J-board orders election re-evaluation

By Brian Gross
Staff Writer

Not only does the question of who will be the next student body president remain unanswered, but now add the question who will serve as senators.

The judicial board of the Undergraduate Student Government unanimously overturned the election commission's decision to nullify April 11 presidential and vice presidential election results and ordered USG to make a new report to the USG senate.

In addition, the board declared nullified the senatorial elections which had been ratified by the senate.

Mike Ruiz, justice, said the election commission's decision to nullify results was not a reasonable conclusion, so it must go back to the point of reporting to the senate.

Some board members raised concerns that a contingency plan should be recommended to deal with the absence of a student government.

"The results are not yet ratified," Ruiz said, "None of the results stand. The commission must reinvestigate and make a new decision for the senate. We felt it was the only thing we could do that was constitutionally reasonable.

Justice Mike Jonscher said since no one is waiting to step in as president, USG President Tim Hildebrand could refuse to give up his office May 16.

The board was asked to appeal the commission's nullification decision by Trojan party presidential candidate Mike Console and vice presidential candidate Brian Hawkins, who won the April 11 election before the results were nullified by the commission one week later.

However, instead of granting the Trojans' appeal, the board sent the campaign violations back to the election commission to be re-examined.

"There were over 10 violations of the election laws," Todoroff said.

"We're going to say (the results) might not have turned out differently," Console said there was no proof of fraud or of students changing their votes.

AIDS education lacking for high school students

WASHINGTON (UPI) — School provide the least amount of AIDS education to 11th and 12th graders—a time when their sexual activity most likely increase—and to students in smaller school districts, government report was said Thursday.

The reports by the General Accounting Office, Congress' watchdog agency, recommended more instruction on acquired immune deficiency syndrome to all students and that state and local governments use Centers for Disease Control funds to collect survey data on AIDS education in schools.

One reason for the lack of AIDS education in 11th and 12th grades is a "crowded curricula," Michael Hand of the GAO told the Senate Government Operations Committee.

"I can imagine a crowded curriculum, but we will have full graveyard," said committee Chairman Sen. John Glenn, D-Ohio.

Marvin Landry of the GAO's Atlanta office also said for limited AIDS education were the issue's sensitivity—political and otherwise—and lack of resources.

"I would hope people would start cooperating. This head-in-the-sand approach because we don't want to think about it" will not solve the problem, Glenn said.

Sen. Herbert Kohl, D-Wis., said without adequate education, "Kids will continue to believe they are immune to the disease.

He noted with disappointment that Wisconsin receives only $246,000 annually in federal funds for AIDS education.

Among the GAO findings:

* Five percent of school districts reported AIDS education be provided at every grade level.

* Fifteen percent of school districts provide AIDS education in the 11th and 12th grades.

"This is troublesome because sexual activity is likely to increase at these grade levels," the report said.

AIDS researchers study toxin in effort to develop antibody

By Phil Pearson
Staff Writer

Soldiers' lives could be saved through SIU-C research funded by the Department of Defense, a representative of the defense agency responsible for the research said.

The researchers are investigating a toxin that occurs naturally and infects tropical fish. When an individual eats a fish infected with the ciguatera toxin, symptoms ranging from gastrointestinal distress to death can result.

Donald Tindall, a SIU-C bacteriologist responsible for growing the samples, said the ciguatera toxin is a natural occurring toxin consumed in tropical waters. Fish carrying the toxin can cause illness among humans who eat the infected fish.

The illness causes gastrointestinal distress in those to six hours and can eventually cause malfunction in the nervous system.

In rare cases, this can lead to death by suffocation in infected individuals. When digested, a person's diaphragm can stop working, Tindall said.

Tindall said there is a great deal of interest in the illness because little is known about it. It is undetectable in fish and is accumulated in the fatty tissues in the human body.

"There's no good clinical treatment for it," he said.

Chuck Dahey, public affairs officer at the U.S. Army Medical Research and Development Command, said many l. situations are contracted to "basic research" for the command. The basic research, once completed at the institutions, is then commercial.

"There's no need to develop a chemical weapon," he said.

Sources involved with toxins research at SIU-C said there is little danger to people and little chance the research is the procurer to a new military biological weapon.

Researchers are growing and testing samples of a toxin responsible for an illness people get when they eat the tropical fish infected with it. The toxin is to be delivered to the U.S. Army Medical Research and Development Command to develop an anti-body to combat the illness, the illness of the gastrointestinal and nervous systems brought on by ingestion of the toxin.

Donald Tindall, an SIU-C bacteriologist growing samples of the toxin, said it is highly doubtful the research could eventually become a chemical weapon.

"It is my belief that it is not likely because of the quantity of materials required is a thousand times more than any lab in the country could produce," Tindall said.

The toxin occurs naturally in dinoflagellates, single-celled organisms that live among aquatic plants, and can be picked up by the food chain from consumer to consumer, all the way to humans.

Chuck Dahey, public relations officer with the Army's command, shrugged off any concern the SIU-C research would lead to the development of a biological weapon, saying the purpose of the research is prevention.

"The reason is to add to the research that could eventually become a chemical weapon," he said.

AIDS education under fire at SIU

Student leaders are advocating a boycott of campus pop machines because of the increase in price.

A resolution in support of the boycott on campus was passed Wednesday night by the Undergraduate Student Government. The resolution, written and submitted by east campus senator Chad Hughes and science senator Nisha Valkartria, says the increase adversely affects the student body and the senate must "show its disgust with the administration's continuous disregard for the students' desire."

The resolution says USG will support a boycott until the current charge is reduced. Hughes said no student gave input on the price increase. "We didn't see the justification," Hughes said.

John Corder, Student Center director, said Canteen Co., the University's vending contractor, came to the University about the increase.

West: ISSC study a healthy endeavor

By Kevin Simpson
Staff Writer

The Intercollegiate Sports Study Committee's study on the role of SIU-C athletics is rolling along and there seems to be support in favor of keeping Saluki sports intact.

Questionnaires were sent out to constituency groups around campus and the surrounding community and two open forums were conducted to allow an equal chance for the public to present their views on Saluki athletics. The open forum was designed to let those who were not sent a survey respond with any comments or suggestions.

The purpose of the study is to help Saluki intercollegiate athletics gain knowledge and perceptions about Saluki athletics.

Charlotte West, SIU-C associate athletic director said the subcommittee was devised to assess attitudes and give individuals a chance to give a free response as to the role of athletics at the University.

"I don't view the study as threatening in any way," West said. "I think we've garnered a lot of support. It seems, for maintenance of the present scope of our programs, I view it as a healthy endeavor."

Approximately 20 people attended the open forums and more than 1,000 of the original 3,350 questionnaire, all of which are confidential, have been returned. The information is expected to be complete by the end of summer.

"We thought the questionnaires would be a valid representative of our different groups of people and then we would supplement that with the open hearing," West said.

"It was designed to give everyone an opportunity and nobody could say they were denied the right to express their point of view. The study was a direct outgrowth of anthropology professor Jerome Handler's belief that the University should drop its football program, West said.

"Handler presented his case to the IAAC last year," West said. "And I think he caught the committee members a little off guard."

A March 22, 1989, Daily Egyptian article reported that Handler asked the Faculty Senate to reconsider the social and economic role of SIU-C's football program.

In his prospect, West said the IAAC should have pursued the issue at that point but it didn't take action on Handler's presentation and the issue was lost in the Senate.

"The president wanted it to be studied as fairly and as objective..." See STUDY, page 27

First place on the line for baseball team

By Greg Scott
Staff Writer

It is rare occasion to see a team progress from worst to first in one season. Saluki baseball fans could witness one such rare occasion this weekend.

After finishing last in the Missouri Valley Conference at 6-14 last season, the Salukis are 40-8 overall and lead the Valley with a 12-4 mark this season.

With a conference championship hanging in the balance, the Salukis play Indiana State (36-17, 6-10) in a pair of noon doubleheaders Saturday and Sunday to conclude Valley action.

In another crucial Valley series, Wichita State plays at Creighton. The Salukis and Creighton are tied at 12-4, one game ahead of Wichita State.

The Salukis enter the final weekend of the conference season in the best position. If the Salukis sweep Indiana State, they are conference champs. Coach Richard "Ike" Jones likes his team's position.

"We hold our fate in our hands," Jones said. "If we win our games, it doesn't matter what anyone else does. We will not be looking over our shoulder."

