Alleged city police irregularities under state police investigation

By Steve Hahn
Daily Egyptian Staff Writer

The Illinois State Police have begun an investigation into possible "irregularities" in the Carbondale Police Department, Carbondale City Manager Carroll Fry said Monday.

The alleged irregularities center around $1,800 which was mailed to the Carbondale Police Department more than a year ago. Reports indicate that the cash was received in the mail by the late Ralph Braden, a former Carbondale detective who was ruled to have committed suicide on Jan. 17.

Braden apparently put the money in an evidence locker in the police station while on duty. The money was found in his home. Later Braden checked the locker and figured the missing money.

Fry would not say what the money was for. But he did confirm that the amount had been recorded in police records around Jan. 25 and that it was not connected to any investigation.

"The money was not recorded in the proper manner or handled properly," Fry said.

Fry would not comment on why Braden had photocopied the bills. He also said, "no comment" when asked if the serial numbers on the photocopies matched the bills kept in the police locker.

Fry ordered the Police Department to locate the money in a bank safety deposit box in the city treasurer's vault. Fry also ordered the Police Department to get the money and said he would look into it himself.

Fry stated that the money had been stolen from Mack's Big Star food store, the Southern Illinoisan has quoted Fry as saying.

Explosions of a faulty arrester at a Central Illinois Public Service Company (CIPS) transformer that serves about one-fourth of the campus caused two power shortages Monday.

The first explosion occurred at 11:15 a.m. and lasted four hours, forcing the main campus and southeast portions of Carbondale to switch to secondary power sources.

Picture on Page 2

At about 3:50 p.m. the second shortage began, shutting down Fain Hall, Communications Building, the Illini Union, II, Lawson Hall and General Classroom Building.

An arrester is a device which grounds excess voltage caused by lightning. The cause of the first explosion is known, said William J. Newman, electrical operations supervisor for the Southern Illinoisan. Newman said no cause has been determined for the second explosion.

Because electricians at the Physical Plant were not immediately able to trace the second power shortage to the arrester, Lerch said he got his electricians that night to go around the campus to look for the cause of the power outage.

"We feel that the power was coming up in too many policies that were not running on full capacity," Newman said.

Lerch, superintendent of building maintenance, said the second explosion probably occurred because of a short in the power line.

By de-energizing the buildings, they hoped to turn off damages to motors that were not running on full power. Bus Miller, an electrician at the Physical Plant, said maintenance men at Life Science II and General Studies Building had smelled smoke, probably coming from overheating motors.

At 8:30 p.m. electricians from CIPS and the Physical Plant traced the power failure to the arrester and fixed it. Lerch said it may take some time to discover all of the damaged motors.

The first arrester explosion set fire to grass around a utility pole near the Wall Street Quadrangles. The fire was extinguished by the Carbondale Fire Department.

The only problem reported on campus was a fire alarm which was in the Center for Electron Microscopy. Judy Murphy, director of the center, said she had evaluated the exact damage, but the microscopes were damaged by the power surge that occurs when the power goes off and comes right back on.

Lerch sent electricians to Life Science II to check how the motors there were functioning Monday night. He said that with all of the equipment and the experiments contained there, it is especially important that all the air conditioning systems are working properly, properly.

Computer Services was inactive for about an hour. Dave Eagan, data processing operations manager, said the fire alarms which went off at 11:45 a.m. in Lawson Hall and General Classrooms were not connected with the power failure, said Harrel Lerch, building maintenance superintendent.

Dempsey zone violation paid by police

By Mark Edgar
Daily Egyptian Staff Writer

University Security Police, who ordered the towing of football coach Roy Dempsey's illegally parked car, paid the $15 fine in a policy which did not go into effect until the following day.

The policy, which requires security police to "make an attempt" to notify owners before towing cars, was issued Friday by Virgil Trimmer, chief of the security police.

But Dempsey's car, illegally parked in a space on campus reserved for handicapped persons, was towed.

Trimmer said he did not have to pay the fee because officers did not follow an "unwritten rule" to try to locate owners illegally parked in a tow zone.

Trimmer said he decided to put the parking regulation in writing to emphasize and clarify the policy after what had happened Monday.

Trimmer said Dempsey called Thursday to explain that no one notified him that his car was going to be towed.

"He said something to the effect that, 'Everyone knows my car. I don't know why they would tow it,'" Trimmer said.

Trimmer said he did not ask Dempsey for an explanation of why he parked in the spot reserved for handicapped persons.

"I was interested in getting back to my meal and not interested in getting back home," Trimmer said.

The policy does not state that the security police will have to pay a towing fee if the owner of a car is not notified before towing. But Trimmer said, "I would make it a decision after looking at what evidence we had.

And I admit that it will be easier to make contact with a handicapped person than with a student." Trimmer said.

Robert Presley, a captain for the security police, said Dempsey told Trimmer him to drive Dempsey to Karsten's Towing Service, New Era Road, Carbondale, to pick up the towed car.

Trimmer confirmed that it was his decision to have Dempsey drive to the towing service and to pay for the fee out of the Security Officer Activities Fund.

"I don't know why there wasn't a policy written down in the beginning. We get caught up in too many policies sometimes," Trimmer said.

Dempsey was issued a $15 ticket for parking in the space illegally. Trimmer said he does not know if Dempsey has paid the fine yet.

Trimmer said he has not seen the ticket that was issued nor talked to the officers who had the car towed.

Dempsey, contacted Friday, said, "It's no one's business whether I get a ticket or not.

Asked if the University Security Police paid for the towing fee, Dempsey said, "I don't know anything about that.

"Dempsey reportedly was in Ohio Tuesday and was not expected to return until Thursday. The parking policy does not apply to vehicles parked in traffic where the safety of other motorists is involved or in cases where the owner's vehicle is being towed for previous violation.
Student Government to hold open forum on fee increases

Proposed fee increases will be explained and discussed at a public meeting at 7:30 p.m. on Tuesday in the Student Center Ballroom.

The Student Government arranged the meeting "to allow students to voice their opinions on the increases," said Student Government President Tom Jones.

The SIU Office of Student Affairs has proposed increasing fees in the Student Welfare and Recreation (SWRF) fee, a $16 per year increase in housing costs, a $18 annual increase for Student Center operation and a $15.90 increase in medical benefit fees.

"It is also important that the students understand how the increases are far," Jones said. "The open meeting is a way for them to find out.

Beg your pardon

An article in Saturday’s paper in correctly stated that the Jackson County Jail is held in the County Clerk’s Office. The tax sale will be held on April 4 in the County Treasurer’s Office.

The article also incorrectly stated that hospitals receive tax dollars and that only one piece of property was forfeited to the tax sale in one year. The sentence should have said that only one piece of property has been sold in the last seven years that was forfeited to the county.

