**SIU-C signs cable TV deal; eight athletic events will air**

By Jackie Rodgers Sports Editor

SIU-C has signed a deal to have eight athletic events televised on cable television. It was announced at the Intercollegiate Athletics Advisory Committee meeting Monday. Phoenix Six, a St. Louis company, is trying to secure agreements with at least 10 cable network outlets to show the events, according to Jean Paratore, assistant to the vice president for student affairs. Paratore said SIU-C had to put up $2,000 to Phoenix Six for the rental of equipment and hiring of people for the productions. The events, to be televised on a tape-delay basis, include the three remaining football games, three men's basketball games, the women's basketball, the swimming (championships and invitational meets), gymnastics against the University of Illinois. The $25,000 will come from a basketball ticket surcharge. Paratore said the University can break even if the package is sold to at least 10 outlets. Before the deal was made, Phoenix Six said it had at least eight outlets lined up. Paratore said the company said it now has 10 interested cable companies.

The package deals for SIU-C to receive 90 percent of the sale price of the package, each cable station, a sum Paratore said is "not very much." In addition, SIU-C will receive 5 percent of the gross revenue of advertising. Paratore said the University is in the process of getting sponsors for the package.

"This is an experimental project," Paratore said. "We don't feel we will lose money on the deal, and, in fact, we have a chance to make some. It is a risk we are prepared to take. We're not taking a loss of revenue." In addition to the broadcasts, SIU-C will get a one-minute promotional spot for every broadcast, Paratore said.

**Talent search center faces budget axe**

By Andrew Herrmann Staff Writer

About 17,000 poor but bright high school students may feel the effects of Reaganesque in the near future, according to Bill Pyle, director of the Southern Illinois Talent Search Center in Carbondale. The poor high school student, the single parent and the divorced mother are typical of the persons the center sends to college, Pyle said. In 1981 the center placed nearly 2,700 primarily rural, white students in colleges and universities across the state, he said, but that number will drop to just another point in the unemployment picture.

The problem is cutbacks in federal funds which are needed to finance the center, which Pyle calls "the only workable program coming out of Washington today.

With three employees and a budget of $104,000, Pyle's department served 54 counties and 83 high schools last year, acting as college guidance counselors who showed the brightest students, motivated them, found funds for them and placed them in the right college.

But recently, the effects of Reaganesque have been coming close enough to the center for Pyle to be concerned.

"There's nothing definite yet about our elimination," he said. "But there is a distinct possibility.

"I do not feel the federal government understood the program for the fiscal year but told him that the program could not be guaranteed funding beyond this year, Pyle said. "I do not know the exact outcome of the program after Monday when he will attend a seminar in Champaign on the future of educational programs. If it turns out that the program is going to be eliminated, then Pyle said he would have to begin a heavy lobbying effort.

"We're paying for ourselves," Pyle said. "For every student we help it only costs the government $25. We've helped put thousands of students to school, watched them become

**CD-14 delays consideration of Bracy buy**

By Ginny Lee Staff Writer

Discussion by the state Capital Development Board of SIU-C's request for relocations of funds to purchase the Bracy Building in March has been deferred by the board's chairman from its meeting Thursday until an "unknown date.

CD chairman Samuel Skinner said that because of strong concern expressed by students about the purchase of the building for library storage, he would like more possible consideration of it until other alternatives have been investigated.

"I've been advised that the students are very concerned that there are other avenues for the University to take," Skinner said. "There just isn't enough time for me to make a decision on Oct. 16." Skinner said that he anticipates visiting SIU-C after Oct. 14 to talk with the administration and students about the request.

"I'll come to the board when we're ready to decide it and when all the issues involved here have been thoroughly considered," he said. "I will not go to push down the throat of any student. Also, the board doesn't want to make any arbitrary decision that the University can't live with."

The University's plan to purchase the Bracy Building will be discussed by Ralph E. McCoy, dean emeritus of library affairs, at a meeting of the Faculty Senate at 1 p.m. Tuesday in the Mississippi Room of the Student Union.