The Salukis would win a tiebreaker over Creighton. They defeated Creighton three times in a four-game series April 14-15 here. But the Salukis wouldn't win a tiebreaker with Wichita this weekend, See FIRST, Page 27

Second game a charm for Blackhawks

EDMONTON, Alberta (UPI) — The Chicago Blackhawks, who lost the openers of their first two playoff series, went on to win each in seven games. So far, they have stuck to formula in the Campbell Conference final, looking terrible in a 5-2 loss to the Edmonton Oilers.

If this is the secret to success, nobody has filled in for coach Mike Keenan.

"I'd like to see us come out and play," he said. So far this year, that has been the Blackhawks' history. It seems there is seldom middle ground. They're on or they're not. And they've been "on" in Game 2 against previous opponents Minnesota and St. Louis but both those games were in Chicago. This time, the Blackhawks are without home advantage as the Oilers finished the regular season with 90 points to Chicago's 88.

The biggest flaw in the Chicago Formula may be the Oilers. With four Stanley Cups in the 1980s, Edmonton became a team known for playoff excellence which can't be said of Minnesota or St. Louis.

The Oilers won Game 1 with only a mediocre performance.

"We were not sharp in Game 1, particularly with our passing," Edmonon Coach John Muckler said. "But we will play better in Game Two, particularly on our power play. They had more chances on our power play than we did," he added of the team that leads the NHL with four short-handed playoff goals.

Oilers veteran defenseman Kevin Lowe said the game plan was right but the execution could have been better.

"I think we were a little rusty (after eight days off) on a couple of instances but we played the type of game we needed to beat the Hawks. They're too disciplined to let us freeload," he said.

As for Chicago's attack, attention still centers on Keenan's choice of Bench players and checking winger Dirk Graham missed the game because of his injured knee.

Asked to speculate on why his team has been so inconsistent..." See HAWKS, Page 36

Softball team plays 4 times this weekend

By Eric Bugger
Staff Writer

The SIU-C softball team is hoping to extend its 16-game winning streak this weekend as it wraps up regular-season play at Illinois State Friday and Indiana State Saturday.

The Salukis are ranked 18th in the nation and their 29-6 record is one win shy of tying the school record.

Rain has canceled the Salukis' last six games and put on their winning streak. The Dames were swept out of Wichita, Ill. and Indiana State last weekend and again Tuesday against Austin Peay.

The Salukis haven't faced a conference opponent since April 1, when they swept a doubleheader from Wichita State. SIU-C coach Kay Brechtlbuehler hopes the loppy doesn't adversely affect her team going down the stretch.

"There is no sense in wasting energy worrying about something we can't control," Brechtlbuehler said. "This is a veteran ballclub and I think they'll rise to the occasion."

The Salukis take a 3-0 conference record into the doubleheaders this weekend. SIU-C was picked by the Gateway Conference coaches in the latest poll to win its first-ever conference title.

Even with the conference tournament just around the corner, Brechtlbuehler said "we are in a position to win it. It is in our hands."

If the Salukans can sweep Illinois State and Indiana State they will be in a great position to take the top seed going into the tournament, even though rain kept them from proving themselves against pre-season conference-favorite Wichita State and Illinois Illini. The Westeriders (27-13 overall, 8-2 conference) are presently third in the conference behind SIU-C and Illinois State (27-24, 10-2).

The Salukans have a 20-33 career record against Illinois State and have yet to win any games against the Redbirds. The Salukans' last win came against a double-header in Carbondale.

"They're a good ballclub, they have a strong pitching staff," Brechtlbuehler said. "I think their conference record is indicative of their team. Their overall record is misleading because they played a lot of ranked teams early in the season."
NATO allies hear proposal to cut European missiles

BRUSSELS, Belgium (UPI) — Secretary of State James Baker presented NATO allies Thursday with a U.S. proposal that would scrap plans to modernize its aging short-range nuclear arsenal in Europe and speed up arms-control talks with the Soviets. The White House proposal, outlined by Baker at a special meeting of NATO foreign ministers, was not unexpected. West Germany and other allies have said for weeks the modernization program was a dead issue because the short-range missiles could reach only the recently democratized and now-friendly countries of Eastern Europe.

Latvia begins independence declaration

RIGA, Latvia, U.S.S.R. (UPI) — Latvia's new Parliament elected a moderate Communist as president Thursday and began fine-tuning an independence declaration that it would take the Baltic republic out of the Soviet Union in unprepared stages. The re-election of Andris Gorbacovs, chairman of the Supreme Soviet, the effective president of the republic, was seen as a sign of moderation for Latvia, which stands at the crossroads between the old and the new Europe.

South African negotiations making progress

CAPE TOWN, South Africa (UPI) — The African National Congress and the white government began a second day of unprecedented negotiations in Pretoria Thursday. The talks were part of the group's bid to rejoin the international community. Negotiations were conducted through a team of ANC leaders, led by Nelson Mandela, and a committee of government leaders, led by Prime Minister P.W. Botha.

Bush says U.S. probing fate of Iranian diplomats

WASHINGTON (UPI) — President Bush revealed Thursday he is trying to get more information about four of its diplomats believed killed by Lebanese kidnappers, calling it a gesture of goodwill rather than a bargaining play. Bush said he is reserving the recent release of Americans Robert Pollard and Frank Reid did little to boost his optimism that the remaining six U.S. hostages would be released soon.

Hubble in trouble — telescope guidance wobbly

GREENBELT, Md. (UPI) — The Hubble Space Telescope's critical guidance system was tested for the first time Thursday and engineers unexpectedly discovered signs that the $1.5 billion observatory was slowly wobbling back and forth. Engineers at NASA's Goddard Space Flight Center in Greenbelt and the Marshall Space Flight Center in Huntsville, Ala., began 18 hours of tests on the 12-ton telescope's precision pointing system, built to keep the giant instrument firmly locked onto guide stars during astronomical observations.

Williamson County armory construction is delayed

CARTERVILLE, Ill. (UPI) — A spokesman for U.S. Rep. Glenn Poshard, D-Carterville, said Wednesday construction of a proposed National Guard Armory for Williamson County will be delayed. A spokesman for Poshard said the opening would be delayed until June because of a nationwide moratorium on new military construction.

City of New Orleans crashes; 25 injured

Daily Egyptian wire services

The southbound City of New Orleans Amtrak, which stops in Carbondale, slammed into a log truck at a railroad crossing in rural Durant, Miss. Thursday. Officials said 20 passengers and four crew members were treated for minor injuries and released. The truck driver was listed in stable condition with a fractured arm. A spokesman at the Carbondale Amtrak office said no Carbondale crew members were aboard the train at the time and that it was "hard to tell" whether any passengers from Carbondale were on the train. The wreck was the third in 10 days for the rail carrier.

State tax program generates financial help for homeless

By Lisa Miller
Staff Writer

Illinois taxpayers gave the homeless a bigger break than expected this year.

Taxpayers donated more than $136,785 to the Assistance to the Homeless Fund by entering the amount they wished to give on line 11d on their income tax form. Having already surpassed its goal by more than $30,000, the Department of Public Aid plans to provide homeless shelters in Illinois with counseling programs, meals and adequate shelter.

"There are at least 50,000 people in Illinois right now who are homeless," said Kathleen Kustra, acting director of the department. "I'm glad Illinois taxpayers wanted to help make a difference this year."

Dan Pitman, DPA spokesman, said he thought the amount currently raised is out of stone, and is going up all the time as late income tax forms come in.

"I am pleased we hit our plateau," Pitman said. "That money will really make a difference to those who are homeless."

Since the DPA reached its goal, the program will continue next year.

Pitman said the opportunity for people to designate an amount for the homeless fund has been offered in past years, but the program hasn't always been successful.

The program was offered last 1986 and the goal was not met. Pitman said the fact this year, people were only allowed to donate up to $10 per income tax form may have been a primary reason the goal wasn't met.

This year, people could donate an amount of money from $1 on up.

Pitman said the money has yet to be designated to any shelters in Illinois because new funds keep coming in.

'Hands on' project teaches kids positive attitude towards science

By Jerianne Kimmel
Staff Writer

Students in local elementary schools will trade in their science books for pulleys, circuit boards, live animals and plans as part of a hands-on science program SIU-C sponsored last year.

The Illinois Board of Higher Education and the National Science Foundation have recently awarded SIU-C two separate grants to expand the program to include students in kindergarten through the sixth grade at Carbondale, Murphysboro, Du Quoin and Pucknashville elementary schools.

This year's pilot program in Carbondale included 250 students in kindergarten through the third grade. Next year, about one thousand students in kindergarten through sixth graders in the four districts will take part in the program.

