Cardinals come from behind, top Atlanta in second straight

ST. LOUIS (UPI) — Tom Pagonozzi's bases-loaded single with two out lifted the Cardinals from behind to win a 6-5 victory over the Atlanta Braves. It was the second straight game the Cardinals rallied to top the Braves.

On Saturday St. Louis came back in the 10th inning, getting a 9-0 shutout, erasing a 9-0 deficit to score the Atlanta bullpen in a 12-11 victory.

Pedro Guerrero started the rally with a two-out, two-run homer in the 10th inning. Paganozzi doubled and was pinch-run for by Mark Grace, who had reached on an error. Grace scored on a fly ball by Terry Pendleton. Pendleton bunted out three hits, including a home run, and drove in three runs for the Cards. Last year's National League MVP went 7-12-in 13 games with two homers and two doubles. Atlanta jumped out to a 1-0 lead in the first inning when Pendleton belted a one-out double into the right-field bleachers. It was his fourth home run of the series.

The Braves made the score 3-0 in the third against St. Louis starter Omar Olivares. Starting pitcher Mike Bielecki led off with a single, Saluki offensive side.

ונים, Indiana. The White Sox fly ball by Mueller to load the bases. Dave Justice singled home Bielecki and Pendleton. St. Louis cut the lead to 3-2 in the third.

Juan Agosto, 2-1, earned the victory by pitching the ninth inning. Pendleton bunted out three hits, including a home run, and drove in three runs for the Cards. Last year's National League MVP went 7-12-in 13 games with two homers and two doubles. Atlanta jumped out to a 1-0 lead in the first inning when Pendleton belted a one-out double into the right-field bleachers. It was his fourth home run of the series.

The Braves made the score 3-0 in the third against St. Louis starter Omar Olivares. Starting pitcher Mike Bielecki led off with a single, Saluki offensive side.

Ones, Indiana. The White Sox fly ball by Mueller to load the bases. Dave Justice singled home Bielecki and Pendleton. St. Louis cut the lead to 3-2 in the third.

Tai Chi instruction helps students build up strength against stress

By Ronnie Chua
Special Assignment Writer

With slow, dance-like movements, Master Han-Chao Hwang progresses through his routine, gingerly turning his waist and shifting his arms and feet, oblivious to what goes on around him.

Hwang, 62, practices Tai Chi, an ancient Chinese exercise he said "builds strength and relieves stress."

"It's different from other sports," said Hwang, a Tai Chi instructor at the SIUC Recreation Center since 1988. "It uses Chi, mind and deep breathing to match gentle activities in building up a balanced system."

Hwang, the former director of Tai Chi Association in Taiwan, said 'Chi' corresponds to the bio-energy or breath of life that flows through the body's meridians.

"In our modern society, with its high pressure and intense competition, everything distorts our physical, intellectual, emotional or spiritual well-being," Hwang said. "Depression, stress and worry can affect our body's 'Chi' balance. We will easily feel pain and catch diseases."

Hwang, a master with 45 years of experience, said Tai Chi uses two principles of nature to create the bio-energy balance: "yin" and "yang." He likens yin to negative electrons that cling toyang, the positive protons in a nucleus, so that the force of attraction holds up the orbit in maintaining system balance.

"For example, in government, we want the rich to pay more taxes and help the poor improve their lives. This is to achieve 'balance,'" Hwang said.

When the bio-energy is in equilibrium, the body circulates nutrients and oxygen more freely through expanded blood vessels, and prevents heart, digestive and lung ailments, neurological problems and rheumatism, he said.

According to a report published in the 1989 Research Quarterly for Exercise and Sport, six male Tai Chi practitioners showed that cardiovascular responses during Tai Chi was slight, showing minimal stress to the heart. The study concluded that during seven to 21 minutes of Tai Chi, the subjects experienced a small but gradual increase in oxygen consumption.

James Frances, a Tai Chi practitioner for four years, said the exercise helps him physically and mentally.

"I had a back pain before I practiced Tai Chi," Frances, 38, said. "But Tai Chi has helped me overcome that. It gives me greater mobility and mental peace, both during and after the exercise."

"You can also do it on your own and you can keep doing it without additional expenses."

Hwang said the source of bio-energy resides just below the navel in the abdomen. Babies, who by nature are stress-free, operate this energy with ease.

"If you know the location of the 'Chi' generator, you can see a baby's abdomen going up and down, stirring up the generator and making 'Chi' balance," Hwang said. "When we grow up, everything disturbs us. We do not know how to take care of it and use it. Young people use their lungs. Old people use their throats. Babies use the abdomen to breathe."

"For it to work, you must have a clear mind free of mental thought. This enables you to meditate deeply. Since the mind is the controller, you must concentrate your mind to push the 'Chi' flow, while all body parts and muscles are completely relaxed, thus allowing the 'Chi' to travel freely. In time, the deep, abdominal breathing done in Tai Chi will allow 'Chi' to flow to all ends of the body's meridian."
Indiana State sweeps three at Abe Martin
By Scott Wuerz
Sports Writer

The baseball Salukis' postseason hopes were crushed as Indiana State completed a three-game sweep of the Dawgs Sunday at Abe Martin Fields. SIUC needed two victories at home or two victories from Bradley at Illinois State to participate in the Missouri Valley Conference tournament beginning May 13 in Wichita, Kan., but could get neither as the Redbirds bounced Bradley for three straight losses, Saluki coach Sam Riggleman said.

"(The postseason tournament) was something that was important to us for a couple of reasons," he said. "It had been a great experience for our young players to have a taste of what the tournament is like, and secondly, we wanted the opportunity for our seniors to showcase themselves in front of the pre-season record books on them."

The Salukis closed out the season with a 9-5 loss in their final contest.

Indiana State rodeough up starter Mike Blang for three runs in the first inning. Sycamore second baseman Dave Doster and center fielder Derick Dowler each singled, then moved to second and third on a wild throw. John LaMar Shortstop Dan Frye sacrificed Doster home with a fly ball to center field before center fielder Mike Strabavy hit an apparent double play ball to Saluki shortstop Clinton Smothers. But Smothers never got a play as the ball hit the second base umpire on the foot and hopped into left field. Two runs scored on the play.

The Salukis were unable to respond with any scoring of their own until the sixth inning. SIU starter Jason Thomas held the Dawgs to only four hits in the first six innings before yielding a double to SIU first baseman Darren Barton. Barton scored when left fielder see BASEBALL, page 15.

Saluki senior catcher Derek Shelton applies a late tag to Indiana State right fielder John Lamar in the first inning of the Dawgs' 9-5 loss. The Salycamores completed a sweep of the Salukis Sunday. SIUC was eliminated from the MVC tournament.

Softball team finishes second
By Norma Wilke
Sports Writer

After losing in the first round of the Gateway Conference Tournament to Northern Iowa, the eighth seeded Salukis came alive and kept on moving to the championship round.

SIUC finished second when it lost to fourth seed Western Illinois 8-2 in the championship game Saturday. Earlier on that day, the Salukis beat Indiana State 5-2 in the semifinals. The Salukis finished at 33-25-1 overall and 11-1-1 in the conference.

"Coach Kay Brechtechsailer said WU, which went undefeated in the tournament, came out and did what the Salukis did to other teams in the tournament," a player said.

"Western had good hitting," Brechtechsailer said. "They've been a good hitting, hitting ballclub all season. We fought back and fought back hard. We just came up short.

This was the first season SIUC, which went 5-2 in the tournament, finished as runner-up. The No. 2 spot qualifies for the National Invitational Championship, which will start May 16 in Macomb.