---

**SIU-C not responsible for Bracy lease payment**

By Ginny Lee Staff Writer

The University did not renew the lease to the Bracy Building to Maron, Inc., on Aug. 31, and therefore is not responsible for the lease requiring a $20,000, two-year payment upon its expiration, according to John Baker, special assistant to the president.

The SIU-C Board of Trustees entered into the $120,000-a-year lease agreement, which included an option to buy, in September 1981. Currently, the University administration is waiting for the state Capital Development Board to approve the purchase and release funds for the former high school building, which would be used to house the University's Morris Library.

James R. Thompson in August signed a $1.8 million appropriation bill for SIU-C to purchase a library storage facility, but have given them notice as to the current situation. Baker said, referring to the $20,000 a year due Maron's son, Harry Melvin, who is the current owner.

"The lease is up. We did not renew it."

The purchase price of the building is $1.6 million. Baker said, and the University's share of the lease, the rent that has already been paid will not be applied to the purchase price.

Another clause in the lease provided that the lessee would install a 25-ton air conditioning coil and compressor in the existing system to make the "air conditioning in the building more comfortable." Baker said that the "promises operable."
Solidarity founders hold sit-in, schedule another for Tuesday

WARSAW, Poland (AP) — Founding members of Solidarity at the Lenin Shipyard in Gdansk defied the Communist government’s new ban on strikes with a sit-in Tuesday demanding reinstatement of the outlawed independent union and the release of union chief Lech Walesa.

Western reporters who left the Baltic port city six hours ago when the strike began said the police had taken no action by then. But Polish television reported the police used “means of coercion” on “several groups” of lookouts who defined orders to disperse after dust fell.

The official news agency PAP said workers had come peacefully but several groups “disturbing the peace” outside the shipyard and at the Gdansk railway station were dispersed by police using force.

The Western reporters said leaders of the protest decided to strike again Tuesday for eight hours. They told the shipyard’s 17,000 workers to assemble outside the gates if the government closed down the yard.

The government television service admitted “a section of the workforce at the Gdansk shipyard stopped work” but claimed pictures taken in the yard showed there was “not much unrest” among other workers. However, the telecast said the pictures were taken between 3 and 3:30 p.m., after the strike was scheduled to end for the day.

The government cut all Telex and telephone communications with the coast at 11 a.m., and highways and coastal areas were blocked to incoming traffic, making it impossible to obtain an independent estimate of the number of strikers.

The strike in the giant shipyard where Solidarity was born in August 1980 had been scheduled to last only two hours. But the Western reporters said the workers decided it would continue six hours longer, until the end of the day shift at 2 p.m.

PAP reported that “the workers of the first shift left the shipyard in peace,” indicating that the strike had ended as scheduled.

One official source in Warsaw said particular trouble could be trouble in all five of the coastal provinces and the interior of the country where Solidarity support was strong.

News Roundup

Nobel Prize for medicine awarded

BOSTON (AP) — Two Swedes and an Englishman shared the Nobel Prize for Medicine on Monday for their research into a group of human diseases ranging from arthritis and high blood pressure to asthma and painful menstruation.

The Nobel prize was awarded to Rune Bergstrom and Bengt U. Samuelsson of the Karolinska Institute in Stockholm and John D. Vane of the Wellcome Research Foundation in Beckenham, England.

Refugee camps searched by police

BEIRUT, Lebanon (AP) — The Lebanese army on Sunday surrounded the Palestinian refugee camps of Saara and Chatila in a search for guns and demolishing sharks built without permit.

Camp residents were allowed to circulate clothes or guns and it was not clear if any camp searches would be allowed by people out of uniform.

Reagan stamps for Republicans

DALLAS (AP) — President Reagan, campaigning for Texas Republicans, aimed another shot at Democrats on Monday before returning to the White House to work on what aides insist will be a “non-partisan” speech on the economy.

In a speech to a Republican rally, the president called Democratic critics of his economic plan “Monday morning quarterback” with no alternative to offer.

Navy fears sub may have escaped

BEDFAVA NAVAL BASE, Sweden (AP) — The Swedish navy captured one of the submarines it was searching for off the coast of Saudi Arabia. The submarine was reported to be carrying several American military personnel.

The submarine, the USS Wainwright, was reportedly forced to surface by a Swedish frigate on Friday.

