Command to come from Bush
By Christina Hall
Staff Writer
Local reserves are waiting for specific orders from President Bush and the Pentagon, military officials said.
"We don't know where we would be deployed to or if we would be deployed," said a source at the Marion Army Reserve Center.
"Nothing will happen until reserve stations are identified," said Lt. Col. See ORDERS, Page 5

Poshard: Options dwindle with time
By Brian Gross
Staff Writer
Bloodshed in the Persian Gulf can still be avoided, but U.S. options of handling the crisis without military conflict are dwindling, U. S. Rep. Glenn Poshard, D-Carterville, said Wednesday.
U.S. forces have been building up in Saudi Arabia by President Bush since Iraq invaded Kuwait, but Poshard said he hopes negotiations through the United Nations and an economic boycott of Iraq will solve the problem without the United States going to war.
Iraq's leader Saddam Hussein probably will not back down, though, Poshard said.
"I have great hope that we don't have to go to bloodshed to solve this problem," Poshard said. "I don't think war is inevitable, but our options are very limited. It seems to me Saddam Hussein is one of those people who is so impressed with his own sense of power that it is very unlikely for him to back down and still save face.
Having the rest of the world in support of U.S. actions goes a long way to solving the situation as does letting economic sanctions take their toll, he said.
Western hostages being held in Iraq complicate the situation, but the United States should not let the hostage threat affect its ability to make sure a war would be a short war, he said.
"The hostages are our most crucial regard right now affecting our ability," Poshard said. "I don't want to kill our own people, and I don't want this to sound hard. But if provocations continue, if a move is made on Saudi Arabia, if the United States had to confront Saddam Hussein's army, it would be difficult to do that without some of our people getting killed."
If this is to be a short war, Poshard said he thinks it will be a very quick war and that Hussein also knows it will be a short war. A war would certainly not be a drawn-out conflict like Vietnam, he said. Iraq has more soldiers in position than the United States does, but U.S. air and naval forces are superior to Iraq's, Poshard said.
"In a short time, our superior forces will have grounded their air forces," he said, "and after that time there would be no match between our air force and their ground forces."

No profit for local stations, regional gas managers claim
By Anny Ryman
Staff Writer
Gas prices have climbed as much as a dime at a time at local service stations in the past week, and customers are not the only ones up in arms.
"We have no control over it. We watch the oil company raise our price, we have to raise our price to the consumer," said Gary Brookmyer, manager of Hamilton Service Station, 221 N. Illinois Ave.
Although the price hasn't increased at Hamilton Service Station in the last few days, Brookmyer said this is only because the station hasn't called gas stations during this time. The last increase at Hamilton's was about a week ago when prices jumped.
Brookmyer said competition in the gas industry is tight.
"You make more percentage-wise when it's cheaper than when it's high because the competition will kick you," Brookmyer said.
The Iraq crisis has heightened people's awareness of the price of gas, he said.
"Everyone is looking at gas prices. You can lower gas a nickel and no one will notice, but raise it two cents and everyone will notice," Brookmyer said.
Gasoline prices are noticeable because gas is a necessity, said John Veatch, vice president of Veatch Oil Company in Vienna.
"If the price of blue jeans went up ten dollars, no one would say anything. The thing about gasoline is that it's a necessity and people have to have it. When the price of energy goes up, it's a little more noticeable," Veatch said. See GAS, Page 5

**Holtz denies steroid accusations**

SOUTH BEND, Ind. (UPI) — Notre Dame football coach Lou Holtz denied a former player's allegations of widespread steroid use by the Irish and pressure on athletes to play while injured.

Former backup center Steve Huffman claimed in a Sports Illustrated story that nearly half of Notre Dame's 1986 lettermen used muscle-building steroids, banned by the school as a health risk. Huffman said he was angry because Holtz called him a "quitter" in a book on the 1988 Irish national championship season.

Holtz said Wednesday he should have removed Huffman's name from the book.

When a flurry of comments ended, two things were clear—there is no proof to support Huffman's charges and he is quitting in his quest for an apology from Holtz.

"I don't come here to defend myself," Holtz said. "I unequivocally deny Steve Huffman's allegations. I think I have done everything I possibly can to deter the use of street drugs and steroids."

Huffman said two Irish assistants suggested he use steroids and that Holtz called him a coward for not playing with a shoulder injury. Holtz said he never knew of an injured Huffman.

"I had been warned by other people that Steve made the comment that he was going to get me," Holtz said. "I took that with a grain of salt. If this article enables him to find the happiness that has eluded him, it serves a useful purpose. I'm really not bitter about this thing. I'm hurt.

"Huffman, contacted by UPI at his Dallas home, said he mainly sought an apology for the book reference.

"I was out to get him for an apology," Huffman said. "A lot of my friends read the book. People have lives outside Notre Dame. If he was man enough to use my name, he should be man enough to apologize. I had no other way of saying I'm not a quitter. I don't think they've caught on that that's what it's all about. It's pitiful to attack the steroids and miss the positive things."

Huffman stands by his story despite Notre Dame Athletic Director Dick Rosenthal's statement that only five of 466 drug tests have come back positive for steroids.

"The public has no choice but to believe this when it's in the papers," Huffman said. "The files are confidential and if we were to look at them, we would see that 45% of the time, they are positive for steroids."

**Conditioning program strengthens Salukis**

By Paul Palbst

Before the Saluki football players ever start putting on the pads they are spending the precision months pumping the iron to prepare for the upcoming season.

The strides the Salukis have been making in the weight room — conditioning and weight training have been substantial, Strength Coach Mike Huffman said.

"The players and coaches have made great improvements since last season," Jones said. "At our fall strength testing session a few weeks ago all the guys were cheering each other on and motivating each other."

The Salukis' improvements are due in large part to the hiring of Jones last August. Jones came from the University of Missouri, where he designed and coordinated the school's strength programs from 1985 to 1988. He now coordinates the entire men's and women's strength program here at SIU-C.

"Since the move of the women's athletes to the arena, I can work with both the men and women," Jones said. "It's more convenient to have them both here.

"I think that he has contributed to the team has been important."

Jones is excited about the idea that he (a Saluki player) can be made stronger and more efficient. If Mike has served in this capacity, we have noticed positive results.

"The players want to take much of a break from the weights during the season or even in the off-season. In the off-season the players work out four, one and one-half sessions per week, with training varying in difficulty of strength, explosive drills and running.

Each summer the players are given specific goals to achieve on their own. When they report back for summer practice certain levels of improvement are measured.

Jones said during the season the players aren't supposed to just maintain a level of strength, but to improve as well."

See STRENGTH, Page 25

**Bears request new indoor facility**

LAKE FOREST, Ill. (UPI) — Soggy grounds Wednesday forced the Chicago Bears to move their practice site once more while team president Michael McCaskey asked the public to help either fund or find an indoor facility.

The Bears, who play host to the Los Angeles Raiders Friday in an exhibition game at Soldier Field, practiced Wednesday at a park near their Halas Hall headquarters.

Wet grounds Tuesday prompted the team to move across the street from its regular practice site to an equally drenched Lake Forest College field.

However, the Bears players refused to wear pads and would participate only in non-contact drills on the slippery grass.

McCaskey said the team's efforts toward building a new indoor workout facility have been hindered by the state Legislature's decision not to approve a proposed dome stadium.

McCaskey issued a plea for a "clear-cut funding" model in which we could install some artificial turf," to be used as a practice site from Nov. 1 until the end of the season. He said the second option is to install a temporary practice structure over some artificial turf near the Lake Forest headquarters, covered by a protective "bubble."

"The players are excited about that," McCaskey said.

"Every once in a while you have to take a steel end Dan Hampton," McCaskey said. "We had heard stories of a new (domed) stadium, a new (bubble) facility."

"The thing I want to know is, what are we going to do when it gets cold, when it gets wet and dreary outside to get anything done?""

Hanns said.

"I want to be able to go to Washington (Dec. 9) and beat those people. I want to be able to go to Minnesota (Nov. 25) and do the same."

---

**NFL cancels TV point-spread talk**

LOS ANGELES (UPI) — All bets are off where NFL pre-game commentators are concerned.

"StadiumCenter" show not bound by the NFL decree.

"StadiumCenter," a football show which airs on Monday Night, has been canceled by the NFL.

"I'm a big fan of the First Amendment, so this offends me in principle," Axthelm said. "Those absolute first-amendment rights that get_convem -ed—if they were playing in my living room, I'd move out they have that right to talk dirty, right?"

"I talk every chance I can get.

"Among the amendments, the first is one of my favorites. If they can do this, theoretically, what else can they do? Can they say Joe Theismann can't have an opinion about a quarterback's ability."

Steve Bornstein, ESPN Executive Vice-President of Programming and Production, is far less offended.

"We never used point spreads in our game coverage," he said. "I think if a line moved dramatically, we'd comment on it. We can still comment on it if it's news. The league asked us not to promote gambling on NFL sanctioned programming, but we can still give the point spreads on our other programming.

"We don't think it's dangerous. It's not an edit. The NFL simply said to us that they didn't want us to publicize what is illegal activity in 49 of 50 states. This is so not condone gambling. Trends tend to make themselves known in historical perspectives, but I don't see this as the first of many NFL demands."

---

**Denoon won't stop until he gets the Gateway crown**

By Tiffany 'youther

Staff Writer

SIU-C's men's cross country coach Don Denoon expects his athletes to be the Gateway Conference champs for the 1990 season.

The Salukis' men's cross country team has three returning runners who have times in the 11:30-12:00 range and have placed among the top five runners in the Saluki Invitational.

"Those three really should come back to be our top athletes for this particular year," Denoon commented.

Other returning members include junior Tracy Guerin and sophomore Lesley Tynes, who also ran in the low 18:00.0-mark for the 5,000-meter race during the track season. Denoon said he expects them to have impressive cross-country seasons as well.

In addition to a total of nine returning athletes, five freshmen have also been added for the team. Kelly Elliott appears to be the top new runner.