Missionaries slain in Rhodesia

SALISBURY, Rhodesia (AP) — Seven white Roman Catholic missionaries were killed here when guerrillas lined up and shot in a guerrilla attack that stunned Christian church groups in Rhodesia and left local officials in "profound grief" from Pope Paul VI. No government official was killed in the killing in four years of war by black guerrillas against Rhodesia’s white government.

The one survivor of the shooting said Thursday that she and three other missionaries who managed to escape in a car were outside the mission. They were killed by a land mine.

The three were killed by guerillas who had been ordered to attack the mission.

"They did not say one word about why they were doing this to us," said Father Dunstan Myerscough, an English Jesuit who said he was hit by a bullet to the head at the mission.

They were shot by guerrillas who had been ordered to attack the mission.

"I walked away from the mission and saw four bodies," said Father Dunstan Myerscough, an English Jesuit who said he was hit by a bullet to the head at the mission.

Midwest gets warmer, but the East stays cold

By The Associated Press

The upper Midwest began recovering on Monday from frequent subfreezing temperatures with the mercury climbing slowly in the mid-Mississippi and Ohio Valleys and the Great Lakes Region.

Fuel-burned barges delayed for weeks by ice on the Ohio River may arrive in Pittsburgh, Pa., by the end of July, a spokesman for the Army Corps of Engineers said Monday.

Forecasts of warmer weather in Kentucky -- with temperatures in the 70s by Thursday and Friday -- prompted hopes that some of the 10 school districts closed because of fast cold could reopen this week.

Columbus Gas said it was going to try to provide natural gas for 21 of the districts, most of which have been shut down since before Christmas, giving more than 100,000 pupils an un-scheduled vacation. The exact reopening schedule hinges on the weather, authorities said.

But it remained quite cold in the Midwest and South Atlantic coast states, with temperatures in the 30s in Virginia and the 40s in the Carolinas and Georgia. A warning of a very cold front was expected to bring readings to the mid-30s in much of the Ohio valley and the 50s in Georgia by Tuesday.

Snow flurries lingered from western New York through the central Appalachian Mountains and Ohio and Michigan. Other precipitation came to portions of Texas. Parts of the Rio Grande Valley and the extreme Southwest received light rain showers.

House fire blamed on blowtorch

A fire Monday at 864 W. College St. was apparently caused by "somebody trying to defrost a frozen water pipe in the attic with a blowtorch," Capt. Everett Rushing of the Carbondale Fire Dept. said. The width of the blowtorch has not been identified.

The resident of the house, Vincent DeRosa, graduate student in classical studies, was in class at 3:15 p.m. when the fire apparently started, said Henry Nicolaides, whose family owns the house.

The firemen reached the fire through a hole they made on the east side of the house’s roof. Rushing said the fire was "under control in no time," but added it took about an hour to extinguish completely because of "smoldering shingles."

DeRosa’s neighbors managed to remove most of DeRosa’s books and clothes from the house. The walls and rugs appeared to be water-damaged.
MEDPREP head: Med school minorities decline

By Sue Greene
Daily Egyptian Staff Writer

Fewer minority members than ever are applying to medical and dental schools, although the need and opportunities for them are increasing, says Michael Rainey, director of the Medical Education, Pre-Professional Program (MEDPREP).

"Rainey was at a preprofessional seminar sponsored by the Black Affairs Council Saturday in the Student Center. The university's 1978-79 Minority Report showed that SIU was one of the few schools, although explained, was due to the length of a seminar sponsored by the Preprofessional Program." Rainey said.

"Premedical women, of said, than average, he said, but most to be interested in medical and dental schools than ever before," Rainey said.

"Although tuition to some schools can be a barrier. Rainey pointed out. SIU has the lowest medical school tuition in the country.

"Rainey called the "difficult science theory a myth. "No one has ever proved it takes a genius to get A's and B's in science courses," he said.

"The test evaluates knowledge, but will also center on evaluating and relating, in my opinion," said.

"He said no one was sure yet what the scores on the new test would reflect. "I plan to take the test this spring," McDaniel said.

"MEDPREP began in the fall of 1972, Rainey said. Last year the program had 25 of its former students admitted into medical and dental schools.

Council okays $10,000 for proposed park

By Pete Retelsbach
Daily Egyptian Staff Writer

A $10,000 fund ceiling for the development of the proposed Lenus Turley Memorial Park was approved by the Carbondale City Council at its formal meeting Monday night.

Under the proposal, which passed by a vote of three-to-two, the council agreed to supply $10,000 from city funds for the estimated $13,130 cost of the project. The council ruled that the remainder of the cost be raised through private funding.

The original plans called for the expenditure of $28,630 for the memorial structure, but the council requested that the amount for the proposed park be changed to cover only the cost of the bronze statue and base.

Voting against the proposal were councilwoman Helen Westberg and Mayor Neal Eckert.

In other action, unanimous approval was given for the issuance of a club B liquor license to the Downstairs Ar- cade, 61 S. Illinois Ave. The arcade will be allowed to sell beer and wine for consumption on or off the premises.

The council also approved the Housing and Urban Development Community Development Block Grant had been changed from $3.48 million to $2.5 million. The additional $15,000 will be placed in the city's contingency fund.

The council also authorized the city manager to submit the grant application to the U.S. Department of Housing and Urban Development.

Also approved by the council was the renewal of a lease to the owners of Wilson Hall for a parking lot on East Park Street to be used by tenants.

Police spies: dirty business?

In the nascent history of the "well-placed government source" in a prized possession. Not having access to "hidden" information would deny the mainstream press the chance to publicize important news to the American government.

The sources betrayed, by those they tell, are a necessary part of the news business. What about secret sources — informants — used by not only the news media but also the Metropolitan Enforcement Group (MEG) in their pursuit of criminal activities? We ought not to be maintained. The latest edition of the book, "The Social Good," provides a service similar to sources used by newsgatherers.

The answer is yes. The question of secret information being used to promote honest and efficient government, releasing information to the public, is a matter of public interest.

The police informant can be similarly motivated. For example, a housewife learns that a friend's husband and peddlers here at the local high school tells police, a conviction result, and she is asked to begin at the elementary school. She acts to protect many high school students from a dangerous drug. Like the newsgatherer's source, she is a source who is guaranteed to protect the leak, and also guaranteed to ruin his political opponents.

Police informants can be motivated by revenge, leaking damaging, sometimes unsubstantiated information, and may have wronged the switch in some small way.

Secretly inform then cannot be unilaterally classified as a source of the secretly cutli information, however, does closer to a definition of a source. Newsgatherers would be blatantly wrong in using damaging information without positively ascertaining its accuracy.

In the police business it is the same way. Using secretly gathered information to stop the high school heroin peddlers may be morally right. Using other non-crime evidence which may be given to police by an informant like a chronic of the suspect's sex life, is equally wrong.

