ISSC grants will be cut early

By Andrew Herrmann
Staff Writer

Some 2,900 SIUC students who receive Illinois State Scholarships Commission grants will find that their awards have been cut by $100 on the first spring semester billing. Joseph Camille, director of student work and financial aid, said Monday.

The ISSC announced last week that Illinois plans to reduce by more than $100, if indeed they were to be made at all, and that a decision on the matter would be made at either Dec. 13 or 15.

However, this has put the University in a dilemma, said Camille. Because the first spring billing is being put together this week and is scheduled for mailing by the ISSC, Camille says it is not yet possible to determine what Camille called a "mass confusion situation." The University expects to receive final figures in the next few days, she said.

"We don't know what the final decision is going to be with the ISSC, and we have not been informed," Camille said. "But we are considering the cuts, and we will in all likelihood have to assume that they will be forthcoming, at least at the point where the final decision is handed down by the ISSC whether the cuts are made and for what amount, then the billing will be readjusted accordingly," she said.

Camille explained that students received a firm offer from the ISSC on their fall semester award notices and that the amount of funding, students were given estimates on what spring grants would be, and that she is hoping that the office is using the fall award figure and that students would expect the billing to reflect a $100 decrease from that.

If, for example, a student received a $1,000 grant for the fall semester, the student can expect his spring billing to show a grant of $900. If the ISSC then decides that cuts of only $100 will be made, the University will credit the account $100 on the next billing.

"After the Dec. 13 or Jan. 11 mailing, we'll know what their decision is for certain," she said. "If we waited until then there is the possibility of another mass confusion situation with the billing procedure and the students.

"We think that this will be beneficial to handle this situation.

Task force extends deadline for report

By William Jason Young
Staff Writer

The Service Evaluation Task Force has extended its deadline from Monday, to Feb. 17, for evaluating seven service functions through student fees.

John Kelly, chairman of the 12-member task force, said that the main reason for the delay in completing the evaluation and the extensions of the deadline was due to difficulties in getting all the data that was requested.

"We did not manage to get things into a form until the middle of the semester," Kelly, a senior with a double major in accounting and finance, said. "A lot of time was spent contacting all the people."

The task force project, a joint effort of the Undergraduate Student Organization, was formed on Sept. 25 to evaluate seven programs supported by $236 in student fees. The task force will formulate a statement for each individual area and a final report for the overall programs.

The report will be presented to President Soest in early February for making recommendations to possible action that would expand some of the services.

The task force is considered by Soest as a third task force of the seven programs which have Non-Academic Priorities. The seven programs which the task force will evaluate are: Student Center fee, student Recreation fee, athletic fund fee, student medical benefit fee and the Illinois State Scholarship Commission fee.

Members of the task force represent the student body. They are David Williams and John Kelly from the Undergraduate Student Council, Andy Messina from the Non-Academic Priorities Committee, Mark Mielke from the Academic Priorities Committee, Sue Jones from the Associated Student Body and Muriel Nave and Jean Easom from the Civil Service.

SIU-C has budget contingency plan

By Bob Delaney
Staff Writer

Slashes in SIU-C's budget, expected as part of Gov. James Thompson's efforts to rid the state of its financial woes, may not cost the University an arm and a leg, or a program and a pay raise.

While speculation by lawmakers and faculty has run that faculty pay raises will be cut aside as part of a plan to ease the state's cash crunch, John Thompson, special assistant to the president, said SIU-C had planned for such a crisis with a $1.1 million contingency plan.

The Legislature gave Thompson the green light Friday to slash up to 2 percent of the budgets of state agencies to make up for a drop in revenue that stems from decreased state sales taxes collected in October.

Woody Mengers, a Thompson aide, said Monday that no decisions had been reached about where cuts would be made for SIU-C and other universities and state agencies. That would be up to the universities, he said.

The conference report giving Thompson authorization to slash the budget allows him to cut up to 3 percent from each agency, but Mengers said some agencies would be slashed by 1 percent while others may be slashed up to 3 percent.

SIU-C set up a $1.8 million buffer in its budget anticipating reductions, according to Baker.

"We see how well we planned," he said. "Baker said it was "our hope that the budget could be reduced without faculty losing 3 percent pay cuts, scheduled to take effect Jan. 1."

Thompson must announce by Jan. 10 what he will take from the BUDGET.

County has flood threat in hand

By Dean Kirk
Staff Writer

The Illinois River, the Mississippi River and many of their tributaries are not expected to crest at levels near those of the late 1970s, when flooding threatened thousands of families in central Illinois.

Although Illinois disaster officials are predicting a "worst in years to come" after the state has received some of its worst flooding in 20 years, Jackson County seems to have managed to weather the storm.

"I don't think there will be too many problems," said Raymond Smith, the county's emergency services and disaster coordinator. A former county coroner, Smith resides in the Mississippi River bottoms near the county line.

Although flood threat is not at hand, Smith said residents are also bracing for a "worst in years to come." The National Weather Service said the Mississippi at Alton's Dam 26 is 21 feet, while the stage is at 31.4 feet. Near the Illinois River at Alton, the stage is 27.3 feet and the crest is expected on Jan. 9.

At Cairo, where the Ohio and Mississippi rivers merge, residents are also bracing for flooding. The National Weather Service said the Mississippi at Quincy was 18.5 feet Monday, nearly two feet above flood stage, but has crested and will fall slowly in the next three days.

The flood stage of the Mississippi at Alton's Dam 26 is 21 feet, while the stage is at 31.4 feet. A crest of near 33 feet is expected on Wednesday.

Six inches of rain swamped the river area and surrounding counties of Kane, Will, Lake, DuPage, and Kendall counties.

to press support to U.S. allegations that the Soviet Union and its allies have used chemical weapons in Afghanistan and Southeast Asia.

