vote.

Since that historic day, however, young people have gained the dubious distinction of having the poorest voter-turnout rate of any age group.

In the 1982 Congressional elections only 18 percent of 18- and 19-year-olds voted. Twelve years later, only 16 percent of the people between the ages of 65 and 74 did so.

In a survey conducted by the non-partisan Public Agenda Foundation, 40 percent of college seniors said they had been politically pummeled to cut federal student loans from Social Security benefits to date.

This year, however, there is a renewed effort to increase student political clout by increasing student turnout at the polls.

Perhaps the most popular survey released this week is a good step in that direction.

For the first time the Undergraduate Student Organization will have registration tables set up in the Student Center, residence hall dining areas, classrooms and off-campus locations. In addition, the Foundation for Advancement of Colored People, the College Republicans and student groups supporting senator candidates Paul Simon and Ed Meese will also be canvassing in Carbondale neighborhoods.

Past attempts at registering students at SIU-C have met with little success, so tonight's efforts are particularly important.

But cuts in federal student aid, a new law which bars aid to men who don't register for the draft and student involvement in the anti-war movement have also touched close to home as the primary reason among students.

In Illinois, it is estimated that 8.2 million eligible voters, about 2 million are not registered. Many of these unregistered voters are students. If students don't register, they don't vote. And if students don't vote, they can expect to continue to be ignored by their elected representatives.

Hunger debate more a sign of demagoguery than true concern

There's a new controversy in vogue these days, namely the debate over the extent of hunger in the U.S.

When presidential candidate Edward Meese cited the scarcity of food as evidence clearly showing the existence and extent of hunger, he put his finger on one of the most modern-day Scrooges. Members of the media and critics of the president (reduced to two classifications) pointed to obfuscation and 'hunger' food lines and soup kitchens. Don't leave us out of your cry. I'm sure you'll leave us out of your Western diet. But as you fail to appreciate its logic, these food lines and soup kitchens prove they are going hungry.

Did I miss something?

The people in these food lines are not going hungry, and in most cases it is because they are the beneficiaries of the good will of private citizens. All the hunger stories in the news about the federally-funded anti-poverty programs cannot match the generosity of the private sector in time and money given to such causes. But what of those federally financed programs that are designed to help our nation's poor? It has been estimated that if all of the federal money that is supposed to go to the indigent went to them directly, with no government middlemen, each poor household would receive around $40,000 per year. If anything, and I think it is safe to say, the poor, those soup lines could not be furthered. This, then, is the newspeak of today: privately funded soup kitchens that feed people are evidence of hunger. And federal money channelled mainly to middle-class bureaucrats is aid to the poor.

Inane Orwellian alliances are a dime a dozen lately, and I would hope that no one would be trying to construct yet another. The primary significance of the year 1984 relates not so much to literary prescience as it does to politics. In this election year voters must decide what kind of policies will get people out of our food lines and back to work. The inefficiency of transfer programs, the corresponding tax drag they impose, the difference in results when some give pause to those who think more spending will not ultimately put even more people out of work. As recent mobilization of hunger, the choices of 1984 may well depend on the size of national appetite for demagoguery.

Eugene Doherty, First Year Law

Planet's survival requires planning

This response is to the Daily Egyptian editorial on acid rain. Information is needed not only for acid rain, but also for many other environmental concerns. Unfortunately, acid rain is only one of many interrelated and critical environmental issues.

One essential environmental factor, not discussed in the editorial, was the effects of concentrated mining for western low-sulfur coal. For example, what effects such mining have on areas of fertile cropland, precious soils and therefore our nation's food supply? Perhaps it will not have any immediate impact, but in the long run, perhaps acid rain is not as severe a problem as presented.

Since I cannot accept that there is no danger from the effects of either acid rain or concentrated mining on western crop lands, pertinent and critical questions arise. One question is whether or not the concentrated mining will permanently and unfavorably disrupt portions of our precious western crop soils. If the mining does adversely affect the soils, what of our food supply? Acid rain and concentrated mining in western soils are only two examples of the critical environmental issues that face us all. Americans need to consider and weigh which policies they feel will be in balance with the cost of resulting long and short term effects.

Presently, the world must face an environmental disaster of results of both acid rain and other pervasive environmental issues. To consider and debate and decide with each issue separately is futile, self-destructive and foolish.

Increasing thorough investigation and well rounded (all factors known considered) planning is essential to achieve a method of harmony with our planet, Earth. How many of us actually take the time to even worry about this planet's survival? How long can we wait?

By Brad Lancaster

Diet and what do we see? We live well thanks to our country, we're old enough to vote. We must work for the country's survival. We've heard it all. We've heard of our nation's survival. We've heard of our nation's survival. We've heard of our nation's survival. We've heard of our nation's survival. Whether our differences, whatever our hatreds, passions or hurts, we are all still a unique species unlike any other form of life found anywhere else in the Universe. It is to this end, the protection and continuation of our human existence, that each of us must work for the continued existence of our species.