Students get a better sense of what science is about by doing it rather than reading about it, said Kathleen Percak-Spector, an associate professor in mathematics at SIU-C and co-director of "Hands-on Science for the Elementary Grades."

"The program gets children thinking about science. It's not "Let's learn these facts about science," it's, "Let's learn what it's like to be a scientist and discover things,"" she said.

When the student make their own discoveries, science has more meaning for them, said Susan Pearlman, an assistant professor in curriculum and instruction at SIU-C and co-director of the program.

"Students have fun and develop a positive attitude toward science," Pearlman said. "They become interested in learning more about it."

The National Science Foundation issued a report earlier this year that suggested America's dominance of science and technology may be slipping while other industrial countries are closen.

ATTENTION SIUC STUDENTS:
Go to school while you go home for the Summer
If you are leaving for work or vacation this summer, consider enrolling in an Individualized Learning Program course. ILP courses carry full resident SIUC credit and are designed to be completed without the need for attendance at regularly scheduled class meetings.

Convenient!
You study at a time and place of your choosing to fit your work/vacation schedule.
Economical!
Tuition and fees total just $51.00 per credit hour.
A Good Investment!
Continue to make academic progress even when you must be away from campus.

ILP courses are available in the following areas this summer:

AD 370 Art Survey
AD 202-3 History of Visual Arts
AF 200-3 Primary Flight Theory
AHC 105-2 Medical Terminology
ART 202-3 Operations of Technical Info.
CEFM 340-3 Consumer Problems
ELT 100-3 Intro. to Electronics
ELT 224-3 Computer Systems Applications
FIN 310-3 Insurance
GEA 330-3 Understanding the Weather
GEA 1143-3 Intro. American Gov. and Politics
GEB 250-3 Politics of Foreign Nations History
GEB 301-3 Modern America 1776 to the Present

Softball, baseball making us proud

FOR SPORTS FANS, 1990 must be the year of the Salukis. First it was basketball. Well, it was almost basketball. Now it's baseball and softball, vying for attention left over from other sports teams.

Who to watch? Now that the Blackbears have clinched the Norris Division, eyes of sports fans in Southern Illinois are all over bats and balls. Becoming more wrapped up in Saluki athletics than ever before, both softball and baseball Salukis have given fans plenty of reasons to be excited this spring.

AMID SIGNS—recruit signs, that is—of an even better season next year, Coach Richard "Itchy" Jones and his team continue to impress fans with a non-stop pitching and batting streak. By the middle of April, the baseball Salukis were ranked inside the top 20 teams in the Collegiate Baseball/ESPN Poll. Saluki baseball earned a No. 10 ranking and the attention of fans nationwide May 1.

THE SOFTBALL SALUKIS threatened to join their athletic counterparts in the rankings, receiving votes for the No. 10 spot in the most recent NCAA Softball Committee's poll although they beat the No. 18 Connecticut and No. 14 Louisiana Tech. So goes our luck with rankings.

But May 1 also marked the day the softball Salukis were denied access into the NCAA poll they were awarded the 18th spot in Division I play. The team's overall record is a towing-26 in the midst of a 16-game winning streak.

FEW DISAPPOINTMENTS have clouded an otherwise spectacul ar softball season. Paired from the NCAA Softball Committee's poll they beat the No. 18 Connecticut and No. 14 Louisiana Tech. So goes our luck with rankings.

First of all, the competition was a growl. Second was the declaration of a "dance contest crown" published in the April 29, 1990 Daily Egyptian.

First of all, the competition was a growl. Second was the declaration of a "dance contest crown" published in the April 29, 1990 Daily Egyptian. This little is in response to the entire article, and we won the show! I also don't think we overstated the coverage of the other fraternities. The article devoted a very descriptive analy sis of the other fraternities right.

The descriptions included both names and storyline. On the other hand the winners of the show received one paragraph minute which simply stated our attire. Also, after the show pictures were taken of Phi Beta Sigma. Why weren't those pictures put in the paper? I assume, with an article of this quality, pictures were out of the question.

We entered the stage on "In the Air Tonight" by Phil Collins. The symbolism of this song can only be appreciated by Delta Tau chapter and close friends. Many complicated steps were performed throughout the show. These included cane steps, chains and a short dance number at the end of the routine.

Whether you intentionally avoided description of Phi Beta Sigma performance or not we'll never know, but in my opinion the article was tacky, unprofessional and very unprofessional.—Billie King, Phi Beta Sigma Fraternity, Inc., G.O.M.A.R.

Spingfest ruins condition of Arena playing field

Last weekend my roommate and I were driving down Cherry Street at 1 a.m. along side of the road I saw someone riding a bicycle. My roommate, who was dressed up, came very close to hit her. This person. I add a lot to the question of whether or not to or three of the other areas shouldn't be banned. In an era of the lawsuit, I see several coming SIU's way. We have been told that one of SIU's most highly rated programs by students and the University community as well as professionals in the field, is the Intramural program (rated third in student service programs in the most recent survey of students).

If so, I beg the administration to remember and recommit to maintaining and improving this standard. Somehow a "bigger and bet­ter" Spingfest.—The Intramural Sports Advisory Board: Lou Peterson, Mark Ludwig, Michael Nunn and Kent S. Robinson.

Wheelchair safety should be everybody's goal

Itchy Stripling, campaign manager for Atlanta mayor, Andrew Young, the former United Nations ambassador who went to Carbondale to see 'black' and vote in the April 24, 1990 Southern Illinoisan poll although they say he was forced to drive in the street (especially at night). I think you should light a fire in the street device.—Judith Misurac, junior, speech communication.

Opinions from elsewhere

Atlanta lives with grim statistic

By Rheta Grimes Johnson

Scripps Howard News Service

ATLANTA — Last year on a day in May a maniac went to get an inspection sticker for her car. Instead, she was beaten, stabbed to death and dumped in the trunk of her own car and dumped in a pasture near her father's property — in a neighborhood park. The attack lasted an hour.

What activity would rate higher on the Mundane Meter than buying an emissions sticker for your car?

Who should be less in danger than a child frolicking in a park? Is the South's high tech necesa, Atlanta, finally being overshadowed by the crime demon? A recent FBI report ranked Atlanta highest in serious crimes — murder, rape, assault, etc. — of any big city during 1989. It was the second year in a row Atlanta claimed the distinction.

For every 1,000 people in Atlanta there were 210 serious crimes.
By Jackie Spinmer  
Features Editor

Middle class yuppies, sporting conservative slogans and fighting liberal battles for democratic reform.

FOR POLITICAL scientists and observers of college politics, this trend of the '80s and new '90s generation of college students doesn't make sense.

"An increasing number of young people are saying 'I'm Republican,' but it doesn't mean anything," said Barbara Brown, a University political science lecturer. "They aren't being consistent with partisan and candidate choice and issue content."

Brown, like many of her colleagues who observe political behavior, says former President Reagan had some influence, molding many college students into a more conservative form.

"College students are especially vulnerable to the influences of a John Kennedy, a Ronald Reagan," Brown said. "The fact that Ronald Reagan, a fascinating media presence, was there makes a difference."

John Jackson, dean of the College of Liberal Arts, said college students clearly supported Reagan and the Republican party in the '80s.

"They don't care Ronald Reagan was opposed to everything they supported," he said. "They liked Ronald Reagan."

BUT TONY Zagotta, national chairman of the College Republicans, said conservatism in college students goes deeper than the surface.

"A lot of people think our generation was fascinated with Ronald Reagan, the man, not the ideas associated with the Republican party," said Zagotta, a May 1989 graduate of Illinois State University.

"College students may not tow the line with Republicans on every issue, but there is much more identification with the party than ever before," he said.

Before Reagan, College Republicans had about 200 clubs and 20,000 members nationwide. During the '80s, the College Republicans grew to more than 1,000 clubs and 125,000 members. Membership has since leveled.

Zagotta said 40 percent of the Republican party is under the age of 40. National polls tend to reflect this number.

The Wirthlin Group, a Virginia-based polling organization, released a poll last April that merged the results of 6,000 people nationwide.

THE POLLS showed people under 30 are the strongest supporters of the Republican party with 48 percent between 18 and 34 showing support and 35 percent of those more than 50 showing support.

Bill Mclnturff, senior research associate for Wirthlin, said in the last seven years, polls have shown increasingly more support for the Republican party among the 18 to 20 age group.

"Young people were not exposed to Nixon, Watergate and Vietnam," Mclnturff said. "They've seen 90 months of economic growth and associate that growth with the Republican party."

While Reagan may have had some impact on college students, Jackson said, students, particularly those at SIU-C, seem to be both liberal and conservative in an inconsistent way.