"He had a record of 8:31 set for high school meets.

"Elliott never finished worse than ninth in any of the state meets he competed in," Denoon said. "He has definite potential in being one of our top seven athletes."

Denoon also in the analysis that the Salukis will be "very competitive." He also said with Denoon's team set to compete in the Gateway Conference.

"We expect to be in the mix," Denoon said.

See DENOON, Page 25
Iraqi troops force Kuwaitis to bring out U.S. citizens

United Press International

Iraqi troops are forcing Kuwaitis at gunpoint to flush out hidden Americans and other foreigners, presumably to be used in Iraqi President Saddam Hussein's human shield against a U.S. strike, Kuwaiti exiles sources and the U.S. government said Wednesday. U.N. envoys arrived in Baghdad to push Iraqi Foreign Minister Tareq Aziz for the release of the thousands of foreign nationals detained in Iraq and in Kuwait since the Aug. 2 Iraqi invasion, officials said.

West Germany agrees to compromise

EAST BERLIN (UPI) — West Germany indicated willingness Wednesday to compromise over the timetable of German unification after the East German Social Democratic Party reversed a decision to demand an Oct. 14 merger. "The federal government considers that any (unification) date which comes soon after Oct. 2 makes sense," said government spokesman Hans K. 2. The statement coincided with reports that the East German Christian Democratic Union of Prime Minister Lothar de Maiziere suggested unification could take place on Oct. 6.

Police attacked by Molotov gunfire

JOHANNESBURG, South Africa (UPI) — Police came under Molotov cocktail attacks and automatic weapons fire in a black township outside the city Wednesday after another day of factional war killed at least 60 people and pushed the death toll to 500 in 10 days. Police struggled again Wednesday to keep the battling rivals apart in Vuwela and other townships surrounding Johannesburg and came under increasing attacks themselves, state-run radio reported. Molots set fire to the town council offices in the township of Kagiso.

District judge convicted of lying to FBI

SAN FRANCISCO (UPI) — A federal judge in the retrial of U.S. District Judge Robert Aguilera Wednesday convicted him of lying to the FBI and disclosing classified information, acquiuliing him of a more serious charge of conspiring to obstruct justice and two lesser counts. Aguilera sat impassively as the verdicts were read by the jury foreman, but cheers could be heard in the crowd of spectators in the cavernous courtroom. The verdict was reached after 4 1/2 days of deliberation. Aguilera could face 5 years in prison and $250,000 fines on each count.

state

Illinois anti-tax advocates point to enemy Madigan

CHICAGO (UPI) — Illinois anti-tax advocates have seen the enemy and he is House Speaker Michael Madigan. Just moments after the Illinois Supreme Court released its opinion Wednesday striking down a lower court ruling that would have allowed the proposed Tax Accountability Amendment on the Nov. 6 ballot, the amendment's supporters sent out a clear message — Madigan is to blame. "This is Madigan's lawsuit," said James Tobin, chairman of the Tax Accountability Amendment Committee.

Sesser mine to reopen in September

SESSER, Ill. (UPI) — The "Old Ben 21" mine will be reopened next month and coal production there is expected to employ as many as 220, the new owners of the mine said Wednesday. Ziegler Coal Co. of Fairview Heights said the mine, 15 miles south of Mount Vernon in Franklin County, will return to full operation by next July. The mine was closed in March by the Old Ben Coal Co. and Ziegler purchased the firm three months later. An estimated $10 million will be spent to overhaul equipment, install new machinery and reconstruct underground facilities, the company said in a statement.

Richard Marx to entertain at Du Quoin State Fair

By Brandi Tipps
Staff Writer

Du Quoin State Fair audiences will welcome Chicago native Richard Marx at 8 p.m. Saturday for the first of two rock concerts that will play at this year’s fair. “We expect to have a great turn out and ticket sales have been great,” said Janet Jones, Du Quoin State Fair ticket supervisor. “People seem to be excited about having him here.”

Tickets are $7. Call (217) 542-2056 for ticket information. Marx, who’s riding a wave of popularity following the release of his latest LP, which yielded two Number One singles, “Satisfied” and “Right Here Waiting,” will wrap up his Repeat Offenders tour with Saturday night’s Du Quoin appearance.

Marx started his musical career at the tender age of 18 after moving to Los Angeles. He made a name for himself by writing songs for Chicago and singer Phil Bailey. Marx’s talents soon became sought after by established entertainers. After several of his demo tapes were turned down by producers, Marx’s frustration encouraged him to write the Number One hit, “Don’t Mean Nothing.”

Later Marx teamed with David Cole to co-produce his self-titled debut album. The LP features special guests such as Joe Walsh, Randy Newman and Timothy B. Schmit. The album almost immediately began to explode the radio statistician’s records.

Marx gained recognition from his initial effort on the American Charts by becoming the first male solo artist to enjoy four Top Three singles from a debut album as “Don’t Mean Nothing,” “Should’ve Known Better,” “Endless Summer Nights” and “Hold on to the Nights” climbed up the charts.

In 1987, Marx was voted the Best New Male Singer in Rolling Stone’s Reader Poll. In that same year he was also chosen for the Best Artist of the Year by Performance Magazine.

Even while touring Marx is on the go. While on tour, he was able to translate ten of the 30 songs written into tracks appearing on the Repeat Offender album. The album was released in May 1989.

Marx will be the first of more than 25 celebrities, including Sawyer Brown and Vern Gosdin and Billy Joe Royal, to appear at the 1990 Du Quoin State Fair grandstand. All shows begin at 8 p.m.

Billionaire developer Trump praises bank transaction

NEW YORK (UPI) — Donald J. Trump hailed the completion of a $3.2 billion transaction with banks that will allow him to spend $1.65 million restructuring his New York Trump Plaza hotel.

Trump also called indirectly upon U.S. monetary authorities to lower interest rates and loosen credit to stimulate a moribund economy.

The developer has been on a financial tightrope for many weeks since the cash flow from his highly-leveraged real estate, casino and airline empire stopped meeting huge interest and principal obligations.

The New Jersey Casino Control Commission approved Tuesday a bank bailout plan under which about $2 billion of Trump’s estimated total $3.2 billion debt was to be restructured with a $65 million cash infusion. Creditors also suspended interest payments on about $850 million in bank debt.

“Our vast transaction with the many banks is now complete,” said Trump in the brief statement released by the Trump Organization, referring to a deal worked out in June with about 90 institutions holding his debt. “This has been both a trying and highly interesting time for me,” said Trump, self-styled master of the “art of the deal.”

“The economic times throughout our country, especially in the Northeast, must be rapidly addressed,” be added.

“Interest rates must come down sharply, and credit, which is squeezing every business, must be made available,” he said.

Approval of the bailout plan by New Jersey regulators overrode three Trump casinos in Atlantic City was the last step in the financial rescue process launched by his main New York bank lenders in June.

SPC open movie season with ‘When Harry Met Sally’

By Wayne Wallace
Entertainment Editor

SPC Films adds, “Action!” to kick off another year of student-programmed movies when the Rob Reiner comedy “When Harry Met Sally” opens at the Student Center Auditorium.

Admission is $1. The film will be shown at 7 and 9:30 tonight and Friday night.

Meg Ryan and Billy Crystal star in this 1989 box office hit. “When Harry Met Sally” highlights the ups and downs of a friendship between two New Yorkers striving desperately to keep their relationship platonic.

The film follows their romantic successes and failures from 1977 to 1989, as they try to help each other through the dangerous world of the singles scene.

Written by Nora Ephron, the film also stars Carrie Fisher and Bruno Kirby.

Just across the building and two floors up, SPC Video presents “Roger and Me” at 7 and 9 this evening. The film ends its Student Center engagement tonight. Admission is $1.

“Roger and Me” is documentarian Michael Moore’s satirical indictment of General Motors, America, chronicling the devastating effects of an auto factory shutdown in his hometown of Flint, Mich.

Moore’s cross-country quest to interview Roger Smith, treedy chairman of General Motors, meets with hilarious results as door after door is shut in his face.

United States must expand coal usage

IN THE MIDST of the Persian Gulf crisis, Americans are forgetting that the United States has plenty of natural resources.

We're worried about the possibility of oil shortage that we're not concentrating on expanding our own resources such as coal that serve as an alternative to gas and oil.

Southern Illinois is sitting on a virtual goldmine of coal. There's only one problem--the coal is too high in sulfur which gives acid rain and is a prime contributor to the air pollution.

LAST SPRING Congress adopted the clean air bill that required a high sulfur emission that results from the burning of high-sulfur coal. Although the bill will clean up the environment, it will devastate the the Southern Illinois coal industry economically.

What seems to be forgotten is that sulfur can be taken out of the coal. Current desulfurization methods are slow and expensive, but are not impossible.

Join: research between the University of Illinois and SIUC revealed an inexpensive way to remove the sulfur by pressure treating it with sulfur. Sounds good, but the process moves at a snail's pace. Other methods of desulfurization such as scrubbers, machines attached to smokestacks that literally "scrub" the sulfur away, are extremely expensive.

WHEN PREPARED properly, coal is just as easy as gas and oil to heat homes. Harold Foster, assistant director of the Coal Research Center, said the L-Star combustor, a type of heating unit, could make the heating of buildings, using coal that has been desulfurized and purified, at a cheaper price than gas-heated homes. But money is needed to further the desulfurization research. All homes could be coal-heated for a fraction of the cost of gas and oil, but coal heating has become practically non-existent today.

The government needs to put money into desulfurization research so we can find a cheaper, faster method and put coal back on the market. The Southern Illinois economy would also get a boost financially if quick, easy desulfurization methods become a reality.

We need to quit relying on other countries so much to produce energy. All states already have comparable resources available in our own backyard.

My interest is not to reopen the war of words about the abortion controversy. My concern is that the women who may have had recent letters in the D. E. not despair of the possibility of carrying an unplanned pregnancy to term.