The report by the four-man panel, released here Monday by Sen. Daniel Patrick Moynihan, D-N.Y., said that the symptoms reported by "alleged victims" were consistent with exposure to highly toxic mycotoxins. It could not be determined whether this resulted from chemical attacks "or could be attributed to natural causes."

news roundup

BELFAST, Northern Ireland (AP) — A bomb blast brought the roof down on the crowded dance floor of a bar frequented by British soldiers. But no one was killed and the explosion was expected to ease tensions.

An unknown number of people were trapped beneath the collapsed roof. "Casualties are being ferried to hospital in a fleet of ambulances and so far five have been confirmed dead," a press officer at Belfast police headquarters said.

No group immediately claimed responsibility.

Salvadoran rebels kidnap youths

SAN SALVADOR, El Salvador (AP) — Leftist rebels im-
terrupted a soccer game in a town near here and kidnapped 19 youths at gunpoint in an apparent attempt to press them into guerrilla ranks, a local commander said Monday.

A civil defense commander in San Sebastian, 30 miles east of San Salvador, said about 30 heavily armed guerrillas firing automatic weapons into the air interrupted the soccer game Saturday.

The commander, who asked anonymity for security reasons, said the rebels rounded up around 140 youths at gunpoint and marched them off into the nearby San Pedro hills northeast of the town, where the rebels are known to have a heavily fortified camp.

Illinois college students going technical

By Ginny Lee
Staff Writer

As consumers of education, Illinois college students have been changing their purchasing patterns by moving rapidly into fields that will give them more potential for the next economy game — such as business, computer science and technical fields.

At the same time, the popularity of liberal arts and sciences is waning, according to a recent report by the Illinois Board of Higher Education which studied Illinois state universities' course offerings and enrollment changes at the baccalaureate, master's and doctoral levels from 1976 to 1981.

The IBHE has warned university administrators to take heed of this trend in making program and budgetary decisions for the future.

"Shifts in student demand of this magnitude can have ramifications for the continued educational and economic viability of degree programs offered by the state's universities," the report warned.

After reviewing the University's academic programs in terms of their educational and economic viability, the master's level in home economics, engineering absorbed a 54 percent rise in the number of undergraduate course hours taken, as well as a 44 percent increase in philosophy. Computer science, of course, saw a 51 percent increase in graduate course hours.

The IBHE report indicated that undergraduates have increased their credit hour courses by 236 percent in four years, while on the master's level in that field, the increase was 84 percent.

Substantial increases were also seen in public administration on the master's level, where course hours rose by 38 percent in four years, while on the master's level in that field, the increase was 84 percent.

Neither foreign languages nor home economics fared well. The IBHE reported that a 51 percent decrease was experienced in the number of foreign language course hours that undergraduates enrolled in and a 74 percent decrease was seen in course hours that masters and doctoral students are taking.

"We have obviously incorporated a recognition of these needs," he said, "or the numbers would not be what they are.

Brown also pointed to the Committee on Academic Priorities at SIUC, which is reviewing the University's course offerings and making program changes as necessary in response to student demands.

"The creation of this task force is absolutely essential if we are to develop alternatives to annual tuition increases," Katsinas said. "Presently, our public officials in Springfield do not hear alternative arguments. Their only source of information is the Governor."

Katsinas said Monday that he is concerned about the challenges to his victory, but insists now that the main concerns is that we get this task force going as soon as possible, as the appeals when time comes.

MBBA President Dave Rodgers said he would file an appeal on Tuesday, and council members Dave Williams and Vic Westberg are expected to appeal the election results.

Opinion & Commentary

Express yourself; vote in USO senator election

The vicious circle is at work in student government once again. Wednesday, an election will be held for Senate seats. Normally, there was a reduction of seats in the Senate. No one wants to be a candidate, thought the number of positions doesn’t seem to have had the desired effect.

...To make the Senate a truly democratic institution, the number of positions must be increased. The Senate is currently made up of 90 representatives, and it is evident that there are not enough. The number of positions should be increased to at least 150. This would allow for a more representative and diverse input into Senate debates.

Graduate assistants who teach need testing on language skills

A teaching problem exists at Southern Illinois University. Graduate assistants who teach at the University of Illinois can teach in a number of courses. Some of these instructors are foreign students, who are not fluent in English. When the TA’s speak, their students have a hard time comprehending their words. Undergraduate students are sometimes confused by the TAs, and as a result, they have problems with their course grades. This situation is totally unacceptable.

Undergraduate students are sometimes confused by the TAs, and as a result, they have problems with their course grades. This situation is totally unacceptable. The University of Illinois should consider providing testing on language skills for graduate assistants who teach in English.

Nuke threat real

After reading the Nov. 30 editorial in the DE, I felt a need to write. The Nuke threat is real. The possibility of nuclear war is constant, and we must be prepared.

...The Nuke threat is real. The possibility of nuclear war is constant, and we must be prepared. It is time for the United States to take action to prevent a nuclear explosion. We must work towards a world without nuclear weapons. The United States and the Soviet Union must work together to prevent nuclear war.

Playboy is the new bible for age of enlightenment

By Michele Imman Staff Writer

Entertainment for Men. That caption caught my eye as I perused the Sunday edition. Naturally, I had to read it — I am a woman.

The old through the pictures and articles, I realized that we have entered a new age of enlightenment. Our society is in an era that needs new thoughts, new philosophies, new morals, new ethics and new expressions. As in the old Judeo-Christian world, all this must come from a new god and a new bible.

Enter Hugh Hefner and Playboy magazine. This new age of enlightenment will be written by Hefner. He will be the arbiter of the new moral world.

To understand this new age, one must study and understand its new bible. The old outmoded bible and its casts of women to cover up, close up, and stay closed in every way. The new enlightenment age, with its petticoats, bonnets, and in extreme cases, the old Our candidate is a man, and in extreme cases, the new candidate is a woman. The new candidate is a woman. But, the new bible says it all in its first commandment: You shall not.