The submarine is believed to have been lost in the North Atlantic after the San Francisco was sunk by a German U-boat in 1943.

The submarine’s capture is likely to be a major setback for the American military, which has been trying to locate the submarine for years.

The submarine was reportedly on a training mission when it was captured.

Atomic vets official angered by apathy of American people

By Mike Nelson
Staff Writer

Joseph Cavins is an angry man.

Cavins, Southern Illinois coordinator for the National Association of Atomic Veterans, is angry because only 10 people attended a presentation on atomic issues Monday.

Looking at the predominantly empty Student Center Auditorium, Cavins said, "Yes I'm angry. Seeing 12 people here makes me mad — it shows the apathy of the American people.

Apathy is a problem that Cavins has encountered before while working with the NAAV. Last June, about 30 people attended a similar presentation in Lawson Hall. At that time, Cavins said the NAAV was conducting "the largest manhunt in American history" to find victims of atomic bomb tests.

Simon said he will introduce a House bill in January which would provide compensation to family members suffering from an illness or disability caused by genetic damage of the person exposed. Simon echoed Cavins statements concerning public apathy about the issue. "There is a real reluctance on the part of the U.S. government and the Veterans Administration to accept responsibility for this problem.

"It's basically a dollars and cents issue," Simon said. "The government does not want to foot the bill for atomic veterans compensation."

The NAAV has estimated that 250,000 civilian and military personnel took part in above-ground atomic bomb tests in the 1940s and 1950s. NAAV estimates that between 10,000 and 14,000 of these veterans are in Illinois. So far, said Cavins, only about 22 of these veterans have been located by the NAAV.

"Many of those vets know of the NAAV," Cavins said. "But the fact is, many of them are embarrassed about what they have done. They're afraid to come forward."

Simon said his bill would also compensate veterans exposed to toxic chemicals. "The bill includes toxic chemicals so that Agent Orange victims can be covered by the legislation," he said.

Simon said he plans to match his bill with similar legislation to be introduced by U.S. Sen. Orrin Hatch, R-Utah.

Open your doors Service Task Force

At last the truth is out. The American system of government based on an informed public is dead, or so the newly set up Service Evaluation Task Force seems to think.

The task force, formed by the Undergraduate Student Organization (USO) to study student programs and make recommendations to President Somit, has decided to close its doors to the public for fear that premature exposure "might bias the survey to be conducted by the task force." This is what John Kelly, chairman of the task force, says.

This is to say things like the Illinois state gubernatorial elections campaign should be run in secrecy. Public exposure, especially through media coverage, is the devil in the details. The USO of Congress should be done in secret for any exposure of their deliberations is worse than useless.

Precisely the opposite is true. Democratic government depends on an informed public. Hence the Illinois Open Meetings Act, which mandates that all public matters are open to the public. While closing the doors of the task force to public scrutiny is a violation of the letter of this act, it is in many ways a violation of the spirit of it.

Kelly's apprehensions are supposed to be for the students. Students have both the right and need to know what is going on. Findings of openness to students mean nothing when one of first acts of the task force is to close its doors to students. How can the task force remain open to students while closing their meetings to the press and public?

The investigations of the task force is heavily dependent on student input. The survey by the task force is meant to gauge students' opinions. Without the input of students, how will students be able to form valid opinions without sufficient information?

Every student in a random questioning of them did not know exactly what was going on in this task force. At least, they knew nothing about the student revenue bond issue. Most of them did not know what the task force was all about.

Instead, we are told in the task force is a dangerous source of bias, the task force should look at it as a helpful tool to disseminate information on the reasons behind the reasons of the task force and create student interest and participation. The media are then open for opinions, ideas, and, yes, even biases. It is in the clash of these that opinions get formed and our best chance of arriving at the truth.

Kelly's apprehensions are understandable. Sometimes confidentiality essential for the proper working of the task force can be communicated to the people. Sometimes, confidentiality, perhaps better than most and there are ways of protecting confidentiality. But too much of the matter is this that this has been done.

The Service Evaluation Task Force is an excellent idea. Do not let it go sour on us.

Satanic messages in rock music?