Poll shows students lean toward Republican party

SIU-C students not consistent between political views and party

By Jackie Spinmer  
Features Editor

University students identify more with the Republican party but consider themselves neutral on political issues, according to the results of a Daily Egyptian poll.

Of those surveyed, 44 percent said they affiliated with the Republican party, 41.4 percent with the Democratic party. 11.2 percent said they were independent and 3.4 percent said they affiliated with other parties.

Four hundred students were randomly selected from the University Directory to be surveyed by telephone with 132 responding. They were interviewed April 28 through May 2.

Although more students identified with the Republican party, 41.4 percent considered themselves neutral on political issues. Contrasting liberals to conservatives, 5.3 percent said they were very liberal, 24.1 percent liberal, 20.3 percent conservative and 9 percent very conservative.

More than half of the students said college students today are more conservative than 20 years ago, 33 percent said college students are more liberal and 15 percent said they are the same politically.

Seventy percent of the students who identified with the Republican party said college students are more conservative today along with 50 percent of those who identified with the Democratic party.

The average age of the students polled was 23 with 22.3 percent from the College of Liberal Arts, 15.4 percent from both the College of Business and Administration and the College of Communications and Fine Arts, 12.3 percent from the College of Education, 7.7 percent from the College of Science, 9.2 percent from the College of Technical Careers, 2.3 percent from the School of Law and less than 1 percent from the College of Agriculture. In comparison, males and females polled showed no significant difference between party and political values.

WASHINGTON (UPI) - A U.S. Supreme Court justice Tuesday refused to suspend a ruling that opened the way for Illinois' first execution since 1962.

Justice John Paul Stevens, without comment, rejected an appeal by a group that had been trying to stop the execution of Charles Wayne Walker. Walker was condemned to death in the 1983 murders of a Macoupin County couple, whose bodies were found in a creek where Walker admitted to a tree, robbed and shot. The victims were fishing in a creek when Walker accused them.

Walker asked in 1985 that this appeal be ended.

The ruling followed Monday's Supreme Court rejection of an appeal filed by the Illinois Coalition Against the Death Penalty and issued by one day Wednesday's 7th U.S. Circuit Court of Appeals decision upholding the constitutionality of Illinois' 1977 death penalty statute.

"I didn't know what to expect," Jon Stromsta, the attorney for the Illinois group, said of Stevens' action. "His decision won't hinder our petition for a rehearing in the Supreme Court.

Stromsta said he was uncertain what effect Wednesday's federal appeals court ruling will have on his client.

"All I know is what I've read in the newspapers," he said. "It's kind of hard for me to comment at this point but it reads like another issue for the Supreme Court. I don't think that's the end of the case. It's not the final event.

Walker, who is on death row at Menard Correctional Center, is among more than 100 Illinois inmates awaiting execution, including mass murderer John Wayne Gacy.

The attorney general's office has asked the Illinois Supreme Court to set a new execution date for Walker, possibly as early as this summer. Current law provides for lethal injection as the method of execution. The prisoner would be taken to Stateville penitentiary near Joliet if the death penalty is carried out.

The last person to be executed in Illinois was convicted cop-killer James E. Duke.

Wednesday's ruling stemmed from an appeal filed by Charles Silagy, convicted by a Vermilion County jury of the 1980 St. Valentine's Day stabbings of Cheryl Black, 32, and her roommate, Ann Waters, 29, both of Danville.

Silagy's attorneys argued they would not have employed an insanity defense if they had known their client would be eligible for the death penalty.

Illinois enacted its current death penalty law in 1971 but no one has been executed.

---

FRID'S asks...

How will you remember college life?

Graduation is the 12th. That means there's only one weekend left to party before entering the "real world." What should you do?

Spend it on the strip dodging drunks, beer cans and bagel vendors? Will you risk bodily harm at Lewis Park dodging irate drivers? And where will you take your parents? Can you imagine your mother getting down and dirty at Chicago's "Checkers?" "Of course not, while not your entire family can kick and stomp at the place totally unique to Southern Illinois."

REAGAN, from Page 5

"Over the past 20 years I've watched, there has been a body of opinion that takes on a dimension of some more liberal views about the environment, personal freedom," Reagan said.

"But clearly, students have become more economically conservative," he said. "They support a number of "causes" that tend to be pro-industry and anti-government with Ronald Reagan."

Although political scientists believe polls show that college students are associating themselves with the Republican party, the Democratic party isn't admitting defeat with this generation of students.

"I've found people affiliating with both sides," said Joe Louis Barrow, deputy director of communication with the Democratic National Committee.

"Many college students are self-proclaimed Republicans because that's what their parents are," he said. "College students are going to start shifting to the Democratic party."

But Brown said most college students aren't prepared enough to tell what their political values are. As a result, there is a hesitation for them to commit themselves one way or another at this point, she said.

"We dump people out at the college age and expect them to be prepared," Brown said. "I think the small module: 10- to 25-year-olds struggle with who they are politically."
Broken-legged rodents aid in bone healing experiment

LOS ANGELES (UPI) — An experiment that involved sending rats with broken legs into orbit aboard a space shuttle has provided evidence that broken bones heal faster in gravity, a researcher said Wednesday.

Dr. G. June Marshall, director of research at Orthopedic Hospital and associate dean of the University of Southern California School of Medicine, said the experiment was conducted aboard a flight of the space shuttle Discovery in March 1989.

The results of the experiment will not have any influence on how doctors treat fractures on Earth. Rather, it confirms that gravity aids in the healing of broken bones.

"The application is not too much for astronomers today, but for future space travel ... someone's going to break a bone and you'll know ahead of time that unless you provide an exercise program or weight-bearing program, the healing will be delayed," Marshall said.

The experiment was the idea of Andre Fras, a high school sophomore in Binghamton, N.Y. It was accepted by the National Aeronautics and Space Administration as part of a high school science program.

After his proposal was accepted, Fras, now in medical school at Brown University in Providence, R.I., obtained Fras said .

"I've gotten so much out of it — on how science really works," Fras said. "I thought of the idea for this experiment when I was 14 or 15."

With continued backing from University administrators, conditions for female employees will continue to improve, a woman's issues activist said.

Uma Sekaran, coordinator of the University Women's Professional Advancement organization, told members of SIU-C's Women's Caucus Wednesday that while women on campus "continue to make progress" there are still many areas that need attention.

Sekaran pointed to several achievements as the benchmark by which others can gauge the current and future status of the University's female employees.

She said through her efforts and others like her, the University has become more aware of the problems facing re-entry students, of the inequities in salaries that exist for women not on the tenure track and of the need for an evening child care program.

She also said plans are under way to better recognize distinguished female faculty and to develop a mentor system to help women more easily be socialized into their academic environments.

"Something is wrong with the way we are indoctrinated into the system," Sekaran said. She said that women on tenure track need to make themselves aware of the steps required to be promoted and added that her own experience as a chairperson for the Department of Management was prompted when she was told that she was "lacking of leadership qualities."

As for the future, Sekaran wants to see her fledgling organization work with other women's groups on campus to increase not only the number of women administrators, but also the number of female undergraduates.

Sekaran would also like to see the University develop a partner placement program. She said SIUC is "losing" quality candidates—"losing in the sense that we are not attracting them because there is no employment for their spouses."

Sekaran, who plans to retire June 1991, said that while her time with the University is short, she hopes during the next year she will lay the foundation upon which future generations can develop SIUC into a model for others to copy.

HANDS, from Page 3

"We need a new national commitment to provide human, financial and physical resources commensurate with the importance of science and technology to America's future," according to the "Science and Engineering Indicators" report.

While 20 years ago the United States had a far larger fraction of its labor force in science and engineering than any other country, "in the last two decades the competitors have employment fractions comparable to ours and are increasing their numbers of scientists and engineers more rapidly than we are," the 401-page report concluded.

Pearlman said many students have a bad attitude toward science when they get to high school. These students think areas in science are closed off to them.

"By starting this program early on, these students won't develop negative attitudes," Pearlman said.

She said it is important that everyone have a basic understanding of science and think as a scientist does to some extent due to the technical nature of society's problems. A hands-on approach will make students better problem solvers, Pearlman said.

The students in the program will tend aquariums and terrariums, observe the properties of liquids and build and operate pulleys and circuit boards, Pearlman said.

She said such activities create more noise and mess in the classroom, but the students enjoy talking about and showing each other their experiments.

"They are being trained in hands-on curriculum during the Saturday sessions through May. Teachers will not use the curriculum on a small group of children this summer."

Interested parents and school administrators can call Pearlman at 453-4734.