Seeing how America has decided to prevent the world from aggression, I feel it is our duty to be able to fight a war to defend our country. We cannot afford to give up our nuclear weapons. The United States must come out of a nuclear arms race. I think that the United States should make a decision to produce a nuclear weapon. We cannot afford to give up our nuclear weapons. The United States must come out of a nuclear arms race. I think that the United States should make a decision to produce a nuclear weapon.

While Hitler rose to power, he rapidly produced weapons that could destroy entire nations. I see the same thing happening today. The fault lies with history repeating itself. — Dana B. Davidson, Freshman, Computer Science

DE's editorial ethics challenged

By Jackie Rodgers
Staff Writer

I've lived in Carbondale for almost a year and a half now, and I still don't feel I belong. Sometimes it feels as though I descended from another planet on a spaceship that landed at the city at the north end of I-77 - Chicago.

Chicago is a hole, it might just as well be another planet. The streets are wide, the buildings are tall, there, people stepped back in horror. I was puzzled further when this occurred every time I opened my mouth. Finally someone explained it to me. You talk funny," she said.

...Those northerners; they think we talk funny...

By Abigail Kimmel
Staff Writer

Finding things to editorialize on from the Daily Egyptian has always been difficult for me. In the main these are issues of city or county government, unemployment, crime and sports, with the occasional problem in the city and on and on.

But for someone reared on a farm, or in a small town, or even some 30 miles from Carbondale, that is next to impossible. It is next to impossible to say anything that has no relevance to anything I have experienced. And so far there is research, it's hard to have opinions which are well-informed, if you've never experienced anything of it.

But this isn't the only time I've run into this sort of problem. In all the time I've been here at SIU - half my natural life it feels like - I've encountered a lot of people very well, actually lots of people view the unmitigated bell for being from Southern Illinois and not from that center of the universe, Chicago. (Or the other dinky little metropolitan centers, New York, or St. Louis.)

Yes, I'm fairly convinced that I will never say something that to you. Farm life will also allow you the chance to find this out for yourself.

One of the earliest possible age with live experience on the farm and the field. And there are lots of pets to be had and a big yard and lots of food and plenty of material for show and tell in school when you're young. And yes, "fack funny," if a slight, only slight. Southern accent is speaking in an odd manner, there are no pressions that may be somewhat unclear. If we, for example, think they are more clear word pictures and images that you may have a Chicago correspondences use. If they use a sort of trade mark for "Northen..."

In my town, I have been found that most of the people I grew up around are generally better read than you do. This is the case with almost all the folk. But there is still an occasional example of you being better informed than them. "Redneck Country."

Where I grew up, is when people fail this area and say it has no culture. I beg to differ. Any area on the face of this good earth that is populated with human beings has a culture of some sort. Maybe they mean culture in art, music, and theater, museums, and theater and all that. You can see that on Chicago. I seem to recall all that. Though not in those other places, there are ethnic festivals and parks and any number of things to do there. And they do them.

Ritenour album is refreshing

By Jackie Rodgers

Until last year, Lee Ritenour was exclusively a smooth jazz guitarist who picked up a few extra instruments for the likes of Kurt Bachman. Capping a successful career, and capped now by a triumphant one for his album "Tobacco Road." This was the result of an appealing combination of his Kool and the Gang sessions on "Tobacco Road." The simple, "In the Hour," opening track on the second pop and soul chart.

The follow-up to "Tobacco Road" is the new direction for Ritenour. "Rit 2" was Ritenour's first solo guitar effort that hinted slightly of a Latin flavor. Now Ritenour's new album, "Rit 2," takes off in the same direction as "Tobacco Road," but does so with authority. Whereas Ritenour seemed unsure of his new endeavor with "Tobacco Road," he seems confident with "Rit 2." First of all, almost all cuts are of the pop variety. That is not to say Ritenour hides guitar talents, but instead, incorporates them into the songs. In "Rit 2," Ritenour tended to hide his guitar, waiting only for a solo to break loose. Now he rips off on the guitar right in the middle of "Rit 2," without disrupting the flow of the song altogether.

Ritenour wrote or co-wrote all of the 10 offerings on this album, and each composition is refreshing. "Tobacco Road," the lyrics to live up the cut and has a good way of saying things. He does not get bogged down with unnecessary or electrics. Whether as a soloist or as a composer, Ritenour toured with his vocals. He has a new smooth, easy-to-listen-to style. As he is good on "Rit 2," but he really shines on this release. With two albums under his belt, Tagg demonstrates he is a professional all the way.

The album opens with "Cross My Heart," a love song of sorts that has a nice horn and string arrangement by Ritenour, along with a guitar solo by "Rit 2" and Jerry Hey's saxophone solo. Bill Champlin and Steve George, a maestro for Bayer Sager, do some nice background vocals behind Tagg's lead. This time also, has a nice dance beat, as the hand clap beats indicate. The dance beat is accelerated a bit in the next cut, "Promises," a promise to a lover to make them promise they will love, but promises were made to be broken, you've broken the one you've made. No last cut, this song. Ritenour breaks into a rich guitar solo, which is later balanced with a smooth sax solo by Tom Scott. "Dream Walkin'" is as Smooth as "Tobacco Road," which allows Tagg to display a bit of vocal virtuosity. There is a nice string arrangement by Roy Smeck and "Alone," another ballad, a love song for a more romantic moment. Ritenour's guitar and a children's choir bring an angel. Dave Grusin contributes the keyboards for this track. The album closes with the closest thing to Ritenour's conventional instrumental.

"It's a" is an album that has something for everyone and in various types of music. Ritenour may be one of the most diverse musicians today, and if he is, a vocalist who all should be hearing more of.

-Campus Briefs-

Harold Rappaport, professor in the School of Medicine, will speak on "Total Effects of Food" at noon Wednesday. The presentation will be open to students, staff, faculty and the public.