As a phonetician whose main interest is in the pronunciation of the English language, I was very interested in a story about Bob Dylan, who claimed he found "Satanic" messages when he listened to rock songs played backwards.

Unfortunately, I was unable to test the hypothesis because equipment to play tape recorders backwards was not available for this university (or a problem he doesn't seem to hear), but by having a sound spectrograph I was able to play the tape he gave, but, again, only backwards, one sentence at a time. What I discovered is that in fact Dylan's assertion that backwards the sounds, like the word "Satan," You are hearing is the word "yes," which, when played backwards and listened to in a state of fear of faith can sound like something else.

A more detailed phonetic analysis of the text he gave might reveal other words that, when played backwards might sound like something else, but one of the things that phoneticians have learned is that words are slippery things to hold over and over again it begins to sound like something.

As incorrectly stated by Sebrina Alexander (President of Delta Sigma Theta Sorority, Kappa chapter) at All Sorority Rush in Ballroom 1 of the Student Center on Sept. 26, 1980, Delta Sigma Theta incorporation in 1913 is NOT the first black Greek sorority to be incorporated under federal law. For the record once again, Delta Sigma Theta was not the first.

We live in a country where criminals get a free lawyer and where our industry produces three nuclear bombs a day. We live in a country to sell inadequate baby food to people starving in other countries, but hasn't terminated the existence of its own starvation. Ours is a country developed in juveniles, where weapons of war are made to keep the peace, where actors such as Ronald Reagan are elected president by a minority of possible voters and where the executive branch of government against public laws to sell to industry, i.e., oil companies. As Americans, our present responsibility with life should be to promote change toward a utopian society.

To achieve utopia, we must stop perpetuating nuclear genocide. Our country and the Soviet Union are prepared to annihilate each other with nuclear bombs there are enough bombs on earth to exist in the extinction of mankind, yet they continue to be manufactured. Nuclear money is spent on armaments rather than energy. To achieve utopia is a difficult ideal for us to fulfill. We are living in a war time atmosphere. To apply this history, and consider ourselves the most intelligent species, yet advocate the capacity to extinguish our species. The only way to research and achieve this genocide. We possess the most inhuman threat to ourselves. If you consider that our country has enough megatonage of nuclear warheads to destroy the world for money and thus half that amount, and both countries' "continuous cold war conflict, you cannot help but understand the difficulties inhibiting utopia.

Besides the nuclear issue, there are impurities that have dominated our existence for 3 centuries: slavery, racism and all selfish ideologies impede harmony, which harmony cannot be obtained, neither can utopia.

As Americans, we must adopt an altruistic, non-violent mode of cognitive awareness. For it is only with this awareness that impartiality can be corrected, harmony obtained and utopia fulfilled. 

—Brad Varecha, Freshman, Radio and Television.

Delta Sigma Theta was not the first
War of words in Middle East aims unfairly at United States

By William Jason Yang
Staff Writer

Whenever a crisis or dilemma arises, the tendency for emotion to overwhelm reason is great.

The likelihood is that when emotion reaches a peak where it becomes uncontrollable, it gives way to sensationalism.

It seems so easy, then, to start pointing a finger at each other and throwing the blame from one to the other. Every kind of extreme example, from animals to the supreme deity, are given to substantiate the blame in varying ways: dogs, pigs, God, Jesus, beasts, Allah, Bible, Koran, and so forth.

One particular place in this world, that when two opposing sides are fighting each other the blame eventually reaches America's doorstep, is in the Middle East.

From the A2E world's extreme point of view, as well as that of many Third World countries, America's foreign policy in the Middle East seems to be altogether influenced by Israel.

When Israel invaded Lebanon, the criticism was first directed against Israel itself. Almost simultaneously the criticisms were transformed into condemnation against the United States.

"Israel could not have done this without the help of the United States!" "The United States is behind all these!" So is the reasoning that fails victim to overgrown sensationalism.

Israel's bombing of Beirut that resulted in countless deaths and almost complete destruction of the city, was set off by the US and deserves world condemnation. So did FLO shelling of Israeli villages that resulted in deaths of humans.

The United States has repeatedly condemned Israel's actions and claimed that it did whatever it could within its authority to restrain Israel.