There is help available, and the fear of being alone and helpless should not be the basis on which a choice is made. If you are now facing an unexpected pregnancy, or if occurs in the future, please remember that there are resources available. If you are an enrolled SIU student when you become pregnant, your health insurance will cover $20 of prenatal and postnatal outpatient visits, diagnostic testing, hospital and delivery charges.

For women who keep their babies, there are resources to help them continue their education, including help with the costs of child care, books and supplies, transportation and vocational counseling. These resources include:

Recently I was honored to be the guest speaker at the American Legion Auxiliary. Here I praise the American Legion officer and organizations who have served veterans well over the years. This year marks 71 years of service for the Herrin American Legion.

In preparing my talk that evening, I couldn't help the flag controversy, walking on the flag, the Chicago Art Institute, the Supreme Court decision about burning the flag, the Bill of Rights, the need to guarantee our rights and freedoms and our need to reverse the flag in the future as it has been in the past.

Today and for the past several days, military forces are being deployed to stations to stand in "fense of not only our bill of rights and constitution of the flag, but everything we are or have been. These young men and women are being placed in positions not unfamiliar to many in Southern Illinois who served in World War II, Korea and Vietnam.

Bad guy, extremist, radical, fanatic, ruthless, insane--that's the way many have described Saddam Hussein. Our country and our president have many more tough decisions to make in the next few days and weeks. Those of you who have looked down the barrel of a weapon at another individual, surely have a better understanding of what our young men are facing today, as they take up positions in the Middle East.

These soldiers today face some of the same, and many different worries such as chemicals, rocks and an enemy so loyal to a single leader that they are willing to follow his orders against all common sense and world opinion. As free people, perhaps we tend to forget that freedom demands a cost. Each of us pays it, in a way, whether we serve ourselves or have to say goodbye for a while to a son or daughter who carries on a tradition begun by the minutemen years ago.

Our desires have not changed from those expressed by President Franklin Delano Roosevelt in a speech to Congress Jan. 6, 1941, as the United States stood and read about a war ravaging our future allies in Europe.

"We look forward to a world founded upon four essential human freedoms. The first is the freedom of speech and of a free press everywhere in the world. The second is freedom of every person to worship God in his own way everywhere in the world. The third is freedom from want... everywhere in the world. The fourth is freedom from fear... anywhere in the world," Roosevelt said.

Last week our 18-year-old son asked his mother to be sure to wake him up early one morning because he wanted to hear President Bush's address to the nation. This is not an unusual request for many different than most kids his age. He seldom watches the news or keeps up with foreign events.

But my youngest son is growing up and he, like other young men, realizes the events in the Middle East. Of all of this is not to change their lives, because they may be called upon to serve. And many are prepared, if called upon, to join the U.S. armed forces. The example of those who have fought for the freedom of this country and the freedom of other countries to exist without fear--Larry King, who, in democratic state representative from Carterville...
WASHINGTON (UPI) — The stage was set Wednesday for the next confrontation in the gulf crisis, with Saddam Hussein defying an advance notice to Iraq that it will not close its embassy in Kuwait as ordered.

It will keep some diplomatic personnel in the country to help serve its citizens. The Iraqi government, which announced the annexation of Kuwait last Thursday, has yet to tell the United States exactly what it means.

Aug. 9, has reduced all foreign embassies closed by Friday and has told all diplomatic missions to leave Kuwait or else lose their diplomatic status by Friday at noon, Kuwait time.

Speaking at a news conference at his vacation home in Maine, President Bush explained that the United States will not close the embassy "because the occupation of Iraq is illegal under international law. This illegal regime cannot be recognized as a result of the aggression."

Bush added that "most countries that I'm aware of would agree that they will not be going along with agreement with this kind of the Iraqi aggression - aggression which has been thoroughly condemned by the United Nations." One senior State Department official, who asked what he thought would happen on Friday said, "We don't know, the Iraqis have said a lot of things.

Sometimes they follow and sometimes they don't."

The State Department released a statement rejecting the Iraqi demand for closure of the embassy.

The statement said the United States "will be remaining in Kuwait as a diplomatic presence" in Kuwait, including the anti-issuador, Nathaniel Howelle, 50, a career foreign service officer and a foreign affairs worker who has been envoy to Kuwait for the next three years.

The State Department said, "We will not remain in the presence must remain in the Middle East for some time, he said. Even if Hussein is quickly defeated, American forces must make sure he is not simply replaced and the same situation arise again, Posthalter said.

Posthalter said President Bush has proceeded correctly in responding to Hussein's invasion of Kuwait. "I think it was correct," Posthalter said. "Given the nature of Saddam Hussein, the President had to do what he did. Saudi Arabia was next in line. You have to confront this kind of aggression as soon as possible."

Oil prices have risen sharply since the invasion of Kuwait, and Posthalter said what the oil companies are getting away with is ridiculous. "It's a rip off," he said. "The President knows it and Congress knows it."

Posthalter said oil companies take advantage of every excuse they can to raise prices, such as when an oil tanker ran aground in Alaska, and prices jumped up.

"The best thing would be for the President to use the influence of his office and demand the oil companies do what is right for the American people," Posthalter said. "The force of the White House is very powerful, and he ought to use it or the prices are going to go right out the window."

ORDERS, from Page 1

Donald Kunzewich, director of public affairs for the Illinois Department of Military Affairs in Springfield, Ill., said a call-up does not mean reserves will be sent anywhere, said Capt. Barbara Goodo, army spokesperson.

"Units are alerted and if they are asked to go they will be ready," Kunzewich said.

Cajun cookin’ heads menu

By Wayne Wallace
Entertainment Editor

The elder statesman of Carbondale barroom blues is joining forces with about 700 pounds of seafood to kick off the school year in grand style. Shrimp, crayfish and Tawi Paul will all be cookin’ on the patio accompanying the Student Center, described the Boogie Boil as “a three-and-a-half hour rarin’ Cajun extravaganza” at a Tuesday afternoon pow-wow with Tawi Paul and members of Liquid, another band slated to perform at the feast.

“Tawi Paul proposes a toast to the second annual Bayou Boogie Boil, which takes place from 11 a.m. to 2:30 p.m. Friday on the south patio of the Student Center. We’re ready to party!”

Tawi Paul
It’s a fairly new band, a little over a year old. We just got a new drummer so we’re changin’ again,” Paul said.

Paul blank, assistant director of special events at the Student Center, described the Liquid and a performer at that ill-fated Boogie Boil premiere in April 1989.

“We tried cookin’ outside last time, too,” Blank said.

“We couldn’t keep up with the demand so I grabbed up all the shrimp and all the crayfish and took everything inside to Food Services,” he added.

He noted that this last minute attempt to meet the demand also failed, despite the conveniences of the indoor kitchen.

“Some people were standing in line for an hour...and then we ran out,” Blank lamented, vowing that this year will be a different story.

“We’re ready. And this looks to be a very scearnin’ event,” he added.

“Carbondale is such a -a- Chinese kind of town, it’ll be nice to have some variety that’s affordable,” Blank said.

Seafood connoisseurs will buy tickets at the Boil instead of paying for their food directly, “It makes it so much easier. You just cash in your ticket when you’re hungry instead of trying to exchange money and your plate of food at the same time,” Blank said.

A ticket for a half pound of boiled shrimp costs $2.89. A half pound of boiled crayfish goes for $2.29.

“if you can scarf down a pound and a half, you’ll be full,” Blank observed.

“We expect a great turnout. And it’s a good way for freshmen to get out and meet people,” Blank said, hoping the weather is more kind this year.

“It’s a nice event for the first week of school, to welcome everybody back. And being on campus on a Friday afternoon, it just sort of spins off, from classes to set the mood for the weekend.”

Movie classic premiers in Marion

By Wayne Wallace
Entertainment Editor

Somewhere in movie producer heaven, David O. Selznick must be one happy dead guy.

These recent prints of his 1939 masterpiece “Gone With the Wind” are making their way around the co. According to packed houses, fans of this Hollywood classic couldn’t get enough. Revered fans had been driven by the original 35mm millimeter glory up on the silver screen, the way Selznick and God meant them to be seen.

Southern Illinois film buffs havecause to celebrate today as the restored “Gone With the Wind” debuts at the Marion Civic Center for the first of six showings. The four-hour Civil War epic will be featured in two daily showings through Saturday.

Show times are 2 and 7 p.m. today through Saturday. General admission prices are $3.50 per person, $2.50 each for groups of 10 or more. Special prices for senior citizens and children are $3.

“I previewed it last night. The print is in very good shape. The color is excellent,’’ said Ray Reynolds, director of Marion’s Civic Center.

“Gone With the Wind,” 1939

Oscar winner for best picture, has continued its theatrical run in revival theaters for more than half a century. It was shown on television for the first time in 1976.

Ironically, it was cable TV mogul Ted Turner—with enemy of many old black-and-white movie classics because of his controversial colorization policies—who commissioned the film’s restoration in time for its 50th anniversary in 1989.

Turner Broadcasting System, Inc. purchased the MGM library of more than 6,700 films in 1986.

“Gone With the Wind” was one of the earliest movies to be shot in three-strip Technicolor, a process by which a film is shot on three strips of film—one to capture each primary color.

To avoid wear and tear on the three sets of negatives, other negatives were struck from these originalstom facilitate worldwide distribution of the film for the past five decades.

Because these sets are third generation negatives were fading both in terms of color vibrancy and
Food vending carts have become a familiar sight on South Illinois Avenue, but some local businesses could do without seeing them.

Bill Haupt, owner of the Corner Dairy, said at Tuesday's City Council meeting the carts are unsightly.

"Pushcarts are a transient business. They are difficult to monitor," he said. "They might be there one night and not the next. They don't have any running water," Haupt said.

The city does not permit pushcart vendors on public property, except for farmers markets and sidewalk sales by local merchants who obtain a permit from the city.

However, some private property owners do allow the businesses on their property.

"If the owners of private property would not allow them, there wouldn't be a problem," Councilman John Yow said.