You may ask: "How is that?" and well that you should, because simple, direct questions demand simple, direct answers. The key words are participation and involvement. Besides getting a chance, only you can do it, and when you do it with a bunch of other people, you become a whole new breed of voter who is not only interested in the election of the week, but in the kind of life. John Githens' song, "Alice's Restaurant," Get the idea. That's the vote we stand. Divided we fall. How many times have we heard that before? Well, it's one of those truisms that apply to real life. Our famous Salukis are proud of that. Teamwork, group effort, association, all of these skills have the same basic principle: people working together to reach a specific goal, utilizing their resources to the furthest limits of their abilities to achieve a winning objective! And you can do it too.

I speak for a relatively new group on campus. We're in our second year of re-emergence and perhaps you've heard of our name on those rare occasions when we've popped to the surface. We are the United Nations Simulation Association, and in the next two years you'll be hearing more about us. You see, it's getting near that time when we hold our annual simulation, an opportunity for students, acting the part of representatives from one hundred and fifty seven nations in our U.N. simulation. So if you need a group of friends which country has four delegates, want to have a gas deciding the fate of the world, plus enjoy some nifty benefits, we encourage you to join our novice group.

This year we and the Graduate Student Programming Council are sponsoring Dr. Andrea B. Constant, the ambassador of Sierra Leone to an embassy in the Soviet Union, as our keynote speaker. His topic will include comments on the other military triangle: the Soviets, Africa, and Asia, on Tuesday, in the Student Center Ballroom. So if you're interested in military intimidation, nuclear war, financial collapse, toxic water or pesky bugs of a thousand different natures, please stop by our booth in the Student Center and say hello. Maybe even register. It's up to you.

As Dr. Spock would say, "Love and Prosper." — Morris L. and Charles Economic and Social Council U.N.S.A.
Festival judge sought strong female portrayals

By Dean Jones Staff Writer

Patricia Erens faced a crowd Friday that was eager to hear about "women in revolt" in Hollywood films, the theme of this year's Big Muddy Film Festival, and said that although she was surprised and happy that the festival had chosen that topic. "For those of you who have come to hear of women in revolt, the news is bad."

"When it came time to pick titles," she said, "there weren't any films featuring strong, independent women in revolt - at least as I defined it." So Erens, a professional in film studies and one of three judges of the festival's film competition, said she instead focused on women screen characters that were "exceptional in some way."

She found that strong, intelligent and independent women were common characters in Hollywood films of the 30s and 40s, when actresses like Hedy Lamarr, Crawford, Davis and Dietrich brought these attributes to the screen as parts of their personalities.

But by the 50s, she said, most film heroines were interested only in finding a husband. "And although recent cinema has featured strong, independent women in the main their behavior reflects merely their sexual interest, which ultimately serves to entrap the heroines as the objects of desire and the victims of cruel punishment."

To illustrate her topic, Erens selected five films to be shown during the festival that, not surprisingly, featured Hedy Lamarr, Davis, Crawford and, surprisingly, a young Elizabeth Taylor in her first major role. She said the films "speak to young women about dreams and ambitions."

Erens' presentation was followed by the Southern Illinois premiere of "Born in Flames," a "provocative, feminist film by independent filmmaker Lizzie Borden."

Although the film has the appearance of a poorly done home movie, with inconsistent color and erratic camera action, the result is a rough texture running throughout the film that is suitable to the images of people in the streets and ghettos of the city.

Forensics debate draws 70 teams

By Yvuli Milanes
Staff Writer

The University of Alabama-Tuscaloosa won the Saluki Invitational Forensic Tournament held at SIU-C over the weekend. Alabama was also in the top five teams in the national event held Sunday evening at SIU-C.

"We're fortunate that our tournament has grown during times of budget problems," said David Buckley, faculty member in the Speech Communication Department and director of forensics. "This is a brand new tournament. New tournaments can be difficult to get started, but ours is probably the largest forensic tourney, national or regional," Buckley said.

Seventy teams from 33 universities participated in the event, conducted by various locations on the campus Friday, Saturday and Sunday. Several hundred students and their coaches traveled to SIU-C to compete, with debate finals held in Davies Auditorium Sunday night.

Buckley, who has coached SIU-C's team since 1980, said his team acted mainly as host for the tournament. SIU-C members and visitors competed, he said, to get some experience. Buckley considers SIU-C to be the same across the country and throughout the year. This year it is National Speech and Debate and Censorship of the Press.

Buckley said that student coaches hold the debate as judges for the competition.

Buckley said he looked for teams that spoke knowledgeably as well as effectively.