But, to simply lay blame on the United States whenever Israel pulls the trigger is that kind of reasoning that belongs to the trash.

The weapons used by Israel may have the "Yankee Doodle Dandy" patents, but the decisions to use those weapons are the result of "made in the White House" stamps.

In a recent interview with Barbara Walters, former Secretary of State Alexander Haig said that the United States has a commitment to its traditional allies in Western Europe as well as the state of Israel. That commitment, he pointed out, is based on mutual trust and shared values.

To connect Israel's action with the "mutual trust and shared values" that it upholds so well, and consequently putting the blame on the US is again a case of poor reasoning.

The issue is not to start putting a label on anyone as pro-American, pro-Israeli, anti-American, or anti-Arab. In the pursuit of truth, the facts should be separated from the general and naive assumptions. Failure to do this will only fuel sensationalism and breed more propaganda.

The outright and inaccurate portrayal of America's foreign policy in the Middle East by the US being totally influenced by Israel is grossly blown out of proportion.

In a sense, the war of words and finger-pointing might very well defeat the purpose: what everybody seems to be claiming to strive for: peace.

Instead of finding ways to minimize our problems, our very childish way of blaming each other seems to multiply the problems.

When it rains in Israel or when the Israeli economy has triple-digit inflation, can the US hold responsible them?

Hebrew, Arabic ties should be recognized

There are few societies in the world whose members do not harbor some unfounded, unflattering stereotypes about their ethnically distinct neighbors—but there are certain nations whose members advocate either the extermination or the wholesale banishment of distant lands.

Yet that seems to be the most recent letter published by the DE. Whenever the DE would appear, the issue of anti-Semitic publications published by the DE would appear. The first outrageous alternative advertising brochure we would leave to its own obvious anti-human demeanor. It is the type of literature that perhaps demands journalistic attention even more, because it purports to be based on historical fact rather than on mere belligerence.

In his letter (DE, Sept. 28), Imam Aladdin Shabazz proposed that the Jews of Israel return to Europe from where they came. There is one obvious thing wrong with this "solution": many Israeli Jews do not come from Europe and are not even Maurice. As far as anyone can tell, the Imam believes that in Israel there is a distinction between Ashkenazi Jews, who come from Europe, and Sephardic Jews, who have lived continuously in the Middle East for centuries. Ironically, the Imam might be interested to know that a recent news report, at the time of the recent demonstration of bombs in the Beirut massacre—a full tenth of Israel's population—the vast majority of demonstrators were Ashkenazi Jews, who have a closer cultural association with the Imam, whom, presumably, the Imam would most readily open to. Our Israeli are precisely those who are the Governor's aggressive anti-Palestinian policies.

Second, if Imam Aladdin Shabazz wants his opinions printed in a public newspaper, the least he could do would be to acknowledge some basic relevant facts, such as manufacturing and recycling our products, rather than perpetuate the fallacy stereotypes?—Alma Goldie, Carbondale.

Micrographics can solve library's material storage problem cheaply

I have been patient and silent long enough. Almost every day I have received another letter regarding the storage or books and documents. This past year, for example, I have been inundated with letters from various students, from the staff, from the community, about the storage problem. There has been a lot of attention paid to this problem. I have been at the university for quite some time now, and I have observed many changes taking place. Some of these changes are positive, but there are also some negative ones. One of the most significant changes is the increase in the number of books and documents being received by the university. This has put a strain on the existing storage facilities, and it has become apparent that something needs to be done about it.

In the past, the university has used a variety of methods to store its books and documents. These methods include the use of microfilm, microfiche, and microcards. Each of these methods has its advantages and disadvantages. Microfilm, for example, is a popular method for storing books and documents because it is relatively inexpensive and easy to use. However, it has the disadvantage of being susceptible to damage from light and moisture. Microfiche, on the other hand, is more durable than microfilm, but it is more expensive.

I believe that micrographics can solve our material storage problem cheaply. Micrographics is a term used to describe a variety of methods for storing and retrieving information. These methods include microfilm, microfiche, and microcards. Each of these methods has its advantages and disadvantages. Microfilm, for example, is a popular method for storing books and documents because it is relatively inexpensive and easy to use. However, it has the disadvantage of being susceptible to damage from light and moisture. Microfiche, on the other hand, is more durable than microfilm, but it is more expensive.