We have no evidence to indicate MEG is using information gathered by secret sources in other than legal ways. During the last two and a half years, in fact, we know that have resulted from every one MEG arrests, Rick Pariser, MEG director, said Friday.

There is no reason to doubt him, hispredawn raids are carried out professionally, using minimum violence, respecting the suspects' legal rights.

Secret informants are a part of life, so you're going to deal in illegal drugs, you'd better know who you're dealing with.

Britain: not happy, not prosperous

By Peter D. Clarke

Editor's note: The following is the first part of a three part series in which Peter D. Clarke a British economist discusses various aspects of the increasingly socialized British economy. In this first part he writes an American perceptions of Britain. Reprin
ted courtesy of the United States Industrial Council Educational Foundation.

The image of Britain that America is given by the liberal media is profoundly wrong. Every year we have a flock of American tourists who come over and look at the British welfare system—the model socialist societies. Britain is meant to be Regularly. Sen. Edward Kennedy comes over and is taken around the model precincts of the socialized medical system, and he comes back and, I gather, commends it to his attention. He says that you should emulate what Britain has given to the world.

The same is true of your journalists, the syndicated journalists that operate out of London. They live a very nice, plush, subsidized metropolitan life and it's my view that they don't see the real Britain. The same is true of your journalists. America is a happy, tolerant, a society at war with itself. You see the sights that one would naturally see—you see the conglom parts of Britain. You don't see the view of the British.

Well, it's my job to tell you that contemporary Britain is not a happy or prosperous society, although I think that truth is beginning to get through any way. The American liberal, I think, holds up Britain and perhaps Sweden, as an ideal for the American nation to copy. They commend it as a model to you. Certainly our socialist friends, our system of city zoning, our highly progressive income taxes, our public TV, our rent control, and our very large nationalized sectors, are all thought to be laudable and worthy of further study. You are told that the United Kingdom is a happy, tolerant, liberal society. The only thing we really haven't got that the American liberal wants in that catalog is busing—we'd have to be a delusion. We would have to be a delusion because of your journalists. There's always an error to try to distill reasons for changes in human events down to one cause. I think I can't necessarily distill the human predicament when Britain into one simple cause, that is, the total power of the state. It's a sad figure, but the British Central Statistical Office recently issued a grotesque statistic, and that was the tax burden in the United Kingdom.

Takimg all direct and indirect taxes, half of British transactons are funded by taxation. Which, to put it even more clearly, means that the average British works for the state on Monday and Tuesday through Wednesday morning, till lunch time. Thursday in all he works in the merchant marine, and in all branches of commerce. And even in politics the parliamentary model was something which other nations wanted to copy.

But all that's gone. Britain is now among the poorest nations on Europe. Now which is Britain, which is itself. It always is an error to try to distill reasons for changes in human events down to one cause. I think I can't necessarily distill the human predicament when Britain into one simple cause, that is, the total power of the state. It's a sad figure, but the British Central Statistical Office recently issued a grotesque statistic, and that was the tax burden in the United Kingdom.

Not too close

The world's population totalled 9,5 billion in mid-1974, according to the latest edition of the United Nations Demographic Yearbook released earlier this week. The annual growth rate of 1.9% has been maintained, the global population will double in 37 years.

It has been an old adage that during cold winter nights we should all snuggle close together. Maybe we should all snuggle in this era.

—Steve Hahn, Assistant Editorial Page Editor

No saints for slaveholders, postwar politics

By Garry Wills

I have had occasion, recently, to lecture on Thomas Jefferson at various universities, and I find a great instance to learning anything from a slaveholder. The monstrous evil that supported Jefferson tends to dull, if not entirely cancel, in the eyes of the young, all his admitted achievements and other virtues. They treat him as a hypocrite—one who said, in the mocking French phrase, "You are my brother, my slave."

This is not entirely just, though it is understandable. How could Jefferson seek freedom for white Americans while enslaving black ones? Dr. Johnson noted that from the outset. So did others. But it is unfair to look back and say no man is allowed to accomplish anything unless he accomplishes everything—he cannot seek minor improvements until he overthrows the greatest and least tractable evil of his time.

Jefferson did not do enough to oppose slavery—few men did; only the saints, like Anthony Benezet. Jefferson, I guess, should have been a saint. So should we all. But some of those in my audience, so smug about evils past, do not grasp the parallel in our own lives.

If the earth lasts long enough, future generations will look back on us with the incomprehending horror we feel for slaveholding cultures. They will ask how a nation ever thought it could justify the buildup of instruments for destroying the globe. The differences between this American president and that one, from Franklin Roosevelt on, will all shrink to insignificance beside the fact that they all coun-

trbalanced this evil and built their careers on it, as surely as Jefferson lived off the evil aliments of slave products.

It will be said in our defense that we had to accept the system—the same thing that is said of Jefferson and his peers. There are "practical considerations"—there always are. Without slaves, there might have been no independence for Virginia. Was it worth it? That is the kind of calculation it is probably evil to make, even if the Virginians had been able to make it.

Without Nuclear weapons, there might be no American dominance of the postwar world. Is that worth it? Survivors of a nuclear showdown would hardly think so. We are told that nuclear weapons have saved us from Russia or Communism or whatever. But if the gamble does not work, our unwilling beneficiaries will not call that much of a rescue. And even if it does work, the hypotheses involved are unrealistic. The idea that Russia or Com-
munism would dominate a resisting world, except for nuclear deterrents, is a wildly improbable compli-

ment to Russia and a wholly unjustified insult to the rest of the human race.

There is no other name for our postwar politics but craziness—as there is no other name for the slave system. Otherwise virtuous men lived with and even promoted slavery. Most of their contemporaries were blind to the monstrous character of their own lives. Only saints saw through the sham—and they were mocked, when not martyred.

Only the saints do not fear the nuclear threat these days—deny it their tax moneys, attack it with a moral revulsion equating that of abolitionists. The crazy wisdom of the world calls saintliness craziness, and is rewarded. It is an old story, as old as Golgotha, the Hill of the Skull—in myth, the burying place of Adam.

The frightening nuclear installations are, as Bol-

bol and intend, the burying places of Adam, of mankind. That is why even one small sign of realism—a president who speaks positively of disarm-
ing as a goal and promise—should be greeted with the same respect we give to Jefferson's inadequate but highly-welcome (and partially redeeming) criticisms of the slave system.

Slapping the media's bottom

By Elizabeth Boccia

We all know that the Central Intelligence Agency and other factions considered necessary in upholding our national security have needed their bottoms slapped from time to time. And thanks to the media, their naughtiness has been brought to the public's atten-

tion.

The Pentagon Papers incident in 1971 demonstrated the public's concern about when governmental prior restraint is necessary regarding national security.

Hopefully, we all agree, however, that certain instances do exist, when, for the sake of national security, the press will exercise its own form of prior restraint.