The city has no limits on the number of carts that can be licensed, but does require a health permit.

Vendors also must register with the city and pay a 1 percent food and beverage tax.

As of mid-August, seven pushcarts were registered in downtown Carbondale — five bagel carts, one donut cart and one breakfast cart.

According to county records, there have been three inquiries for information regarding regulations for setting up food carts.

The city manager's report reviewed the situation and included possible options:

- The merchants could work together to discourage their neighbors from permitting pushcarts on their private property.
- The city could impose a licensing requirement with reasonable standards to limit the number of pushcarts and their location.
- Pushcarts could be prohibited.

City Manager Steve Hofner indicated in the report he would like to work out a compromise that permit pushcarts to vend on the sidewalks but pose less of a problem to more permanent businesses. No specifics were mentioned.

Councillor John Mills said the situation has gotten out of hand, but he does not favor eliminating pushcarts.

Mayor Neil Dillard agreed that the carts should not be eliminated but supports limiting the number.

Some businesses allow pushcarts to operate from their private property.

Councillor Richard Morris said he is not against regulation, but it may be a situation that businesses in the area can deal with.

Councillor Keith Tushorn said the carts add diversity. But the proposed option of merchants working together to discourage their neighbors from permitting pushcarts on their private property would be like swimming against the current.

In other business, the council decided after reviewing a status report, the old depot stabilization will continue with the inspection for hazardous materials.

Estimates to stabilize the structure total $40,000. However, inspection and removal of asbestos and other hazardous materials and removing the roof may cost an additional $60,000.

The ceiling is covered by a material which appears to be asbestos board and some asbestos insulation exists on the old steam piping, according to the report.

The depot is in the process of being nominated by the Carbondale Preservation Commission as a local landmark.

The council also appropriated $65,000 in Motor Fuel Tax Funds for the West Stuyvesant Stream Extension Project.

The extension connects North University Avenue with North Illinois Avenue.

The council commissioned $6,000 to use as local matching money to fund a $12,000 survey to identify potential landmarks and historic districts when and if a grant becomes available during this fiscal year.

Gasoline prices fail to drop as quickly as they increase

CLEVELAND (UP) — The major oil companies have been saying the price paid at the pump for gasoline reflects increases and decreases in oil prices, but research shows decreases in gas prices aren't likely to occur as quickly.

Kenneth Mayland, chief economist for the Society Corp., a bank holding company, said Wednesday gasoline prices were slow to move down as oil prices fell earlier this year:

"Interestingly, when oil prices fell this spring from February on, there did seem to be a dragging of feet in terms of adjusting gasoline prices lower," Mayland said.

"At that time, the spread between oil prices and gasoline prices opened up to the very high end of historical ranges."

"When oil prices fell further in May and June," Mayland said, "that spread opened up to 64 and 65 cents a gallon."

With the refineries' acquisition price of oil now at about 64 cents a gallon and unloaded gasoline selling for about $1.25 a gallon, the spread is about 61 cents.

He said a 61-cent spread is not exorbitant but added the information is important to the public.

"When they say, if and when oil prices go down, gasoline prices will go down, it's nice to have this research, because we can test their claims," he said.

BP America Inc. President James Ross, in answering questions about gas prices following the Iraqi invasion of Kuwait, said they are based on the current price of acquiring oil, and would go up or down as the price of oil goes.

Mayland, however, said the trends are changing in price adjustments.

Mayland said the result is oil companies and gasoline stations are "producing, especially strong (profit) margins.

Great Lakes' spawning to begin soon

COLUMBUS, Ohio (UPI) — The director of Ohio State University's Ohio Sea Grant Program says the next six to seven weeks are the most critical of the year in preventing the spread of zebra mussels.

"Reports on zebra mussels in European literature had indicated that the mussels would begin to spawn when the temperature reached 54 degrees," Dr. Jeffrey Reutter said Wednesday. The same literature indicated that the veligers (juvenile zebra mussels) must settle and acclimate in eight to 10 days, or die.

"It now appears that neither of these statements is completely accurate in Lake Erie."

The zebra mussels, which now have been found in all five Great Lakes, attach to hard objects, such as boats, boat docks and water inlets.

Recent findings by Dr. David Garton, an Ohio State University zoologist doing research for Ohio Sea Grant, indicate that while the water temperature in the lake's Western Basin is more than 70 degrees, that the stock of mussels has not yet spawned.

This year's spawning will be two or three weeks later, and Garton is not ready to attribute the delay.

Move 10 years ahead of the class.

The new HP 48SX and a free 'library card' can get you there.

With HP 48SX built-in functions, our new HP 48SX Scientific Expandable calculator takes a quantum leap into the 21st century. Buy an HP 48SX between August 15 and October 15, 1990, and HP will send you a free HP Solve Equation Library Card (a $30.00 retail value).

The plug-in application card alone contains more than 300 science and engineering equations, as well as the periodic table, constants library and a multi-equation solver. It's like having a stack of reference books right at your fingertips.

The HP 48SX calculator is so advanced, it will change the way you solve problems. It integrates with a HP Solve Equation Library Card (a $30.00 retail value).

The plug-in application card alone contains more than 300 science and engineering equations, as well as the periodic table, constants library and a multi-equation solver. It's like having a stack of reference books right at your fingertips.

Turning garbage into black gold is the aim of two SIUC graduates using a process perfected by an Illinois inventor.

Dave Sanders and Paul Baskis are set to open a plant in Frankfort that will take 10,000 tons of household trash and turn 40 percent of it into 11,000 gallons of crude oil every day.

Sanders said that oil produced by the process is no different than the crude oil that is imported into the United States.

One of the biggest potentials for the process is the relief it could give to dwindling landfill space.

"We're serving for 100 percent recycling. It's going to take the place of landfill," said Sanders.

Recyclable materials like glass, aluminum, metal and high density plastics will be separated out of the refuse, but all other materials including landscape waste can be used to make oil.

The "depolymerization" process works by heating and pressure to break apart carbon molecules in organic or carbon-based substances like plastic. The process is no different than the way oil is made naturally.

Baskis said the process can produce more energy than it uses because it releases the energy that was used to make asphalt when the molecules are broken down.

Dave Baker of Oak Park developed the "process reactor" that made the process feasible.

The reactor has no moving parts and will operate in a closed loop system where oil will be produced around the clock with no emissions.

Baker has worked for several companies developing new industrial technologies ranging from medical equipment to the mold foam cushions in car seats.

The development of their depolymerization system also had outside help from the Chemistry and Engineering departments at SIUC. But Baskis credited Dave Schindler, formerly with the Technology Commercialization Center, with pointing them in the right direction.

Computer glitch sends mortgage default to 10,000

ATLANTA (UPI) — Citizens & Southern Bank apologized Wednesday to more than 10,000 puzzled mortgagors in three states who received default notices because of a computer glitch in the bank's Atlanta headquarters.

"We apologize to anybody for whom we've caused any problem or concern and we feel badly about it," said Citizens & Southern spokesman Scott Spered. "I hope we haven't caused too much of a problem.

"The computer processing error" occurred Friday but was not caught until Saturday.

"We've got the problem and mailed out notices to all customers by Tuesday morning," said Spered.

He said none of the customers who received the notices in Georgia, Florida and South Carolina were in default.

Their records will not show a delinquent payment and their credit record will not be affected by this situation, he said.

"We've received a few calls, but not too many," Spered said. "Because we caught the error pretty quickly perhaps we haven't upset too many people."

Oil prices soar on world markets; oil shooting up by more than $3 a barrel

United Press International

Crude oil soared by more than $3 a barrel Wednesday in a rally triggered by a Saudi oil company's notification that it would suspend deliveries of petroleum products to Japan and led by fears of an imminent shooting war in the Mideast.

On the New York Mercantile Exchange, West Texas Intermediate crude for October delivery surged $2.35 over Tuesday to a 37-month high of $31.22 a barrel, the highest closing price since the $31.72 of Nov. 20, 1985.

It brought the benchmark crude's rise to $9.60, or 45 percent, since the Aug. 2 Iraq invasion of Kuwait propelled oil markets into an upward spiral.

On the European cash market, the United Arab Emirates' Dubai light — the key OPEC crude from the Middle East shipped mainly to the Far East — rocketed $1.30 to $29.65 a barrel, a rise of $11.55, or 63.8 percent since the invasion.

Embarq puts damper on U.S. rice farmers

HOUSTON (UPI) — Rice farmers nationwide stand to suffer a double whammy as commodity prices drop and production costs soar in face of the Middle East's oil embargo and the United Nations trade embargo against Iraq, agriculture spokesmen said Wednesday.

A major export customer for premium long-grain rice grown in Texas, Arkansas, Louisiana and Mississippi, said Bill Goldsmith, spokesman for the Rice Council, an industry trade promotion group.

Iraq purchased 392,000 tons of rice from the United States in 1989, or about 25 percent of all U.S. rice exports, Department of Agriculture statistics show.

Declining prices are expected to affect rice farmers around the country. The September contract on the Chicago Rice and Cotton Exchange Wednesday was $6.50 per hundred pounds compared with $7.02 on Aug. 1, the day before Iraq invaded Kuwait.

The trade sanctions against Iraq come as the rice harvest is underway in Texas, Louisiana and Mississippi. The harvest for Arkansas, California and Missouri rice is expected to start in September.

Most farmers are expected to hold their rice off the market for months to see if the Mideast crisis will be resolved or until prices improve.

JPL Engineers re-locate Magellan Venus probe

Spacecraft re-establishes radio contact with earth following 17 hours of silence

PASADENA, Calif. (UP) — Engineers briefly received signals from the errant Magellan Venus probe Wednesday, indicating the spacecraft was acting on emergency instructions to search for Earth after losing contact Tuesday for the second time in a week.

A brief signal from the spacecraft was received at the Jet Propulsion Laboratory shortly after Magellan emerged from behind Venus at 12:32 p.m. PDT, more than 17 hours after the costly probe's signal suddenly faded out and more than 12 hours after engineers began ordering the craft to "phone home."