An original poster sale will be held at the Gymnasium and Recreational Sports Center. The sale will take place from 1 p.m. to 4 p.m. on Wednesday through Friday in the Gymnasium lobby and the Central Office. The sale will feature a variety of paintings and prints, and there will be a drawing for a free gift. The sale will benefit the Educational Fund for the College.

The campus community is invited to attend the "The Party Pack," a program about having a successful party, starting at 6 p.m. in the Recreational Sports Center. The program will feature a wine tasting and a tour of the facility. It is sponsored by the Wellness Center and Interfraternity and Sorority Recreation.

Phillip Graham, author of "The Art of Living," will present a workshop on "The Art of Living." The program will be held from 10 a.m. to 2 p.m. in the Recreational Sports Center. It is sponsored by the Wellness Center.

Applications are due January 21st. The prizes include dinner for two at a fine local restaurant, and tickets to a major show in the Spring.

Library making some changes to benefit handicapped students

Staff Writer

Changes are being made at Morris Library to help better meet the needs of handicapped students. Braille will be put on all of the elevators, and a resource room on the first floor will be filled with braille books, wheelchairs, tables, a machine that can enlarge print, and a machine that can read books aloud, according to Dan Thompson, minority affairs commissioner for the Undergraduate Student Organization.

The project was proposed by the LSU last spring, and most of the equipment is expected to be in the room by the beginning of spring semester. Most of the supplies for the resource room are already on campus in various locations. Thompson said they just need to bring them together in a central place, "but the one big thing we are waiting on is the Kurweil reading machine, which is like a big talking machine. A Kurweil machine is able to read books at various speeds, speak other languages, read figures and do calculations, he said.

Judith Harwood, a librarian at the undergraduate library, said the Xerox Corp. donated 100 of the machines to colleges and universities that applied throughout the United States.

Teen loses toy company suit

DEDHAM, Mass. (AP) — A 16-year-old high school student who claimed he was invented a toy robot at the age of 12 has lost his bid for $2 million in royalties from Milton Bradley Co.

A Norfolk Superior Court jury found there was no valid written contract between the toy maker and Peter J. Ocko, son of Stephen J. Ocko, who worked until 1978 as a senior game designer for Milton Bradley.

Peter Ocko claimed in his suit that Milton Bradley owes him $500,000 in royalties on $2 million in sales of a remote control toy tank called Big Trip. He claimed he developed his toy at his Brookline home.

Ocko, son of Stephen J. Ocko, who worked until 1978 as a senior game designer for Milton Bradley, claimed he invented a toy robot when he was 12. But a Massachusetts jury has found no valid written contract between the teen and the toy maker, and he can only look for $2 million in royalties.

Although the machine has not yet arrived, Halke said he hopes to have it soon enough to put up letters on elevators in other buildings if needed. It's really exciting seeing these things so close to being in place.

Thompson said, "It's a good investment because the machine can be used to put up letters on elevators in buildings if needed. It's really exciting seeing these things so close to being in place."

DEDHAM, Mass. (AP) — A 16-year-old high school student who claimed he invented a toy robot at the age of 12 has lost his bid for $2 million in royalties from Milton Bradley Co.

A Norfolk Superior Court jury found there was no valid written contract between the toy maker and Peter J. Ocko, son of Stephen J. Ocko, who worked until 1978 as a senior game designer for Milton Bradley.

Peter Ocko said in his suit that Milton Bradley owes him $500,000 in royalties on $2 million in sales of a remote control toy tank called Big Trip. He claimed he developed his toy at his Brookline home.

Although the machine has not yet arrived, Halke said he hopes to have it soon enough to put up letters on elevators in other buildings if needed. It's really exciting seeing these things so close to being in place.

Thompson said, "It's a good investment because the machine can be used to put up letters on elevators in buildings if needed. It's really exciting seeing these things so close to being in place."

Thompson said they just need to bring them together in a central place, "but the one big thing we are waiting on is the Kurweil reading machine, which is like a big talking machine. A Kurweil machine is able to read books at various speeds, speak other languages, read figures and do calculations, he said.

Judith Harwood, a librarian at the undergraduate library, said the Xerox Corp. donated 100 of the machines to colleges and universities that applied throughout the United States.
Step lively

Leslie Cole, senior in data processing, took a lively step Saturday during halftime at the Saluki women's basketball game. Cole is a member of the Black Fire Dancers.

Short stories' reading slated

Philip Graham, SIU-C professor of English, will present three of his short stories at 7 p.m. Tuesday in Student Center Activity Room A. Graham said he puts "as much effort into the reading of my work as I do the writing."

He has published short stories and prose poems in The New Yorker, The Paris Review and other magazines. One story he will read Tuesday, "Light Bulbs," was published in The New Yorker and will soon be made into a short film. Graham said, to promote in New York City. Other featured poems are "Waiting for the Rihni Moment" and "Cave Drawings."

Graham has authored a compilation of 19 short stories called "The Vanishings." The author is currently working on his second book of stories, which will contain the three poems to be presented Tuesday. A recent theme, he said, has been the unspoken rules inherent in human relationships.

Graham has taught creative writing in the Virginia and New York University literary courses.

Stereo stolen as student sleeps

Heavy sleeping can have its problems. As a student discovered Sunday when $1,200 worth of stereo equipment was stolen from his room while his roommate slept.

Adam Koper, of Stevenson Arms at 600 W. Mill St., told police that, while he was away from the room, 120 cassette tapes and his 8000 stereo were taken.

Police said they have no suspects.

Post office open next 2 Saturdays

The Carbondale main post office will be open two extra days to help alleviate the Christmas mailing rush.

By order of Postmaster Hubert Galbreath, the main post office, 1301 E. Main, will be open from 9 a.m. to 12:30 p.m. Dec. 11 and Dec. 14. Full window service will be offered.

The Carbondale post office is usually not open on Saturdays for window service.

Eckankar alternative living explained in weekly meetings

By Dean Kirk
Staff Writer

They learn how to come in contact with the spirit, which they believe exists outside time and space, but they refer to God as IT. They believe there is a connection between their souls and the soul of God, but in the soul's eternity.