In the Jan. 17 issue of Newsweek, regarding an article on a new security system being tested by our Air Force, its editors chose not to do so. And although I have heard of no dissent or con-

trovery concerning the article, I do question their motives.

In the lead paragraph the question is raised as to how vulnerable security systems at nuclear power plants and weapons sites are to infiltration by thieves or terrorists. The article describes how Air Force experts are about to put into operation a sophisticated new system they hope will fail even the most ingenious in-

truder: how it works and problems with the system not yet perfected. The triple-threat system does it all by com-

bining three of the most reliable identification methods now in use: voice patterns, fingerprint and handwriting. That's something even the Ronoc Woman might have a hard time tackling.

Once perfected, studies indicate that each of the three components will be at least 98 per cent effective in rejecting unwanted persons. This combination of all three services should screen out all but one in 126,000 would-be intruders.

Those are hardly odds one would want to take to Las Vegas. But there is always that slim possibility.

Newsweek entitled its article "False Safe" after the famed novel and movie dealing with such a security system for nuclear arms. As per the Hollywood ending, this fail safe system backfired resulting in the destruction of N.Y. and Moscow.

This column was not intended to discuss the pros and cons of nuclear armament or disarm-

ment. However, certain situations still necessitate the utmost security and the least amount of public scrutiny. This triple-threat security system being put through final testing at Pease Air Force Base near Portsmouth, N.H., is one such instance.

A lack of knowledge on such security systems poses no direct threat to our constitutional rights. Why then do we need such a detailed description of such devices?6

What are the chances of successfully hijacking an airplane? Despite high odds, the risk enjoyed quite a rash of attempts. Could such widespread publicity by the news media, television and cinema alike, have added to the mystique? Why give any would-be saboteurs, thieves or terrorists any idea of perhaps being that one in 126,000? It is a far-fetched gamble, but nevertheless, a possibility.

Regarding delicate security matters, the press should feel obligated to refrain from discussing not only the grim possibilities, but large or small, the odds involved.

Beg your pardon

A photograph accompanying the Feb. 3 viewpoint on ineffectiveness in Morris Library showed two students participating in the Textbook Rental Ser-

vice, a program which occupied space in the library but which has been discontinued.

The photo came from the Daily Egyptian files. We regret any misunderstanding that it may have caused.

Letters of novelist Alldington to be published by SIU Press

The results of five years spent tracking down letters from Richard Alldington, the English novelist, translator and biographer, are being published in "A Checklist of the Letters of Richard Alldington," by Norman Timmes Gates on Feb. 28 by the SIU Press. Alldington, who died in 1962, and whose works include "The Death of the Gentleman," were beginning to find responsive readers, was a prolific writer. Gates' "Checklist" gives the location of more than 7,500 letters whose existence he uncovered in places such as Canada, Great Britain, the United States, Russia and Australia. The individual holdings range from one or two letters faithfully reported by admirers in large collections. The largest private collection, at the Perot Museum of the last Norman Holmes Pearson, of York, contains more than 1,000 letters from the literary executor of the estate of H.D. Alldington's wife. The lastest collection is that of SIU's Morris Library which holds one of Alldington and a biographer. The letters do not only with Alldington's fascinating personal experiences but also with literary matters which illuminate the cultural history of the times, often remembered for his controversial book on Lawrence of Arabia. Alldington's reputation rested on his novel, "Death of a Gentleman," a classic of World War I and generally on his career as a modernist poet. He was acquainted with a host of literary figures such as D.H. Lawrence and Lawrence Durrell, whose books he ceaselessly read and whose careers he attempted to aid. Gates' "Checklist" contains an extensive biographical sketch of Alldington, perhaps the most complete and detailed study of Alldington's life and letters. The checklist contains all the letters to recipients, to holdings by repositories, and to libraries by year. Norman Timmes Gates is an associate professor of English at Rider College in Trenton, New Jersey.

On the cover of "A Checklist of the Letters of Richard Alldington," by Norman Timmes Gates, one of the best-known English novelists, translators and biographers. The book contains a checklist of the letters written by Alldington to various recipients, including prospective readers, publishers, and editors. The letters provide insight into Alldington's personal and professional life, as well as his literary and political views. The book is published by the SIU Press and is available for purchase.

"Perfect rock band" Boston will appear

The high-priced, new "heavy metal" rock group, Boston, will be appearing in the area on a three-day tour setting March 4 and 5. Opening the Boston will be guitarist Nils Lofgren, formerly of Grim and Crazy Horse. With songs like their hit single, "More Than A Feeling," and current chart climber, "Long Time," Boston effectively wields melodic structure and vocal harmonies to a heavy rock format. Formed and based in Boston, the band is the brainchild of lead guitarist Tom Scholz, a former mechanical engineer for Polaroid who helped develop the SX-70 instant camera. While working for Polaroid, Scholz was working by night, experimenting with Ultrak recording equipment to develop the perfect rock band. It is called, "better than nothing." The group's phenomenally successful debut album, "Boston," grew out of Scholz's debut hit in his home studio. Scholz also acted as chief engineer and co-producer of the album. Tuesday afternoon at 3 p.m. in the Arena Green Room a ticketed late meeting will be held to select six persons to run the ticket lines which will be forming Wednesday from 8 a.m. to 10 p.m.

Programs throughout the Midwest have a large number of openings for education, social scientists, the liberal arts. Specific assignments now being recruited.

Sign up now to see VISTA recruiters at Placement, Feb. 8-10.

Professor says infancy crucial

By Lynn Waller

Since early brain experiences make a difference in child development, infants require care at birth—but parents are not prepared for the job, said Burton White, director of the Harvard Preschool Project in a lecture titled "Infancy As A Critical Life Stage."

White, senior research associate and lecturer at Harvard Graduate School, said an audience of about 300 students and professionals that the first 18 months of life are the most crucial in a child's development. "Nothing new happens between the ages of three and six," White said. During those years the child refuses the skills he has already learned.

The author of "The First Three Years of Life," a book on child development in the early stages of life, White admitted that he has only one professional interest. "I'm concerned with the story of how well-get together people get to be that way," he said.

For the past 13 years, Dr. White, who studied at Harvard, has been particularly interested in how well-get together six-year-olds get to be that way. "Research I've conducted shows how infancy and toddlerhood relate to education and human development," White said.

Convinced that a child's learning experiences before age three provide the foundation for future educational achievements, White has centered his research around the family and the building of a child's life in the home.

Exhilarating the child is easy in the first six months of life, according to White. "A child who is not only deeply loved, and he develops natural skills such as reaching, rolling over, and making head movements. White noted that most parents do not realize that at this initial stage."

