IT'S FRIDAY the 13th but even that age-old superstition that black cats and Friday the 13th are double bad luck couldn't keep Miss Carol Howard from cuddling this pretty black kitten. If you're the type who worries about bad luck you'll find a guide on Page 4 that may help you avoid it today.

Foreign Student Registration Reaches New Summer High

* * * * *
Largest Number In History Attending Summer School

Summer registration of foreign students at SIU has set a new high, according to Mrs. Mary Wakeland, foreign student advisor.

Approximately 160 students from 45 foreign countries are enrolled in classes on campus this summer, she said.

Mrs. Wakeland pointed out that during the regular school year the number of foreign students at SIU had dropped slightly over the previous year's record breaking total.

Students from Asia and the Near East comprise the bulk of foreign students at SIU. That area is represented by 95 students, she said, while 23 come from Central and South American countries, 22 from East and West European countries and four from Africa.

National records indicated that engineering is the most popular course for foreign students throughout the U.S. But Mrs. Wakeland said that foreign students here seem to be distributed evenly in all fields.

According to the Institute of International Education, a record number of foreign students visited the U.S. during the 1961-62 school year.

More than 58,000 foreign students attended 1,798 colleges and universities throughout the nation during the regular school year.

The state of Illinois ranked fourth in the nation behind California, New York and Michigan with 3,637 foreign students attending its colleges and universities.

During the same time, an unprecedented number of faculty members were abroad for educational purposes. Their number, 22,263, is a 27 per cent increase over the previous year.

Board Of Trustees Meeting

The SIU Board of Trustees meets at 9 a.m. today at the President's Office.

The largest number of students in history are enrolled at SIU this summer, according to Loren Young, assistant registrar.

A total of 7,221 students are enrolled at all SIU campuses this summer, Young said.

pointed out. On the Carbondale campus there are 3,023 males to 2,429 females.

The Carbondale campus, which includes VTI, has an enrollment of 5,542, an increase of 290 over last summer. The Edwardsville campus has an enrollment of 1,769, an increase of 245.

Young said the total increase is eight per cent over last year.

Again the male students outnumber the females, Young

Driving To Lake-on-Campus Slowed By Road Construction

Road construction is slowing down swimmers in a hurry to get to the beach at Lake-On-The-Campus.

The east end of the loop road around the lake is blocked by construction of the new physical education building.

In the next few days, the west end of Campus Drive will be closed for four or five days near Greek Row while a new road bed is constructed, according to John Lonergan, landscape architect.

About a month later, the road will be closed for a day while the surface is poured, he said.

While the road is closed, drivers heading for the beach can reach it by two routes.

The official route, Lonergan explained, is south on Oakland to Chautauqua, west to the Reservoir Road, then double back on the SIU farm road to Campus drive.

One construction official said some drivers have unofficially been getting to the beach by using the east end of the loop road and driving through the physical education building construction area.

Another pointed out that some drivers have been using a narrow, dusty path which runs through the Greek Row construction area. Instead of taking the left fork at Greek Row, they drive straight ahead to the dead-end and then turn left.

University officials and construction men frown slightly at the unofficial routes because of the possibility of accidents and getting a car stuck.

Philippine Dancers To Perform Wednesday

Philippine culture will be traced from the sixteenth century in the form of dances and folk music 7:30 p.m. Wednesday in the Morris Library auditorium.

Flany Domingo Chu, a Philippine Ph.D. candidate who arranged the choreography, will highlight the program.

The five part program is sponsored by the Committee on Asian Studies. "Glimpses of Philippine Culture" will include authentic dances capturing the arrival of early Spanish influence to current western customs and traditions.

\$3 Million Project:

Library Addition Bids To Be Opened July 19

Bids will open July 19 and 26 for construction of an additional floor and a four-story tower on the Morris Library. University Architect Charles Pulley said completion of work on the library is expected sometime during the school year of 1963-64 at a total project cost of approximately \$3 million.

Subject of July 19 bidding will be such mechanical aspects of construction as ventilation, plumbing and heating. On July 26 bidding will be on general construction and finishing.

Pulley said a story measuring 142 by 303 feet will be added to the present library. The four-story tower will measure 106 by 120 feet.

The tower will remain a shell, similar to the upper stories of the University Center, until funds can be provided for completion, Pulley said.

Plans call for completion of the interior of the second and third floor, however.

Pulley said prospective bidders have been provided with blueprints and specifications.

Carbondale Firm Submits Low Bid On Campus Loop Road Extension

Apparent low bids totaling \$156,525 have been received at SIU for construction of a 2,700-foot extension to the campus' mainloop road.

Triangle Construction Co. of Carbondale was the lowest of three bidders on the main construction project at \$154,335, and estimated the job time at one year. The Cunningham Electrical Co. of Anna submitted the only bid on four street lights for the road—\$2,190.

General construction includes laying the 40-foot wide

curbed blacktop road with accompanying storm and sanitary sewers and adding an 80 foot extension to the campus steam tunnel. The loop extension will run from the Chautauqua Street Housing area entrance near the Agriculture Building north across Chautauqua and Grand Avenues to the old Lake Street entrance at Mill. Two Chautauqua barracks and a university owned residence on Grand Avenue will be sold at public auction and removed for the project.