"The premise is that someone who is a polished speaker but does not know the facts should talk to someone who knows what he is talking about but isn't quite as polished," he said.

Keith Sanders, dean of the College of Communications and Fine Arts, said debating offers students "some of the best experience they can get in research, analytical thought and presentation."

Cross-examination, in which students from opposing teams question each other, is the most stimulating part of the debate process, Sanders said. "Debate students must use their acquired knowledge in a practical manner under pressure and without prior preparation."

Whether a university as a whole is liberal or conservative, Sanders said, "the debate team does not affect the position a debate team takes on an issue."

"Research is intellectually rewarding," Sanders said, "because a student must learn about the topic, learn a little bit more about it. SIU-C has a long tradition in debate, Buckley said. Many SIU-C faculty members were once debaters."

Last December, the SIU-C debate team took first place in a West Coast competition involving 60 teams at the University of Southern California. In January, the team won a similar event at UCLA.

"Our team is good because we've had a lot of support from the University. We have a lot of money and effort from the speech department," Buckley said.

A variety of individual speech competitions were also held as part of the tournament.

The film also showed the Somocista's freedom fighters and their battle against the Nicaraguan government. The film offers the first concrete evidence of U.S. involvement. Some footage showed stacks of crates of machine guns, grenades, and ammunition being loaded onto ships in Nicaragua. Yates, who is one of the year's judges in the Big Muddy Film Festival, has covered activities in Central America since 1962.

"You learn to live with the danger," Yates said. "If you're covering a battle, you go with one side or another, never on your own. But mostly you just get caught up in trying to do a story well that you're not scared.

Since 1981, news stories have reported that the CIA is involved in supplying the Somocistas with arms, money and training. Yates said her film offers the first concrete evidence of U.S. involvement. Yates, who is one of this year's judges in the Big Muddy Film Festival, has covered activities in Central America since 1962.

"You learn to live with the danger," Yates said. "If you're covering a battle, you go with one side or another, never on your own. But mostly you just get caught up in trying to do a story well that you're not scared.

Since 1981, news stories have reported that the CIA is involved in supplying the Somocistas with arms, money and training. Yates said her film offers the first concrete evidence of U.S. involvement. Some footage showed stacks of crates of machine guns, grenades and ammunition being loaded onto ships in Nicaragua. Yates, who is one of this year's judges in the Big Muddy Film Festival, has covered activities in Central America since 1962.

Students can earn credit in six academic areas through an interdisciplinary study program in Greece offered by SIUC this summer.

Informational meetings for those interested in the program will be held at 7 p.m. Wednesday in Lawson 221. Students who want more information can contact Mark Johnson at 687-641.
Town throws cold birthday party

Storm greets Reagan's homecoming

DIXON (AP) — A winter storm, reminiscent of the "Furious Blizzard" that struck the day before Ronald Reagan was born, blew into northwestern Illinois on Sunday, the eve of a visit by the president to his hometown for a huge birthday party.

"We have a just a few snowflakes in the air right now, to give the town a little character," said Mae McClerndon, owner of this prairie city's souvenir shop, Sunday evening. "Snowflakes in the air right now, owner of this prairie city's weather, 'The Air Force One, the president's jet, is scheduled to land Monday morning at Rockford, and Reagan is to be shuttled by helicopter to Dixon.'

Sunday, the eve of Reagan's birthday, Dixon business said early that Sunday's snowfall may have a few snowflakes in the air right now, to give the town a little character," said Mae McClerndon, owner of the Dixon souvenir shop, said early Sunday afternoon. "But I don't know how long it's going to hold out. It's getting windy."

The National Weather Service forecast snow accumulating to at least 1 inch Sunday, with winds up to 35 mph and gusts at 40 mph.

Clearing and colder temperatures, with an afternoon high of about 13 degrees, were forecast for Reagan's visit Monday.

The Tampico Tornado, a newspaper published until 1966 in the tiny town 25 miles southwest of here where Reagan was born, said that the "Furious Blizzard" hit the area Feb. 5, 1911 — the day before Reagan was born in an apartment above a bakery on Tampico's Main Street.

Despite Sunday's winter weather, automobile and pedestrian traffic began picking up considerably in Dixon as anticipation of a hero's welcome and party planned for Reagan's visit Monday.

Businesses in Dixon's main north-south street, Galena Avenue, said early that Dixon's weather, "Traffic is picking up, especially downtown, and for a Sunday," said Mrs. McClerndon.

The way folks in this northwestern Illinois community figured it, there was noth political about Reagan wanting to come to town. It was strictly a social call. The president, their hero, just wanted to party on his 73rd birthday in the town he loved and had called home for a dozen years after 1950, they said.

But it would be Reagan's first visit as president.

The frenzy of organizing over, little was left Sunday but to hope the weather cooperated — and start to party.