When the child is six or seven months old he begins to crawl and then problems arise. White explained, "A child learns that he can move from one spot to another on his own." White said, "and develops a natural parental reaction to a child's uncontrolled curiosity to prevent the child from crawling by making use of a playpen or other limiting device. This hinders the child development."

Between the ages of seven months and two years, a child learns to talk and his curiosity increases. He develops roots of intelligence. He "learns" to learn. The child also begins to develop socially. By the age of two, White noted, "the child has become an incredibly complicated creature who has learned to control his mother."

White warned that parenting is not passive as many believe. "A certain personality is needed for parenthood and many learn this too late," he said.

Most parents are unprepared for the job of child rearing, according to White. He compared the experience of bringing home a new child with the process of buying a new car. "If a person buys a new car he has driving experiences and an owner's manual in the glove compartment," White said, "but when parents bring home a six-day-old infant, all they have is a new baby and a new responsibility." A new emphasis on preparing parents for the job of child rearing is needed, White noted.

Good child rearing requires the parent to be firm. "Parents need to be able to say no and back the words up with action," White related. He said that a great number of people, in trying to love their children, become too permissive. When they discover the problem, it's too late.

White voiced optimism for the future of early education in child development. Every major foundation in the country has made the strengthening of the family as a child's source of early education one of their highest priorities, according to White. There is state and federal government support for education in early life stages and for parental education in child rearing. New television programs designed to educate parents in child rearing will be aired nationwide next year, White said.

"We'll have better child rearing in the future," White said, "which will produce children who experience less pain, deeper pleasure and stronger family ties.

ENERGY INVESTMENT

NEW YORK: API—According to a recent report in the Institute of Life Insurance's Trend Analysis Program, the development of new energy sources appears to be a likely area of investment for life insurance companies, which were among the first backers of jet airplane transportation.

Pregnant woman assaulted

University police said Monday investiga-
tions are continuing in an in-
cident where a pregnant woman was pushed down a flight of stairs at Evergreen Terrace early Sunday

morning.

Police said Richard L. Haber-
berger, 30, an unclassified graduate student, called at 1:30 a.m. Sunday and said someone had just pushed him while he was at the stairs.

Haberberger's wife, Cindy, 30, said that he black male, about six feet tall with medium build and short hair shoved her down the stairs.

Mrs. Haberberger suffered a bruise to the back of her head. No other information was available Monday.

Also, an SIU student was burned fatal p.m. while operating a pressure machine at the Hor-

cristian Research Center in the Uni-

versity Farms.

David A. Beecu, 31, a graduate student in plant and soil science, was working on the machine when steam escaped, giving Beecu first and second degree burns on his back. The next day Beecu was taken to Memorial

Hospital of Carbondale and later transferred to the Health Services Emergency, police said.

Carbondale police reported a burglary from an automobile in which a pistol and a bag of powdered acrylic resins were taken.

Police said Ted Schaefer repon-

ed the burglary of a nine millimeter pistol and the powdered resin.

Independent study available

By Wayne BrieSt

Student Writer

If you're currently a college student studying a 3.8 Grade Point Average and if you have ac-
cumulated 30 hours, you are-

whether you realize it or not-

eligible for the President's Scholar Program.

This program is a university-wide honors program offered to all college and graduating high school students. It's an independent study program enabling students to do in-

dependent study while receiving

a grade.

Any graduating high school student is eligible providing they have completed an American College Testing (ACT) total composite

score of 30 or above and have finished in the upper five per cent of their class.

They may also qualify if they total a composite ACT score of 30 and are within the upper 10 per cent of their graduating class.

Currently Clifford Harper, dean of general academic programs, is han-
dling the program while SIU is search-

ing for a director.

More than 40 resumes have been received since the resignation of the former director, John Dotson. With already more than 500 students involved in the President's Scholar Program registration begins on

times every day at Woody Hall, Wing C, Room 12.

Next year you could be on a scholarship.

If you are a Sophomore, Junior, or Senior with 2 years of

Graduate or Undergraduate studies remaining, you may be eligible for an Air Force ROTC two-year scholarship which pays your tuition and gives you a $100 a month allowance. And it picks up the tab for books and lab fees, as well.

After college, you'll receive a commission in the Air Force... go on to additional, specialized training... as you get your start as an Air Force officer. There'll be good pay and responsibility, and lots of other benefits... and a great opportunity to serve your country.

Il all starts right here—in college—in the Air Force ROTC. Look us up and see what we have to offer, and show us what you can offer in return.

We are recruiting now for Fall '77

Contact: Capt. Fran Daigle, AFROTC Det. 226, SIU
Carbondale, IL 62901, Phone: 618-453-2481

Air Force ROTC - Gateway to a Great Way of Life
Student jobs now available; ACT form on file required

The following jobs for student workers have been listed by the Office of Student Work and Financial Assistance. To be eligible, a student must be enrolled full-time and must have a current ACT Family Financial Statement on file with the Office of Student Work and Financial Assistance. Applications may be picked up at the Student Work Office, Woody Hall-B, third floor.

Jobs available as of Feb. 4, 1977:

Chemical lab openings, one opening evening. One opening, 4 to 10 p.m. One opening, Monday.

Scholarships now available

Several scholarship and fellowship opportunities are now available for SIU students. Applications and further information are available from Helen Vergeza, Room 228 Woody Hall C.

The Administration on Aging is offering a $5,000 dissertation grant for research on aging. Students in the social sciences are eligible. The deadline is March 15.

Summer scholarships in field research in archaeology and life sciences are available from Earthwatch. The deadline is Feb. 14.

Seniors and graduates in social and physical sciences, humanities, law and business can receive a summer internship with the federal government. The deadline is March 15.

The Department of Labor is offering dissertation grants for research in manpower needs. The deadline is March 15.

The National Committee on the Challenges of Modern Society is offering awards to pre- and post-doctoral candidates for research in public policy toward various problems of today's society. The deadline is March 1.

All programs growing, limited only by funds; chances for employment near 100 per cent

By John Reddick
Daily Egyptian Staff Writer

Editor's note: This is the eighth in a series of articles on the 12 colleges and schools of the University.

A major source of pride at SIU's School of Technical Careers (STC) is that its graduates get jobs.

Arden L. Pratt, STC dean, says 90 per cent of the 1,976 graduates from the STC bachelor programs were placed in jobs. The other seven per cent went on to further their education.

The bachelor of science program studies are developed by each student in consultation with advisors to meet the individual's career objectives. Many types of previous occupational and educational experiences may be applied to the baccalaureate program.

Pratt said he knew a student who received a BS in theater from SIU and then got an associate degree in architecture. He now designs theaters. Pratt said.

There are 2,175 students enrolled in STC. David Saunders, director of the office of information services for STC, said about 75 per cent of the students are enrolled in the associate degree programs while 25 per cent are in the bachelor programs.

The two-year associate programs are offered by STC in four major occupational clusters: allied health and public services, applied technologies, aviation technologies, graphic communications.