A review

Saturday night is unlike any other night of the week. For this reason, Susan Orlean, author of "Saturday Night," looked at Saturday night activities a little closer than most people ever will.

Orlean traveled all over the United States, participating in local Saturday night rituals. While traveling, Orlean was looking at certain themes, for example, what is it like to work on a Saturday night? Who spends Saturday night with whom, and what do they do? How have Saturday night traditions changed?

Orlean found Saturday night was really an exception. More people get together on Saturday nights, more people get drunk, more visit friends, more go bowling, more get killed than on any other night of the week. So she went out in the field and wrote about her findings.

One Saturday night brought Orlean to Elkhart, Ind., to "cruise." Elkhart, a New York resident, called Elkhart one of the nation's "capitals of cruising." Cruising is the contemporary equal of strolling, once a popular Saturday night activity. Throughout the chapter on cruising, Orlean explains the history of cruising, and what it has meant to Elkhart. But Elkhart's cruising tradition may come to an end.

Recently, Mayor James Patrick Perron called an executive order banning traffic from the center two lanes of Main Street after 8 p.m., cramping the style of Elkhart's "cruisers." At least Orlean got to experience Saturday night cruising before it was gone.

Another Saturday night brought Orlean to Los Angeles for a little "scene making." She documents the night she spent with two teenagers, Christina and Chris, who considered themselves quite sophisticated. These hip teenagers take Orlean out with them to various locations to "make the scene." They plan out each place they will go to, so they can have the right clothes. That's right, they bring several different outfits with them in the car, and they stop at gas station bathrooms to change. A bit of a change from Elkhart, where they are content to spend all Saturday night in the same outfit, driving up and down Main Street.

An in-between of these extremes was found in Portland, Ore. Orlean went there to check out "lounging," meaning hanging out in a bar with a top 40 lounge band.

The band she met, No Means Yes, played every Saturday night at the Stuart Anderson Cattle Company lounge, a folky-speak restaurant chain that is popular in the Northwest. Customers usually listen to the band in the lounge while they wait for their table.

Because the majority of the loungers are waiting to hear their name called for a table, the band has to stop playing every time a name is called. As you can imagine, this somewhat stifles the creativity of the band.

**New book takes close look at Saturday night activities**

Minority program launches first class

By Rob Coné
Staff Writer

A new minority leadership program designed to train students to take a more active role in campus organizations recently graduated its first class and is already showing signs of success.

Deborah Walton, coordinator for the Emerging Leaders Program, said that of the 11 predominantly black and Hispanic second-semester freshmen who participated, one was elected to student council and the Undergraduate Student Government and two others are now involved in the Hispanic Student Council, which will have its first meeting during fall semester 1990. One student did not complete the course, Walton said, because of commitment conflicts.

Jose Torres, a freshman in aviation maintenance from Chicago, found the program "very beneficial." He said the skills he gained are ones of the reasons he has gotten involved in the Hispanic Student Council. Torres added that as he continues to get involved, he feels he will be more capable to handle a leadership role.

Walton said the Center of Student Involvement targeted minority students for the program because very few of campus student organizations lack minority participation.

"On this campus, if you look at the priority one organization—Undergraduate Student Government, International Student Council, Student Programming Council (among others)—everything with the exception of the Black Affairs Council and the International Student Council, the presidents are not minorities," Walton said. "We have close to 380 student organizations and out of those you can probably count the number of minority presidents, secretaries, treasurers and so forth."

Of the 36 representatives who served on USG during the past year, only four were minorities—this figure does not include USG's seven white female representatives.

Walton said low minority participation in SPC is a reason to question whether the SPC was gearing enough programs toward minority tastes.

Amie Roeh, executive chairwoman for SPC, admits that the programming council's 13 committees have only a few minority representatives. But she said all of the University's registered student organizations are asked for input.

She added that during the past year SPC co-sponsored seven events with campus RSOs and the Center for Student Development.

Roeh said that if the council did not have minority representation, it would not be able to fulfill its mission of diversity and inclusion.

Because she believes most minority students are unaware of the value of an RSO, Walton said the leadership program's weekly sessions attempted to familiarize the participants with the various student organizations and then give them the skills and confidence to get involved.

In addition to graduate students mentors, Walton said, the students met with presidents from many of the priority one organizations and were given seminars on leadership styles, communication skills, community involvement and etiquette. With these skills, she said, "We hope to make them better scholars and citizens."

"To ensure the students' success, Walton said, "We will be monitoring their progress throughout their student careers."

Walton said the pilot program is scheduled to be offered again next spring. To date, no college credit is awarded to those who complete the course, but she said efforts are being made to have it accredited. She also said plans are being made to include sophomore minority students.

Democrats call for reforms in campaign spending laws

WASHINGTON (UPI) — Leading Senate Democrats proposed a sweeping bill Thursday to reform campaign finance laws, including a limit on spending and a plan to ask each taxpayer to donate $3 to pay for most costs of the races.

The proposal also suggested that political action committees, known as PACs, be prohibited from donating to Senate candidates—an idea similar to one outlined by Republicans earlier this week.

However, while the two parties appeared close on the PAC question, the spending limit and the public financing proposal are initially opposed by Republicans and likely to be major stumbling blocks to a compromise when the matter reaches the full Senate, perhaps next week.

Despite the intense GOP opposition, it had been expected that Democrats would push for the spending limits. However, many Democratic figures privately conceded for weeks that it appeared nearly impossible to win passage of any public financing proposal.

**HOMELESS, from Page 3**

coming in.

Kevin Johnson, spokesman for the Department of Revenue, said only 1.8 million returns have been sent in and 5 million were expected overall.

Johnson said his department will give the money to the DPA in three installments, one at the end of June, one in July and one in October.

Pittman said the DPA will decide which homeless shelters and agencies are to receive the funding after the first installment has been paid.

U.S. Sen. Paul Simon, D-Ill., said the homelessness problem is an alarming one across the country as well as in Illinois and said this money is coming just in time.

Democratic aids added that the checkoff provision, because it involved taxes, would technically have to be included in another bill coming from the House.

No matter how it is fashioned, however, any proposal to limit spending and provide public financing for congressional races is certain to cause major problems in the Senate. In 1988, Democrats unsuccessfully tried for weeks to break a Republican filibuster blocking a bill which included spending limits.

Mitchell also conceded that he did not believe all Democrats would line up behind the plan. Nonetheless, he and Boren argued that the public, upset with past campaign abuses, was ready for a reform bill.

Boren added that he considered all parts of the bill negotiable, except for the spending limits—the very item Republicans do not want.

"The only meaningful way to reform the campaign finance system is to have meaningful limits," added Mitch. "Anything less is not real reform."
Federal judge rules against leaders of sex church

LOS ANGELES (UPI) — A federal judge Thursday ruled against the leaders of a church that promised salvation through sex in exchange for cash "sacrifices," saying it was established merely to skirt Pander 1960s laws.

After hearing six days of testimony, U.S. District Judge William Matthew Byrne Jr. found that Will and Mary Ellen Tracy's Church of the Most High Goddess is not based on a bona fide religion and that its leaders are_involved in their claim that is not based merely on the religious basis.

"I find their testimony is incredible. The religion has no basis to it other than sexual conduct," Byrne said in ruling from the bench.

The church "is nothing but a shell attempt to be asserted by (the couple) to protect themselves from the laws of the state of California," he added.

The decision ends a civil rights lawsuit filed against the city of Los Angeles by the couple. The suit was brought after the Tracys were convicted by a Municipal Court jury Sept. 8 of operating a house of ill repute, and Mary Ellen Tracy was also found guilty of prostitution.

In the suit, the Tracys, who represented themselves, alleged that authorities were denying them their freedom of religion and expression by investigating them for sexual offenses.

After the judge's ruling Thursday, Will Tracy told reporters: "There is no religious defense in federal court. I think (the decision) is appalling."

His wife, Mary Ellen Tracy, the 47-year-old mother of eight who claims to have had sex with 2,000 men as the High Priestess of the church, said she was "totally devastated."

"This is such a slap in the face after all I've gone through," she said.

Will Tracy said the ruling will be appealed, but that the church will be forced to shut down.

During the trial, the Tracys testified that their religion requires six male members to perform oral copulation on Mary Ellen Tracy, offer a $150 sacrifice, then "purify" themselves by having intercourse with her.

Assistant City Attorney Byron Boekman, who dubbed the trial the "civil rights case from hell," argued that the church was nothing more than a front for prostitution. Byrne agreed.

"The sacrifice, I believe, was really a payment for sexual favors," he said, adding that the fact that church members were almost all male "also tends to show a lack of sincerity in (the church's) religious belief."