A bizarre religious group? No, they are the practitioners of Eckankar. Eckankar is basically a way of life where you learn how to come in contact with the spirit, said Loretta Eaton, president of the five-member, SUU-C Eckankar group. Eaton said, "In the resurrection of God, which flies from IT in the form of angels or other beings that you meet in your own life." The meetings, held at 7 p.m. every Wednesday in the Student Center Missouri Room, are book discussion classes, open to the public. Eaton said, "The books are works of "living Eck masters," written by children from India who's been with them from 1971 to 1981, Harold Klemp, current master, and Paul Twitchell, from 1960 to 1971. The founder of modern-day Eckankar, Twitchell wrote about 40 manuscripts over a period of 20 years. Before Twitchell began writing, Eckankar was an oral teaching, Eaton said.

Practitioners of Eckankar don't believe in God as Eaton said, but the soul's eternity. "IT's more a way of life where you try to come in contact with the spirit and that kind of spirit that exists outside time," Eaton said. He said practitioners achieve mastery by making each vehicle for God - or "sugmad," the ancient Chinese word for God. They become vehicles for God by ridding themselves of the five passions of the mind — lust, hate, anger, vanity and attachment to material things, said Jeff Cartnal, senior in administration, who's been involved with Eckankar for eight years.

Eckankar practitioners aren't Christians, he said, "We recognize the validity of all religions. We would say most religions come from Eckankar."

In Eckankar individuals move through five spiritual planes, after a two-year initiation phase where individuals discover whether they wish to continue.

Upon reaching the fifth plane, "you experience yourself as soul," Eaton said. "You know who you are." A person becomes aware of past lives at this plane known as the "soul plane.""The soul plane requires passing through physical, astral, causal and mental planes. A person is said to have crossed the initiation phase on each of their first four levels.

Eaton said contemplation is the means used to advance from plane to plane. It is done by sitting in a lotus position with eyes closed and attention on the "spiritual eye." Eaton said, "Certain holy words are chanted, he said, to raise the individual spiritually to see the lights and hear the sounds. Contemplation is done individually. Eaton said, lasting no specific length. "They're people have help in their spiritual journey from the outer master, the physical form of the living Eck master." Eaton said.

Certain holy words are chanted, he said, to raise the individual spiritually to see the lights and hear the sounds. Contemplation is done individually. Eaton said, lasting no specific length. "They're people have help in their spiritual journey from the outer master, the physical form of the living Eck master." Eaton said.

"They're people have help in their spiritual journey from the outer master, the physical form of the living Eck master." Eaton said.

Eck masters are people who reach the 12th plane. The inner master is an aid in the person's journey to spiritual awareness. The inner master, Cartnal said, is the spiritual guide on the inner world, experienced on higher awareness levels.

During progression from plane one to 12, people note their lives have changed. "I wouldn't say it's a bed of roses," Eaton said. "You know you're being taken care of by the spirit." He said practitioners of Eckankar experience joy and happiness, have more emotional control and deal with life more responsibly.

Eaton said Eckankar is growing fastest along the Ivory Coast of Africa, its work, he said, is not limited to that continent.
Battle for the Black Hills goes to court

By David Egner
Associated Press Writer

YELLOW THUNDER CAMP, S.D. (AP) - Perspiration pouring down his naked body, Indian occupation leader Russell Means prayed softly in the holy sweat lodge at Yellow Thunder Camp. He said, religion is a way of life.

Indians who have spent 20 months in this scenic Black Hills valley say their belief in the traditional Sioux religion is the reason for their occupation of land in the Black Hills which they call the holy sweat lodge. They pray when they are naked and they pray from the underground spirit world into the Black Hills millions of years ago.

"GRANDFATHER. Great Mystery, we beg you to stop the wasicu-Lakota for white man-from raping the sacred Mother Earth and raping her children," Means prayed, alternating between English and the Lakota Sioux language. "Give us strength to battle the wasicu."

Forty stones taken from an outside fire radiated intense heat in the sweat lodge, and Means splashed water on the stones every few minutes to fill the small round tent with steam that stung the naked flesh of its three occupants.

Some of these prayers were given in a rhythmic chant in the darkness of the tightly sealed sweat lodge, which stood opposite a circle of four buffalo skulls.

Means, who was raised as a Christian but became disillusioned with it in college, said the Lakota Sioux believe they emerged from the under-ground spirit world into the Black Hills 12 years ago.

"That's why we're naked, because we are in the womb," he explained.

In this sweat lodge symbolizes the womb of Mother Earth. Means said.

"The sweat lodge, about eight feet in diameter, is designed to cleanse the soul. Means said as he stood in the snow and dressed after more than an hour in the tent.

"We're naked," he said later in his upper home. "The pipe is our strength."

Run your own company at 26.

We're looking for a few good college students and graduates who can fill the shoes of a Marine Corps officer. It's a pretty tall order.

Because it means leading other Marines. Being responsible for their safety and welfare. That's something no civilian job can offer you at 26. It's something very few people can even measure up to.

If you think you're cut from the right mold, see your Marine Corps Officer Selection Officer when he visits your campus or call him at the number listed below, today.

Marine Corps Capt. Christie will be at the Student Center, 2nd floor, Rivers Room, on December 7th and 8th from 9:00am-4:00pm or call collect (314) 263-5817

Maybe you can be one of us.

P.S. The few. The proud. The Marines.

War seen from teenage view
By Michele Imann
Staff Writer

They say people forget with time, but for Regina Shelton that isn't true.

Although World War II happened a long time ago, Shelton's memories of the war haven't faded.

Shelton was a 12-year-old girl in Silesia, Germany, when the war started in 1939. Now, Silesia is no longer a German city. At the end of the war, Russia and Poland took over Silesia. It is now known as Kladzko, Poland.