SIU To Offer Menard Inmates New College Study Program

SIU extension courses at Menard state prison this fall will start to take on some of the aspects of a regular undergraduate program, according to Thomas E. Cassidy, lecturer in English.

Besides teaching freshman composition and drama courses at SIU, Cassidy devotes several hours a week to teaching and helping the Menard inmates.

In past years these classes at Menard taught by Cassidy and other SIU faculty members have been a combination of courses mostly from the liberal arts curriculum at the college freshman level. A typical group of classes was government, English, and phi-

losophy, or during another year, English, mathematics, and government.

This summer Thomas Oliver, SIU supervisor of testing, and Cassidy have been administering aptitude tests to the men at Menard before setting up the classes to start in fall.

Plans are for a selected group of inmates to be followed through their courses for the year, possibly even a second year, to measure the effectiveness of the program in ultimately qualifying those who finish class work satisfactorily for additional college work anywhere after their release from Menard.

Other regular class work in freshman courses also will be offered again at Menard,

where the inmates enroll voluntarily for this self-improvement phase of their rehabilitation.

Warden Randolph has been very pleased with the progress of the program of Menard classes, Cassidy said, which also have been followed with interest by Myrl Alexander, director of SIU's Center for the Study of Crime and Correction.

The Menard program of required freshman courses is one of the very few formal college-level prison classes anywhere, Cassidy added. Some Joliet prison inmates are enrolled for television course credit through the University of Illinois, and a few Menard prisoners also are

enrolled for credit for TV classes.

At the recent eleventh annual Conference on Correctional Education, held on campus late in June and attended by some 70 midwestern prison and correctional officials, a panel discussion on penal education was received with a great deal of interest for more than two hours. On the panel were Cassidy, David T. Kenney, associate professor of government, and John E. Grinnell, SIU vice president for operations.

Cassidy has taught at Menard for the past three years, Kenney also has been an instructor on this "commuting faculty," and Grinnell started the Great Books program at Menard.

THOMAS CASSIDY

Play It Cool And Beat The Heat

Wrap a wet towel around your head if you want to keep cool. That's what the rural women of Bengal, India do, said Purnima Chaudhuri. (This is guaranteed not to produce any more "water on the brain" than the American suggestion "go soak your head.")

Miss Chaudhuri also said when it is too hot they "just sleep outside." Another innovation is to put in the windows slats made from the Khas tree and sprinkle water on them. "As the breeze blows in, the air is cooled," she said.

The Indian methods of keeping cool are matched with equal ingenuity by students at SIU.

"I live in the shower," giggled Madonna Blessing from the Home Economics department.

She said that foods with a lot of fat or starch cause the body to give off more heat than fresh fruits and vegetables. She suggests plenty of liquid (she didn't say liquor!) and says sherberts cause less body heat than ice cream.

America's quest to keep cool is filled with paradoxes. For example, one student points out that:

"Women take off some of their clothing in the summer (more every year, it seems) and then stay out in the sun to broil."

Marilyn Anderson, a senior in sociology, suggests, "Stay in the air conditioned office and do nothing—or walk slowly if you have to walk."

Mary Jane Phillips, an elementary education major, decided that sitting in the shade of the University Center patio drinking lemonade was quite refreshing. It is nice of SIU to provide soft drinks, watermelon and lemonade occasionally for its summer students, she said.

A jump in the lake is often advised but Dave Koch, a graduate student, grinned, "I go over to Crab Orchard and sit in the lake."

Mary Ann Rhoades says

having all her classes in cool buildings or air conditioned rooms helps her.

Have you ever tried pouring water on your ears? You never know till you've tried. It may not cool you off, but you'll sure have clean ears.

Dr. Paul Campisi, chairman of the sociology department, feels that class discussion would help take one's mind off the heat.

And there are those who insist it's ALL in the head. It could be. But it's obviously not true in the case of one student who candidly admits: "Can't be; there's nothing in my head."

'The Enchanted' - A Pleasant Evening

"The Enchanted" opened Wednesday night at the Southern Playhouse and although less than enchanting, it provided a pleasant evening.

The play is a fantasy centering around a young girl, her suitor and a ghost, who she hopes can help her make the world happy. It has humor and light moments, but not as many as the title would suggest.

Maurice Valency, who adapted the play from Jean Giraudoux's "Intermezzo," described the play as a biological study of a young girl "when she turns from girlhood to womanhood, from the love of mankind to the love of a kind of man." The study is much more obvious in the description than in the actual performance.

The play is set in a clearing in the woods just outside a small French town. Here the ghost (David Shafer) meets

with Isabel (Frances Goodwin). Isabel's role is well played and her conversations with the ghost seem completely plausible.

Her human suitor, the Supervisor (Dave Davidson) seeks to break up the strange relationship between the ghost and Isabel. The Supervisor's lines sounded read at the start of the play, but improved as the play progressed.

A plot to kill the ghost is planned by the Inspector (Howard Estes), who thinks the ghost is actually a live man, who supposedly drowned in a nearby lake earlier. Agreeing to everything the Inspector proposes is the Mayor (William McHughes). Both draw many laughs from their humorous lines in the play. Their make-up, which gives them a clown appearance, and well-cited mannerisms contribute to the humor.

Soby Kalman in the role of the Doctor is by far the outstanding performer on the stage. His performance gives "The Enchanted" a professional touch.