Micrographics is a technology that is being used in a variety of ways to solve storage problems. For example, many libraries are using microfilms to store their periodicals. This is done by converting the periodicals into microfilms, which are then stored in a microfilm archive. When a user wants to access a particular issue of a periodical, they can retrieve the microfilm and view it on a microfilm reader.

Another advantage of micrographics is that it can be used to store and retrieve information quickly. This is important for libraries because it allows users to access the information they need in a timely manner.

One concern that some people have about micrographics is that it can be expensive. However, there are ways to keep the costs down. For example, many libraries are using microfiche to store their periodicals. This is less expensive than using microfilm, but it is still more expensive than using paper. However, the cost savings can be offset by the fact that microfiche is more durable than paper and can be stored for longer periods of time.

I believe that micrographics has the potential to solve our material storage problem cheaply. It is a technology that is being used in a variety of ways to solve storage problems. It is a technology that can be used to store and retrieve information quickly, and it can be used to store and retrieve information in a cost-effective manner. I believe that the university should consider using micrographics to solve its material storage problem.
Art lecture to be given at museum

Arthur Herron
Student Writer

The last of four art lectures will be given at 7:30 p.m. Tuesday in the Furer Hall Museum Auditorium.

Philippe Fehl, an Art historian from the University of Illinois, will speak on "Decorum and the Naked Truth. Notes on Bernini's Verita." Bernini was an Italian sculptor in the Baroque style and one of the most famous artists of the 1600s.

Professor Fehl, a research fellow at the Warburg Institute of London and historian in residence at the Academy of Rome, is a noted scholar in the area of Italian Renaissance and Baroque art. His interests go beyond the 16th and 17th centuries, including all of the classical tradition from Greece to America during the first half of the 9th century.

Fehl received his doctorate in art history from the University of Chicago. He is the author of two books and has published articles in magazines such as "Burlington Magazine" and "The Encyclopedia Italiana."

This is the first lecture of the Fine Arts Colloquium for 1982-83. The series is sponsored by the Museum and Art Gallery Association, the College of Communications and Fine Arts, and the School of Art, the Art Students' League and the University Museum.

John Willock, director of the University Museum and Art Galleries, will speak on the "Great to Greece." Nov 16. Cursis was the chief god of the underworld among ancient Egyptians.

Sherwood Fehl, associate professor of Art History will lecture on Simone Martini Allure. Jan 25, and George Mavigliano will talk on March 15. Mavigliano is also an associate professor of Art History.

All of the lectures will include slide presentations.

Merry olde times highlight concert

Jesters, jugglers and music will be the order of the evening for the Renaissance-inspired Sixth Madrigal Dinner Concert.

Reservations for the holiday celebration are being taken now at the Student Center Central Ticket Office. Tickets are $11.90, plus 60 cents tax.

The Christmas celebration, complete with a feast, will begin at 7:30 p.m. on Dec. 8, 9, 10 and 11 in the Student Center ballrooms.

Originally of Italian origin, the madrigal dinner has been a tradition since the 15th and 16th centuries. It was revised by English composers into an informal type of entertainment during the Renaissance. The Christmas madrigal dinner was a family meal combined, making each part independent, both melodically and rhythmically.

The menu for the evening consists of the Wassail Cup, cranberry supreme molded salad, roasted medallion of beef, wild cherry supreme and cranberry carrots.

Dishing up the buffet is a group of Nantucket Jesters, jugglers and music which plays for the evening. The dinner is scheduled for three hours, from 9 to 12 a.m. The Madrigal is the last of the series.

Tickets can be purchased at the Student Ticket Office. Tickets are $11.90, plus 60 cents tax.

Original art in the form of madrigals and other Renaissance articles will be given as prizes to the three highest bidders.

Poet targets harsh realities

By Phillip Florin
Student Writer

A reading will be given by local poet Gordon Lester-Massman, at 7:30 p.m. Tuesday in Activity Room C of the Student Center. Sponsored by the English Majors Organization.