In the championship game SIUC managed two runs in the bottom of the fifth, but all-conference pitcher Veronica Wilson held the Salukis to the rest of the way.

Wilson gave up seven hits and had one strikeout, but she was more damaging at the plate when she slugged in four runs on four hits and two home runs.

The Westerwinds scored their first run in the first inning with a lead-off home run by Wilson. WU scored another in the third when a runner, who reached on an error by all-conference shortstop Cheryl Venorsky, scored.

Coach Kay Brechtechsailer said Venorsky has tremendous athletic ability beforeandscape SOFTBALL, page 14.

Men golfers finish 6th in Valley tournament
By Thomas Gibson
Sports Writer

The Saluki men golfers never hit their stride as they shot poorly and finished sixth in the Missouri Valley Conference Championship.

Coach Lew Hartzog said he did not have a clue why the team did so poorly.

"We finished lower than I anticipated. I expected us to finish higher than we did," he said.

Illinois State, who finished with an overall score of 550, beat the championship with 525. Hartzog said it was just a bad weekend for SIUC.

The team proved to be a disappointment for Hartzog, who is retiring and seniors Sean English and Sam Leekrone, who will graduate.

The team needed to finish ahead of Illinois State to win the all-tournament title for the second consecutive season, and Leekrone failed to make all-conference for the fourth successive season.

One of the bright spots of the weekend was that sophomore Sean Schiebal shot well enough to receive his first all-conference honors.

Hartzog said Schiebal's all-conference strong team performance in rounds one and two.

Tolsa finished a close second with a 906 total. Southwest Missouri State shot 916. Wichita State finished tied with Drake with a total of 946. SIUC shot 955 good for sixth place, and Hartzog said the championship was the worst he had seen his team shoot all year.

"The team played tight," he said. "I think the team never regained their confidence from the Drake Relay."

It was just a bad weekend for SIUC.
Beginning salaries expected to increase

By Christy Gutowski
Special Assignment Writer

Although new college graduates face a tighter job market, starting salaries for most job positions have increased in the past three years.

Starting salaries for new college graduates with a bachelor's degree are expected to increase 2.3 percent to $27,037.

Salary increases are expected to remain essentially the same as last year at $36,175 for MBA graduates and $30,000 for those holding a doctorate, according to Patrick Scheetz, director of collegiate employment research for Michigan State University in Lansing.

Scheetz conducted a national survey as part of Career Development and Placement Services at the university.

The survey, titled "Recruiting Trends 1991-92," is the 21st report the school has conducted that includes responses from 464 employers in business, industry and government agencies.

Some bright spots are in careers such as computer technologies and sciences, Scheetz said.

"New and emerging careers such as laser technologists and researchers, computer applications and graphics, database designers, desk top publishing and logistics and loss prevention professionals are in demand from employers," he said.

Other careers still in demand include chemical, electrical, mechanical and industrial engineers.

Companies also reported a 10-percent decrease in hiring quotas for 1991-92, which comes on the heels of a 9.8 percent decline from the previous year, Scheetz said.

Students should do some homework before they graduate," she said. "Don't wait until the last minute to practice your résumé and interview skills."

The Northwestern University Lindquist-Endicott report offered several tips for graduates to follow when searching for a job.

"Students should also be prepared for graduation to ensure their chances of obtaining a job," said Marilyn DeTomasi, assistant director for SUIC Career Placement Center.

"Some students do have a homework assignment in advance of an interview; others define career goals and desired opportunities in advance. Students should show some enthusiasm and sincere interest in the interview; communicate effectively; be honest and sincere; be totally prepared; be realistic; and research all job options."

Five-year plan more popular

Only 55 percent graduate within four years

By William Ragan
Special Assignment Writer

Barely half of all college students in Illinois graduate in four years, according to a recent study conducted by the Illinois Board of Higher Education.

The study tracked the freshman class of 1980 in all Illinois public universities, which numbered about 276,000.

Eight years later, about half of the students who graduated, half had dropped out and 350 students still were enrolled, working toward a degree.

The study, completed by IBHE during the 1989-90 school year, shatters the myth of the four-year graduate. Only 55 percent of the students graduated in four years while 32 percent graduated within five years, 8 percent took six years to graduate, 3 percent graduated within seven years and 1 percent took eight years to graduate.

ChrisCadaytook five years to get his degree in anthropology from SIUC in spring 1991, something he attributes to a lack of foresight.

"I messed around for my entire college career," Caday said.

Caday, an undeclared graduate student from Lake Zurich, is one of a growing number of students who take more than four years to graduate from college.

More than half of all students at Illinois universities are nontraditional students who rarely have the means to finish school within four years, said Ross Hodel, deputy director of IBHE.

"A person with a family is not going to take a 15-hour load," Hodel said. "Obviously, they are not going to finish a degree in four years."

IBHE studies conclude that half of all university students in Illinois change majors at least once during their four years of education, which affords the time needed to graduate, Hodel said.

"Most of the student changes majors and that's part of the college experience," Hodel said. "If you wait until your junior or senior year to change majors, you may require more time to graduate."

Most students still expect to graduate in four years but sometimes changing majors leaves a student no alternative but to take an extra semester or even an entire year, said Will Travaglini, chief academic adviser of the radio and television department.

"Sometimes they get themselves inside a box by changing majors, and they just..."...they are not going to finish a degree in four years."

Diplomas: New technology aids SIUC to produce own documents

By Sherri L. Wilcox and Casey Hampton
Special Assignment Writers

Millions of graduates every year receive elaborately printed documents that hang in their home or office, or lay in a drawer for a lifetime. But few ever question where this magic piece of paper came from.

If students graduate from Princeton, Columbia, Northwestern or any of the campuses of the University of California, they have a degree printed by Jostens, the nation’s largest diploma mill.

Located in Red Wing, Minn., Jostens rolls out more than 3 million diplomas a year and millions of certificates of achievement.

“It is a big job,” said Gene Leise, Jostens president manager. “Each diploma goes through a 100 percent inspection to check for spelling and overall quality.

Jostens has printed degrees for all state universities in the United States at one time or another, Leise said.

SIUC, Harvard and Yale, however, stand out from other universities in this area because they print their own diplomas.

Graduates of SIUC receive their diplomas in Jostens covers, but the actual diploma is printed internally by the University’s Service Enterprises.

Service Enterprises handles all the University’s automobiles, copiers and vending machines as well as printing.

Congratualtions to all 1992 SIU Graduates!

The SIU Alumni Association commends all graduates on the achievement of earning their college degree. We also invite you to take time before you leave and join the Association. Membership benefits include:

- Alumnus Magazine (published 4 times a year)
- Car Rental Discounts
- SIU Alumni Visa Card
- Discount Insurance
- University Bookstore Discounts
- (20% Life Members; 15% Annual Members)
- Priority Mailings of Alumni Events
- SIU Touch of Nature Discounts
- (20% off lodging; 15% off programs)
- Carbondale Shoney’s Discount
- (25% all members)

...And these benefits continue to grow!
GRADUATE, from page 1b

don't have a choice," Travelstead said.

In addition to changing majors, some students said they set back their academic career to declare a major which also causes complications.

"If a student is under-jad and waits until junior year to declare a major, that can be a major problem," said Michael Madigan, undergraduate adviser for the microbiology department.

"If they haven't had the necessary classes, they have to scramble to complete school in four years," he said.

The number of students needing extra semesters to graduate varies between departments.

The School of Art and Design, for example, harbors many students who graduate later because of the intensive nature of the program and the large amount of students who change their major, said Art Center dean, Larry G. Hughes.

"If they come into the major late, it has complicated all the liberal education classes, it's difficult to carry a load of five studio classes," Hughes said. "This is the result of the high level of commitment of the students in the program.