JPL spokeswoman Mary Beth Murrill said engineers believed the spacecraft was rotating in space, or "coning," apparently after receipt of emergency commands ordering Magellan to sweep the heavens with its radio antenna.

In so doing, Magellan's radio beam ultimately would sweep across Earth, 149 million miles away, allowing JPL engineers to re-establish full two-way communications.

"They got a very brief, few seconds of radio contact," Murrill said, "not long enough to re-establish contact. It is consistent with coning. They are assuming the spacecraft has responded to the commands and is coning for Earth and that contact can be re-established later on."

While the brief "blip" received from Magellan did not indicate what had happened to knock it out of action, it showed the probe was still working and capable of following commands — welcome news to harried scientists and engineers who have been working around the clock to re-contact the spacecraft.

Ground controllers briefly lost contact with Magellan last week after a series of glitches, possibly triggered by a passing cosmic ray, but they were able to re-establish communications Friday. The probe was still in a protective "safe mode" when contact was lost again Tuesday.

Magellan represents a $551 million project to plot the hidden surface of Venus with cloud-piercing radar beams and get the probe into operation is crucial to NASA after problems with the Hubble Space Telescope and NASA's shuttles.

JPL experiment representative Steve Wall said the way Magellan's signal faded from view Tuesday indicated the spacecraft turned its antenna away from Earth for some reason and "we do believe that anything like a massive failure occurred. We are very hopeful we will be able to do something." Engineer... at JPL were studying why Magellan temporarily lost contact with Earth last Thursday when radio signals from the spacecraft broke up and faded out Thursday night. There were no indications of any new problems at the time the signal was lost.

Assuming Magellan maneuvered into a new orientation, the critical question for NASA was simple: Wore the probe's solar panels still aimed at the sun and generating life-giving electricity or was the spacecraft being forced to rely on limited battery power?

"When we lost signal with the spacecraft, the batteries were charged," said Truly. "If the batteries are continuing to be recharged by the sun then we will eventually make contact with it and get it back."

WASHINGTON (UPI) — Two leading atmospheric scientists Wednesday rebuffed claims the sun’s natural fluctuations will off-set global warming from man-made "greenhouse" gases, and argued for immediate steps to curb such pollution.

Last year, in a report that found favor in the Bush administration, scientists with the prestigious Marshall Institute in Washington downplayed the threat of global warming from pollution. One contention was that the sun's output of energy is expected to decline early next century, resulting in substantial natural cooling and possibly making efforts to reduce greenhouse gases "unnecessary or even harmful."

Now, James Hansen and Andrew Lacis of the NASA Goddard Institute for Space Studies in New York have disputed that scenario, saying their calculations show natural swings in solar radiation could not counteract greenhouse warming.

The greenhouse effect occurs when carbon dioxide and other gases act like the glass windows of a greenhouse, trapping heat in Earth's atmosphere and preventing it from escaping back into space. Some scientists think worldwide temperatures will increase as a result of greater emissions of carbon dioxide and other greenhouse gases from man-made sources like car exhausts.

Whether the Earth actually is warming — and when possible resulting problems like droughts, rising sea levels might occur — is a matter of controversy, although most records show global temperatures have risen about 1 degree Fahrenheit over the past 100 years. Uncertainties include the impact of oceans, clouds, volcanoes and the sun.

In an article published in the Journal Science, Hansen and Lacis said the sun's energy output would have to fall at least 2 percent to counter the warming they expect to occur by 2050 if emissions of greenhouse gases continue to rise at their current pace.

"There is no evidence for such a decrease (in solar energy)," the researchers wrote, noting ground-based observations of the sun's diameter suggest its energy output has varied only 0.2 percent or 0.3 percent over the past 275 years. A 2 percent decline "would also be '20 times larger' than changes measured by spacecraft over the past 11 years, the researchers said in their article.

Robert Jastrow, co-author of the Marshall report and founder of the Goddard space studies institute, called Hansen's article "very interesting," but "completely contradictory to what his team's analysis found."
INTRODUCTION
A. The Student Conduct Code for Southern Illinois University at Carbondale is intended to provide an environment conducive to learning, growth, and development of students. The University seeks to create a community characterized by free expression, high intellectual honesty, respect for others and a concern for the individual welfare of students. All students must be prepared to recognize and abide by the regulations listed within this student conduct code. Failure to do so may result in disciplinary procedures that shall be consistent with these regulations.

II. Rights and Responsibilities
A. Students shall be free to determine the directions of their own learning and to pursue the courses of study that are of interest to them, and to engage in free expression, inquiry, and discovery. Constitutionally-protected rights include free inquiry, research, coordination, and other activities. After due process, and in the best possible reconciliation - the provisions of this code shall be adequate and necessary.

C. Title-Authority Enforcement
These regulations shall be known as the Student Conduct Code for Southern Illinois University at Carbondale. Violations of these regulations will constitute reasons for regulations. The regulations contained herein are established under the authority granted by law to the Board of Trustees to establish rules. Regulations for the University president and pursuant to Section 3.05 of the Board of Trustees shall be in effect. The regulations are in place to ensure that the rights and responsibilities as listed above are granted. The University community have the responsibility to comply with these regulations. The regulations for the University at Carbondale are intended to promote the President of Southern Illinois University and faculty and staff. Violations of this code are prohibited.

D. Definitions
The Student Conduct Code has the responsibility to provide in numbers these disciplinary procedures to ensure that these regulations are developed. According to this code, the Student Conduct Code will be applied to: (1) Conduct that is not used in the conduct of the person's own work. (2) Conduct that is not required "in the course of" the conduct of the person's own work. (3) Knowledgeably and with knowledge of the conduct under consideration. Conduct shall be considered, including, but not limited to: knowledge of the conduct person or actionable, influences of supervision or agreements of advisories and hearings held before a hearing. Knowledge of the violations of any discipline shall be consistent with these regulations. Conduct that is not used in the conduct of the person's own work. (4) Knowledgeably and with knowledge of the conduct under consideration. For the purpose of determining whether or not the student or any other person, including the University has violated this Code. (5) Predominantly for directions of a civil nature. (6) Predominantly for the purpose of determining whether or not the student or any other person, including the University has violated this Code. (7) Predominantly for directions of a civil nature. (8) Predominantly for the purpose of determining whether or not the student or any other person, including the University has violated this Code.

II. VIOLATIONS
A. Acts of Academic Dishonesty
1. Plagiarism: Representing the work of another as your own work.
2. Fabrication: Making up data or other material that is not your own without credit to the original source.
3. False statements about academic data or representing your home as the result of scholarly or scientific research.
4. Knowingly furnishing false information or failing to cooperate in violation of this code.
5. Solicitation,aiding, abetting, concealing or attempting conduct in violation of this code.

B. Acts of Social Misconduct
1. Violence
2. Sexual Abuse
3. Physical Abuse
4. Harassment
5. Discrimination
6. Intimidation or obstruction or false statements about the academic data or representing your home as the result of scholarly or scientific research.
7. Involvement of minors in any activity that may damage any function of the University or favor any student or group.
8. Involvement of minors in any activity that may damage any function of the University or favor any student or group.
9. Involvement of minors in any activity that may damage any function of the University or favor any student or group.
10. Endangering the safety of others or failing to comply with directions of an authority.

C. Disposition
1. Dismissal
2. Unemployment
3. Expulsion
4. Suspension of grades or other academic consequences

D. Disciplinary Procedures
1. Dismissal
2. Unemployment
3. Expulsion
4. Suspension of grades or other academic consequences

III. SANCTIONS
The following sanctions may be imposed for the violation of this code. A. Charges of sexual harassment may be adjudicated under the Title IX Investigation. B. Charges of sexual harassment may be adjudicated under the Title IX Investigation. C. Charges of sexual harassment may be adjudicated under the Title IX Investigation. D. Charges of sexual harassment may be adjudicated under the Title IX Investigation.

9. Student Conduct Code for Southern Illinois University at Carbondale
The provisions of this code shall not include any action that may be taken to accommodate, including, but not limited to: knowledge of the conduct person or actionable, influences of supervision or agreements of advisories and hearings held before a hearing. Knowledge of the violations of any discipline shall be consistent with these regulations.

6. Disciplinary Procedures
Disproportionate Discipline
The University shall be responsible for the determination of the nature and extent of the violations of any discipline that may be taken to accommodate, including, but not limited to: knowledge of the conduct person or actionable, influences of supervision or agreements of advisories and hearings held before a hearing. Knowledge of the violations of any discipline shall be consistent with these regulations.

5. Disciplinary Procedures
Disproportionate Discipline
The University shall be responsible for the determination of the nature and extent of the violations of any discipline that may be taken to accommodate, including, but not limited to: knowledge of the conduct person or actionable, influences of supervision or agreements of advisories and hearings held before a hearing. Knowledge of the violations of any discipline shall be consistent with these regulations.

4. Disciplinary Procedures
Disproportionate Discipline
The University shall be responsible for the determination of the nature and extent of the violations of any discipline that may be taken to accommodate, including, but not limited to: knowledge of the conduct person or actionable, influences of supervision or agreements of advisories and hearings held before a hearing. Knowledge of the violations of any discipline shall be consistent with these regulations.

The University shall be responsible for the determination of the nature and extent of the violations of any discipline that may be taken to accommodate, including, but not limited to: knowledge of the conduct person or actionable, influences of supervision or agreements of advisories and hearings held before a hearing. Knowledge of the violations of any discipline shall be consistent with these regulations.

2. Disciplinary Procedures
Disproportionate Discipline
The University shall be responsible for the determination of the nature and extent of the violations of any discipline that may be taken to accommodate, including, but not limited to: knowledge of the conduct person or actionable, influences of supervision or agreements of advisories and hearings held before a hearing. Knowledge of the violations of any discipline shall be consistent with these regulations.