Moreover, the judge pointed out that the couple probably took in income of more than $100,000, "but no books or records were kept of any kind, and all the bills were paid in cash."

"I find the church is an innovation of the plaintiffs set up as a result of their arrest for prostitution," he said.

---

A day of activism commemorating the Kent State Massacre and the Carbondale student uprisings of May 1970.

On May 4, 1970, several Kent State students protesting the Vietnam War were killed by National Guard troops. The following day, anti-war protests spread to SIUC, riots erupted here and Carbondale officials soon placed the town under martial law. What can we learn from history? How has the 1970 student movement affected SIUC student life?

**SPEAKERS INCLUDE:**

**LEAD**

- Nancy Kurshan - Yippie organizer for 1968 Democratic Convention, organized levitation of Pentagon.
- Mariel Nanasi - Member of Committee to end Marion Lock Down
- Hose Lopez - Member of National Committee to free Puerto Rican prisoners of War
- Other speakers will be there also

**BANDS:**

- Blue Meanies

National Guard Officer in front of the Brush Towers
Official: Cairo needs gambling boat

CAIRO, III. (UPI) — No city in Illinois has a richer history of riverboating than Cairo and a spokesman for the impoverished city's chamber of commerce said Thursday no Illinois city needs the potential riverboat gambling can provide more.

"After what this town has gone through in the last 50 years, this might be the last chance to save it," said James St. Wilson, a former Cairo Chamber of Commerce committeeman to bring riverboat gambling to the city. "The unemployment rate is about 30 percent. A native of Cairo, Wilson, 79, said he has had trouble sleeping because of his enthusiasm for the project.

"Cluter buses from the south will wear themselves out getting here," Wilson said.

Wilson noted that cities like

Nashville and Memphis are only about 160 miles from Cairo — to say nothing of Evansville, Ind., Paducah, Ky., and Cape Girardeau, Mo. Wilson pointed out the five licenses awarded in Illinois are all west of Cairo.

The state will award five licenses to operate boats beginning no sooner than Jan. 1, 1991. Four of the licenses will be for the Mississippi River and one will be for the Illinois River. Each license will cost the boat owner a minimum of $100,000 and $4,000,000.

The political subdivision who will be issued the boat license will make the decision as to which boat to receive the license. Wilson said he expected both Alexander County and the city of Cairo to prove legislation endorsed by the project.

"Over and above that we have additional sales taxes, motels and restaurants doing business," Wilson said. "This is something the state is handling so as on a silver platter we have to take advantage of." Wilson said he had already been contacted by people interested in docking a boat in Cairo.

REGISTRATION FOR THE American College Testing Program (ACT) will be given on June 9 close Thursday. For details and registration materials, contact Testing Services, Woody Hall II.

BRIEFS

THE WOMEN'S Night Safety Transit, the Night Safety Vans and the Evening Van will not provide service on May 11. Service will resume for the Summer semester on June 11.

THE SOUTHERN Illinois Audobon Society will have its monthly meeting at 7:30 tonight at the Lion's Center of Carbondale 500 W. Main, L.R. Minnifeld, an amateur photographer, will present a slide show. The event is free of charge.

THE CARBONDALE Public Library will have a book sale from 9 a.m. to 1 p.m. Saturday at the Library, 405 W. Main. In case of rain, the sale will be May 12.

THE REC Center will be open all day again on Sunday. Students may study or work out at any time through the night. Refreshments will be served in the Assembly Room East. For details call 356-5355.

THE FRENCH Table will meet from 4 to 6 tonight at the Pinch Penny Pub.

THE SULIKI softball team is looking for volunteers to work at the Gateway Athletic Conference Championship Tournament Thursday through Saturday. A variety of jobs are available. For details call Mark Congreave at 453-1127, ext. 237.

INTERVARSITY will meet at 6:30 tonight in the Student Center Illinois Room. The group will leave from there for a year-end picnic.

THE NON-TRADITIONAL Student Graduation Party will begin at 6 p.m. tonight at the Pinch Penny Pub Outdoor Garden.

THE SIU Strategic Games Society will meet from noon to midnight in the Student Center Illinois Room.
Herbicide testing in streams shows low concentrates

WASHINGTON (UPI) - Recent testing for the presence of herbicides in streams in 10 midwestern states found a low concentration at most of the 145 sites sampled, the Interior Department's U.S. Geological Survey announced Thursday.

USGS hydrologists said detectable concentrations of herbicides were found to be low at 79 percent of the sites sampled during October and November of 1989.

In earlier sampling conducted in May and June of last year - after herbicides had been freshly applied to the fields to control weeds - relatively higher concentrations were found at 98 percent of the midwestern sampling sites, the USGS said.

Stream tests conducted last October and November were expected to have lower concentrations because most of the water in streams is derived from ground water instead of surface runoff during that time of year, scientists said.

Avian and reptile sources were the most frequently detected herbicides, with the highest concentration found in the Minnesota River at Jordan, Minn., during late October, the USGS said.

The latest test results are part of an ongoing USGS study to determine the seasonal and geographic distribution of herbicides in streams of an agricultural region. The Midwest was chosen because about 60 percent of the pesticides used in the United States are applied in that region to produce more than 75 percent of the nation's corn and 60 percent of its soybeans.

Owl vomit research a payoff, article claims

SPRINGFIELD, III. (UPI) - A $110,000 program to research the contents of an owl's pelvis is a pay off aimed at assisting a persistent critic of the state Conservation Department, according to an article in a national wildlife magazine.

The May issue of Audubon magazine contends the study duplicates existing research and will shed no new light on the diet or life of owls. The Conservation Department is funding the research, which is being conducted by the Illinois State Museum. Rep. Ted Leverenz, D-Maywood, said he will ask the Legislative Audit Commission to investigate how and why the agency decided to undertake the multi-year study, which involves collecting pellets of undigested material coughed up by owls. The pellets are analyzed to determine owls' prey which is then used to develop the best way to preserve owl habitat.

Leverenz is especially interested in why the researchers chose Jack Pine - a free-lance nature writer Pan Gibson to conduct the fieldwork for the study. Gibson, a columnist on wildlife issues, has attacked Conservation practices and policies.

Gibson is paid $25,000 a year plus mileage for the agency since she received the owl contract in 1988. Conservation Department spokeswoman Carol Knowles also denied the allegations.

DE
Statistics reveal air contamination 100 times beyond safe level!

The smoke gets into your throat and makes it raw. It fills your mouth with a nauseating, acidic taste. Water is undrinkable.

Across the road from the factory, the ground suddenly seeps into a great, gaping hole that stretches to the horizon. It looks like the Grand Canyon, with craters and ridges, but this isn’t a natural phenomenon. It’s a coal mine gouged deep into the earth. Through the haze, dim figures are moving — bulldozers, derricks, cranes and trains, dwarfed by the immense pit.

The mine is owned by several companies that have created factories with smoke pouring from their chimneys. There’s a glint of light in the sky, but it’s not the sun; it’s gases being burned off. The houses of Espenhain come right up to the gates of the factory. Their walls are stained a murky brown; cracked plaster is falling away from the underlying brick.

Bicyclists are out. Church bells are ringing, people are working in their gardens. Flowers bloom in Espenhain, but sniff them and you all smell sulfur. Why would anyone live here?

“You have to understand, for a long time we didn’t realize what was happening to us,” said Walter Christian Steinbach, leader of a local citizens’ effort to do something about the pollution.

“When we started to suspect something was wrong, the government refused to talk to us so we knew nothing for sure. Besides, this is our home. What would you have us do? There are 80,000 people in this district alone. We can’t all move away.”

Environmental disaster came to Espenhain and its neighbors in the guise of progress.

After World War II the Soviet Union created an Eastern European industrial zone from southern Poland to northern Czechoslovakia. Its heart is in East Germany, which became one of the world’s top 10 industrial nations, producing synthetic rubber, gas, chemicals, plastics, fertilizers, machinery, precision instruments, optical equipment, and cameras.

East Germany had always been an industrial area, but before the war it was powered by hard coal from the western part of the country. When that fuel was cut off after the war, East Germany turned to the only fuel it had in abundance — the soft, brown lignite coal mined around Espenhain.

It wasn’t just used for industry; people also heat their homes with it. Hoops of it lie everywhere or sidewalks, in backyards. Its acrid tang is the smell of Eastern Europe.

And that’s the heart of the problem; lignite is full of sulfur. Every year millions of tons of sulfur dioxide are poured into the atmosphere from Eastern Europe. It returns as acid rain, it contributes to global warming and its byproduct is acid rain.