"It requires skill, however there are those who are not adequately prepared and don't realize how hard it is," Hughes said.
Seniors experience high stress in final year before graduation

By Trumier Camphor
Special Assignment Writer

Finals, resumes, term papers, job hunt, good byes, the hard economy and loans loom in graduating seniors' minus creating an extremely stressful environment.

Rob Sepitch, coordinator of stress management at the Wellness Center and coordinator of programs to help students manage stress, said stress is different for every person because the rate of wear and tear on the mind and body depends on the person.

"Stress is neutral," Sepitch said. "It is neither positive or negative. How we interpret events makes them either stress producing or challenging."

Jennifer Wilken and Steve Hysaw are political science majors graduating in May.

Wilken is carrying 16 hours this semester, contemplating going to law school in a year and wondering what it is going to be like moving back home with her parents after four years of being on her own.

"I'm very excited about graduation, but I'm afraid to go out there because I know there are no jobs," Wilken said.

Hysaw is managing 17 hours of classes and preparing to take classes during the intersession to complete his degree requirements.

"I'm very excited about graduation, but I'm afraid to go out there because I know there are no jobs," Wilken said.

Hysaw said he had an overwhelming amount of papers to write this year and has not thought about telling anyone goodbye.

"I've had so many papers to write I've had a hard time keeping up with the deadlines for them," Hysaw said.

Wilken said she has had no real stress this semester, but her last year has been her toughest.

"Last semester I had major papers due all the time and I didn't get my resume started until last fall," she said.

Wilken said she wants to go to law school, but she needs to pay some bills, so she is going home to work.

"I guess, if anything has caused me stress this semester it's the idea that I'm going to be in debt when I leave here," Wilken said.

Pamela Britton, SIUC director of financial aid, said the amount of student debt has more than doubled in the past few years and the financial aid department is concerned about students' ability to repay their loans in light of the poor economic times.

"My advice to students wanting to avoid stress because of their debt, would be for them to keep close contact with their lenders regardless of their situations," Britton said.

Sepitch said the Wellness Center not only sees seniors dealing with stress, but also juniors, sophomores, freshmen and graduate students.

"One of the ways we try and help students is by helping them to manage their time correctly," he said. "We help them match the amount of time they put into certain tasks. If something is not a high priority we will help them place that out.

"Hysaw said a big part of her stress this semester was from not prioritizing and putting off things like doing her resume and looking for a job.

"I think it is very important to look for jobs before the senior year," she said. "Hysaw, who will be spending his summer\

Making deadlines
Completing requirements, paperwork on time could mean trouble for those lagging behind

By Teri Lynn Carlock
Special Assignment Writer

Graduating without a hitch requires lots of planning, SIUC advisers say.

Lavida Cruse, assistant director of records at Woody Hall, said her department has problems with students not meeting deadlines.

"Students forget to apply for graduation," she said. "The Friday of the first week of the term is always the deadline. Then there is a two-week grace period when students can still apply with a letter from their dean. And in the summer when there is only a one-week grace period, it can become a real problem for students if they are behind."

About 75 students each semester usually file for graduation during the grace period, Cruse said.

Students also do not communicate enough with their instructors and do not pay their bursar bills, which both affect the graduation process, Cruse said.

"Some don't know if their grades have been turned into our office and others haven't paid their bills so their transcripts are delayed," he said.

Joyce Jolliff, adviser for the School of Art and Design, said because the college's students do not advise themselves, it is important they meet with her regularly.

"I see them every semester and make sure they know what's remaining in their required classes," she said.

Jolliff said she experiences occasional complications with students applying for graduation, but there is not one particular problem that happens frequently.

"If I have students applying for graduation the first week of their last semester," she said. "It's early, but at least they get it done. Later in the semester they get busy." Problem Jolliff has seen is students' transcripts not arriving on time, but this is not a common problem, she said.

Lori Sefton, the adviser for the radio and television department, said she sends out a letter to all of her students telling them what courses they need to graduate.

"I try to give them counseling on how to pass their classes so they go into their final semester knowing what they need to do everything from (incompletes from transcripts)."

Sefton said all SIUC advisers are required to send a copy of the graduation letter to students and another copy to Cruse.

The advising problem Sefton has had to deal with is students who self-advice until their final semester, she said.

"When they finally turn in their paperwork I'm very surprised that they need a certain class or something before they can graduate," she said. "But this only happens to about two out of 400 students I advise. The others know that they need one to 1/12 semesters before they graduate."

Charles Fligel, an adviser for the School of Music, said his advising in his college is "pure chaos" this semester.

"People are doing advisement who have never done it before," he said. "All faculty members are advising this semester because the dean told them we should."

But all of the advising faculty members do not have access to the computer system where the files are kept, Fligel said.

The School of Music has an official graduation check during the spring semester. The advisers also have had students with transfer problems, and students not completing required credits, Fligel said.

"The students' responsibility to see if they have all the credits and requirements," Fligel said.

"People will not graduate because they didn't know what they were doing," he said. "All faculty members at SIUC and need to seriously worry about it two semesters before they graduate."
Colored paper, strange prints botch résumés, counselor says

By Todd Welvaert
Special Assignment Writer

A two-dimensional piece of paper cannot fully describe a three-dimensional person, but a well-done résumé comes close.

The résumé will be the only representation a graduate will have at a potential employer’s office and for this reason it should be the epitome of the graduate’s experience, skills and quality.

“It’s your life, the only thing these people will have to judge you by,” said Dinah Miller, SIUC Placement Center counselor. “It’s a tight market and you have to remember the résumé will be scanned not read in depth.”

Miller said the résumé should be brief, containing only pertinent information.

“When one page and it will be pitched in the trash,” Miller said. “They just don’t have the time to be reading biographies of potential employees.”

Miller said a good résumé should be neat, printed on a good grade paper, be totally error-free and have a professional appearance.

“You have to catch their eye,” she said. “But don’t do it with gimmicks like colored paper, odd shaped paper or strange fonts.”

Miller said things like colored paper might attract attention at first but if experience and skills are not there, the résumé still ends up in the trash.

“The gimmicks might work for jobs in more creative fields but for the more serious-minded business, I would suggest staying with the tried and true,” she said. “Too many recruiters still go back to the bottom line—content.”

The type of résumé also depends on the particular job in which a graduate is interested. Business, computer science, journalism, advertising and medical professions should all differ in content.

“It’s important to tailor the résumé for the type of job you want,” Miller said. “If you are into computers, it is important to mention the kinds of languages you know.”

Miller said a student’s grade point average is optional, but some recruiters automatically assume it’s low if it is omitted.

Resume content depends on the person but all resumes should include an address; phone number; experience, especially if it shows increasing trustworthiness; and an idea of the applicant’s personality.

“It’s important to be specific,” Miller said. “At this time of the semester students get caught in a catch-22. They have to put an address down but many will be moving at the end of May, so it’s something they have to consider.”

Miller said all résumés should include a cover letter that expands upon the information but it still should be brief.

“The cover letter is important,” Miller said. “It’s kind of a letter of introduction. It shouldn’t be terribly wordy, one page and shouldn’t go into great depth. A cover letter should never tell the potential employer what they want, it should suggest that the student is what they need.”
Internships offer chance for practical experience

By Ronn Byrd
Special Assignment Writer

Every summer break students face a decision to either make money with a service job or to try for an internship for work experience.

"Whether an internship is worth the time and effort is up to the student," said Pamela Good, student and alumni, said. "The cost of living while in school is summing and expensive."