At an afternoon reception Monday at the Chalet Motel on the outskirts of town, for Reagan's out-of-town friends and for former residents to renew acquaintances with those who have stayed.

At a fancy, $100-a-ticket cocktail party at the Brandwine Inn attended by U.S. Agriculture Secretary John Block, Illinois Lt. Gov. George Ryan and a host of powerful people — to help pay for Monday's $60,000 party, the Reagan celebrates birthday, Page 12.

REAL party — In dozens of homes in this city of 15,000, an interdenominational church service was planned Sunday night at the First Christian Church, where Reagan taught Sunday school from 1924 to 1928.

Most Dixon businesses said they would close until after Reagan left — except restaurants, gasoline stations, Mrs. McClerndon's shop and similar establishments.

"The excitement was never over the fact that we would actually see Reagan," said Mrs. McClerndon, emphasizing the word "see." She says she'll likely be too busy to join the town party. "It was over the fact that he was coming here and that's good for business."

She shop usually is closed Sundays and usually has only one sales clerk for the 10 a.m. to 4 p.m. weekday hours.

She was open for business Saturday until after 6 p.m., and Monday Sunday at 7 a.m. Much of her business, she said, was from reporters hungry for Reagan T-shirts, Reagan coffee mugs and Reagan stories.

"I've stopped counting how many times I've been interviewed today, let alone in the last two weeks," said Mrs. McClerndon.

She said she was ready for a crunch of business from the 15,000 people expected to view Monday's 11-unit parade passing within yards of her shop.

Some people said they were nearly as gladly over the arrival of more than 100 "big-time" television, newspaper and radio reporters traveling with Reagan as they were about the president's arrival.

Air Force One, the president's jet, is scheduled to land Monday morning at Rockford, and Reagan is to be shuttled by helicopter to Dixon.

**Brain operation frees man from burden of epilepsy**

GALVESTON (AP) — Tom Kennedy spent 20 years never knowing when his next epileptic seizure might strike. Brain surgery has freed him — possibly forever.

"I can't believe how great things are," said the 31-year-old grocery store employee. "I just smile all the time. I think some of the people who knew me before think I'm guilty of something."

Five months ago, Kennedy underwent an operation in which a walnut-size piece of brain matter was removed from his right front temporal lobe. It was a last resort — no medication stopped his several weekly seizures.

Such surgery is performed annually on only about 200 of the nation's estimated 2.2 million epileptics, according to figures from the Epilepsy Foundation of America in Landover, Md.

The procedure can be used in only certain cases — those in which doctors can identify the location where normal electrical impulses in the brain begin to go haywire, producing the seizures that characterize epilepsy. Also, the source of the disordered impulses must be in a non-visual part of the brain.

Still, Dr. Arthur A. Ward, a neurosurgeon at the University of Washington Medical School in Seattle, says the surgery is significantly underused.

Tooth Fairy turns teacher

The lessons have teeth in 'em

By Anne Flasza  
Staff Writer

Do you like your teeth? Do you want to keep them?

Dental hygiene and dental technology students demonstrated proper dental care at the University Mall Saturday when they kicked off Children's Dental Health Month.

Included among the displays were exhibits on prenatal care, a child's first visit to the dentist and a "toothbrush exchange." (This effective program lends structure, support and motivation to your effort to break the habit."

Cynthia Enterman, assistant professor of dental hygiene, said that about 80 members of the SIU-C chapter of the Student American Dental Hygiene Association participated in the program which ran from 10 a.m. to 4 p.m.

A puppet show titled "Bugs Bunny's Adventure" was presented with the help of Carbondale Brownie troop 168.

About 50 children sat through the show holding balloons that said "Dental health is more than just a pretty smile."

Jane Arminas, president of the Student American Dental Hygiene Association, said the response from children and parents was good Arminas was dressed as the tooth fairy.

Enterman said other activities slated for February are:

-Feb. 7, a presentation on the JoJo and Joyce show on WSUI television.

-Feb. 9, from 3 to 5 p.m., dental hygiene students will be working with the children at the Carbondale YMCA.

-Feb. 11, a trip to the Anna State Mental Hospital to instruct the children in good mental health.

An old-fashioned dentist's office is being displayed in the University Museum in Faner Hall until March, Enterman said.

Scott Cortopassi, a senior in dental technology, was one of about 70 dental technology students participating in the program Saturday.

"There were many people asking about how dentures and replacement teeth are made," Cortopassi said. "A lot of people don't realize that these are made by people and not machines, and that they aren't made by dentists."

Patrice Tosh, a first-year dental hygiene student, said that more than 60 toothbrushes were given out in one hour at the toothbrush exchange. "If children establish good health habits when they're young, it'll make it easier on them later," Tosh said.

Shirley Beaver and Renee Ahf, assistant professors in dental hygiene, co-chaired the February children's dental health program.