Shelton's war experiences began due to the war's effect on her family. Because her home was a part of Germany during the war, the family couldn't stay in the city. At one point, her family, including her brothers and her parents, were on the verge of being sent to the east, but for Regina Arnold, who will perform works by Bach, Schumann, Faure, Purcell and Britten.

Senior baritone to perform Wednesday

A senior student recital will be performed by baritone Bruce W. Trummer at 8 p.m. Wednesday in the Old Baptist Foundation Chapel.

Performers will include...

All-American Concert slated

Break trips popular despite economy

By Dean Kirk
Staff Writer

Times may be hard, but they haven't seemed to have had an adverse effect on the popularity of the two semester break trips that the Student Programming Council is offering.

And while the five trips that Southern Outdoor Adventure Recreation is also offering don't seem to be experiencing the same popularity, they too appear to be unaffected by the current money crunch.

"Economics is a factor," said Mark Cosgrove, program director of the SOAR Underway program and professor of outdoor adventure courses. "You can see fluctuations in that." He said how students budget their money is a determining factor of whether they will decide to attend a trip.

Bill Hyman, SPC assistant coordinator for university programs, said "Despite the money crunch, people are being more selective where they will go." He also said more students are saving their money and not "blowing it all at once."

Cosgrove said he was unsure if hard times were affecting the number of students signing up for SOAR's trips.

SOAR is offering five trips for SIU-C students, faculty and staff. Cosgrove said the Big Bend trip, back-packing and Minnesota cross country skiing, snowshoeing, and dogsledging programs are new.

The Minnesota trip, with only one person signed up for its 10 available spaces, will probably be canceled, "Cosgrove said. Another SOAR trip, featuring cross country skiing at Michigan's upper peninsula will also probably be canceled. No one has signed up for the trip. Cosgrove said this is probably because of the relative nearness of another SOAR trip, one featuring cross country skiing in Kettle Moraine, Wis.

He did say the chances are good that SOAR's other trip — a sailing voyage in the Florida Keys — as well as the back-packing expedition in Texas will be held.

But SOAR doesn't monopolize semester break trips. The Student Programming Council has offered a ski trip to students, faculty and staff, said Hyman.

This year's trip will be to Steamboat Springs, Colo. A trip to the Bahamas this year is being offered for the first time. Hyman said 46 people have registered for the banana trip, which could accommodate only 25 originally. The trip was very affordable for students, he said.

For the SPC trip, students had to pay $360 before the deadline Wednesday. "If someone went on his own, it would cost at least $500," Hyman said, noting that round trip air fare alone would cost $350.

Sign ups for SPC's Colorado trip have been as numerous as those for the Bahamas trip. All 80 spots were sold by Thanksgiving break. Last year, the trip didn't sell out at all.

Hyman said there still-interest in going on the trip may come to the SPC offices, third floor Student Center, and leave their names. He said an additional 12 to 18 people might attend if space becomes available.

Hyman said interest in the ski trip is due to students being more careful with how they spend money.

The ski trip has gained in popularity. Hyman said, because those who enjoy past trips have told others and consequently increased interest. At $239, this year's trip is the same price as last year's.

Hyman didn't know how much the Colorado ski trip would cost if it wasn't sponsored by SPC, but he said the trip is "definitely a break."

"Very rarely do students sign up in advance," Cosgrove said.

He also said students who sign up at the last minute do so because they have other opportunities for them to spend money and the trips involve such major financial considerations for them and their parents, that both put off the decision.

Last year Cosgrove didn't have as many people sign up at the last minute. The eight people who signed up for 1981's trip to Kettle Moraine did so before deadline. The trip was cancelled because of a lack of snow. A cross country skiing trip in Michigan was cancelled too, not because of bad weather, but because all the participants had signed up after deadline.

Hyman has also experienced last-minute sign ups. He believes last minute sign ups occur because people are more certain about what they will do during semester break as it draws near.

Cosgrove is uncertain whether he will have a lot of people signing up for the SOAR's 1982 trips at the last minute. "It's possible, but you never know."

Doctoral student in psychology wins fellowship

SIU-C graduate student Jana Kay Smith has been named winner of the Marcia Guttenberg Fellowship awarded annually by the national Evaluation Research Society.

Smith, a doctoral student in the Department of Psychology, won the fellowship in a nationwide competition sponsored by the society.

The award, which carries a $1,500 cash prize, honors the founder and first president of the society.

It is given to an outstanding young professional in the field of evaluation research.

Smith, of Everett, Wash., just completed requirements for her doctorate in psychology, and is a native of the University of Northern Colorado. She holds a bachelor's degree from Western Washington University.

**Knollwood Rentals**
- **8 & 10 wide**
  - Monthly rent: $85 & up
  - Country Living
  - 5 Wiles on Old 13
  - 642-2300 - 647-5098

**Mobile Homes**
- **Two Bedroom Mobile Homes**, furnished, underpinned
  - 12x50 $125.00/mo.
  - 12x40 $120.00/mo.
  - No Pets

**Comforatable Two Bedroom House**
- 12x36 m.s.f., 2 bedrooms, 1 bath, 1 living room, sleeps 4
  - Underpinned
  - 12x36 $125.00/mo.
  - 12x34 $120.00/mo.

**Murdso~:o Two Bedroom House**
- 12x36 m.s.f., 2 bedrooms, 1 bath, sleeps 4
  - 12x36 $125.00/mo.
  - 12x34 $120.00/mo.

**Large Two Bedroom, Close to Center**
- 12x36 m.s.f., 2 bedrooms, 1 bath
  - 12x36 $125.00/mo.
  - 12x34 $120.00/mo.

**Concened About Winter**
- Rent includes water, trash pickup, basic lawn maintenance
  - 12x35 $125.00/mo.
  - 12x33 $120.00/mo.