Twenty associate degree programs are offered: Automotive, mortuary science, dental hygiene and several other programs are on the Vocational Technical Institute (VTI) Campus next to the Crab Orchard Wildlife Refuge on Carbondale.

A bus leaves Carbondale for the VTI Campus every half-hour from 7:30 a.m. through 8:30 p.m. It leaves the VTI campus on the hour. Data processing and law enforcement are located in Foster Hall.

STC is scheduled to move in June 1977, to a building under construction near Carbondale, next to the VTI campus. The building, estimated to cost $6 million, will house most of the programs.

Sauders said most STC classes are filled months before the mandatory University deadline for cutting enrollment.

The availability of jobs is one reason why the classes fill so quickly, Pratt said. He said a firm in Houston said to "send down all of your graduates in this and manufacturing technology—they're hired before they get to Texas."

There are 5,200 students in the STC program. Pratt said the first non-academic one-year associate degree program in the nation started in 1945.

Sauders said many courses which were offered at VTI are now being taught in community colleges.

Among these programs are welding, drafting and basic auto mechanics.

Sauders said STC concentrates on high-cost programs such as aviation and such low-investment programs as mortuary science. He said a community college would not have the enrollment to support a program like mortuary science.

Pratt said STC has a high turnover rate of instructors, because our school is different from academic programs. We have a student body made up of people who come from industry, health and business backgrounds, who teach for two, three or four years and then return to their original field.

We don't look for a person with a Ph.D. in aviation, because there is no such person. But an experienced person from the aviation industry who lacks a high school degree but has practical experience and work experience in the field.

Pratt said in the past many professors and administrators in the University did not recognize the ability of persons who came from a non-academic environment. Joe Albert, an instructor who teaches the Mechanics and Theory of Automatic Transmissions agrees with Pratt.

Albert said, "The academic world looks down at us. But he added with a grin, 'Things are not as bad as they used to be. We began to get a little more recognition around 1971 when academic people couldn't get jobs."

But not all STC graduates can find work. Pratt said he first heard of the Mortuary Science Program, said the program has difficulty in placing women graduates.

He said that in the past many funeral homes had their own ambulance services. The directors of the funeral homes would have to send people to recover bodies. Many directors were "reluctant to send a young lady" on such a chore, Herts said.

He said that because most funeral parlors are small businesses with few employees, when the director is give a choice between hiring a male or a female, he'll usually choose the man.

Herts added many funeral parlors no longer have ambulances and "the chance of a woman finding a job appears to be improving."

With the help of outside funds STC has improved the quality of programs and equipment in the school. Pratt said fiscal requests have been reasonably met by the administration. But he estimated that STC receives "well over $1 million in donations annually."

He said the biggest recipient of outside funds is the aviation department.

Edmund Dalioea, chairman of the aviation department, said, "The University does not give us enough money to run our programs. But I look at the situation pragmatically. Rather than spend my time lamenting and complaining about the budget, I have chosen to look toward the airlines and others in aviation for help."

Dalioea said there is $6 million worth of STC equipment at Southern Illinois University. Out of that he estimates that SIU has allotted "less than $500,000 to the program."

Other big donors to the program are the major airlines, and aircraft manufacturers, and the military. Dalioea said. He said those donations help "make our aviation program the best in the nation."

Karen Johnston, a dental technology major, practices the art of molding false teeth in a lab at the School of Technical Careers.

It's tune-up time in the auto emissions lab at the School of Technical Careers.

Teaching assistant Carroll Bailey assists student mechanic Richard Kile.

Professor says rating game important for TV advertisers

By Angell Peddicord

"The Ratings Game," was the topic that opened the first multiple day convention of the Midwest Regional Chapter of Alpha Epistle Radio, a national broadcasting fraternity.

If Eugene Dyvig, SIU associate professor of radio-television, was the last minute speaker, when a representative from Arbitron, a major rating company, could not get to Carbondale because of inclement weather.

Dyvig said, "people blame ratings" for violence on TV, censorship, and sexually liberated programming. As well as a "favorite hate" of viewers, the broadcasters also are negative on ratings because of expense, but without ratings they couldn't "compete in the marketplace."

"Ratings are a reality," Dyvig said. They are basically taken for advertisers so that they can make "wise buying decisions" and can "target advertising" to specific audiences.

He said, "there is information exposure," which Dyvig says is created by the broadcasting of advertisers for "more and more information.

The actual rating is not the most important information, according to Dyvig. It is the type of audience that is listening or watching.

In a recent television survey, there were 46 columns of information. Only one of these involved an actual rating. Other types of information included were average national audience, cost, geographic location, project unsure.

Law journal available soon

By Lynne Weller

The winter issue of the SIU Law Journal will be available to the general public by the second week of February, according to Ronald Spears, associate professor of law at SIU.

Because of printing delays, the journal was released late, Spears said. It was to have been distributed to Dairyland and the Midwest area.

The journal provides a secondary source of research and analysis for lawyers and judges, and reports new developments in different areas of law. "At the same time, the journal enables law students to improve their legal research, writing and analysis," Spears said.

Including the front cover are three major articles, one comment and several case notes. The articles were written by SIU law professors and one outside contributor, while the comment and case notes were contributed by SIU law students.

In the front articles, David C. Johnson, SIU professor of law, considers the changes made in the Federal Estate and Gift Tax Law. T. Richard Mager, associate professor of law at SIU, wrote about "The Past and Present Attempt By Congress And The Courts To Regulate Corporate And Union Campaign Contributions And Expenditures In The Election Of Federal Officials." In the article, Mager deals with past prohibitions and regulation of campaign contributions and offers some solutions to the problems arising in this area of the law.

Ronald Hayes Malone of the U.S. Department of Justice outlines criminal abuses in private welfare and pension plans in a third major article. Malone suggests a national enforcement program be developed to prevent further abuses in these areas.

As a student contributor, Louise Johnson comments on the issue of an individual's compensation for injuries sustained from the use of birth control products. "Up Against A Uniform Wall: An Analysis Of The Liability Of Birth Control Products Manufacturers" is the title of her comments.

Also included in the journal are several case notes. According to Spears, these are student analyses of recent cases and court decisions dealing with many different areas of the law.

Spears noted the significance of student contributions to the journal and student input in the production process. "There is a real sense of pride in school involvement," Spears said. "It is, essentially, the law journal is the SIU School of Law to the rest of the country: it's the only part of the school they see."

Journals may be obtained by writing to the business editor, School of Law, Law Journal, Southern Illinois University, Carbondale, Ill., 62901. Single issues of the journal cost $4. A year's subscription to the journal, which includes two issues, costs $7.

Federal judge died Monday

CHICAGO (AP) — Federal Judge Richard H. Austin, 70, who came close to being elected governor of Illinois last year, died Monday in a suburban hospital.