Candidates to speak at voter sign-up rally

The Undergraduate Student Organization and the Graduate and Professional Student Council are co-sponsoring a voter registration rally, starting at 2 p.m. Monday in the Student Center Roman Room. Scheduled to attend the rally are Illinois Secretary of State Jim Edgar, Illinois House member Bruce Richmond, and 22nd District congressional candidates Ken Gray, state Sen. Kenneth Burke and Randy Pachtelt, Williamson County state's attorney.

Also attending will be U.S. Senate candidates Philip Rock, president of the state Senate, and Roland Burris, state comptroller; state Senate candidates Ralph Dunn, an Illinois House member, Sidney Appleton, mayor of Murphysboro, and Gary McClure, Randolph County coroner.

Each will speak about education and the need for students to register to vote.

"One of the grandest theatrical entertainments you're likely to see anywhere and at anytime. They are not just ready for the big time. They ARE the big time."

ResortAir expands service to St. Louis

By Philip Fiorini
Staff Writer

State that public acceptance of its service was "outstanding." ResortAir has announced that, beginning Feb. 16, it will offer expanded service from Carbondale to St. Louis from Southern Illinois Airport near Carbondale.

ResortAir President B.F. West said Friday that the expanded service will include flights Monday through Friday from St. Louis departing at 8:30 a.m., 1:15 p.m., 6:10 p.m. and 7:50 p.m. Sunday's two flights depart at 6:10 p.m. and 7:50 p.m., arriving in Carbondale about 35 minutes later.

The flights from Carbondale will depart at 7:45 a.m., 9:45 a.m. and 6:55 p.m. Monday through Friday. Saturday and Sunday's lone flights will depart from Carbondale at 7:45 a.m. and 6:50 p.m.

The cost for a flight to St. Louis is $53, but when connecting with another airline there is a $25 add-on charge, West said.

The 9-month old airline has been using two of its four planes to fly three round trips a day to St. Louis since Dec. 27.

West said he sees a healthy relationship between ResortAir and Air Illinois competing out of the same airport, saying that it will not be a "battle to the death." "We're excited and there will be competition, certainly," he said. "Mainly, though, it will help the traveling public.

Since ResortAir came to Carbondale it has been traveling at a 35 percent load factor, which includes "disturbed" figures, West said, because of SIU-C's month-long Christmas break. ResortAir's three airliners are restricted to 17 passengers.

West said he's confident the expansion will be successful and aid Southern Illinois, since the trade area in Carbondale and Murphysboro is "much larger than both cities would date.

"We were requested by almost everyone to provide more service to St. Louis, or at least advised that the service could be beneficial," he said. Although service to St. Louis will be expanded, West said he doesn't see the possibility of losing some of the smaller flights or that it could be beneficial," he said. "Mainly, though, it will help the traveling public.

Buzbee says changes needed in Social Security amendment

By John Racine
Staff Writer

State Sen. Ken Buzbee, candidate for United States Senate in Texas, told a gathering of voters Tuesday night that he favored a proposal to make Social Security changes needed in order to keep the program sound.

"There's no question that the Social Security system is in need of overhaul," Buzbee said. "I am for the idea of a two-year study, by an impartial group, to chart future Social Security policy.

"And I'm opposed to increasing Social Security taxes at this time, for fear of a economic downturn."

Buzbee said his position was "a no-frills" approach to Social Security reform.

"Al Gore's reaction to the Social Security amendment was naive," Buzbee said. "He didn't even bother to take the time to read the amendment."
Post-exercise cool-down may save lives

Joggers and other fitness buffs who fail to cool down slowly after vigorous exercise could increase their chances of a post-workout heart attack, new medical research suggests.

A "rushing" increase in the level of a hormone that can trigger irregular heart beats has been found in men who exercise hard and suddenly stop, doctors reported in Friday's Journal of the American Medical Association.

"The man who jogs three miles, stops suddenly, talks to his neighbor and potts the dog is pursuing the worst possible jogging recovery strategy," said one of the researchers, Dr. Joel E.Dimsdale, a psychiatrist at Massachusetts General Hospital in Boston.

Dimsdale said the findings likely would apply to women as well.

He said more attention should be paid to the end of the jogging period, when at least two or three minutes of walking are recommended to cool down. The strategy applicable to women is "very beneficial," he said because it helps increase the heart rate to normal levels immediately after the exercise was stopped.

Dimsdale noted that jogging is more susceptible to irregular heart beats called arrhythmias, the "most dangerous aspect of running," than swimming, cycling or other activities.

Levels of noradrenaline, which is important in regulating blood pressure, were found to increase markedly during exertion and to shoot up to 10 times their normal levels immediately after the exercise was stopped.