1. Disciplinary Procedures
Disproportionate Discipline
The University shall be responsible for the determination of the nature and extent of the violations of any discipline that may be taken to accommodate, including, but not limited to: knowledge of the conduct person or actionable, influences of supervision or agreements of advisories and hearings held before a hearing. Knowledge of the violations of any discipline shall be consistent with these regulations.

II. DISCIPLINARY PROCEDURES
A. Initiation of a Complaint
1. A student or employee of the University community may file a complaint to address issues of discrimination or harassment.

III. CLOSING REMARKS
The University shall be responsible for the determination of the nature and extent of the violations of any discipline that may be taken to accommodate, including, but not limited to: knowledge of the conduct person or actionable, influences of supervision or agreements of advisories and hearings held before a hearing. Knowledge of the violations of any discipline shall be consistent with these regulations.
The student must submit a preference for a hearing before a judicial board of three members. The student may appear with an attorney, but student attorneys are not permitted in initial disciplinary hearings. The student is entitled to have a witness of his or her own choosing to present evidence on the student’s behalf.

b. The Coordinator of Student Judicial Affairs shall conduct the hearing and make the final decision as provided in paragraph (a).

c. Each member of the judicial board shall be impartial in the hearing and decision, and no individual shall preside over or participate in the hearing or decision of a case involving him or her.

II. DISCIPLINARY PROCEDURES

A. Preliminary Investigation

1. The Coordinator of Student Judicial Affairs shall determine if there is sufficient evidence to conduct a preliminary investigation.

2. If the Coordinator of Student Judicial Affairs determines that there is sufficient evidence for a preliminary investigation, the Coordinator of Student Judicial Affairs shall notify the student in writing of the alleged violation and the specific violation(s). The Coordinator of Student Judicial Affairs shall also provide the student with the opportunity to respond to the specific violation(s) in writing. The Coordinator of Student Judicial Affairs shall respond in writing within 10 days after receipt of the student’s response.

B. Formal Preliminary Investigation

1. If the Coordinator of Student Judicial Affairs determines that there is sufficient evidence for a formal preliminary investigation, the Coordinator of Student Judicial Affairs shall notify the student in writing of the alleged violation and the specific violation(s). The Coordinator of Student Judicial Affairs shall also provide the student with the opportunity to respond to the specific violation(s) in writing. The Coordinator of Student Judicial Affairs shall respond in writing within 10 days after receipt of the student’s response.

2. The Coordinator of Student Judicial Affairs shall determine if there is sufficient evidence for a hearing.

C. Formal Hearing

1. If the Coordinator of Student Judicial Affairs determines that there is sufficient evidence for a formal hearing, the Coordinator of Student Judicial Affairs shall notify the student in writing of the alleged violation and the specific violation(s). The Coordinator of Student Judicial Affairs shall also provide the student with the opportunity to respond to the specific violation(s) in writing. The Coordinator of Student Judicial Affairs shall respond in writing within 10 days after receipt of the student’s response.

D. Determination

1. If the Coordinator of Student Judicial Affairs determines that there is sufficient evidence for a formal hearing, the Coordinator of Student Judicial Affairs shall notify the student in writing of the alleged violation and the specific violation(s). The Coordinator of Student Judicial Affairs shall also provide the student with the opportunity to respond to the specific violation(s) in writing. The Coordinator of Student Judicial Affairs shall respond in writing within 10 days after receipt of the student’s response.

E. Appeal

1. The student may appeal the final decision of the Coordinator of Student Judicial Affairs to the Judicial Board of three (3) members. The appeal shall be filed in writing within five days after receipt of the final decision.

2. The Judicial Board shall hear the appeal and make a decision

F. Final Hearing

1. If the Coordinator of Student Judicial Affairs determines that there is sufficient evidence for a final hearing, the Coordinator of Student Judicial Affairs shall notify the student in writing of the alleged violation and the specific violation(s). The Coordinator of Student Judicial Affairs shall also provide the student with the opportunity to respond to the specific violation(s) in writing. The Coordinator of Student Judicial Affairs shall respond in writing within 10 days after receipt of the student’s response.

b. The Coordinator of Student Judicial Affairs shall conduct the hearing and make the final decision as provided in paragraph (a).

c. Each member of the judicial board shall be impartial in the hearing and decision, and no individual shall preside over or participate in the hearing or decision of a case involving him or her.

III. DISCIPLINARY COMMANDS

A. The Coordinator of Student Judicial Affairs shall determine, as a result of the disciplinary proceedings, the appropriate measures to be imposed on the student, which may include, but not be limited to, any of the following:

1. Probation
2. Suspension
3. Expulsion
4. Other measures as deemed necessary by the Coordinator of Student Judicial Affairs.
Low crime, environmental awareness rank high in survey

NEW YORK (UPI) - Bremerton, Wash., blessed with a low crime rate and an environmental awareness, was rated as the "best place to live" in the United States Wednesday in a Money Magazine survey.

Seattle, 15 miles away from Bremerton, was second after being rated first in 1987 by more than one survey. San Francisco held on to its third-place ranking, Tacoma, Wash., a neighbor of Bremerton and Seattle, ranked fourth, and Columbia, Mo., fifth. Sixth on the list was the Eugene-Springsfield, Ore., area.

Minneapolis-St. Paul was seventh, Olympia, Wash., eighth, Sacramento, Calif., ninth and the Los Angeles-Long Beach area 10th.

But the list of 300 cities in the fourth annual Money survey was the Aiken-town-Jeffielchich, Pa., area.

The survey pointed out that areas in New England comprised half of the top 10 in 1989, but said those cities were "arming those that are caught to the rankings because of economic stagnation and depressed housing prices."

Bremerton, southwest of Seattle across Puget Sound with a population of 120,000, was hailed as a "super-burb" — a medium-size, safe, environmentally clean place with a rebounding economy."

The mayors of the top and bottom cities on the list were quite philosophical about the whole thing.

"Is that right?" commented Bremerton Mayor Louis Mentor, whose city had been ranked 17th in 1988. "A year ago they didn't know we existed."
Third trial begins in FBI spy case; agent accused of passing manual

LOS ANGELES (UPI) — Richard Miller, the only FBI agent ever charged with espionage, betrayed secrets of his government to Soviet agents, a federal prosecutor said Wednesday.

"He did not begin his (FBI) career with intention to betray his country," said Assistant U.S. Attorney Adam Schaff.

"Vietnam eventually had more soldiers but it built up more gradually."

"The building of U.S. troops sent to defend Saudi Arabia against a possible threat of invasion has the same phones jangling at the facility, an 11-square-block complex that is the Department of Defense's nerve center for the procurement of food, medical supplies and uniforms for all the armed services."

"What we're seeing that we're doing... is not going to some depot..."

"The center which normally handles $3.5 billion worth of supplies, has so far shipped more than $15 million in materials specifically for the Persian Gulf operations."

"That includes 9,000 tons of food, tens of thousands of uniforms, 50,000 bottles of soda."

"Workers at the little-known center can see the fruits of their labors whenever soldiers in the region are shown on TV."

"And as many containers of lip balm."

"Also among the supplies are special protective suits and nerve gas antitoxin kits. Each soldier heading for Saudi Arabia has been issued the suits and antitoxins because of the fear that Iraqi troops may use nerve gas and chemical weapons."

"Even though the chemical weapon items are not a part of a soldier's kit, Friel said the center so far has had no problem meeting that peculiar need."

"All the need has been met out of current stocks," Friel said. "We've been working with industry to make sure we're not going to be caught short. If we need to gear up industry, we will."
Chicago cheers new cheetah cubs

CHICAGO (UPI) — Chicago's Lincoln Park Zoo has exported its first-ever birth of four cheetahs.

The best part, zoo officials said Wednesday, is that the newborn is the first-time mother of the cubs, Pampas, is taking care of her babies as her namesake Sue Sullivan did. They're all doing fine. They're the first four cubs born at the Lincoln Park Zoo, said Mike Trillo, a zoo spokesman.

The cheetah, named after the national animal of Namibia having the largest concentration, said Grisham.

Now, North American cheetah breeding efforts from the Oklahoma City Zoo, said the birth is "a rather unusual event.

"Last year, there were only eight facilities (in the United States) that bred cheetahs. They've been bred in captivity. If you ask why, we would fix it," said Grisham.

The 400 cheetahs in North America, he said. Of the 114 females, only 15 had litters last year. Only 37 cubs survived.

The endangered creatures number 5,000 in the wild and are located primarily in northern and southern Africa with the nation of Namibia having the largest concentration, said Grisham.

Chemical tool tracks tusk takers

WASHINGTON (UPI) — Scientists have devised a powerful new tool to track down elephant poachers — a method that uses the chemical makeup of ivory to pinpoint a slain elephant's origin, it was reported Wednesday.

The team of South African researchers say they have developed techniques that can examine ivory from an elephant tusk and determine the geographic region where the huge animal roamed when it was alive.

That information could provide valuable clues to conservationists' efforts to stop poachers who are killing endangered elephants for their tusks, researchers said. It is said over 100,000 tusks made into jewelry, piano keys and carved trinkets.

Prior to the recent ban on commercial imports of ivory by the United States, Japan and other countries, poaching for ivory had been an international trade but was a major factor in the extinction of elephants.

The elephant population, estimated to be about 1.5 million in the late 1970s, fell to less than half that number by 1990.

Past efforts to identify the geographic source of ivory by examining ratios of carbon and nitrogen isotopes did not work very well.

Now, South African researchers have found that looking at ratios of the mineral strontium, along with carbon and nitrogen, offers an accurate way of identifying ivory's origin and this provides "a potentially powerful tool for the control of illegal trading in ivory."

In a study published in the British journal Nature, a team headed by N.J. van der Merwe of the University of Cape Town examined ivory and bone specimens from more than 100 adult elephants collected by wildlife officers in 20 game reserve areas in 10 African nations.

As it turned out, was found among the regions in distributions of carbon and nitrogen isotopes in the bone.