A surprisingly well-played job is turned in by the five elementary school girls from Carbondale. Becky Etherton's facial expressions of surprise and amazement border on scene stealing in the third act. Other girls are Vicky Volk, Gretchen Hartzog, Patti Harlage, and Nancy Martin. The roles of Armande and Leonide Mangebois, gossiping sisters, are played by Virginia Derus and Mickey Carroll. The deafness of one of the sisters forces the other to repeat some words such as "bottom-side-up" and "pregnant," which although producing a rather crude humor, still evokes laughs.

First executioner (J. David Hilton) and second executioner (James Pettit) take part in the only singing number in the play. Both seem too young and collegiate to be executioners, but their handling of their revolvers surprises everyone.

Greek Teacher Wins Award To Study Here

Persephoni E. Tzakou of Athens, Greece, who will do graduate study at SIU, has been awarded the Helen W. Atwater International Fellowship for 1962-63, the American Home Economics Association has informed University officials.

Miss Tzakou, principal of the Marasilon Teacher Training College for home economics in Greece, spent three months at SIU in 1960, studying home economics under the State Department's teacher development program, and another six months as a graduate student under special scholarship grants from the Illinois Association of Future Homemakers and the SIU Home Economics Club.

She expects to complete the requirements for the master's degree in home economics education next year. She has been designated as a recipient of an SIU graduate fellowship.

Student Picnic Sunday At Giant City Park

A Giant City picnic outing sponsored by the Student Activities office, will be held this Sunday.

The fifty-cent ticket includes a box lunch, lemonade, and bus trip.

No special recreational activities are planned. However, sporting equipment ranging from softball to badminton will be available.

A chartered bus will leave the University Center building at 1:30 p.m. and will leave Giant City park at 6 p.m.

Reservations can be made at the Student Activities office.

Dr. James Aaron, coordinator of Southern Illinois University's Safety Center, will be a featured speaker at a meeting of the Illinois Police Chiefs Association here Sunday and Monday (July 15-16).

Aaron will give an illustrated talk on SIU's basic and advanced police training courses.

Dr. James E. Aaron, lecturer in health education, is attending a professional seminar in safety and driver education at Iowa State University this week.

After the symphony concert Friday a dance will be held on the University Center patio at 9:30 p.m., featuring twist records and music to change her mind.

Kathleen Koski, SIU graduate student in art, will present her first art exhibit Sunday afternoon in the University Center Gallery Lounge at 3 o'clock. The exhibit will run for two weeks beginning Sunday and running until July 30.

Miss Koski's exhibit of paintings, prints, drawings concerns people. Her exhibit reflects people in jazz music surroundings.

Visitors to the exhibit will have a chance to meet Miss Koski at a reception in Ballroom A of the University Center which is adjacent to the Gallery Lounge. The reception will last from 3 to 5 p.m. Sunday.

Community Development Department Helps Freeburg Analyze Itself

The city of Freeburg has completed its first year of self-analysis with the aid of SIU's Department of Community Development.

A story in the current issue of the "Community Development Newsletter" reported on the initial year's progress.

Among other things, Freeburg has held three two-hour training sessions in community development; formed a steering committee of representatives of all organizations in the community which has prepared an opinion survey; decided to study recreation, housing and government as its first three areas of community research and or-

ganized three study committees.

The recreation committee undertook an inventory of all recreational facilities in the community, conducted surveys of adults and high school students to determine needs, and is working with the Freeburg Recreation Project, Inc. to develop a 63-acre park site purchased three years ago with funds from an annual community homecoming.

The government committee is in the process, the article said, of gathering information about the village and township governments, while the housing and planning committee has undertaken a land use survey.

Dr. William J. Tudor, SIU director of Area Services, was named coordinator of the Jackson County program to raise funds to build and equip the Salk Institute for Biological Studies.

The Institute which is directed by Dr. Jonas Salk is being built at San Diego, Calif.

Dr. Tudor's appointment was announced by Andy Gloescki, state representative of the National Foundation-March of Dimes.

The Department of Music will present Donna Kratzner, pianist, in her senior recital, Sunday, July 29, at 4 p.m. in Shryock Auditorium.

Students who plan to graduate in August have until July 20 to fill out formal application for graduation, the Registrar's office has announced.

The \$17 graduation fee is payable at the time of application, according to Sue Eberhart, recorder.

Bong Hi Cho To Present Piano Recital

The Department of Music will present Bong Hi Cho, pianist, in a graduate recital at Shryock Auditorium, July 22, at 4 p.m.

The recital, given in partial fulfillment of requirements for the Master of Music degree, includes these selections from the works of Bach, Chopin, and Debussy: Bach's Partita V: Praeambulum, Allemande, Corrente, Sarabande, Tempo di Minuetto, Passepied, Gigue. The Chopin section of the recital is his Sonata III: Allegro Maestoso; Scherzo-Molto vivace; Largo, and Finale-Presto, ma non tanto.

The Debussy selections are "Reflets dan l'eau," "La soiree dans Grenade," and "Feux d'artifice."