**Convenient to Campus**
- Close to campus, 2 bedrooms, sleeps 4
  - 12x36 $125.00/mo.
  - 12x34 $120.00/mo.

**Two Bedroom, Unfinished, Large kitchen and Dining Room**
- Located on pleasant Hill Road

**Home Room**
- 2 bedrooms, large range and refrigerator furnished
  - Available. App. to show. Call 549-6499

**Bedroom with washer-dryer**
- Monthly rent: $120.00
  - Available Jan. 1

**One Girl Needs Bedroom for 7 months, 2nd floor, brick ranch. No. 345-6499
  - Ask for Mr. Smedley.

---

**Apartments**
- **NO ONE BEDROOM**
  - Size: 10x16 m.s.f., 1 bedroom
  - Utilities: All utilities included: Heating, hot water, gas.
  - $95.00/mo.
  - Available December
  - Does not include: Electric, Phone, Trash pickup.

**Perfect For Graduates**
- **2 bedroom apartment**
  - 15x18 m.s.f., 2 bedrooms, 2 baths, 1 parking space, near 2nd Ave.
  - Utilities: All utilities included: Heating, hot water, gas.
  - $135.00/mo.
  - Available December

IU-C joins desulfurization study

By Tina Mitchell

IU-C is among a number of Illinois institutions that have joined the University of Illinois at Charleston in a research effort to desulfurize of Illinois coal. The three-year project, the Center for Research in Sulfur in Coal, is the first major project of its kind to be undertaken at IU-C.

The research effort is being conducted by a team of four assistant professors of chemistry and biology, and three members of the research staff. The project is being funded by the Illinois Geological Survey.

Glass blowing is his hobby

Gift ideas easy for craftsmen

By Michele Ilan
Staff Writer

While many people are worrying about what to buy friends and relatives for Christmas, Jim Boydstun relies on his talent as a glass blower to solve his problem.

The art of glass blowing, said Boydstun, a graduate student in art, involves the age-old technique of blow pipe and molten glass. The process, which usually takes about 30 minutes for one piece of glass, is done in the hot glass studio of Pulliam Hall.

A four- to five-foot-long pipe of stainless steel is dipped into molten glass, which has the texture of molasses. Boydstun said the glass sticks on the pipe and the pipe is spun around to prevent the glass from dripping off. A bubble is then blown through the pipe, and the glass is shaped any way the student wishes, using various techniques, he said.

One is to use wooden cups or blocks to nudge the glass, making it symmetrical or round and even. This process allows control to prevent the glass from being blown unevenly and to allow the glass to cool so it will develop a "skin" on the outside for manageability.

Boydstun said the glass then must be separated from the pipe. The glass is scooped out with a wet file. Another pipe, called the pontil, is attached to the bottom of the piece at the same time. This lets a person work on the top of the glass. The pipe is finally separated from the glass, cooling the joint with a knife. Afterwards the glass is cooled slowly for three hours, usually overnight.

The furnaces in the hot glass studio are run six months of the year, because of the intense heat. Boydstun said in the summer it is impossible to work in the studio because the temperature may reach 130 to 140 degrees. Boydstun said he may feel dizzy and faint from the heat if he works on a piece of glass too long.

Boydstun, who obtained his bachelor's degree in General Studies Art at SIUC, said glass blowing is unique because each piece is different. "You can't blow two things alike," he said. "The glass used by the students is crystal clear, he said. "Everything is clear unless you add little chips of color."

The chips are imported to Germany, which are applied to the pipe before the pipe is immersed into the hot glass. Boydstun said, "It's amazing what you can do with the glass and the bits of color in making Christmas tree balls," he said.

Officials begrudge name of sludge

MILWAUKEE (AP) — Officials here who want farmers to use more sludge have decided that they could spread the word better if they had a better word to spread.

The Milwaukee Metropolitan Sewerage District told its Public Policy Committees on Friday that it will give $250 to the person who can think of a more marketable name for sewerage sludge.

The agency said it will hold a contest early next year among its employees and farmers who apply for the sludge.

It noted in a staff memorandum that other sewerage solvers have found sweeter words for the foul-smelling stuff. The Madison Metropolitan Sewerage District calls its fertilizer Metrogro.

Engineers: Find out about the Nuclear Navy.

If you think you have the ability and desire to master nuclear engineering, the Navy's Nuclear Propulsion Program has openings for about 200 outstanding college graduates. There's a Navy Recruiting Officer ready to give you all the details on how you can become someone special in the new Navy.

Diver qualifies for regional meet

Saluki diver Johnny Conlan qualified for NCAA Regionals by placing sixth out of 41 on the one-meter board at the invitational this weekend. Jim Watson missed his cut off by two points on a seventh-place performance on a three-meter.

Rick Theobald, a former Saluki diver and now SIUC advanced student, also decided to meet as an athlete-coach. As an exhibition diver, he took part on both boards, while working as a coach with Coach Denny Golden, who stayed for the women's meet this weekend.

"It was a very high caliber meet," said Coach Denny Golden, who stayed for the women's meet this weekend. "There were several nationally ranked divers. It was good that they got to go up.

The invitational was a meet not originally on the Saluki schedule. The divers had planned to compete at the 3-A Meet at the SIUC Recreation Center pool, but Nebraska did not bring any divers with its swimmers. The decision for the Saluki divers to go to the Invitational was made just a few days before the meet began. "Johnny and Jim both did real steady jobs," Golden said. "That's really all that it takes."

Theobald, who teaches classes in physical education, still works out with the divers and is looking to maintain his position on the national team, according to Golden.

NFL representatives okay pact

WASHINGTON (AP) - National Football League union representatives voted 19-6 and filed late Tuesday and the first in which they recommended, by a two-thirds vote, its ratification. On Nov. 18, when the agreement was announced, they voted with three abstentions to send the agreement to the players. The two votes were recommended by the union and the Management Council.

A number of changes were agreed to by both sides in a series of subsequent meetings between union and management leaders.

Union chief Ed Garvey said the "substantially improved" document would "likely be ratified" by the full membership when it votes Wednesday.

The union's 1,500 members will be given the choice of voting to accept the contract, rejecting it or abstaining.