These ratios are determined primarily by the volume and disposition of the plants the animals eat. Because, in such cases, it's the strontium isotopes — which reflect the composition of the soil and the underlying rock — could be used to draw distinctions, the researchers wrote.

The scientists said practical application of the method will require a more comprehensive understanding of the chemical makeup of all regions where elephants roam in Africa.

"Such a database could provide the foundation for international control of the ivory trade and hence the conservation of the elephant and its habitat," the researchers wrote.

NASA suspects beads in fuel line cause of space shuttle grounding

WASHINGTON (UPI) — Tiny glass beads that somehow got into a fuel line are believed to have caused a hydrogen leak that grounded the space shuttle Columbia in May, a NASA official said Wednesday.

Workers discovered between 100 and 200 glass beads between one-thousandth and three-thousandths of an inch in diameter inside a piece of equipment found leaking on the shuttle, said William Lenoir, associate administrator for space flight.

The beads were found about two weeks ago when the leaky piece of equipment, a so-called "disconnect" assembly used to mate the shuttle to its external fuel tank, was sent to the Parker Hannifin Corp. in Irvine, Calif., where it was made, Lenoir said.

The beads could have gotten between a shaft in the disconnect assembly and a seal that prevents the hydrogen fuel from leaking, causing the problem, Lenoir said.

Officials are uncertain how the beads could have gotten into the disconnect assembly but were working with the company to find out, he said.

The beads are used for a variety of manufacturing processes, he said.

"There's not much question in our minds that that's implicated in why there's an external leak disconnect shaft seals leak. We've been unable to find definitively how they got there," he said.

"In a way that's good news because that says, 'Hey there's some external something contamination that led to the leak.' And we just need to make sure we don't have that in the future," he said.

The shuttle Columbia, which has been fitted with a new disconnect mechanism, is scheduled to blastoff from the Kennedy Space Center in Florida on Sept. 1 for a nine-day astronomy mission that was postponed by the leak in May.

New attorneys blamed for slow death row cases

CHICAGO (UPI) — Illinois Supreme Court Chief Justice Thomas J. Moran Wednesday blamed inexperienced lawyers for the backlog in capital punishment cases at the appellate court's intermediate court levels.

Moran, addressing the opening session of the 37th Annual Illinois Judicial conference, called the capital punishment process "troubling."

Moran noted the death row population in Illinois is growing by leaps and bounds and some inmates have been on death row for more than a decade.

"Simply stated, in capital cases defendants are often represented by inexperienced attorneys at the trial level," he said.

Court will not rescind order in marrow transplant case

CHICAGO (UPI) — The Illinois Supreme Court Wednesday refused to rescind its order sending a controversial bone marrow transplant case back to the lower courts for reconsideration.

The high court earlier this month ordered that guardians be appointed for the three children involved in the case to make sure their viewpoints are represented.

At issue is whether 3 1/2-year-old twins, James and Allison Carran of Elk Grove Village, should be forced to undergo blood tests to determine whether they are suitable bone marrow donors for their dying half-brother, Jean-Pierre Bourje, 12, Hoffman Estates.

The twins' mother, Nancy Carran, asked that the court reconsider its order because she said she had adequately represented her children's interests.

"The guardians can now begin to take testimony from the children," court spokesman John Madigan said.

The high court heard the case on direct appeal. It was ruled last month the twins should not be forced to undergo the tests.

Cell transplant to treat defect in young baby

SAN FRANCISCO (UPI) — French scientists said Wednesday the had performed transplants from aborted fetuses to other fetuses still in the womb to treat inherited diseases.

"We've been unable to find definitively how they got there," he said.

"In a way that's good news because that says, 'Hey there's some external something contamination that led to the leak.' And we just need to make sure we don't have that in the future," he said.

The shuttle Columbia, which has been fitted with a new disconnect mechanism, is scheduled to blastoff from the Kennedy Space Center in Florida on Sept. 1 for a nine-day astronomy mission that was postponed by the leak in May.

Cleveland outfielder
out of alcohol rehab

CLEVELAND (UPI) - Troubled Cleveland outfielder Joey Belle spent the last 10 weeks receiving treatment at the Cleveland Clinic for alcoholism. Belle, who has a history of disciplinary problems, read a statement at a Tuesday news conference at Cleveland Stadium in which he admitted his problem with alcohol led him to stronger tantrums. The team had refused to comment on Belle's status since he was placed on the suspended list June 7 after there had been no mention of Belle having a problem with alcohol before Tuesday's news conference.

"My name is Albert Belle and I have been in treatment for alcoholism at the Cleveland Clinic," Belle said. "While I'm at the clinic I discovered that I have had problems with concentration, motivation, appetite and temper. I have found a new way of life through the clinic's program and a 12-step recovery plan.

Belle's name is Albert Joelu Belle and he will be 24 Saturday. Belle spent last winter in Cleveland and the Indians had him see a psychiatrist regularly to try and help him deal with his temper. "Alber is how he'd like to be referred to from now on," said team spokesman John Maroon.

Lewis' 4x100 relay team
wins at Linzer Gucl meet

LINZ, Austria (UPI) - The Santa Monica team led by Carl Lewis and Leroy Burrell won the men's 4x100 meter relay Wednesday at the Linzer Gucl track meet.

Santa Monica breezed to victory in 38.23 seconds, but stiff head wind prevented the team from approaching a world record. The team's best times were the top two performances of the day.

"It was too cold and too windy for a good attempt at the record," Lewis said.

Andre Cason won 100 meters in 10.18, followed by fellow Americans Dennis Mitchell and Mike Marsh.

American Danny Harris clocked 48.16 seconds to win the 400-meter hurdles, ahead of Japanese Graham Windrop.

Brazilian Jose Luis Barbosa won the 800 meters in the relatively slow time of 1 minute, 45.51 seconds. Russian Nenad Khodjakewitz won the world record-holding 800-meter run.

Olympic champion Roger Kingsford in the 110-meter hurdles with a time of 13.22 seconds.

Jeanie Jefferson of Cuba topped American Mike Powell in a battle between the two best long jumpers of the season. Jefferson jumped 26 feet, 11 1/4 inches (8.21 meters) and Powell 26-7 1/4 (8.10 meters), but both were well short of season bests.

Randall Barnes won the shot put with a throw of 65-4 (19.91 meters), but it paled compared to the world record 75-10 1/4 (23.12 meters) he set this year.

Rodion Gusilina, her apparent to Soviets pole vaulter Sergei Bubka and the only other man in history to clear 6.00 meters, managed a measurer 18-1 1/2 (5.50 meters) for sixth place. Soviet compatriot Viktor Ryzhkenkov won the event with 18-10 1/2 (5.75 meters).

Merlene Ottey of Jamaica, the world's fastest woman sprinter this season, skipped the meet to attend her boyfriend's birthday party in Italy. In her absence, American Michelle Finn won the 100 meters in 11.16 seconds. Alpska Lopes of Cuba captured the 100-meter hurdles in 12.97, finishing ahead of the American pair of LaVonna Martin and Linda Tolbert.

Cuban Ana Quirot won the women's 400 in 50.78, with Canadian Charmaine Crooks second with 50.79.

Javier Sotomayor of Cuba and Petra Feltke of East Germany won the men's high jump and women's respectively.

The meet, a memory for the International Amateur Athletics Federation (IAAF) Grand Prix calendar, attracted 10,000 crowd...
they were opened, they would have been documented. Officials are saying this. They didn’t play ball. They weren’t in the room. Notre Dame fans will hate me. People who hate Notre Dame will love me. People in the middle deserve to know what’s really going on.

Holtz said he and others contacted by Sports Illustrated denied steroid charges and were unhappy those comments were not in the article.

Sports Illustrated committed journalistic errors beyond our comprehension,” Rosenthal said. “It received specific denials to its accusations and saw fit not to print them.”

Dr. James Moriarity, a school and team physician, said every Irish player in the past three seasons has been drug tested under a year-round, random program as well as at bowl games the past three years.

“Tests indicate Notre Dame does not have blatant steroid problems,” Moriarity said. “There’s no question our athletes know our feelings on steroids. We don’t tolerate them. In no way do we encourage it. All our coaches know the danger.”

Puzzle answers

STRENGTH, from Page 23

try and improve on it.

“We test each guy at the beginning of the season,” Jones said. “Then we set a goal of improving on that level of strength as the season progresses.”

Another benefit of the improved strength, Jones said, will be the stamina of the players late in the game.

“Our conditioning will be a major factor in the fourth quarter of ballgames,” Jones said. “We have emphasized the idea that we need to be well conditioned for the entire game to be a dominant ballclub.”

Jones said his job is to be the planner for the athletes, they take it from there.

“I structure what it is they need to do. They do the lifting and all the work, they deserve the credit,” Jones commented. “I think you’ll see one of the 14 being an effective athlete for us.”

The only other teams in the conference that Denoon is concerned about are Illinois State and Indiana State.

“The only other team in the conference that Denoon is concerned about are Illinois State and Indiana State.”

Another factor in the fourth quarter of ballgames, “Jones some say it. Denoon is working the conference rather easily,” Denoon said. “At the same time, their top runner from last year’s team was a senior and she graduated and their number two runner has left their program so they’re basically working from their third runner down.”

“Indiana State, on the other hand, had two athletes that came on in the track season last year and really did an outstanding job. Both of them were conference champions outdoors and we expect them to have really good seasons and give them good leadership,” Denoon commented. “They didn’t have much depth and that’s where their recruiting will have to make dividends for them, so they’ll have to have some freshmen come in.”

DENOON, from Page 29

in long distance runs. Overall, Denoon said the team is in better shape than any team had in the past.

“We have 14 athletes out for cross country right now and I think you’ll see any one of the 14 being an effective athlete for us,” Denoon said.

The only other teams in the conference that Denoon is concerned about are Illinois State and Indiana State.