*And Then There
Were None...*

A MESS OF MELONS were consumed Wednesday by students and faculty members at the watermelon feast staged by the Student Activities Office. Lush, juicy sections of melon (left) were waiting on the tables when the "guests" arrived. Marie Nemnich, a graduate student from Florissant, Mo., (center) does what comes naturally when one is around watermelon. And when the party was over only a few tell-tale seeds remained on the tables. (Photos by Bob Miller)

Library Now Concentrates On Books For Graduate Study Programs

The Liberal Arts and Sciences have an adequate collection of books at the high levels but other fields are lacking, he explained.

"There is a great deal of emphasis on American and English literature as well as some on Latin America," he added.

According to Dr. McCoy, many of the books come from members of the Friends of the Library, an organization whose chief aim is to improve the library.

"More than \$450,000 of gift books have been received in the last five years including special collections of great value and size," he said.

"The special collections have book plates bearing the name of the donor. The most recent is a gift of 800 books on Mexico given in memory of Arthur C. Hoskins."

Faculty members are frequently attracted to or repelled from a university because of the adequacy or inadequacy of the library, he said.

"We have to keep up with current book productions both in this country and abroad. As we acquire an increasingly competent and scholarly faculty, we have to meet their teaching and research needs," McCoy said.

But most of them may still be checked out, even though they aren't catalogued, he hastened to add.

Dr. McCoy said that of the 600,000 books on all SIU campuses, 500,000 are here on the Carbondale campus.

"Our entire book collection is quite adequate on undergraduate levels," he said. "Now we are trying to build an adequate collection on the master and doctoral research level."

East Main And Wall Streets

It's Friday The 13th

If you're the type who worries about such things as Friday the 13th coming on the same day as a mid-term exam don't give it a second thought -- that is if you slept with your books under your pillow.

Superstition has it that the book under the pillow bit is one sure way to pass. Of course, the prof might have a different idea.

Most civilized people claim they are intelligent and therefore are not superstitious. Yet today you're sure to find a lot of "intelligent" people playing it safe, "just in case."

Just in case there's any doubt see how you score on these questions:

Did you get out of bed today facing the wall that runs North and South from the right side, being careful not to sing before breakfast, but sneezing if you happen to feel like it?

The North-South position of the bed comes from the belief that the poles of the earth exclude beneficial magnetism. The right side is best because the left side attracts malevolence. A person shouldn't sing because this appears to be an over joyous attitude and invites the attention of the Evil Eye. An accidental sneeze will ward off an evil spell, for it is believed that during a sneeze the soul escapes for a moment from the body.

A conscientious individual will hold the soap with which he washes so that is does not slip, for as the soap slips so will fortune slide out of his hands. He will also put money in the right-hand pocket of a new jacket so that while he wears it he will never know want.

If a handkerchief is found on the street, it must not be touched; for handkerchiefs are for tears, and tears are for sorrow. Similarly, lovers must not give knives or scissors to one another on this day for sharp instruments will cut their romance in two.

A woman who loses her wedding ring will also lose her husband, Friday the 13th folklore has it.

A bachelor may gain himself a wife and \$10,000 a year by seizing the last piece of bread and butter on a plate. An unmarried woman will remain unmarried if she seizes the last piece of anything.

This thought began in the time when men seized women, and it was unlady-like for a woman to be aggressive. Therefore, a man who seized the last piece of bread and butter demonstrated the strength that would win him a rich and beautiful wife. A woman who performed the same feat showed the brawn that would scare off potential suitors--so hands off, girls!

But, no matter what cautions are taken it is not easy to avert the Evil Eye. The complexity of the matter lies in the fact that the Evil Eye has patterns of behavior that have never been accurately defined. A dropped fork may mean that a love has been broken in two, or that a strange lady will be calling. Black cats may be the pets or sorcerers, or descendants of the god cats that flourished in Cleopatra's age. A robin may be the giver of wishes, or else a harbinger of death. And, a spider web brings prosperity to many homes.

On this particular day certain interpretations of colors are necessary. Blond or yellow may stand for cowardice and fear, or for gold and prosperity. And, in other areas dark hair is associated with the dark power of evil, and only a blond visitor can guarantee prosperity. In some cases if the first visitor for dinner is blond, good fortune will soon follow.

There seems to be no solution to the dilemma.

One school of thought believes that even the most obvious devices employed on Friday the 13th will thwart the Evil Eye.

However, another counter-acts with the belief that should the first visitor of the day be a woman -- no matter what color her hair -- disaster is certain to follow.

And there are some men that say that holds true for any other day of the month as well.

Master's Candidates

English Examination

The theme section of the graduate English examination will be administered to masters degree candidates, who have conditionally passed the objective part of the examination, Saturday from 1 to 3 p.m. in Muckelroy Auditorium.

The theme will be about 500 words. The candidate may choose a topic from a list of 15 to 30 selected by the English department.

RESTING THEIR FEET. Dr. and Mrs. Orville Alexander pause in front of the Taj Mahal at Agra, India. Their round-the-world is taking them to Germany where the government department chairman will teach a short course this summer. They will return to Carbondale before the fall term begins.

Weekly Editors Open Conference Sunday At Park Near Alton

Newspapermen and women from ten states and at least two foreign countries will attend this year's sessions of the annual International Conference of Weekly Newspaper Editors. The conference begins Sunday at Pere Marquette State Park.

One highlight of the conference is the annual Sigma Delta Chi lecture, to be presented this year by the first woman president of the Guild of British Newspaper Editors.