But it’s not just the lignite fuel. Factories have been dumping chemical wastes directly into the rivers, which are also afflicted with nitrates from fertilizer runoff. Drinking water is contaminated far above the minimum standards of the West.

Espenhain has the world’s highest rate of sulfur dioxide pollution.

“In this little district, we got 15 million tons a year,” Steinbach said. “Last winter in an experiment I put a brass candlestick out on my balcony, just standing in the air. Before spring it was all corroded away.”

Steinbach, 45, is a minister who lives in Roetska, the next town down the road from Espenhain. He has a raspy voice and bloodshot eyes, both of which he blames on the pollution.

People were happy when the factories came, he said, because they provided jobs for virtually all of the district’s 15,000 workers. But after a while, people in his congregation began to talk.

“It seemed that people were getting sick more, dying earlier,” Steinbach said. “The doctor noticed symptoms of problems with people’s lungs, but he was told to be quiet. We had nothing concrete, and it was forbidden to talk about these things. When I made inquiries of the government, I was threatened with arrest.”

The official silence ended when the communist government was thrown out last fall. But what can be done for Espenhain?

Western experts have estimated that it would take 20 years and $200 billion to clean up the mess, if a cleanup is even possible.

Scripps Howard News Service

Do not hallucinate.

The text is about East Germany's pollution problem, specifically in the town of Espenhain, and the environmental disaster that has resulted from the industrialization of the Eastern European region after World War II. The text describes the pollution caused by factories and industrial areas, the health effects on the local population, and the attempts to address the issue. The text also mentions the social and economic consequences of the pollution, including job creation and health problems.

The text uses vivid descriptions of the pollution, such as white, gray, and black smoke, sulfuric orange and yellow smoke, and the smell of sulfur. It also provides specific statistics, such as 100 times beyond safe levels of air contamination.

The text includes quotes from a local citizen, Walter Christian Steinbach, who describes the pollution and its effects on the town. The text also includes the names of factories and industries that contribute to the pollution, such as those producing synthetic rubber, gas, chemicals, plastics, fertilizers, machinery, precision instruments, optical equipment, and cameras.

The text ends with a mention of the Western experts' estimates of the cost and time required to clean up the pollution, which is $200 billion and 20 years, respectively.
Irritated by the crowd, a college student and a police officer were shot and killed on May 4, 1970, at Kent State University. The shootings, which occurred near a dormitory, marked the end of a protest by students against the Vietnam War. The incident became known as the Kent State shootings, and it remains a controversial event in American history.
TOXIC, from Page 1

knowledge base of how to protect people from toxicologic agents.
He added the command conducts numerous health-related research projects, making it a better way to combat malaria.

Daisy also denied anything but a very small toxicologic risk involved in the research. He said the toxin cannot reproduce, cannot cause disease, and safety standards are required by the University, the state, and the command.

Paul Brandt-Rauf, a toxicologist and associate professor at Columbia University in New York City, said the toxin was "not high on my list" as a choice for the development of a biological weapon. He said the toxin is dead and can't reproduce. If introduced into a water system, the toxin would become too diluted to harm humans, though deaths may occur from eating infected fish.

Brandt-Rauf said it is remotely possible to develop the toxin into a weapon, but if he were to develop a weapon from a fish, he would use the poison, such as the one he saw, the very poisonous puffer fish. He wouldn't use the ciguatoxin. As it exists in nature, it's not very good (as a potential weapon), he said.

Tindall agreed. "There are other compounds that are much more usable," he said.

The Department of Defense is sponsoring the current research, which has previously been sponsored by the Food and Drug Administration, National Institute of Health and other agencies.

Total funding from all sources is close to $2 million, Tindall said. Research on the organism responsible for the toxin has been done in one form or another since 1978, he said.

SODA, from Page 1

The contract Canteen has with the University allows the company to raise the price if it can document that its costs have gone up by a certain amount, Corker said.

"They came to us about raising the price. But it was a small amount," he said.

According to Hughes, a majority of pop machines in Southern Illinois have prices less than 55 cents.

Hughes said he believes after Canteen raised its price, the student raised the machine price to keep the same level of profit.

"The price could have been kept the same and the University's profit lowered, he said.

Hughes said the price change should have been made before the Student Center Board.

"Any increase must be mutualiy agreed upon," Hughes said. However, according to Corker, the vending machine contract is a campus-wide contract and is not something the Student Center Board usually considers.

"I don't see the problem. The only thing that is going to be hurting (from the boycott) is the Student Center," Corker said.

Revenue from the Student Center machines is put toward the center, Corker said. Funds from all other campus machines are put into a central account, the Student Welfare and Development fund, which is then transferred over to the Student Center, he said.

AIDS, from Page 1

of the school districts not requiring AIDS education, most were large, enrolling less than 450 students.

- Less than 80 percent of recipients of Centers for Disease Control funds did not collect data on its nature. It can exist in other beliefs, sexual behavior and drug use.

- Training for some AIDS teachers was absent or often insufficient.

- Education for out-of-school youth—often the most vulnerable population—was nonexistent.

The committee heard from a New Orleans teacher who is trying to bring the cultural awareness of the sexual education to elementary school.

"We've got to get out of this Bible Belt thing. We have to be straight-up front with the (students)," said Deacon Dowell, who teaches at Warren Easton High School. "We must have more teachers who are willing to be cued."

David Karms of Arlington, Va., who is a health commissioner, became sexually active at age 15 and upon his 18th birthday learned he had the AIDS virus.

"The most effective education is education for those who are already infected," Karms said, adding he tells audiences that at one time, he thought he was invincible but is now facing the consequences of his high-risk activities.
Baseball's 'wealthy' landing in the cellar

Cardinals, Giants, New York teams in unfamiliar area

By Mike Tufty
UPI Sports Writer

NEW YORK (UPI) — No one has ever found a way to redesign baseball's cellar.

It's a slum all to itself, a place where no one wants to receive his mail. This is one house that will never be a home. Rooms of wallpaper could scarcely improve it, and a new layer of tile would just go to waste.

When you reside in last place in any baseball league, forget about getting the right set of drapes. Don't even bother with new furni­ture. Santa Claus will never come down this chimney. Even the cocktails won't want any part of it, and the houseplants would die in 24 hours.

You could install a hot tub in this cellar, and no one would ever get wet. Don't even dream of entertaining there. After all, who would visit if they could help it? Door-to-door salesmen will walk past with their nose in the air.

Down in this basement, the pipes are always leaking and the washing machine overflows. There are spider webs in the corner, and you'll probably step on a nail. It's no party time down there, even on Saturday night or on birthdays.

If nothing else, baseball's cellar is a model of stable real estate. The value of this neighborhood never goes up or down. And, the Huns could live next door without hurting the prices. One owner can't give it away, with or without an oil well.

No one who lives in baseball's cellar will relocate in a minute. They'll lie low just to get out.

And leave the furniture and dog. Any resident would burn the place down, even after living there for years.

Considering all this about baseball's cellar, you wonder why the rich and the very rich are exploring the neighborhood. San Francisco would be a ride up and down the streets. Kansas City has done everything but pick out the paint. St. Louis and New York are measuring the walk to the bus step.

Entering Thursday night's games, only Atlanta was preventing the Giants from legal resi­dence in the National League West cellar. Just last summer, it seems, the Giants lived high on a hill overlooking the Pac­ific. They used to jog by the bay in the morning, and have dinner in Sausalito.

As for Kansas City, that mid­west greenery smelled pretty as ever this spring, with the chance that some newcomers would help the Royals move back to where they lived for most of the 70s and 80s. Instead, Kansas City is in such a depressed area, the real estate agents can't even see the place.

Then there's New York, where $200 can buy you a hotel room the size of a suite, and a mid­town apartment will occupy three salaries. In this market, both the Padres and the Yankees are shopping for a cellar dwelling. At least you get the feeling the Mets will eventually choose a better neighbor­hood. That's more than you can say about the Yankees.

Things could improve for San Francisco, Kansas City and New York. Until then, some of base­ball's wealthiest citizens have donated much of what real estate agents and pitching coaches have given for years — 24 hours a day you play this game, so much of it is location, location and location.

Co-owner: Royals not a good buy

KANSAS CITY, Mo. (UPI) — Saying "not any­one with any intelligence" would buy the Kansas City Royals, team co-owner Ewing Kauffman said Thursday he will wait before considering his "drowning" partner's plan to put the team on the auction block.