"At such levels the heart is more susceptible to irregular heart beats," said Dimsdale. "Though noradrenaline will cause arrhythmias in a healthy person, far smaller amounts are needed to bring on irregular heart beats in a person with heart disease, the doctors said.

"Post-exercise cool-down may save lives."

Policy may require drug, alcohol tests on students

ARKADELPHIA, Ark. (AP) — Tiring of toothless methods of trying to keep illegal drugs and alcohol out of classrooms, school boards in two Arkansas towns have passed regulations that can require students to submit to breath or urine tests.

The American Civil Liberties Union, which has argued that the tests violate students' constitutional rights, but school officials say the policies are working and that they have heard little outcry.

"We're not on a witch hunt," said Gerald Jones, high school principal in a town of 5,000 miles away, began enforcing an almost identical program last month.

"The Arkansas Chapter of the ACLU said it expects to file suit over the policies on grounds that they violate students' rights against unreasonable searches.

"The whole way this thing is written is a violation of a student's right to privacy. The schools are supposed to be teaching the law, not violating it," Executive Director Sandra Kurzjaika said.

Ford contends that schools "are not bound by the strict interpretations of the law because, when a student is in school, we still have some of that parental power we used to have."

Under the policies, teachers must report students who act strangely or smell of alcohol or marijuana. Depending on the suspected violation, a principal may require the student to submit to a breath or urine test to prove whether he has been using a narcotic or alcohol. A lie detector test may be required to determine ownership of confiscated drugs.

If the tests are positive, the student is suspended for the remainder of the semester and loses all class credit. A second violation results in the student's suspension for one year, while the third offense leads to permanent expulsion.

Refusal to take the tests can result in suspension for the semester.

Ford said that nine of the 1,200 students in grade 9-12 have been given the urine test, and four were found to have smoked marijuana. A breath test on another student indicated he was intoxicated.

No tests have been given in Hope, high school principal Gerald Jones said. Some 1,000 students in grade 6-12 are affected by the policy in Hope, a town of 8,000 in poultry farm country near the Texas border.

Staff Writer

Students who have been frustrated trying to get access to a terminal at Pfaner Hall for computer coursework can solve their problem with a phone call - if they have the right equipment.

"If you own a home computer and can afford the minimal cost of using your phone to dial into our computer, I'd encourage you to use our dial-up system," said Leo Min, director of computing affairs.

Min said a student with the proper equipment to make connection with the University computer needs only the correct telephone number to dial, which can be obtained from the Academic Computing Department, an access number and a password to log into the SIU-C system.

Just as you need the correct key to get into a room in your house, you must have the right access code to get into your prospective computer area," he said. A booklet telling how to use the SIU-C system is also necessary.

Faculty members use the dial-up system in their offices and homes for research purposes, preparing course materials and performing administrative tasks, Min said.

Two phones are usually used in a faculty member's office so incoming calls will not be missed. The extra phone expense comes out of the faculty member's pocket, Min said.

"It would be more productive for the University if it paid for the extra phone," Min said. "Paying for the phone, as many commercial businesses do, would give the faculty extra incentive to work more hours in their offices. It's pure profit for a university when a professor works extra hours."

Students registered in computer courses are given an access number and password, Min said. The number of access numbers given to each student depends on the number and needs of the computer courses in which the student is enrolled.

Students are also given a limited supply of computing dollars, called "funny money," for translating computer time into dollar figures, Min said. According to Tom Purcell, assistant director of academic computing, this funny money is allocated to the deans of each college and then to each department.

Purcell said an acoustic coupler, or modem, translates phone signals from the home terminal to SIU-C's computer and vice versa. Some microcomputers have a built-in device which does this job, he said, but it is expensive. Having a lineprinter is not necessary because SIU-C lineprinters can be used, he said. Students are not charged extra for lineprinter paper used for their courses.

Because passwords can be discovered by other students, Min strongly encourages students using home computers as well as students working on SIU-C's terminals to change their passwords at least once a month. Students who give out their access number and password to other students will find their computing dollars reduced, he said.

Ten dial-up phone lines are in operation during the day and 24 at night. Min said students can usually log in with no problem, although sometimes they may have to wait about five minutes until a line clears.

The number of people using the dial-up system cannot be determined, Min said, because the number of modems used isn't known. He suggested a system in which students check out modems and terminals from the computer center in Pfaner Hall or in the Learning Resources Center in Morris Library.

"The University probably wouldn't go for that idea because of money problems, and because the idea is just too radical," he said. If needed, students could place a small deposit on the checked-out modem or terminal. The amount would be far less than commercial businesses charge for the same service, he said.

Purcell said it would be extremely difficult but not impossible for home-computer whizzes, known as "hackers," to log into SIU-C systems without knowing the codes and passwords.