She is Mrs. Gordon Clemenson, 15th president of the Guild, and editor-in-chief of the five newspapers in the Kent & Sussex Courier Chain.

The Elijah Parish Lovejoy Award for courage in journalism will be presented at the Sunday night session of the conference.

This year's nominees for the Lovejoy Award include Tom Anderson, editor of the Coolidge, Ariz., Examiner,

recommended by the University of Arizona Department of Journalism; Gene Wirges, editor of the Morrilton, Ark., Democrat, nominated by Charles F. Wells, M.D.; Lee Chesley, executive editor of the Carpentersville, Ill., Review.

The "Golden Quill" award will be presented at the annual Sigma Delta Chi lecture. The recipient of the award will be chosen from among newspapermen who wrote outstanding editorials.

Mrs. Clemenson is editor-in-chief of five papers, each with its own local editor, with a total circulation of more than 60,000.

Sue became associated with the Guild of British Newspaper Editors in 1946, the year it was formed by editors of provincial daily, evening, and weekly newspaper editors.

Steven Barwick, professor of music, will be featured as pianist with the Symphony Orchestra today at 8 p.m. in the University Center ballroom.

Phillip Olsson of the music department will conduct the concert.

Life Upon The Summer Stage At SIU Is Far From Being A Bed Of Roses

JANROSE CROCKETT

Being a member of the summer stock company is almost like being the captain of a ship. They not only get to wear the costume and medals of their rank but they know how to "man their ship."

The ship, of course, being the stage and all the many technicalities that accompany the production of a play.

The 13 drama enthusiasts attending SIU for the summer program spend the entire day--from 8:30 a.m. to midnight--studying the ways of the theater.

"This is a good stout program in drama. You learn more if it is concentrated," says Janrose Crockett, a junior at Union College in Barbourville, Ky.

The mornings are spent either rehearsing on stage or learning lines. In the afternoon, they perform the technical jobs of their trade. Operating the lights and sound, hammering and painting scenery, and fixing costumes is part of their training.

"Everybody does everything and we are so busy that we do not have time to get homesick," says Miss Crockett, a native of Ewing, Va.

"One of the favorite jobs is paint spattering," says Janrose. It is hard on the clothes but the publicity they create for themselves while taking a break at the University Center is worth it, she adds.

The evening hours at the Playhouse are spent setting up for a performance or having a dress rehearsal. On Sunday evening, the students strike the set and immediately erect the stage for the next play.

Theater-goers will remember Miss Crockett in "Pursuit of Happiness," and "Silver Tassie." During "Enchanted" she will operate the sound. She also has a part in "Imaginary Invalid" and will help with the technical work on "Showboat."

For their summer work the students get 12 quarter hours of credit.

Miss Crockett, who has an area major in English drama and speech, hopes someday to go into the professional theater. "It takes a lot of pounding the beat and standing in line," she adds.

If her theater dreams do not materialize, she would like to teach drama.

At Union College she is a member of Alpha Psi Omega, national dramatics fraternity, and this past year has taken part in every campus production.

CONCENTRATING upon her hat ribbons, Janrose Crockett moves back into the past with the help of the theater department's costume wardrobe.

Human Smorgasbord:

Summer Bugs Even 'Bug' Men Who Study Them

Dr. John C. Downey crossed his legs casually, pulled up his pants leg and scratched three red bumps.

"Chiggers," he explained. "Entomologists get more bites than anybody else."

As a "bug" expert, Dr. Downey, associate professor of zoology, seemed an ideal source of advice on how to win the summer war against mosquitoes, horseflies, chiggers, woodticks and other insects who look upon the human public as their own private smorgasbord.

Dr. Downey glanced out at the pleasant scenery outside his comfortable office on South Forest. In the shade of a clump of dense trees, it looks remote from the University--more like a fishing camp and an ideal habitat for swarms of mosquitoes and other biting bugs.

"The real cause of concern with an insect bite," he said still scratching, "is allergy."

"Any kind of severe reaction to a bite could be caused by an allergy. And some people may suffer as much as a year from one insect bite."

"The time to really start worrying about an insect bite is if you start feeling ill sometime after the bite," he added.

According to Dr. Downey, mosquitoes, flies, chiggers and ticks have been known to carry diseases, among them encephalitis--which is similar to polio--rabbitt fever, rocky mountain fever and a kind of typhus. However, though the potential is there, the chance of a person picking up such a disease by insect bites is relatively small.

Insect control, Dr. Downey said, is a never-ending problem. Biological control, a case of finding bug-eating bugs, has been the most satis-

factory when it can be used.

"We have some good commercial poisons and a body of knowledge on control," he said, "but insecticides, when misused, can be dangerous." "Housewives," he added, "are better off with roaches than with poison sprayed on their dishes and food."

"But if people are only worried about insect bites while out on a picnic, the best control is a good insect repellent."

How to avoid insect bites completely?

"You might try locking yourself up in a vacuum jar," he suggested.

Beachcomber Party At Lake Saturday

"Beachcomber" is the theme of the party Saturday, 8 p.m., on Campus Lake beach featuring Wendel O'Neal's orchestra. Dancing, singing and general frolic is free for all to enjoy courtesy activities development center of the office of student affairs.