Special arrangements are made for the Tinley Park resident. "I would rather take it whether they want to take an internship next year," said through personnel needs and to promote the services to alumni, said Pamela Good, professional placement counselor for the University Placement Center.

Good said many students do not realize the center can be of use to them after they have graduated.

The center offers the same services to students and alumni, she said. "The registration fee for students is $25, which means you can use the center for six months after graduation."

Alumni pay $35 a year and can initiate search at any time and receive as many resumes as they want, Good said.

The placement center offers such services as on-campus interviews. The center also offers on-campus interviews interviews.

The center also offers a referral service in which employers use the center looking for qualified students. Two vacancy bulletins are published each month in the career counseling service. The resume bank is published every Friday and lists vacancies in the United States. "International Jobs Bulletin" is published bi-weekly and lists overseas vacancies.

But the service that really saves students time and money is the mailing service, Good said.

The placement center mails student resumes to any company with a verifiable opening, she said.

The placement center also sponsors six career fairs to enable students to become acquainted with different types of employers, said Judy Eaton, placement counselor for communications and fine arts.

The most important service the placement center offers graduating seniors is help with their resumes, Eaton said. "Students underestimate their competition," Eaton said. "They just put their resumes together to get in over the ways."

Eaton said some students have written resumes for class and received B's and C's, and still send the same resume out to a perspective employer.

The purpose of a resume is to get an interview, she said. Students should not underestimate the power of a resume.

For students who cannot afford $25 or do not want to spend the money to be registered with the placement center, the center offers an abundance of resource materials on careers, Good said.

The Career Resource Library is open to any student and is staffed and stocked by the Career Development Center.
Soldiers pull out of riot-torn L.A.

LOS ANGELES (UPI) — Riot-weary Marines and Army soldiers pulled out of the ravaged city Saturday, where they had been deployed to help quell riots that erupted following the controversial Rodney King verdict.

"We're gone, we're history," said Army spokesman Maj. Steve Hill, following an announcement of the troops' departure by Gov. Pete Wilson.

Hill said 1,800 soldiers from the Army's 7th Infantry Light division left Los Angeles in 42 commercial busses Saturday afternoon, bound for Ft. Ord. About 1,500 Marines took off for Camp Pendleton, he said.

That left about 10,000 National Guardsmen and 2,125 Los Angeles Police officers to handle the riot aftermath, officials said.

Maj. Pat Antosh, National Guards spokesperson, said less than 20 Guardsmen were actually out on the streets with Police Saturday nights — and that number "continues to go down," she said.

The remaining Guardsmen were stationed near Los Angeles and were available to assist local law enforcers if necessary, Antosh said. No date has been given for when the National Guard will leave the city.

"We will remain here...until they no longer need our services," she said.

Stress leads to police abuse, says SIUC security director

By John McCadd
Police Writer

SIUC Security Director Robert Harris knows the stress and frustration of the police business. A frustration he says can lead to violence and racial injustice.

But despite levels of stress they experience, racism and other biases can be controlled by forming a stronger bond between police and the community, police say.

"There are some white cops that hate blacks and there are black cops who won't arrest blacks," Harris said. "There's no way to weed these people out before you hire them, so you have to keep an eye on them if you do.

Harris said he cannot imagine an act of police brutality similar to the Rodney King beating occurring in Carbondale, because of the size of his police force and the police training programs.

Police are required to do in-service training, which takes place in the spring and fall, and further subject to relevant topics in 30-minute shift meetings, which because of the recent King protest, have partially revolved around the topic of cultural sensitivity, Harris said.

Carbondale Police Chief Donald Strom said as part of officer training, cultural sensitivity is instructed as a necessary control on perhaps "natural" biases.

"Bias is deeper than racism or even police-community relationships," Strom said.

Struggling state universities examine tuition increases

SPRINGFIELD (UPI) — State universities are studying 10-percent tuition hikes in response to tight state finances, Board of Regents Chancellor Roderick Groves confirmed Sunday.

A change in how tuition is figured could have the effect of a 20 percent tuition hike for those full-time students who take more than the minimum number of classes, Groves also said in a broadcast interview.

Although Gov. Jim Edgar's 1992-93 state budget was based on an Illinois Board of Higher Education recommendation of a 4 percent hike, governing board and university officials have said for several weeks they will need to use their authority to raise more money to operate the schools and give raises to faculty and staff.

Groves, who's board is responsible for Northern Illinois, Illinois State and Sangamon State universities, said his board probably will follow the University of Illinois' lead and raise tuition by 10 percent.
Under their roof, by their rules

Grads go home to parents

By Christine Leninger
Special Assignment Writer

After the pomp and circumstance, many graduates may be home to find their place rather than to independence and the work force.

The current economic situation is forcing many students to move in with parents after graduation, said Randy Smith, counseling intern at the University Counseling Center.

"Students are not complaining of the change in place because it is not on their minds," Smith said. "Graduating students are still most concerned with having as much fun as possible before they have to leave or what they are going to do when the time comes to begin their futures."

"There is a major uprising of graduates living with their parents because of economic difficulties, such as not being able to get a job, that will effectively support themselves away from the home," Smith said.

"Children returning home after four years may feel uncomfortable there because they expect the parents to be parents and not people with interests. Likewise, the parents may expect the student to act like a 17-year-old, as the child was prior to attending college. In this situation, all of the family needs to learn how to live together again, which takes hard work and much compromising on both sides."

"Not all students feel this pressure and welcome the opportunity to save some money while working their first job after graduation."

All too often parents and the graduate create expectations, based on the past, of what living together should be like and do not live up, as the other, as an individual, Gilbert said.

"Children returning home after four years may feel uncomfortable there because they expect the parents to be parents and not people with interests. Likewise, the parents may expect the student to act like a 17-year-old, as the child was prior to attending college. In this situation, all of the family needs to learn how to live together again, which takes hard work and much compromising on both sides."

Final thoughts

A graduate at last year's College of Business and Administration ceremonies displays his final sentiments in an unusual way. The top of his cap read 'Outa here.'

Books offer job-hunting hints

By Brandi Tipps
Special Assignment Writer

Three new books recently published by Planning/Communications gives job hunters almost every resource needed to find a job in today's slumping job market.

The books are the ticket to 80 percent of the job opportunities that students will never find on their own, said Daniel Lauber, author of Professional's Job Finder. Government Job Finder and Non-Profit's Job Finder.

Lauber said the books introduce students to job seekers to more than 4,000 of the specialty and trade periodicals, job hotlines, job-matching services and computerized job databases where employers advertise most job vacancies.

Lauber said the resources in his books help job hunters find jobs that are not advertised in local classifieds.

"Each book also includes chapters on resumes, cover letters and interviewing," he said.

Lauber said he tried to make the books entertaining as well as informative. Each book is illustrated with cartoons depicting the horrendous trials and tribulations of finding a job, Lauber said.

Lauber said it is important that he order to find the book hunters listed in the books, it took over 14 months between both, 1,000 letters and 2,000 phone calls.

Most students and people do not have these kind of resources, he said.

Professional's Job Finder costs $15.95 and contains job leads in areas such as advertising, animal care, sports, sales and health care, he said.

Government Job Finder presents more than 1,400 job sources for local, state and federal government in the United States and overseas. It steers job hunters toward periodicals, journals, job-matching services and computerized job listings, Lauber said.

The Government Job Finder, costing $14.95, includes job information in areas of arts, political industry, finance and architecture.

Non-Profit's Job Hunter has not come out in bookstores yet, but will be out by May 15, also costing $14.95. It teaches people how to use job bulinaries, specialized trade periodicals and find internships in the non-profit industry, Lauber said.

Non-Profit's includes information in areas such as music and dance, social sciences, religion and the environment.