"It is conceivable that a hacker could write a program in which the computer continually tries different number-letter combinations for access codes and passwords until it finds the right one," Purcell said.
Ban has widened Olympic hockey eligibility dispute

SARAJEVO, Yugoslavia (AP) — The disqualification of a Finnish goalie from the Winter Olympics broadened the dispute over eligibility of hockey players to at least 12 squads Sunday.

And a meeting at which the United States claimed that four Canadian players had signed professional contracts and were ineligible for the Olympics took on greater proportions.

A Finnish official said he learned at the meeting that an inquiry by his country over the eligibility of at least 11 players from four nations had been accepted as a formal protest by the International Olympic Committee.

The squabble between the United States and Canada, meanwhile, remained unresolved less than 48 hours before the hockey competition was scheduled to begin Tuesday.

"We don't have all the countries here who have players who are potentially ineligible," said Roger Jackson, president of the Canadian Olympic Association. "The Finns have identified four countries but the Canadians are concerned that there might be more than that."

Jackson said representatives of the countries involved would meet Monday. Final rosters for teams in the hockey competition must be submitted by 2 p.m. EST Monday.

The Finnish inquiry followed an International Ice Hockey Federation ruling last fall that Canada could use at the Olympics players who participated in or fewer National Hockey League games. Earlier, the IOC had told the Finns that goalie Hannu Kamppure, who played one professional game five years ago, was ineligible. Jackson said.

"It is important for us that the rules are the same for every team, not just the Finnish or Canadian team. We cannot accept that they can play and ours cannot," said Kosti Rasinen, the secretary general of the Finnish Olympic Committee.

Kamppure was on Finland's original roster for the Olympics but did not come with the team.

The IOC's acceptance of Finland's letter as a formal protest means that, for the first time, it has decided as a group to examine the complaints that have been raised here about the players on other squads gathered for this Winter Olympics.

It was not immediately known Wednesday if the 11 players were, but no United States players were on the list included in a telegram, Rasinen said. He identified nine of the players as coming from Italy, Austria, Canada and Norway.

Kamppure played one game for the Edmonton Oilers of the old World Hockey Association in 1979. Finnish officials said Saturday that he would not be on the Olympic roster.

Hartzog's squad tops Illini for first win

By David Wilhelm
Salukis' Gavin and Mo guard win.

The key event is the one that started it all. Don Phillips jumped a 4:75. Salukis' Hartzog grabbed first with a jump of 4: 5. 8. He then recorded a 4: 11.5. Though Hartzog said none of the jumps were outstanding, they were important. "The triple jump was the key to the meet. Hartzog was a great track man. There was some great competition."

The mile run may have been proof of how competitive both events were. Both Saluki Edwin Wedderburn ran against three Illini runners. Hartzog said the Salukis' 4: 30: 26 was going on it. Wedderburn was disqualified after he burst between two of the Illini runners. Wedderburn's disqualification enabled Illinois to grab the top three positions. However, the Illini runners could also have been disqualified, but they weren't.

Shot-putter John Smith broke a 17' 4 1/2-inch record when he threw 64' 9-7/10 to beat the Illini's Jeff Lehnman to notch the victory for the Salukis.

Despite a time that was nearly six seconds off their world best time set last week, the mile relay team came away with a win. Parr, Van Gorkem, Tori Adams, Elvis Forde and Mike Franks defeated the Illini, 3: 14: 14 to 3: 21: 75. Satelk Stephen Wray won the high jump over Tim Rulka and Todd Mains. Wray jumped seven feet 5-6/4 for six Illini jumpers."

CINCINNATI from Page 20

"I used the meet to experiment with the events. It gives us something to work on and improves things that are swimming alternate events."

Staff Writer

The meet is a three-day, five-session event, Steele said. "There is a chance to see if our team depth can hold up in a section where we are relatively strong. I think we have the caliber and depth to win the meet."

The Saluki women used a combination of strong sprinting and steady diving to thrust Cincinnati into the dual meet season 5-0. The women won 12 of 14 events, including all four relay events and both diving competitions.

Women's Coach Tim Hill was pleased with his team's performance in the meet. "We really took it to them," he said. "Since this was the last dual meet for the seniors, I put them in the 200 medley relay and I think they rose to the occasion."

Hill's seniors, Paula Janson, Papi Ratcliffe, Barb Larsen and Laura Brown, won the 200 medley relay, finishing eight seconds ahead of Cincinnati with a time of 1: 48. 7.

Saluki swimmers Wendy Trick, Amanda Martin and Janet Racke had two events during the meet. Trick won the 100 and 200 backstrokes. Sue Wittry took third in both backstroke events. Martin's third in the breast and Linda Bell finished third in the 200 breast.

Airakses, was the top finisher in the 300 freestyle and the 200 butterfly. Her 3: 20. 14 in the 200 fly set a lifetime best. Stacy Westfall and Larsen finished second and third in the 200 fly, as the Salukis swept the event.