Classical Economic Theories Challenged

Author Hails

Industrial Society

As Ultimate In Goodness

For Mankind

Reviewed By Herman Haag

"Toward a Reasonable Society; The Values of Industrial Civilization." By C. E. Ayres. University of Texas Press, 1961.

Dr. C. E. Ayres is both an economist and a philosopher with highly unorthodox views in each area. It is apparent that his rebellion against the traditional classical theories of economics has caused him to turn to philosophy in an attempt to show that man has not blindly acquiesced to these classical economic laws.

He says, "I have long been in revolt against the dogma of the classical tradition. According to the Grand Tradition of Adam Smith, Ricardo, Malthus, James and John Stuart Mill, Stanley Jevons, Alfred Marshall and all their distinguished collaborators and associates, all the vast congeries of activities by which mankind gets his living are organized and directed by the market, by the price system. No one directs these activities. There is no pattern, no master plan."

Again he states: "Not one in a thousand of those who glorify 'free competition' or 'free enterprise' and oppose all economic and social 'tinkering' has any clear idea of what he is glorifying or why it is glorious. For the community at large, it is sufficient that the great scholars who together constitute the grand tradition of classical political economy have established the meaning of these slogans. Such is the responsibility of Scholarship! In a sense, therefore, the present book represents an act of rebellion against the grand tradition of classical political economy and modern economics. But the rebellion is not against the consequences of these ideas; it is against the ideas themselves."

Dr. Ayres contends that if man has progressed—that if our way of life is superior to that of the stone age—mankind has had some way of knowing what is good and what is bad. For this way of knowing, he turns to Thorstein Veblen, the economist, with his "technological" process, and to John Dewey, the philosopher, with his "instrumental" process. These

two "processes" are identical and provide a "standard of judgement of truth and error and of good and bad." The author devotes one-third of his book to the analysis of this intriguing question. He is particularly critical of moral agnostics who "have persuaded themselves that good and evil lie beyond the scope of scientific knowledge and beyond the grasp of trained intelligence." He attributes this agnosticism to the three doctrines of scientific separatism, economic individualism and cultural relativism, and the validity of each, he sharply assails. He moves on to explore the origins of reason and prejudice which are the protagonists in his drama depicting the battle for men's minds and sets the stage for the victory of reason.

Social scientists have long been irritated by the chidings of their colleagues in the physical sciences who point out that there seem to be no universal facts in the social sciences—that values are modified by cultures. Dr. Ayres attempts to refute this by developing the thesis that there is a basic pattern of rationality in human affairs which is trans-cultural. This pattern is the willingness of all people to accept technology, to prize tools and to value skills. In his definition of tools, he includes instruments of inquiry, presumably those of scientific research. He points out that there is little resistance to the adoption of improved equipment and practices except where they run counter to superstitions. He contends that the proponents of cultural relativism have generally overlooked this similarity in their diligent quest for cultural differences.

Dr. Ayres does not fail to recognize the existence of myths, mores, magic, status and other expressions of irrationalism and superstition. He points out however that although these tradition-bound influences play a large part in the lives of individuals and communities, there exists at the same time a different system of technologically determined values. He contends that the experience of the

western industrialized world justifies the conclusion that superstition is being replaced by knowledge and prejudice by reason.

Essentially, the author is saying that the important values of life are the same for all ages, all people and all cultures. For one who has spent some time in Asia, this is difficult to accept. It may be, however, that Dr. Ayres is correct and that Eastern values will change progressively as they advance industrialization.

In his analysis, Dr. Ayres suggests that religion has been changed by technology. He argues that even here rationality is increasing while superstition and ritualism are declining. Judging from the persistence of fundamentalism even in many areas of the so-called enlightened Western world, religion as a whole, in my opinion, has come only a short distance in the direction the author points.

Dr. Ayre's second major thesis is that judgments of value are true or false in the same context as judgment of fact. He asserts that "mankind has always known that health and strength are good and that food conduces to health and strength and so is good too." Now, however, we have modified that value through knowledge to make it more specific because certain foods which prevent disease are better than mere food. Proceeding to a higher value, the author states that "men have judged freedom more valuable even than food" because men have found that deprivation of freedom does affect all activities in which one may engage.

At this point, he might have cited the experiences of Soviet Russia with food production in contrast to those in our own country. He contends that despite the persistence of traditional patterns of action, people can and do make moral judgments on the basis of scientifically determined knowledge and that this is becoming more and more the accepted

method. We do plan social legislation and institutions on the sound foundation of confirmed fact.

Dr. Ayres argues that value is a unity and not a mixture. Nevertheless, he discusses at some length five "public" values; namely, freedom, equality, security, abundance and excellence as well as the subject of "moral" values. He considers these to be highly interdependent and, in effect, a system of values. One has difficulty here in believing that each of these is equally significant in every culture of our world.

The author firmly believes that the industrial society is the ultimate in goodness for mankind and that it provides the best climate for attaining the high social values man desires. He considers this to be the product of the technological process. Early he states "INDUSTRIAL SOCIETY IS THE MOST SUCCESSFUL way of life mankind has ever known." He considers "the American way of life" as its best current example.