Don DeBolt, publisher of CEO Job Opportunities Update, said Lauber's Non-Profit Job Finder is one of the best research books he has ever found.

"It is good for everybody who is looking down any career path to have all the resources in one place at one time," DeBolt said.

DeBolt said the books are highly, readable and organized but his favorite aspect of the book is the sections on interviews, he said.

"He tells you how to perform at an interview and even tells you what the 20 most asked questions at an interview are," DeBolt said.
REBEL CALLS FOR AFGHAN MILITIA OUTSTER

REBEL CALLS FOR AFGHAN MILITIA OUTSTER

Hard-line rebel leader Gulbadin Hekmatyar led an unusual mass rally Sunday, winning the support of thousands of Afghans and five key guerrilla groups for his demand that ex-communist militia forces be ousted from the Afghan capital. "Death to the communists—we want them out of Kabul now," shouted the crowd that gathered at the Shahi mosque in the southern city of Jalalabad to hear Hekmatyar.

MINE EXPLOSION KILLS 11 IN CANADA

Searchers Sunday found the bodies of 11 coal miners and continued rescue efforts for 10 others trapped more than a mile underground by an explosion in the mine shaft. Rescue officials continuing to dig for the missing miners still trapped deep in the mine said debris and fallen rock had impeded their process. They said it was unlikely they could reach the miners until evening.

LEBANESE PRESIDENT ENDS TALKS IN SYRIA

Lebanese President Elias Hrawi returned Sunday from Damascus after consulting with his Syrian counterpart on the strategy to be adopted following the resignation of the government, official sources said. Hrawi, who traveled to Syria Saturday, and President Hafez Assad held three rounds of talks during which they discussed the current cabinet crisis and the formation of a new government, the officials said.

SERBIAN ARTILLERY POUNDS SARAJEVO

Serbian mortar fire sent buildings ablaze in Sarajevo Sunday evening as fierce gunbattles raged across the city after a day of Serbian artillery and air strikes on other towns of war-torn Bosnia-Herzegovina. The government announced that at least 1,320 people had been killed and 6,700 others injured in six weeks of fighting ignited by a Yugoslav army-backed Serbian offensive to seize a self-declared state.

SHUTTLE CREW SETS UP SATELLITE REPAIR

The Endeavour astronauts chased down a stranded communications satellite and geared up for a high-stakes spacewalk Sunday to bolt on a new reactor motor and salvage a project now valued at $426 million. At 3:31 p.m., with Endeavour trailing the crippled Inclint 6 satellite by just 9 miles, shuttle commander Dan Brandenstein fixed maneuvering jets to begin the final phase of a complex orbital ballet.

HEINZ’S CHIEF TOPS FORBES’ BEST-PAID LIST

Anthony J. O’Reilly, head of Heinz Co., was America’s highest-paid chief executive officer in 1990. The head of Hauppauge, N.Y.-based Heinz, was paid a total of $2.4 million in salary, bonuses and perks, a 26 percent increase over 1989, according to Forbes Magazine. O’Reilly was followed by executives at General Motors, $1.9 million; General Electric, $1.9 million; and Sears, Roebuck, $1.9 million.

SHUTTLE CREW SETS UP SATELLITE REPAIR

LOYOLA MEDICAL CENTER USES 3-D PROCESS

Modern medicine is reaching back to the 3-D process that amazed 1950s moviegoers to create a life-size three-dimensional effect for doctors and nurses in the operating room. The technology allows surgical teams and medical students at Loyola Medical Center to watch monitors that project three-dimensional video images of delicate brain and head operations as they are performed by a neurosurgeon through a microscope.

SIMON CALLS FOR BETTER HEALTH CARE

Sen. Paul Simon, D-I11., warned that millions of elderly women "are living on the margin" of poverty because they do not have long-term health insurance. Simon said women are more likely to need long-term health care than older men because women are more likely to live in poverty and are more at risk for physical limitations. He said 41 percent of the non-institutionalized women over age 65 live alone.

Summer employment may be taxable—IRS
By Christy Gutowski
General Assignment Writer

Students who are leaving their textbooks and exams behind in search of summer employment will be faced with some taxing decisions as they enter the job market.

Many students looking forward to summer jobs will not be exempt from paying taxes, according to the Internal Revenue Service.

Many times an undergraduate's earnings are below the required amount to make them liable for taxes. But in summer months, several students look for full-time employment and their tax tables change, said Kris Zini, an IRS spokeswoman in Springfield.

Now that students are out looking for summer jobs, it's important to make sure enough income taxes are being withheld.

Congress adopts act to protect minorities
By Sherri L. Wilcox
General Assignment Writer

New legislation has been introduced to the U.S. Congress which would protect minorities by increasing the punishment for crimes motivated by hatred and prejudice.

The Hate Crimes Statistics Act, adopted in 1990, requires the Attorney General to collect information on hate crimes. The FBI has compiled a report of these crimes since the act was initiated, which is scheduled to be released in June.

Hate crimes legally defined as any crimes in which conduct was motivated by hatred, bias or prejudice based on the actual or perceived race, color, religion, national origin, ethnicity, gender or sexual orientation of another person or group of persons.

Although there is yet no formal report of hate crime statistics available, U.S. Senator Paul Simon, D-Makanda, said recent newspaper reports have led him to believe these crimes continue to rise.

In a statement to the president April 2, Simon introduced the Hate Crimes Sentencing Enhancement Act of 1992. If passed, the act would increase penalties for crimes motivated by hate by one-third.

David Carle, Simon's press secretary, said the new legislation will send a signal that society regards hate crimes as especially dangerous to the social fabric.

"As our nation grapples with a weak economy and worriesome crimes of some politicians who want to redivide into isolationism, too many of our citizens react with hate towards others," Simon said in the statement. "Our country cannot tolerate crimes that victimize innocent people who are members of the minority."

Simon called hate crimes "symptoms of a deep societal illness" and see CRIMES page 6

Ensuring insurance responsible decision

INSURANCE COMPANIES SOON MAY LEARN the difficulties everyday citizens face when getting coverage. Legislation proposed by Illinois Treasurer Patrick Quinn and Rep. Lou Lang, D-Rockie, would require nearly 1,500 health, life and property insurance companies in Illinois to pay into a fund guaranteeing payment to their policyholders.

It is a responsible step from the state government in a time when health insurance is becoming a national issue and apathy among insurance companies has become a plague. Insurer providers must be held responsible for the people they cover.

TOO OFTEN, FLY-BY-NIGHT COMPANIES will advertise cheap rates for those desperately in need of insurance. But when claims are filed, the companies cannot back up their financial responsibilities, and the needy are left to handle their own problems.

A statewide insurance superfund will allow policyholders to be predators on the companies that have received their trust and finances.

ALTHOUGH THE GUARANTEE FUND will result in costs being passed on to the public, the scourge of insurance companies filing for bankruptcy presents a larger cost.

It has become common practice among insurance companies to delay payments because of financial backlogs. In addition, the delinquent procedures of neglecting claims and habitually making late payments are becoming more than financial threats to policyholders.

These days, personal medical decisions are based on the events. If the reader doesn't get insurance premium, they no longer get coverage. But insurance companies every day are allowed to delay payments to their customers.

INSURANCE IS A MAJOR INVESTMENT that must be guaranteed. Any company opposed to this fund opposes reliability and responsibility to the people who count on its insurance coverage.

Policyholders do not have enough money to pay their insurance premiums, they no longer get coverage. But insurance companies every day are allowed to delay payments to their customers.