Other individual winners for the Saluki women were Barb Larsen in the 200 back and Janice Coons in the 400 individual medley and Roxanne Carlton in the 1, 600 free. Coons also took second in the 200 free with a time of 1: 54. 81 and Brown was third at 1: 58. 01. Ratcliffe took second in the 100 free with a time of 53. 83 and Rand Royalty was third at 54. 18. "We had some good swims and some bad swims," Hill said, "but we didn't do our goal of going undefeated."

Hill said he thinks his squad will be able to win the Gateway Conference championship this weekend at the Recreation Center pool.

The squad's next goal, Hill said, is to win the Metro Independent Championships Feb. 22-24 at Columbia, S.C.

Saluki diver Angie Fairberhe was the winner in both springboards. Fairberhe posted a NCAA regional qualifying standard of 361. 83 on the three-meter board. She also won the one-meter competition with 353. 35.

Diving Coach Dennis Golden said Fairberhe's performance was best of the season.

SYCAMORES from Page 20

and a 53: 3 mark.

In that period, substituting good for missing was key. Bibbens and Bibbens, giving the Salukis a 49-66 lead. Van Winkle then went to the delay offense.

"I think we had the time that we had been ahead all night and we weren't going to get any calls so we had better hang onto the ball if we can," he said.

The strategy backfired, however, as Bibbens drove to the hoop, missed and fouled Marv Golden, who then hit two free throws. Bufford and Hubbard committed turnovers while still in the delay.

"You have to execute things correctly," Van Winkle said of his delay strategy.

The Sycamores did not score a field goal in the final 1: 48. Their only points came on 10 of 11 free throws.

For the Salukis, the loss was hurtful.

"I'd rather lose by 10 points than this way," Bufford said. "We'll have to regroup. Our next two games are at home."

For the Sycamores, it was a big win for us. We're right in there now with Bradley. Crockett apparently had a better place in the conference."

Bufford did start for the first time this season because he missed Saturday's shooting symptoms."

"I just read our schedule wrong," Bufford said.

Bernard Campbell and Chris George were also absent from the starting lineup, due to "scheduling problems," Bufford said.

The Salukis started Perry, Bibbens, Harry Hunter, Dan Weiss and Roy Birch. Bufford, Geography and Business, led the game with nine minutes left in the first half and SIUC trail 25-21.

The Salukis received good individual efforts from Bibbens, Perry and Birch. Perry had 18 points and 10 rebounds while Birch had nine assists in 21 minutes.

For the second straight week, Parry Duncan was timed at 7. 46 in the 60-yard high hurdles, but it was not good enough for a victory Saturday as it had been the previous weekend against Indiana. Ed Smith and Derrick Gentry of Illinois recorded a 7. 38 and 7. 41.

John Sayre and Andy Geiger of SIUC took the top spots in the pole vault. Sayre vaulted 16-6, Geiger 16-8. Mike Franks won the 300 with a 30. 30. He defeated Illinois' Lester and he was 30. 70. Franks earlier had placed second in the 60-yard dash with a 6-6. 34 and Mitchell Brokeins of Illinois won with a 6-7. 6.
Salukis fall to Hoosiers Friday, winning four of its last five tennis matches to boost SIU- C 6-3 at the Egyptian Sports Center.

Gabriel Coeh and Chris Visconti were the only sparks the Salukis could muster after the 2-2 tie as the pair squared past Bill Koch and Guengerich 7-5, 7-5 at No. 2 doubles.

"I was impressed with Gabe's and Chris's play," Saluki Coach Dick LeFevre said. "It may take some time, but I think our team will come together." Saluki Paul Rasch was thumped by Jeff Cohen at No. 5 singles. Cohen won 6-4, 6-2. Hoosier Kim Anderson breezed past Saluki Steve Quanor 6-4, 6-2 at No. 6. At this point, the Hoosiers were up 4-2.

Wadmark and Nilsson, both from Sweden, were teamed at No. 1 doubles and fell to Pontow and Christoff 7-5, 3-6. But it was an impressive showing considering the two were teamed together at No. 1 doubles only three weeks ago.

"They've (Wadmark and Nilsson) only had two matches together," LeFevre said. "They may take some time before they play good doubles." The final Saluki loss was at No. 3 doubles as Cohen and Maariin slipped past Rasch and Quanor 6-4, 6-4. The Salukis travel to Danville Saturday to take on the Illini. The Illini beat the Salukis last fall 6-3.

"I wanted to see improvement from the high jumpers. They have jumped better in practice than they did at the Mason-Dixon Games." DeNoon said. "We might get three or four athletes out of our athletes and they finished in the top six. I really had figured that we might have a national qualifying mark from Rhonda.

"It may take some time, but I think our team will come together."

Saluki coach Dick LeFevre said.