He concludes by saying that the industrial society is "a way of life to which modern man has dedicated himself because it is the epitome of real values which take their meaning from the life process of mankind. And its supreme value is hope—a hope, warranted by past achievements—of a far better life next year for ourselves, in the next century for our children's children, and in the next millennium for all mankind."

As an economist, I agree with much that Dr. Ayres writes. I, too, feel that economics has placed too much emphasis on property and too little on man as a social being. The book is well written and should be challenging both to economists and philosophers. Nevertheless, I was plagued throughout my consideration of the book with the feeling that Dr. Ayres was forced to search far and wide for the structure needed to support the conclusions he planned to reach.

Turner As 'Fast' In The Classroom As He Is On The Cinder Track

Brian Turner is expected to perform well on the track as a distance runner on Lew Hartzog's SIU track squad but the 24-year-old Englishman is performing just as well in the classroom.

Turner came to Southern in the spring of 1961 as a miler and since that time has been representing the Salkus in many of the big invitational track meets.

After four quarters here Turner has compiled an overall 4.1 grade point average in his major field of economics. During the past winter and spring quarters Turner has been on the academic dean's list for pulling a 4.25 average and better.

When he was running last winter in the indoor invitational track meets, he carried 18 hours and recorded a 4.27 grade point average. Just last spring as a member of the SIU track team that finished third in the NCAA track and field championships, Turner carried 15 hours and received a 4.66 grade average.

Turner has been able to pull a high grade point average even though he practices three hours a day throughout the year regardless of weather. Sunday is the only day the British runner takes off.

He studies approximately 20 hours a week despite the fact he is out of town on weekends. Many times throughout the year he leaves on Friday and doesn't return until Sunday. Such a schedule would be hard on anyone but it is especially true of an athlete. Even with the demanding schedule Turner has been able to maintain top grades.

Squirrel Season Opens August 1

The first hunting season of the year -- squirrel season -- will begin August 1 and end October in the southern conservation zone, according to the Illinois Department of Conservation.

Jackson County is included in the southern zone.

Grey, black, and fox squirrels are legal game. But white squirrels are protected year round. The daily bag limit is five squirrels. The possession limit is 10, except on the first day of the season when it is five.

This fall Turner has signed up for 19 hours even though he will be competing on Southern's cross-country squad that will be running every weekend.

Turner is carrying a heavy scholastic load because he plans to graduate in three years. After entering Southern in the spring of 1961, Turner hopes to receive his degree in the spring of 1964. He realizes it's a demanding schedule but the 24-year-old likes the rugged competition it gives him.

Even while in England as a young boy, Turner has been competing against other people. England's school system is based on competition and Turner is used to its demands.

BRIAN TURNER

Glenn (Abe) Martin To Begin 25th Year Of Coaching At SIU

Glenn (Abe) Martin, the dean of Southern's active coaching staff, will be observing his silver anniversary at SIU this fall.

Martin, whose name has been linked prominently with four sports at SIU, is taking the anniversary in his stride. He'll be looking for new "fields" to conquer with his baseball team, which won five straight IAC championships, facing its opponents as an independent.

After arriving as a coach in 1938, Martin led Southern's gridders to several winning seasons, directed the 1946 basketball team to the NAAI championship and is still building an already remarkable baseball record.

However, the SIU Martin combination dates back even further as he starred here as a freshman grider in 1929. Martin captained Southern's 1930 football team, the only undefeated club in the school's history, and was the conference discus champion in 1932.

"I've enjoyed the many years spent competing, both as a player and a coach, in the IAC," Martin said, "and naturally I'd like to be trying for a sixth straight conference title next spring. Nevertheless, I'm excited about the prospect of meeting new opponents now that we're an independent."

Like all veteran coaches, Martin has seen quite a transformation in collegiate sports down through the years. "When I first came here in 1938," Martin said, "we hardly knew what the term 'athletic scholarship' meant." "Still it's difficult to keep good ball players around," Martin said, "as professional clubs are signing collegians with increasing regularity."

The genial sportsman, who twice has been sent overseas by the State Department to conduct baseball clinics, is confident, however, that Southern's winning ways will continue as long as he is able to recruit St. Louis-area prep stars.

BILL CORNELL

Cornell To Try Out For England's Team In European Games

Bill Cornell, 21-year-old track man from Chelmsford, England, has returned home for the European Game tryouts today and tomorrow. Cornell will be running in his usual event -- the mile.

He holds the second fastest time for British milers and was invited to compete in the tryouts by the British Amateur Athletic Board. The BAAB governs athletics in England much the same that the Amateur Athletic Union governs athletics here.

Cornell holds all the SIU mile records with his 4:00.5 time standing out. He turned in the four-minute plus clocking at the NCAA track and field championships when he finished behind Oregon's famous miler, Dyrrol Burleson.

In addition to running the mile for Southern, he has run the half-mile for Lew Hartzog. He also runs on Southern's distance medley,

four-mile and two-mile relay teams that tour the country.

It will be the first time that Cornell has been home since he came to America in the spring of 1961. Since coming to America he has been running under SIU colors.

He has withdrawn from his summer classes and plans to return to SIU in time for the beginning of fall quarter. Bill's wife, Rose, will join him in England in late August and then both will come back here in September.

Following the European Games tryouts are the Games itself and then the Empire Games. If Cornell runs well in the tryouts he will head for Yugoslavia to train for the European Games. The European Games will be held in late August.