INSURANCE COMPANIES CANNOT BE allowed to continue their hypocritical manipulation of the public. Before countless taxpayers dollars are spent to bail out negligent insurance companies, the government must step in. Insurance has grown unchecked and is in dire need of guidelines. Forcing insurance providers to live up to their responsibilities is a proactive decision to nip a growing problem in the bud.

Quotable Quotes

"You find yourself not wanting to go out of the house, you lose all sense of self-esteem. Your relationship is a casualty, and that's a nice way to put it. You're in a permanent state of dismal, worthless, black despair that will not end no matter what anybody tells you." —Walter L.r. and talk-show host Dick Cavett, on the clinical depression he suffered in the 1960s.

We have tried everything from R.E.M. to John Philip Sousa. You could not imagine how much energy, imagination and debate has been devoted to this issue. Every song has one lyric that may offend one person, or an artist may have had a drug conviction 10 years ago. It's preposterous. —Gary Ginsberg, an aide to presidential candidate Bill Clinton, on the hazards of selecting an appropriate theme song for the campaign. Songs by the Blues Brothers, the Doobie Brothers and James Brown have been considered and rejected.
Everybody has biases, doctors, lawyers, university professors or anyone that deals with people. In order to find the best way of working in the community with the many different cultures, and dealing with the needs and wants of the people who live there, he said. Strome said the police department's first concern is the selection process, where potential police officers are allowed into contact with the community. "We give psychological tests, require them to do three or four interviews and we conduct detailed background checks," Strome said. "This way we know the kind of office that will interact with Carbondale people." Harris said police brutality does not always stem from racial bias, but sometimes from stress characteristics of the police environment. "We are human beings, although race is definitely sometimes part of it," Harris said. "Let's say I went out for a run, didn't have a good night, I'm just tired. I'm just gone. It's not my intention to hurt anyone, but for some reason because you were the unlucky guy who aggravated me at the wrong time, you were..." The guy with the Los Angeles Police Department will see a lot more of the young people, Harris said. "They become hardened and hardened a whole lot. One day, their police officer is injured more frequently during arrests." Strome said though factors contributing to police brutality can be controlled, he said people may have a hard time using the same policing techniques as the Los Angeles Police Department because they will apply for jobs, which makes the selection process difficult. "Today, the stress levels are all higher because the police have to arrest a different kind of person, a person that is regularly known to Carbondale police." Police in (large) cities will work in high crime areas with people who are on all sorts of drugs," Strome said. "They're nothing like the people we see. Our police force might not apply to them. Nevertheless, it's important that the police have workable police officers to do it. Köpping King said. Larry Brockelsby, director of the St. Louis Police Human Resources Department, said the police training program in St. Louis specially trains officers in dealing with a culturally diverse community, a task that are a result of the city's large population. "While attending police academy, trainees must complete 40 hours of human relations skills training, 10 of these are devoted to cultural diversity issues. Individuals participate in two days of role playing activities to allow instructors to assess the trainee's human relations skills, he said. Brockelsby said interaction between police and students, "We live in a multicultural community. "Our community is characterized in the Community Oriented Policing Services and of the police program. The police program divides itself into districts which they patrol regularly to meet and maintain support with the community. Police also are entitled to psychotherapeutic treatment from the Police Employee Assistance Program at St. Louis University. There is a lot more criminal activity among young men especially due to the population increase, so it's important that our police officers have as much control as possible in intense situations," Brockelsby said. Carl Flowers, first vice president of the Carbondale Chapter of the National Association for the Advancement of Colored People, said brutality and racism come from a larger, environmental problem. "Brutality comes from teachings in the education system that suggests some people are better than others," Flowers said. "For the police and the community to come together, there needs to be a consistent effort to make the black community comfortable with knowledge that police will uphold the law and not discriminate," he said. "It is possible that police brutality can happen here in Carbondale," Flowers said. Police said officer stress can be avoided simply through individuals learning the role of the police force if they think stress cannot be handled properly. Jason Breux, comptroller of the Black Affairs Council and member of the Saluki patrol, said the increased enlistment of blacks to the Saluki patrol has developed cultural interactions that can aid in the overall cultural sensitivity in the community. "Sometimes I'll be teaching them how to 'approach' black people or perhaps to keep an eye on black things," Breux said. "They'll have a lot of questions about black people, but they can use that as a way to look at what the community is like." When you don't know a community, you are more likely to rely on statistics about them, which are usually negative statements to the police, he said. "You have to rely on are [which is what polling officers can get in the beginning of age 21], or other stats about our lifestyle, which you can compare to the rest of the community," he said. "Then you have to look down on the community as a whole." William Schroeder said because many people file complaints to state's attorney's offices, the most grievous crimes will be processed. "I have investigations are more distant and tend to see things more objectively," Schroeder said. "If the state doesn't want to come to the police, they'll be reluctant to see bad things in their own pees." Mark Smalk, BACP administration of Justice Professor, said the best route for a complaint to take is with a private attorney because police may not be well informed of the incident or may tend to downplay the events during investigation. **Stress, from page 1** scared about abusing his body for a week because his final exams are more important right now. "I'm just glad that it's over right now, this is what I have to do to perform well," Salah said. Salah has been drinking a lot of coffee to stay awake while studying all night. Barbana Fijolek, Wellness Center coordinator, said most students use caffeine to keep themselves awake during finals week. "Students over studying for tests often causes students to stay up all night and drink a lot of coffee," Fijolek said. "Most people have a hard time right now, they're eating, they're harming their bodies." Fijolek said students take time off to relax and take care of themselves often during finals week. "They need to taper off after finals are finished. "Bad habit studying can cause stress. When they do this, it means they have to work out their head every five minutes, half an hour or so to keep the body awake for studying," Fijolek said. "Half an hour or so to keep the body awake for studying," Kane Dammorler, a sophomore in psychology from Freeburg, said the pressure of having to study for a test is enough for her to stay awake most of the night before a test. "I may drink a caffeinated drink, but usually the stress of the test is enough to keep me studying," Dammorler said. "I am a procrastina- todi an, too often I am forced to pull that all-nighter to study for a test," Dammorler said. Many times, after studying for extended hours, students find it hard to wind down for sleep. Fijolek said. "Students with this problem can drink a cup of herbal tea or warm milk, or take a warm bath after studying so that they feel ready for sleeping," Fijolek said. "Warm milk and herbal tea help people fall asleep because common tryptophan, a natural substance that slows the body down, is needed for you to feel ready for sleeping." Warm milk may work because psychologically, not only physical- ly, it warms the body, whereas, the person feel sleepy, Fijolek said. Salah said he has been watching television to wind down each night before trying to get some sleep. "But the body may not need eight hours of sleep each night in order to achieve full potential in its waking hours. "Everyone needs different amounts of sleep, but when a person gets less than four a night, it is considered a problem," Fijolek said. "As a short term stressor, not getting enough sleep can be made up without causing long term problems," Fijolek said having a set schedule will help the body keep in the studying mode throughout the week. Salah said. "It also must schedule time to relax. For instance, Salah said he was waking up at 5 a.m., every morning, studying until 10 a.m. with scheduled breaks throughout and three p.m., then studies until 2 p.m. when he takes a mid-afternoon nap. He then wakes and follows a sim- ilar routine for the rest of the day. By the end of the day, I am so tired that I do not really need to wind down, but I do Anyway so I go to bed. Salah said. Spencer Watkins, a senior in advertising, said he has studied so hard the whole semester that finals week will not be a problem. "I have only one really hard final and that is on Friday, so I am not going to be working as much as a whole body, so the finals weeks in the past have been," Watkins said. "I have studied said in the past he used all forms of caffeine, including cafe- feine pills and diet pills to keep awake for finals week cram ses- sion." "After four years, those things don't really affect me anymore because I have used them so much," Watkins said. "Although they make me feel sick sometimes, I still used them because finals week is not as bad compared to me.**

A state agency interested in bringing Illinois businesses in touch with China will soon have to open its doors to Chinese companies.