“Indiana State was our conference champions last year and they won the conference rather easily,” Denoon said. “At the same time, their top runner from last year’s team was a senior and she graduated and their number two runner has left their program so they’re basically working from their third runner down.”

built
DALLAS (UPI) — The safest forecast to be found in the array of NFL preseason prognostications is that a year is a year and hope will be better.

It could hardly be otherwise. And yet in the slightest chance, of course, that the Cowboys could turn into a team like the one they did in 1989. But if only by accident, they will likely win more than the one game they won in 1989 and could easily wind up winning a home game for the first time since 1987.

Dallas Coach Jimmy Johnson, in fact, suggests he will be disappointed with the season if his team fails to win more games than last year. He had better be ready for his fans.

Yes, the Cowboys will be better than they were last year, but probably not much better. There is a general feeling as the team gets together in training camp and the players seem to have a better grasp of what they are supposed to be doing. The problem is that they don’t have enough players on the team who can get it done.

The exciting news of the Cowboys from the 1990 exhibition encounters suggests they are conspicuously similar to the team that wound up the 1989 season, despite a lot of cosmetic changes in the defense.

On defense, Dallas looks like a fairly decent club. During the second half of the 1989 season the Cowboys played some excellent defensive games and now running back managed 100 yards against them over the last nine weeks of the season.

Linebacker Eugene Lockhart is a legitimate Pro Bowl player (although the Cowboys’ record last year was too much for him to overcome), comeback issue: “it has been installed in the starting lineup and he should help. Speed has been upgraded throughout the defense.

The problem still appears to be, just as it was a year ago, that Dallas can’t make the big plays on offense. The Cowboys were next-to-last in sacks last year with 29, one ahead of the New York Jets. And they set a franchise low with a paltry seven interceptions.

Creating turnarounds and winning big hand-in-hand and until Dallas can start making the big plays on a daily basis defense it will be able to do much — especially with the other problems the team has on the other side of the line.

And those problems have to do with quarterback. Last year was easily the worst in the NFC.

Dallas gained 4,294 yards last season — 347 fewer than the Phoenix Cardinals. The Cowboys had 246 first downs, easily the NFC’s last. Their average time of possession — 25:34 — was worst in the league and their third-down efficiency — 33.2 percent — was second worst in the NFC (to Atlanta).

Denver Broncos hope for another shot at Super Bowl championship

DENVER (UPI) — Believe it or not, the Denver Broncos actually want to make it back to the Super Bowl.

Undaunted by four failures, including last year’s 5-10 headquarters, the Denver Broncos at Super Bowl XXIV, the Broncos say they have no sign of a Falcons arc celebrating their 25th

The seasons have been some people and thing their 25th

The seasons have been some people and thing

The Broncos Super Bowl failures have them branded as losers.

Now they have been one of the league’s most successful franchises in recent years, winning three of the last five titles, and the Broncos’ Super Bowl failures have them branded as losers.

Denver coach Dan Reeves said, "Our team has accomplished a lot over the past few years, but to some people that doesn’t mean anything.

Favre, who turned 30 over the summer, was a shoo-in for the Super Bowl season with the Broncos. But there have been no signs of a drop-off in either his skills or enthusiasm.

Reeves said:

Elway spent extensive time in the team’s weight room during the training camp, and Broncos’ strength coach Al Miller believes Elway may be the strongest quarterback in the league. Reeves said his team’s quarterback’s work habits are a good example for his teammates.

When you have a guy who has done as much and as much as John Elway, and he’s working as hard as he’s working, that’s contagious," Reeves said.

For the second time in several years, the Broncos enter a season with concern about their starting running game. Bobby Humphrey broke into the starting lineup in the fifth week of his rookie season last year and ended up with 1,151 yards.

More importantly, he showed no signs of the foot problems that plagued him in his rookie season.

Veteran Sammy Wnder, entering his ninth year, likely will be Humphrey’s backup. With Al Miller on the Broncos’ second running smells list, has announced this probably will be his last season.

Denver’s offensive line has grown from one of the smallest in the NFL to one of the biggest over the last three years. tackle Jerry Penry and Ken Lane, guards Doug Widell and Jim Juriga, and center Keith Kante average 6-foot-4 and 285 pounds.

Wide receiver Mark Jackson is coming off a subpar year, but he and injury-prone Ricky Nattel can take some pressure off Vance Johnson, the receiving corps should be solid.

The Bronco’ the biggest improvement came on defense. Denver ranked third fewest points allowed.

It finished third in the league in fewest yards yielded, up from 22nd in 1989, and ranked among the league leaders in sacks and takeaways.

Safety Steve Atwater, last year’s all-pro free safety, stepped into a starting role in his rookie season. The Broncos believe they have found another young talent in this year’s third choice, defensive back Alon Montgomery.

Montgomery played safety in college, but the Broncos would like to see him turn him into a cornerback.

"Alon Montgomery may turn out to be the kind of guy you just can’t keep off the field," Bronco defensive coordinator Wade Phillips said.

Getting in the game with the Saluki Baseball Team and the Saluki Sports Pass

WOMEN’S TRACK & CROSS COUNTRY — The Saluki women’s cross country and track and field programs both enjoyed great success in the decade of the ‘80’s. After taking over the program in 1983, coach Don DeNee led his teams to four straight Gateway Conference indoor and outdoor track titles. In his tenure at SIU DeNee has won the Gateway Conference of the year four times.

The Saluki track and field program has turned out many top notch athletes including 1988 Olympian Connie Price.

Black hats a perfect fit for Glavine’s Atlanta Falcons

ATLANTA (UPI) — The Atlanta Falcons are celebrating their 25th anniversary and black hats are a perfect fit for Jerry Glavine’s new team.

The league’s newest bad boys on the block are spoiling for a fight and shooting from the hip in a Red Gun offense that’s been compared to sandler ball — as in "everybody get open."

On defense the "Black in Black" brigade are scappy trying to resemble the unit Glavine helped coach in 1980. Those teams went in the playoffs three times and won the NFC West in 1980.

"Memories are here of winning and the city of Atlanta being totally a part of the team," Glavine said. "I hope to return to that feeling and situation."

After a 3-13 season in 1989, the coaches believed Glavine’s reward to be only a 50 percent to become a hero in town again long ago dubbed "invis".

Glavine inherited a team that has been through rebuilding and now has star-quality talent. One of the first things Glavine did when he was named the new coach in January was to call former Falcon quarterbac Brian Barkowski and tell him, "I’m the luckiest guy alive."

Favre, with the ball, is a hero in town again long ago dubbed "invis".

McMichael looks around for new team

LAKE FOREST, Ill. (UPI) — Contract negotiations between the Chicago Bears and holdout Steve McMichael hit rock bottom Wednesday, with the veteran defensive tackle given permission to seek employment anywhere.

McMichael and his agent, Larry Bales, met privately with Bears finance director Ted Phillips at Halas Hall, at which time Phillips said he offered a restructured proposal. McMichael turned that down, and the two sides broke off talks.

"I never thought it would come to this, but I don't think Steve McMichael will ever play for the Bears again," Bales said.

Furthermore, the Bears gave McMichael permission to pursue a trade with Houston. Phillips said the Oilers have expressed some interest in McMichael, who is under contract through the 1991 season.

Phillips gave McMichael permission to have Oilers general manager Mike Holovak contact Bears vice president of player personnel Bill Polian. Holovak was unavailable for comment.

Browns still chasing the Super Bowl

CLEVELAND (UPI) — The Cleveland Browns' last decade started with "The Pass" and ended with a Super Bowl loss in Denver.

In between there were two coaching changes, a pair of classic losses to the Broncos in A.F.C. Championship games, a playoff loss in Miami in which they blew a 2-lead, and a barrage of dog bites and barking.

Even though the 1980s were far more successful than the 1970s, the Browns went another 10 years without giving owner Art Modell what he wants more than anything in the world — a trip to the Super Bowl.

And it doesn't look like he's going to get there in the first year of the 1990s, either.

There have been reports that Modell, who is 65 and has undergone two heart bypass operations, has told coach Bud Carson he is to reach the Super Bowl — or else. The Browns won the N.F.L. championship in 1964, three years after Modell bought the team, and lost in NFL title games three more times before the end of the 1980s.

-Fortysomething' golfers having a good year

AKRON, Ohio (UPI) — They're too young for the Seniors Tour, yet old enough to draw extra attention when they do win a golf tournament.

They are golf's "fortysomething" generation, and this week, they will be taking on the young guns of the golfing generation in the $1.1 million World Series of Golf at Firestone Country Club.

Beginning with Thursday's first round, Hal Irwin, Gil Morgan, Tom Kite and Larry Watkins will be shooting for a victory that not only will give them a 10-year qualifying exemption and increase their bank accounts by $198,000, but also will strike a blow for every aging athlete that believes younger does not necessarily mean better.

"You do start to question your ability," said Morgan, the 1978 champion who qualified for the World Series by winning the Kemper Open in June. "You know it's all going to end sometime, but you hope it's not right now."

"But you just never know in this game. I'm the last one to have guessed what would have happened to me this year." Morgan, 43, had rotator cuff surgery in 1986, but had not come close to winning until this year. Now he has earned more than $300,000, his best-ever season as far as money winnings are concerned.

An international field of 47 golfers is expected to tee off on the par-70, 7,149-yard South Course that features six par fours longer than 500 yards. Rain during the week will make the greens softer, but also will make the already lengthy course play even longer.

This year's star of the over-40 golfers is Irwin, who won an emotional victory at the U.S. Open.

University Bookstore

everything you need!

Textbooks. New and used. And used books save you 25%. All the required course materials plus suggested readings.

Supplies. The ones you expect to find like notebooks, pens, pencils, and folders. Others you might not think about like engineering and drafting.

Helpful employees. They are there when you need help. They know the answers to your questions. They help you quickly find everything you need.

Return on your investment. Money spent at University Bookstore goes toward the operation of your Student Center. It helps pay for the free coin lockers, t.v. lounge and Information Station. It helps keep bowling and billiards prices low.