Attorneys for Avron Fogelman forwarded a plan to Kauffman in which the team's founder once again could become the sole owner. Kauffman would be requested to loan $34 million and also match the high offer at the end of a bidding pro­cess.

Kauffman, 73, said the plan called for him to per­sonally lend the Royals $34 million, which then would be loaned to Fogelman to help the real estate developer from Memphis, Tenn., resolve his financial prob­lems. The loan would come due Jan. 2, 1991. If there were no bidders at that time, Kauffman could foreclosure and be the sole owner.

"Although this procedure is very un­usual to me from a financial perspective, I believe it is one way to assist Mr. Fogelman and keep the Royals secure in Kansas City," Kauffman said at a news conference at Royal's Sadium.

He said he may reach a decision on the plan by the end of the month.

"It's true, it is not a good fin­ancial investment, but this is not a case of me wanting the Royals — cash plus deprigation. So it has turned into something of a civic opportunity."

Co-owner: Royals not a good buy

KANSAS CITY, Mo. (UPI) — Saying "not any­one with any intelligence" would buy the Kansas City Royals, team co-owner Ewing Kauffman said Thursday he will wait before considering his "drowning" partner's plan to put the team on the auction block.

ATTORNEYS for Avron Fogelman forwarded a plan to Kauffman in which the team's founder once again could become the sole owner. Kauffman would be requested to loan $34 million and also match the high offer at the end of a bidding pro­cess.

Kauffman, 73, said the plan called for him to per­sonally lend the Royals $34 million, which then would be loaned to Fogelman to help the real estate developer from Memphis, Tenn., resolve his financial prob­lems. The loan would come due Jan. 2, 1991. If there were no bidders at that time, Kauffman could foreclosure and be the sole owner.

"Although this procedure is very un­usual to me from a financial perspective, I believe it is one way to assist Mr. Fogelman and keep the Royals secure in Kansas City," Kauffman said at a news conference at Royal's Sadium.

He said he may reach a decision on the plan by the end of the month.

"It's true, it is not a good fin­ancial investment, but this is not a case of me wanting the Royals — cash plus deprigation. So it has turned into something of a civic opportunity."

Are you tired of oversized classes?

If so then think about taking your general education courses at SCC this summer!

At Shawnee Community College you'll find:

- Quality education courses in English, Math, Psychology, Speech and Sociology
- Affordable tuition ($23 per semester hour for in-SCC-district students)
- Personalized instruction
- Telecourses in Health, Literature and American Government
- Day-care Services

Classes Begin June 11
Pre-Registration Now - June 3
Late Registration June 4 - June 13

"Where the Student is Our Top Priority"
United Press International

NBC Sports reached no further than its staff Thursday when it named Mary Albert and Bob Costas as alternating lead NBA announcers. The network, which lost major league baseball to CBS, grabbed NBA television rights from its rival network for $600 million over four years. The deal begins next season when the televised pro basketball is in 1960.

Albert and Costas will split play-by-play duties during the 22-game regular-season telecast schedule, the early rounds of the playoffs and the conference finals. The two will also share host and play-by-play responsibilities on the All-Star Game and NBA Finals shows. Albert will call play-by-play for the 1991 All-Star Game and will host the NBA's All-Star Game. Costas will do play-by-play on the NBA Finals and host the All-Star Game coverage.

The roles will alternate between the two during the subsequent years of NBC's coverage. "The obvious question is what prompts this," Costas said of the split in duties. "People tend to be cynical and look for some behind-the-scenes reason. Neither one of us is interested in one-upmanship. I wouldn't want to do this if Marv wasn't also involved. It wouldn't have felt right."

"Marv is so closely associated with the NBA, probably as closely associated as just about everybody but (Laker announcer) Chick Hearn and (Collie announcer) Johnny Most."

The two will also share the schedule. "Mike was pretty upset with some of the players," Murray said. "I guess I was one because I didn't play much in the first period."

Savard traditionally plays well in the post-season and against the Celtics in the NBA's post-season -- when those teams met in the final, he had 29 points in 15 games.

Mets' Tom Seaver last year in his first season with the Braves, saw little action in the two periods but Albert said he had 29 points in 15 games. "People tend to like the NBA," Albert said. "Nobody does well ... People tend to like the NBA."

The two said they co-existed nicely during pre-game shows before NBC's basketball telecasts. "It's literally true that on NBC pre-game shows we flipped a coin," Costas said. "Before Game 1 in 1986, we flipped a coin to see who would get the Red Sox dugout and who would get the Mets. Then we alternated. It was the same with All-Star games."

NBC's analysis said will be not be named until sometime after its playoffs end. There has been speculation that Detroit Coach Chuck Daly will leave the sidelines to become NBC's top commentator.

Television ratings prove that the NBA is more popular than ever. The 1986-87 championship series between Boston and the Los Angeles Lakers garnered a whopping 15.9 Nielsen number. The first two series have also both been brought in figures above 15.0.

The title series between Seattle and Washington 11 seasons ago averaged a 7.2.

Costas will continue to host "NFL Live" and Albert will remain bow-and-blow commentator on NBC's boxing shows and do play-by-play on NFL telecasts.

NBC's first telecast is Oct. 13 when the Knicks play in the McDonald's Open in Barcelona, Spain.

NBC names Albert, Costas as NBA announcers
STUDY, from Page 28

ly as one could," West said. The issue then was referred back for a new ACF balanced overview, West said. The subcommittee was required to look at the total program and not just one program.

The information will be helpful in formulating future and administrative decisions relative to the Saluki athletic department. It will be released during the fall semester to make sure faculty are present when the information is released.

Bill Minn, ISSC chairman, said the subcommittee of the Intercollegiate Athletic Advisory Committee might prove to be very helpful to the athletic administration.

FIRST, from Page 28

State. The Salukis split with Wichita State April 21-22. But West said, "Wichita State could win the tiebreaker because it is in the Salukis in the series." The scenarios that could occur are endless. The Salukis could end up at No. 10-ACT for well Jones isn't surprised at the tight conference standings.

"I think this is the best six-team conference in the country," Jones said. "I figured the conference race is just being rolled down to the final weekend."

Saluki catcher Derek Sheldon said this weekend is what the Salukis have been hoping for. "We have a lot of confidence in ourselves in this position," Sheldon said. "We control our own destiny. Our goal is to win all four games. We won't have to worry about Creighton and Wichita State."

The conference champion will host the MVC Tournament May 16-18.

The Salukis should be very worthy opponents for the Salukis. They are the defending tournament champions and defeated nationally-ranked Illinois 8-6 April 24th.

Sophomore right-handers Sean Bergman will start the series opener. Bergman (7-1) hasn't lost a decision since the season opener at Louisville. He is 4-0 against Missouri Valley opponents.

-- The Salukis are ranked 10th by Baseball America and 11th by Collegiate Baseball/ESPN. Wichita State is ranked ranked seventh by Baseball America and 12th by Collegiate Baseball/ESPN. Creighton is ranked 17th by Baseball America and 16th by Collegiate Baseball/ESPN.

The Salukis rank fifth national in hitting (.332), seventh in fielding (.969) and seventh in team batting average (.233).

Relief ace Al Levine is ranked sixth nationally in saves with 11.

-- One of the reasons for the Salukis’ success is their senior leadership. Here is what the senior team members are saying: Custer fielder Doug Shields — .357, 6 home runs, 46 RBIs.

West agreed that overall support is swaying in favor of keeping all programs intact.

"I think the support was very much in favor of the support for the retention agreement," West said. "I would say definitely the majority of people were alocates of baseball. And in my opinion baseball was the single sport under attack, people really rallied in support."

"The Strategic Planning Committee analyzed the sports very, very carefully the year before Jim Har arrived," West said. "Our recent, formed committee has access to that material and we may very well refer back to that committee in our final report."

St. Louis Police

St. Louis Policemen giving tickets
to seatbelt users - Cards tickets

ST. LOUIS (UP) — When Kim Taynor's car was pulled over Thursday, she thought she was getting a ticket. She actually got two of them, but instead of being summonsed to appear in court, they were for a baseball game at Busch Memorial Stadium.

Taynor, a medical assistant in Bethalto, Ill., about 20 miles northeast of St. Louis, was often

Baseball Notes

130 people who received two tickets to a St. Louis Cardinals' baseball game because she was wearing her seat belt.

The giveaway was part of a program by the St. Louis Police Department designed to reward drivers who wear seat belts.

Police stopped motorists at a downtown intersection, handing out tickets to those who wore the restraint.

"We're doing this to increase awareness," Taff said. "In 1989 we had 52 traffic fatalities, a slight increase over 1988. And we hope to reduce it in 1990.