Illinois companies interested in doing business with China will soon have an opportunity to learn more about its markets by participating in the University of Illinois-China Mission '92 Aug 4 to 13 in Beijing and Shanghai.

Illinois Department of Commerce and Community Affairs is organizing the mission in cooperation with the University of Illinois, the International Trade Corporation of China and the University\'s International Corporation. By Glenn Ma, international consultant with the DCCA international business division.

"Our department tries to import and export nationally," Ma said. "We\'re trying to take some of the Illinois companies to other countries to let them meet with potential clients and see if they can do business with them in the future," he said.

"Business people in the United States were very interested in visiting China and learning about capturing a potential market for their product or service in that country because China is presently in a stage of development, which opens up a lot of doors for business," he said.

"China\'s present national economic plan includes tremendous promise for companies involved in energy, telecommunications, electronics or printing, agriculture, construction and new building materials, environmental protection, food processing and plastics," said DCCA director Jan M. Grayson.

Because of the gradual opening of the Chinese borders to international trade, the nation would be in need of technical and economic assistance, Ma said.

"The purpose of the trade mission is to find Illinois companies willing to set up businesses in that part of the world will be the help China needs to establish two-trades in its economy," he said.

If businesses participating in the mission showed particular interest in working with Chinese companies, CICC would also try to arrange programs and activities tailored to address the specific needs and interests of those companies, Ma said.

Activities would include business roundings and technical seminars for the Illinois companies.

Therapies may lower prostate cancer risk

GAINESVILLE, Fla. (UPI)

A new combination of therapies for prostate cancer appears to reduce the risk of recurrence, Florida researcher reported.

Their presentation was prepared for the meeting of the American Urological Association\'s annual meeting in Washington in May and derived from the work of the University of Florida in Gainesville, who said they base their optimism on preliminary results of computer studies and an ongoing clinical study of male patients with prostate cancer that had \"spread beyond the gland itself.\"

Another major factor that might lower prostate cancer, he said, is \"patients who undergo hormonal therapy and subsequent prostate removal.\" The patients were found to remain cancer-free at a median follow-up of two years. Some of these men were in the first group of patients who had undergone surgical removal of the testicles prior to prostate removal, while older men received daily doses of a synthetic hormone for about three months prior to removal of the prostate.

"Each of these procedures are aimed at stopping release of the male hormone testosterone, which is produced in the testicles and feeds both the prostate and other cancers that might also exist,\" Dr. Martin Rifkin, a UF follow-up in urology, said.

The hormonal therapy has proved very effective in shrinking the tumor and numbing additional cancerous growths. In the average patient, the hormone treatment was effective in shrinking the prostate 34.7 percent of its original size. Reduction of tumor size was verified by ultrasonic imaging of the diseased prostatic area.

By reducing the size of the tumor, the doctor said, \"We were able to safely promote remission in some patients and have a chance of their disease going away without being able to remove all of the cancer.\"

The incident was soon followed by vandalism and degradation on April 22.

Following National Gay Awareness Week, the entrance of Northwestern\'s Norris University Center was boldly spray-painted with the statement: \"DIE QUEERS, THERE WILL BE BLOOD.\"

In response to the vandalism, Northwestern president Alan Weber issued a formal statement condemning this type of action and reaffirming the university\'s support,\" We are committed to protecting the freedom of speech and expression of all students regardless of their sexual orientation,\" Weber said.

But the response by Northwestern\'s administration has not satisfied student groups.

In general, up administrators have been \"twitchy\" and \"callous,\" said Debra A. Yeung, president of Northwestern\'s Gay and Lesbian Alliance and a member of the Northwestern University Coalition Against Hating.

\"I think most hate crimes go unreported and unnoticed by the majority,\" she said. \"Increasing the penalty is really important to increasing awareness.\"

\"SUIC, however, the homosexual community is not receiving the same degree of

\"If a building materials manufacturer expressed interest in a joint-venture purchasing program, we would try to have our Chinese host arrange meetings with local manufacturers and to visit plants and sites,\" he said.

Ma said CICC is one of China\'s most prominent and resourceful \"de organiza-\"tions.

\"The trade mission provides a really excellent opportunity for all\," Ma said. Some of the more dynamic, largest and most successful business organizations in China are worth billions of dollars, while some of the trade contact, U.S. companies are being given a valuable chance to branch out their business,\" he said.

Businesses interested in participating in the trade mission should get in touch before May 22 by calling DCCA, he said.

\"Outside of some descending letters in the Daily Egyptian, nothing on this is harassment has taken place,\" Ma said.

The harassment, which involves graffiti and calls from someone attempting to convince her to \"go straight,\" boycotters and hateful comments from women pretending to be homosexual, and minor damage to the outside of dormitory rooms of some other members of GLFB.

\"SUIC is a very liberal campus, much more so than Northwestern,\" Ma said. \"There was a lot more harmed here.\"

Ma also attributed the more peaceful attitude on the SUIC campus to the University\'s anti-discrimination stance.

\"The clause makes it punishable to discriminate against people because they are different,\" she said. \"Not all universities have this type of clause, but I think it is effective.\"

Vernon Hills of the Illinois Gay and Lesbian Task Force said he, too, is hopeful about stronger penalties for hate crimes toward all minority groups.

TAX, from page 3

liable to pay cashes. This means if a student made more than $600 in a year, and a third of it is interest, they will not be able to claim exempt status on their W-4, Zins said.

"The student has wage income only can claim exempt status with less than $1,000 in wages in 1992 total 3,600 or less.

Both said the decision to claim exempt on the returns should be taken seriously because students may not owe any tax due to the IRS at the end of the year.

"There\'s nothing wrong with wanting to have more money in your paycheck, as long as your sure at the end of the year you\'ll have enough money to take care of.\"

Michael Heath, director of SUIC payroll and financial aid, said the University is not in the business of offering tax advice for the student, individual. The student\'s individual tax needs are different and should be handled on an individual basis.

"The advice we give are wrong," he said. "There are too many variables involved.

Different factors affect whether students should claim exempt, including, past work experience, previous earnings, marital status and whether they are claimed as a dependent on someone else\'s return.

"We don\'t know (the student\'s past experience) - it\'s hard to tell whether it is beneficial to the student, an exempt status or not,\" Heath said.

The University department recommends students visit a local tax consultant for personal tax advice.

The IRS has a five-part dependency test before a full-time student can claim a dependent on their parent or legal guardian\'s tax return. To be claiming the tax return, students must meet the following requirements:

To be dependent, the student must:

1. Be a United States citizen, or have a Social Security number.
2. Have a gross income tax of $2,015 or less for one year, with a support provided for at least 6 months during a year, and have a member of the household or pass the relation test.
3. Students who claim the disqualifying status must file again in the next return year to insure their status. Zins said, those that allow taxes to be taken from their paychecks do not have to renew their status.

\"Because of the gradual opening of the Chinese borders to international trade, the nation would be in need of technical and economic assistance,\" Ma said.

"The purpose of the trade mission is to find Illinois companies willing to set up businesses in that part of the world will be the help China needs to establish two-trades in its economy," he said.

If businesses participating in the mission showed particular interest in working with Chinese companies, CICC would also try to arrange programs and activities tailored to address the specific needs and interests of those companies, Ma said.