Motivation in training leads to freshman swimmer’s success

By Yeon Marciszewski
Associate Sports Editor

Anderz Grifflhammer has swum in meets as a Saluki. He owns two SIUC records. Coach Sue Faber said that when she talks about Grifflhammer, and has nothing but praise for the freshman, she means business.

Before the Alabama Kansas meet of his second season, Grifflhammer swam 9.37 and 9.25 during time trials of the two freestyles.

“Going into the meet, I thought if I could come out with a chance of going 9.20 and 9.20, he would,” said Steel. “He’s going to keep doing what he needs to do as a worker, he’s excited about what he’s doing.”

To some athletes, practice may become a boring routine. Something that mechanically gets done each day. Grifflhammer regards practice as something as important as competitions.

“If you have times you have in practice, the more self-controlled you get for competitions,” the 18-year-old said. “I try to do my best and I’m almost never nervous when I leave the pool. I think of how I could have done better.

“I keep training,” Grifflhammer said. “He’s disappointed when we don’t beat his brains out and if he’s not crawling from the pool.”

As do many of the swimmers, Grifflhammer participates in nine practices each week, logging 7,000 to 8,000 yards each time he varies from training for the individual medley and far distance races, but the effort is always the same.”

Two weeks ago he did a one-hour swim, and each 15 minutes, one lap, he said. Grifflhammer did 5.760 yards in that time, and Steel added, in somewhat of an understatement. “He was going at a pretty good clip.”

Grifflhammer also credits Grifflhammer with being a goal-oriented swimmer.

“He takes time to work out his performance on paper,” the coach said. For his mile on Saturday, when he qualified for NCAA competition in the 1,650 yard freestyle, he had his splits worked out from start to finish, and knew when he was on or off pace.

“Other people might have his skill and physiology, but not his motivation,” Steel said. “That motivation is essential.”

That attitude will help him attain goals during the year, and Grifflhammer has one main goal for his freshman year-

placing in the top 12 in the 1,650 at the NCAAs. He qualified for the meet this weekend with a time of 15:35.95. Steel and Grifflhammer agree that it is a time between 15:10 and 15:15 will be needed, and that the freshman is capable of doing it.

After the NCAAs March 21 to 23, Grifflhammer doesn’t look too far into the future, preferring not to set long-term goals because “you never know what’s going to happen.”

In the meantime, he’s adjusting to speaking English, to living in the dorm and getting over his initial homesickness.

And breaking Saluki swimming records.

Wins becoming rare for Saluki coach

By Dan Devine
Staff Writer

Saluki basketball coach Allen Vandale has rarely gone begging for victories during the Saluki coaching career.

In the three years he spent at Jackson Community College in Michigan — 1976-79 to 1980-81 — his teams won 53 games, lost only 14, and were ranked as high as second in the national junior college ranks. In his last year, he was named the coach of the year.

Even his debut season at SIU-C could be considered a success, despite the team’s less than modest 11-18 mark. The Salukis raised their conference win total by seven games and were the most improved major college team in America.

Injury didn’t slow down Faber

By Jackie Rodgers
Staff Writer

Two years ago, three doctors told Sue Faber she would never play basketball again after tearing up her knee. The fourth doctor told her that there was an outside possibility she might play again if she worked really hard to rehabilitate the knee.

Faber took the fourth doctor’s advice and ran with it, literally. She worked hard, and last year, two years after she first sustained the injury, Faber was the starting forward for the SIUC women’s basketball team once again.

This year, Faber is playing without the cumbersome brace she wore last season. The 25-year-old Faber is referred to as “Grandma” by her teammates.

“I hope they call me that lovingly,” she said with a laugh. It isn’t only her age difference that makes her a much more responsible leader during the Salukis’ practice sessions.

Her teammates voted her captain for the third time.

Coach Cindy Scott said that Faber’s dedication to the game and her team are reasons why she is the type of player any coach would want on her team.

“She cares about her teammates, the program, me, everybody.” Scott said.

Faber said that her perspective of the game has changed from the time she injured her knee.

“I don’t take basketball for granted,” she said. “I had it taken away from me for two years. I now have a much more realistic understanding of what happened before.”

She points to her last full season where she was the knee injury — 1978-79 — as the difference between her and the other members of this season’s squad.

That year the Salukis went 26-6 and captured the state crown. In 1979-80, Faber played an integral role in SIUC’s 19-7 season.

“I know what it is to play on a winning team,” the 6-6 forward said. “Right now, some people on this team don’t really know what winning is, so I try to set a winning atmosphere in practice. They have to learn to accept the negative, accept and learn from it.”

Faber has had to make some adjustments. As a sophomore, she was looking at four or five points, averaging just over 20 points per game. Last year, she knew her speed and size would not allow her to do that, so she did the dirty work, leading the team in rebounds (8.8 per game), dishing off assists and leading in minutes played while closing in on the career scoring mark with a 10.6 point per game average.

She surpassed that when she exceeded 1,176 points in this year’s opener against Division II Southeast Missouri State. She may also break the career rebounding mark before her collegiate career ends this season.

Overall, Sue Faber is the best player I have ever coached,” said Scott. She’s a great player. She’s consistent — she can do anything she wants to do. Well, she just goes out and busts her butt every day.”

Faber could have taken the doctor’s warnings and hung up her high tops, but she said she felt it was important to prove to herself.

“I wanted to prove that I am a good student, and that I could come back and play,” Scott really said. “I’m glad I did.”

Faber said she would bet all the money she has, “which isn’t much,” that the Salukis will pull off the upset. She and her teammate, Leslie Jackson, are determined to make the kind of comeback she did. She said she is confident the team will go on a roll, win 10 or 11 games in a row, and win the Gateway

Collegiate Athletic Conference title.

“This is that type of team,” she said. “This is the type of team we have the coaches that won’t let them quit. We just have some breaks go against us, and then those same things will work for us.”