The 74-year-old senior U.S. District Court judge died of natural causes on Monday afternoon in his home in Chicago. His death was confirmed by Assistant U.S. Attorney John M. Grogan, who said he was informed of it by Austin's adopted daughter, Gail Homan.

Austin was a Chicago Superior Court judge in 1960 when he was selected by the Democratic State Central Committee to oppose then Gov. William D. Stratton, who was seeking his re-election to a third term.

Stratton won, but only by a slim 28,577 votes.

Before appointment to the federal bench, Austin also served as first assistant state's attorney in Cook County and as chief justice of the Circuit Court of Cook County.

Beg your pardon

It was incorrectly reported in Friday's Daily Egyptian that the maximum fine for the proposed Business-Redevelopment District ordinance was $1,500. The maximum fine is one-half an acre.

TERRIER CAGERS WIN

By Jim Whittle 
Daily Record & Sports Writer

Carbondale's Community High School basketball team wheeled back into South Seven Conference title contention by defeating league leader Marion 87-70 last Friday at Harrisburg. 75-57, in conference action last weekend.

Carbondale, 9-2 in conference play and 12-4 overall, still trails Marion 19-2 by one-half game with defending champion Benton in contention at 7-3.

Gordon Welch scored 30 points and Johnny Payne added a career-high 30 points to lead CHR's win over Marion Friday while Welch's 32 points highlighted Saturday's win over Harrisburg.

In the Marion game, the Terriers led most of the game, but trailed by short periods in the second quarter. Marion's James Orr fired in six first half baskets to lead the Wildcats. But, CHR's Joe Hertz hit two baskets right before halftime to hand the Terriers a 34-33 lead at halftime.

"We weren't moving the ball well enough the first half," said Doug Woolard, CHR coach. "Our guys didn't penetrate their zone very well. Orr was hurting us with his jumpers," Woolard said.

The second half was a different story as Welch and Payne took command under the boards. CHR's reserves played well also at David Schimmelfiend's defense held to one second half basket and Kelvin Cowan got the Terriers' offense moving with sharp passing.

The game was tied 40-40 when the Terriers could. Welch scored 12 points and Payne 10 as CHR spurted ahead a 43-40 lead. Marion could not get any closer than seven points the rest of the game.

"Our guards did a lot better the second half," Woolard said. "When Marion pressured us the final quarter our guys responded well. We kept hitting the basket and got some nice assists," Woolard said.

"I'm glad our guys bounced back after last week's two losses," Woolard said. "We have won a dozen things this week and keep on winning in close games on numerous occasions.

Women hoopspters win twice

By Lee Friedman
Every Egyptian Sports Writer
Jeri Hoffmann and Pam Rendine combined for 22 points to lead the SIC women's basketball team to a 74-50 win against highly regarded Indiana State Saturday afternoon at Davies Gym.

The Salukis defeated a much improved Eastern Illinois team by nearly the same score, 74-50 Friday night, as four SIC players scored in double figures.

In the Indiana State game, Hoff- mann dropped in 20 and guard Jane and Brenda Saluki second team followed and diving, "Swenson said."

With three of the four starters scoring over 10 points, the Salukis took the game as they dived to 31-21 from the floor. Jeri did everything on the court, from diving the length of the floor to hitting from the outside. The Salukis scored 29 points and had two starters scoring in double figures.

In addition to her 10 points, Rendine had nine assists, as she broke out of a terrible offensive slump and used her speed and strength driving ability to take the Indiana State man-to-man defense.

Swimmers sweep pair

By Lee Friedman
Every Egyptian Sports Writer
The men's swim team picked up a pair of wins on the road as it beat Cincinnati 130-70 Friday and Kentucky 87-46 Saturday to equal its dual meet record to 6-3.

The meet with Kentucky was a close one and wasn't decided until the last couple events were highlighted by Mike Salerno and Glenn Miller in the 500-yard backstroke as he won the event in a time of 1:44.3.

Salerno put out an all-time pool start as Cincinnati "threw" the 400-yard relay, saving their better swimmers for other events. Dave Gobbi and Rich Godfrey took one-two in the 1,000 freestyle and Salerno grabbed an early lead, but Cin- cinnati led 25-21 before the diving as it took the 300-individual medley, the 300-yard breast and the 300-yard butterfly.

It was pretty tense going into the diving as Salerno said that the crowd made things worse, because they actually had a leg of beaten Glenn gets 40, cagers lose

(Continued from Page 20)

Elmoine blocked an Al Grant jump shot in the final seconds as he brought Lambert off the bench second. Brent and Johnson each hit two free throws to leading the final second fiasco followed to end the game.

The Salukis hit 37 of 80 shots for a 46.3 shooting night, while the Shockers downed 33 of 61 shots for 54 percent.

With 4:34 left in the game, Salerno outrebounded the Salukis, 42-40, and buried the Salukis at 3-3 and held the lead by the Salukis' 10 of 22.

"Both teams cheated death on several occasions," said Wichita Coach Harry Miller. "We almost didn't finish this one."

"These are two evenly matched teams," Miller added. "We tried to do everything we could to stop him. He is the greatest scorer I've ever seen in the game of basketball. He doesn't need a pick. He just needs a lead of daylight."

The loss dropped the Salukis' Valley mark to 5-3. The next Valley game is at 7:30 p.m. Thursday in the arena against the Texas State leader in the Valley and the nation's No. 1 field goal shooting percentage team.

Salukis too much for Roosevelt, 95-58

By Lee Folsom
Daily Egyptian Sports Writer

It was a strange night at the Arena Monday night as Southern Illinois took on Kansas State. The Salukis were victorious, 95-58. It was strange, too, because Dan "Killer" Hartzog was not playing. He has the flu and was not expected to return for a few games.

Mostly everyone who watched the game laughed. They couldn't help it.

As the Salukis scored a record-breaking 100th win as Saluki coach in his seventh year at SIU, the bench could have taken No. 100 to the bank early in the game.

After half a minute, 22 at halftime, Lambert went mostly with his bench in the second half. Mel Hugheht, Barry Smith, Milt Huggins and Tom Harris got in a lot of map-up time and by mid-game the bench was empty.

Tom Harris turned the game into a joke.

The game progressed into nothing short of a puppet show as the crowd finally became aroused in the second half. A long shot by Skip Kieszkowski became the center of attention.

The audience exclaimed and some frustrating, unsuccessful offensive attempts were made by Fort Scott and Kansas, and Lambert threw in one or two shots. He received a standing ovation a few minutes later. Kieszkowski played only seven minutes on the night.

Fitzsimmons was two of seven from the floor, but the two he hit were from 30 feet. The crowd ate it up. Another thrill was Jerry Kellum popping in six points, the first time he made it into the scorebook this season.