Season Tickets

Faculty and staff season ticket holders from last year have until August 1 to purchase the same seats they had. After that time all remaining season tickets will be sold on a first come first served basis.

Price for a season ticket is \$8.50 for five games. SIU will play Hillsdale, Illinois State, Lincoln University, Fort Campbell, Ky., and North Texas State in McAndrew Stadium.

EXAM SCHEDULE

The final examination schedule for the summer session has been announced by the registrar's office.

WEDNESDAY, AUG. 8

8:55 classes (3-5 credit hours)7:30-9:30
 8:55 classes (1-2 credit hours)9:40-10:40
 11:45 classes (3-5 credit hours)10:50-12:50
 11:45 classes (1-2 credit hours)1-2
 2:35 classes (3-5 credit hours)2:10-4:10
 2:35 classes (1-2 credit hours)4:20-5:20

THURSDAY, AUG. 9

7:30 classes (3-5 credit hours)7:30-9:30
 7:30 classes (1-2 credit hours)9:40-10:40
 10:20 classes (3-5 credit hours)10:50-12:50
 10:20 classes (1-2 credit hours)1-2
 1:10 classes (3-5 credit hours)2:10-4:10
 1:10 classes (1-2 credit hours)4:20-5:20

A student who must miss the final examination when scheduled may not take an examination before the one scheduled for the class.

Workshop To Develop Safety Education Courses For Illinois Schools

A special workshop in safety education to develop a curriculum in safety education for Illinois high schools gets under way on campus Monday.

Some of the nation's best-known safety educators are on the faculty of the workshop which concludes August 8, according to Dr. Herbert Stack, visiting professor of safety education in Southern's Safety Center and former director of the New York University Center for Safety Education.

Stack, who along with Dr. James Aaron and Dr. Frank Bridges of the Safety Center is directing the workshop, said an intensive program is planned, delving into such topics as recreational safety, home accidents, fire prevention, physical education-athletic injuries, traffic safety (except for driver education), vocational safety, transportation safety and first aid.

Among speakers scheduled for the workshop are Marvin Criqui, program director, Drive-Division, Rockwell Mfg. Co., Pittsburg, Pa.; Dr. Norman Key, executive director of the National Commission on Safety for the Na-

tional Education Association; Dr. Irmagene Holloway, safety program specialist, division of accident prevention for the Department of Health, Education and Welfare; and Edward Klamm, director of accident prevention, All State Insurance Co., Skokie.

State officials participating include O.H. McKnelly, supervisor of transportation for the Office of Public Instruction; A. Edward Johnson, supervisor of safety and driver education for that office; Sam Freidman, assistant legal counsel for the Office of Public Instruction; Gordon Lindquist, safety and traffic engineer for the Chicago Club; James Williams of Mutual Insurance, Bloomington; and Ernie Goetz, Illinois field representative for the American Red Cross.

St. Louis Bus Trip

The bus to St. Louis for the Municipal Opera performance of "Mexican Holiday" will leave the University Center main entrance at 4 p.m. Saturday.

Dupree Favored To Defeat Russian

Jim Dupree, SIU sophomore track man from Pompano Beach, Fla., and Jerry Siebert are favored to win the 800 meter run next week when the U.S. and Russia meet in an international track meet.

Sports Illustrated picks the U.S. to win the meet and that Dupree and Siebert should win easily in the race even though the Russians--Abram Krivosheyev and Valeri Bulishev--have faster times.

Siebert and Dupree are faster and smarter than the Russian duo despite the fact that the Russians previously this year have faster times.

In previous meets the Russians do not like to run a tactical race which this promises to be. If Dupree and Siebert set a fast pace at the start then the U.S. will win the race for the first time in four meets.

A Look At The Lake-on-the-Campus

HARRY SEGEDY inspects the natural science diorama depicting the plant and animal life found in the Lake-on-the-Campus which recently was completed for the SIU Museum. Segedy and Myron V arax, technicians on the Museum staff, spent some eight months researching--including several days of skin diving--to prepare the display. (Photo by Don Heiberger)

Farmers Urged To Enforce Safety Work Rules To Reduce Accidents And Fatality Rate

More persons are killed annually in farm accidents than in any other occupation, says J.J. Paterson, SIU agricultural engineer and farm safety specialist, in calling attention to National Farm Safety Week July 22-28.

There are a variety of reasons for this unflinching crop of death and injury on the farm but they all rest on the fact the family farm is an independently operated enterprise in which the members of the family are responsible for their own affairs and safety. There are no bosses watching over them to enforce safety rules as there are in most industrial plants where the safety record is much better than on the farm, Paterson points out.

The work conditions on the farm change with the job and

weather. Working hours may be irregular and lead to over fatigue at some seasons of the year. The average farmer today also uses a wide variety of power machinery, electrical equipment and poisonous or explosive chemicals, adding to the hazards of farming.

These facts make it essential that agriculture exert greater efforts to create safety consciousness among farmers. The problem received special attention in the 1962 President's Conference on Occupational Safety in Washington, D.C., earlier in the year. The National Safety Council has been working on the question for 19 years through annual National Farm Safety Weeks and other educational programs but the annual toll of dead and injured

continues high. The economic losses from farm accidents runs into millions of dollars every year.