Activities would include business roundings and technical seminars for the Illinois companies.
**Prof wins SIUC's top honor**

University News Service

Philosopher Mark L. Johnson, professor and chair of SIUC's philosophy department, has won the university's top honor for scholarship.

Johnson, the eighth faculty member to receive the SIUC Outstanding Scholar award for research and creative activity, will be cited at commencement activities Sunday, May 17.

A 52-member cash prize goes with the award.

Described by College of Liberal Arts and Sciences Dean Gary S. Stege as "one of the leaders of the current generation of continental philosophers," the 42-year-old Johnson specializes in the role language plays in making sense of the world.

His current research, underwritten by grants from the National Endowment for the Humanities and the American Council of Learned Societies, focuses on moral theory and the role of imagination in reasoning and thought. A book will publish the results as his fourth book.

"Mark's initial work... has shown that philosophy can still address modern problems in our culture circle, has challenged the paradigm of dominant linguistic theory, and offered an important alternative to our understanding of meaning," wrote SIUC colleague Thomas Alexander in a letter nominating Johnson for the scholarship honor.

"The Body in the Mind" extended and deepened the implications of these views for philosophy proper. In time it will become, I am convinced, a major innovative movement in our discipline."

Last fall Johnson was a visiting scholar at the University of California-Berkeley Institute of Cognitive Studies. He has addressed scholars in Canada, Italy and the Netherlands and has been invited to present papers to such groups as the American Association for the Advancement of Science, the American Psychological Association, the American Society for Aesthetics, the Cognitive Science Society and the Society for Philosophy and Psychology.

In addition to writing three books, Johnson has contributed chapters to five volumes and has published 12 articles in professional journals. He serves as consulting editor for the journal "Cognitive Linguistics" and as a reviewer for the "Journal of Aesthetics and Art Criticism."

Johnson came to SIUC in 1977 after receiving his doctorate degree from the University of California in 1974. Johnson, his wife Sandra Mccornith, and their two children live in Carbondale.

**State police conduct safety checks, issue 966 tickets**

SPRINGFIELD, Ill. (UPI) -- Mother's Day weekend saw restrictions and curtailment of roads for safety checks and inspections.

State police reported in a release Friday that 966 tickets and 1,278 written warnings were issued last weekend in the Illinois State Police Districts.

More than 300 state troopers worked 20 roadblocks in the state, 18 of which involved 18 State Police districts.

Troopers issued 375 citations and 171 written warnings to motorists for failure to wear a safety belt, and 11 other citations were issued for drivers who failed to use child-safety seats.

Ninety motorists were cited for drivers' license violations, and another 247 drivers got written warnings for the offense.

Troopers wrote 21 tickets and 653 warnings for defective equipment, 108 tickets and 352 warnings for registration violations, and 82 tickets and 92 warnings for other vehicle code violations.

"While we have made great advancements toward reducing traffic deaths in Illinois, there still remains much to do," Gainer said. "Motorists should expect routine roadside safety checks at any time and at any place," he said.

**Automotive technology program takes part in research for computer diagnostic system**

University News Service

The automotive technology program at SIUC is participating in a study of how driver behavior affects the data for Chrysler Corp.'s Mopar Diagnostic System (MDS).

This vehicle computer-driven tool designed to help dealership service technicians diagnose and fix problems with a car is helping the university stay ahead of the growing number of electronic controls in today's vehicles.

This technology is now in use at many Chrysler Corp. dealerships across the United States.

MDS consists of a computer console, a video monitor, keyboard and a data recorder that provide service technicians with engine performance data right in the service bay.

The automotive technology program at SIUC's College of Technical Careers agreed to do the research as part of gathering engine performance data as a project this spring which could become a new course.

The research requires making hundreds of recordings of several engine families in various production modes to use a computer "overlay" for technicians to compare data from suspect circuits in a malfunctioning vehicle.

Chrysler Service and Parts Division's Operational Diagnostic Development department and its Information Management Systems group, plus suppliers such as IBM and Bell and Howell, which participated in the development of MDS, have donated equipment and resources to the project.

**Bulgarian law scholars to study SIUC for ideas**

University News Service

A group of Bulgarian judges, lawyers and scholars will visit the SIUC School of Law this month looking for ideas to take back home.

They're kind of like Rip Van Winkle," said law school Dean Harry J. Hayworth.

"They've been away from the world for a period where they have had very little activity in anything other than criminal law. And their legal system is different—it's based on civil law (derived from Roman law) as opposed to the common law (derived from the English system) the United States has a system at a whole and see what could be adapted and what just wouldn't work well here."

The May 25-June 5 visit will comprise half-day seminars on such topics as judges' making of the jury system and field trips to local court labs.

Before their Carbondale visit, the group will tour private law firms, the Shawnee County District Attorney's Office, the U.S. Claims Court, the Federal Court of Appeals and the U.S. Supreme Court in Washington, D.C.

They will arrive in Washington Saturday, May 16.

Last year, Hayworth, two law school colleagues and three SIUC police students spent three days in Bulgaria at a conference that was organized by the University of Sofia, the Bulgarian government and the American Bar Association.

DE celebrates anniversary with rap song, alumni events

By Kristi Rominger
Special Assignment Writer

Daily Egyptian alumni and friends returned to Carbondale this weekend to pay tribute to the campus newspaper that gave them their start.

And the weekend brought back some special memories for many, including William Harmon, former managing editor of the DE.

"The DE has been a place with a unique degree of independence and freedom," Harmon said at a banquet Saturday night. "And since the free speech era, students have had the freedom and learned something about the responsibility of that freedom at the DE."

About 80 past and present DE staff attended the reunion and advertising salespeople returned to Carbondale Friday and Saturday to relive memories of the newspaper.

Event weekend included a reception Friday at the Student Center, as open house tour of the DE in the Communications Building, a picnic at Touch a Tree Center where there was an anniversary banquet at Touch a Tree Environmental Center.

Catherine Hagler, business manager of the DE, said the paper has come a long way since October 1916.

"The staff has grown and expenses have grown," she said.

Hagler said the DE continues to produce quality reporters, advertising salespeople, photographers and graphic artists, and it has the reputation of being one of the best college papers in the country.

"It just proves that the more things change, the more they stay the same," Hagler said.

At the DE is free of charge and has a circulation of 27,000 to daily readers on the SIUC campus and neighboring communities of Carbondale, Murphysboro and Carterville.

Advertising revenues completely support the paper—no student fees have been allocated for its funding.

"We try to get as much as possible," said Wanda Brandon, acting faculty managing editor.

Brandon said she is most proud of the student journalists who come out of the DE.

"Students make the day-to-day decisions about the collection and distribution of the news, she said. "I'm here as a safety net."

The DE has undergone many modernizations over the years, but all the old news important to the university, and local community.

Today, the pages of the tabloid-sized DE contains international, national, local news, sports, features, comics, classifieds and display ads.

The paper employs about 110 student employees and eight full-time supervisors.

"Don't ever underestimate what undergraduates students can do," said George Brown, former business manager and faculty officer of the DE.

Brown said when students are placed in a learning environment, they do what has to be done to get the job done.

"Students learn the job and grow into the job," he said.

Many students over the years have grown and developed skills at the DE.

Jackie Spinner, 1993-94 student editor, celebrated the anniversary of the Daily Egyptian and gratitude employees who work at the paper now a sense of their past.

"I can't tell you what the Daily Egyptian has done for my life because I am still a part of it," she said at the banquet Saturday night.

"I still go to bed at night thinking about it and wake up every morning thinking about it."

But Spencer said the people who have gone before her have laid the foundation for its future successes.

"If I were to find the soul of the Daily Egyptian to thank it for everything it's done for my life, I'd find every one of you this," she said.