Huggins was the leading SIU scorer. Mike Glenn finished with 14 and Gary Wilson 13 as every Saluki got on the board. Wilson was high rebounder with nine, and Craig Smith of Roosevelt was the game's high scorer with 21. Other scorers for SIU were Wayne Abrams and Smith with eight. Richard Ford with seven. Hugheht, Al Grant, Tom Harris and Burnside with four.

The Salukis played without guard Al Williams, who missed the plane to Wichita Friday and was not allowed to suit up for Roosevelt.

"I told me thought he was supposed to pick up his bags at 12:30 instead of 11:30 Friday," said Lambert. "I'm going to have to weigh the situation again and decide," said Lambert, when asked how long Williams will be out. Williams sat on the bench in street clothes during the game.

"That's our version of 'That's Entertainment Part 3,'" Lambert said about the game afterwards. "Sometimes people go to the games to look for something different.

Monday night at the Arena they got it.

Close, but SIU tracksters second to Illini

By Rick Karch
Daily Egyptian Sports Writer

Two days before the Illinois Intercollegiate Relays, where the Salukis competed in 10-12 events, and had an opportunity to move up, Illinois Coach Gary Wieeneke said former Olympian Craig BIundt was going to be the biggest story of the two meets. "He's a big guy. He has set a 220 yard hurdles record and also holds a big record in the high jump," said Lambert.

"He's a big guy. He has set a 220 yard hurdles record and also holds a big record in the high jump," said Lambert.

The Salukis could not have the same excitement in the meet at the Illini. Illinois also won the last event, the meet, to beat SIU 182-182 in the 17 team field. None of the other schools even came close to being a challenge to the two perennial powers.

SIU track Coach Lew Hartzog might have been disappointed after losing to rival Illinois, but not this time.

"I'll be glad to get back to the bus coming back from Champaign. I have never been more proud of a team than I was of you today. Illinois has a super team, and for you to give them a run like that was just super," Hartzog said.

But "super" could also describe the performance of the SIU team.

"I think the performance of the team was about as good as you could ask for in the weather conditions the way they were, they would have had a very good showing and a few points less — and that still would have been good," Hartzog said.

A big disappointment Friday night's event when Mike Sawyer set a meet record in the three-mile run with a time of 15:53. The Salukis were not in the long jump with a leap of 25-3/4, which would place them behind Illinois and the Illini's Brian Johnson on the second place list.

As expected, SIU dominated the pole vault, taking four of the six places for points. Tom Johnson, Gary Hunte and Illinois' Doug Lall all cleared 16-6 (a meet record), but missed at 17 feet. Johnson won because of less misses, while Hunter and Lall tied for second.

Other places were occupied by Andy Roberts, second in the 800-yard hurdles (15.75), Mike, third in the 3000-yard dash (8:32.3), Mark Hughes, second in the 10000 yard run (23.134), John Marks, second in the shot put (58-4), and Elmore, third in the discus (180-0).

The Salukis were defeated by Illinois in the mile relay (4:03.63), Paul Cook, second in the 8000 and Johnson was fourth in the two-mile run (9:03.2). The Salukis, however, took two relay events in the 70-66 and third in the mile relay in 3:20.1. The Salukis are all that remained sprinters were hurt the most by the weather," Hartzog said. "It's difficult to be sharp when you have green grass." The people in the field events were superb, he continued. But they were not able to work out in the weight room, and other places.

"I am amazed that the distance people ran as potent as they did. To run in the cold and the weather is most difficult," Hartzog said.

Although his team took second place in the distance meet, Hartzog saw a bright future for the team. Losing to Illinois didn't take anything away from the Saluki track team, because Illinois has such a good team.

"With a little luck, they could win the NCAA indoor title," Hartzog said. "But it would take some luck, as would any team. In Louisville next weekend, they could break the world record in the distance medley.

People should appreciate the differences of being able to practice in the Armory, and the things we don't have an indoor facility. We doubled Eastern Illinois (which finished in third place) and they're a good team.'

Salukis Valley drive slowed at Witchita

By Dave Heere
Daily Egyptian Sports Editor

For Wichita State, it was the victory it needed to push them to a share of the Valley race again, but for Coach Paul Lambert, it was another episode in "heart break hotel," or "last second, Valley lost.

All the kings horses and all the king's men couldn't have saved Southern Illinois from getting caught in a Valley trap. The Salukis would have had another episode in "heart break hotel," or "last second, Valley lost.

The Shockers had the game in hand, but the Salukis came back in the second half and took the lead away from them. The Valley State was the victim of a last second reversal in the game's final seconds.

With 14 seconds left, the Shockers had the ball in the Saluki hoop. A time out was taken by the Shockers, who were confident they had the lead, but the two teams came back on the court. Glenn went to the scorer's table to check the score and when he returned, time had expired and the game was over.

When he returned, the ball was still in play and the Saluki player was dribbling out the clock.

We only had four players on the court for the Shockers at that time. Lambert went back to check the time out with the scorers, and the officials came over right at night, but they still got the ball in play," said a tight-knit Lambert, who had what could have been his 100th Saluki victory taken away by Wichita.

"I know they check and make sure everybody is ready," Lambert said.

"I know they check and make sure everybody is ready," Lambert said. The officials added that when he questioned the play, the officials "just kind of looked at me."

"This was a big win for them (Wichita). Johnson had a great game, he really played super," complimented Lambert. "He played long way to go to get yet," said Lambert, referring to the possibility of another clash with Wichita State in the post season Valley tournament in Wichita.

Lambert's bench was thickened when 6-4 guard Al Williams failed to catch the plane taking the team to the tournament. Johnson popped the 18-footer, and Ford blocked a Bob Trugle shot to send the game into overtime.

Johnson scored six quick points midway through the overtime, giving the Shockers an 82-78 lead. Ford made an important tip in, and after Johnson hit a free throw at the end of the quarter, Glenn took a Harris pass and scored one of his seven points on the game's second extra frame.

Brent took over for the Shockers at the final buzzer, and the Salukis lost Wilson on the first half and hitting a bomb at the cutter to the Shockers lead to 92-32. The Salukis began to work the ball inside as Wilson and Cory Abrams scored laid ups, Mel Hugheht hit the first three point shot he had seen all year, but the Shockers were not making all the more difficult.

The Salukis took the second team place in the meet, the second place in the mile relay in the game's final seconds.

The Salukis are all that remained sprinters were hurt the most by the weather," Hartzog said. "It's difficult to be sharp when you have green grass." The people in the field events were superb, he continued. But they were not able to work out in the weight room, and other places.

"I am amazed that the distance people ran as potent as they did. To run in the cold and the weather is most difficult," Hartzog said.

Although his team took second place in the distance meet, Hartzog saw a bright future for the team. Losing to Illinois didn't take anything away from the Saluki track team, because Illinois has such a good team.