Lester-Massman, 33, who has been writing poetry since his first year in college, has had two pamphlets of his poetry published. A book, titled "Schoecks" from Abatieur Editions is due for release in January.

He says his poetry attempts "to get at the truth of life without catching it in a detached, obscure term." Lester-Massman, associate director of the University Press, received a master's degree in fine arts from the University of Alaska in Fairbanks. His undergraduate studies were at the University of Texas in Austin. He has lived in California since May.

Lester-Massman said his poetry is the work of Alan Ginsberg, who has been called the most renowned modern poet, have similarities of concept and style. He said there are also influences of Robinson Jeffers, D.H. Lawrence and Walt Whitman in his work.

"The subject of my poems is like the bullseye of a target. I see that target and shoot my arrow at it, reaching the intimacies of that subject," he said.

However, Lester-Massman sees a difference in his poetry and a distinction between many contemporary poets.

"I don't write of the outer rim of my subject. I say exactly what I mean to say, I'm more straightforward than most modern poets and don't work the poem into the form, it just comes on its own," Lester-Massman said.

"Too many modern poets are detached in their own lives (within their poetry). Many are posing through their poetry and I feel I should try to break from this mode of writing. Not like a tree whose leaves are falling, symbolizing a love that is ending," he said.

Perverse in many of Lester-Massman's poems is a harshness, a theme most readers might not find too pleasant.

According to Lester-Massman, "the harshness is there because it's harsh to be alive. There exists a need to write with this reflection. Most people never really achieve personal fulfillment. Consequently, I write about a world in a manner that projects it even harsher than it really is." This is where Lester-Massman feels his style is consistent with other contemporary poets.

Being a product of society, Lester-Massman said, the poet doesn't want to become invisible. "Poetry, when working well, should reflect society as it is to be heard," Lester-Massman said.

Because of this symbiotic relationship the poet has with society, modern-day poets have a duty to be honest. Lester-Massman said the world is wrong when people are unhappy.

Another prevalent theme in Lester-Massman's writing deals with relationships, especially those close to Lester-Massman personally.

"To relationships I write about are with my family — my wife, children, my sister — about being a parent." His wife, Elin, is an instructor in the Journalism School.

Duo to perform mime Friday

Kate Bentley and Jacqueline Wildau, the duo that is "Mainly Mime," will return to S.U.L.C. one night, performing at 8 p.m. Friday in Student Center Ballroom D.

Tickets are $3 for students and $5 for the general public, available at the Student Center Office and at the door Friday evening.

The team met while working with the troupe of Bonton, one of the oldest mime companies in the nation. Bentley worked with the troupe for seven years performing, teaching and touring. Wildau, a graduate of L'ecole Jacques Lecoq, left the troupe and worked as a professional mime and clown in a solo act before founding Mainly Mime in January 1978.

The team was later joined by Bentley and they developed a region of mime called "Mainly Mime." Bentley and Wildau both studied mime at the World Institute of New York's Westbeth Theater Center. In addition to their tours as Mainly Mime, the two women have pursued their craft separately in the United States and Europe.

After their fall tour last year, Bentley coached an ice dancing team of world champion skaters and worked with the renowned theater company La Familia in the New York State prison system.

Wildau went to Paris where she performed and wrote a 13-week comedy series aired on French national television. She also worked in Hollywood Mime Theater while working on a comedy skit to be aired next month on the national dance show, "Solid Gold."
International grads are 'ambassadors'

By Michele Inman
Staff Writer

As international student who chooses to study in Simon, a return home may be invited to serve as an SIU-C international ambassador.

"The role of these ambassadors is to promote the image for SIU whenever there is an opportunity and to refer any prospective SIU students who may have questions or who want to know or any questions about SIU they may have been asked to that office for correspondence," said Simon, assistant director of Area Services Office, Research and Service, said.

According to the SIU travel and visit schedule, we usually contact these ambassadors, he said. "It's entirely up to the ambassador what he or she wants to do. We don't impose any responsibilities on him.

Sometimes the ambassador will arrange flight reservations while other times he may greet individuals at the airport.

Chu said, "There has been a lot of assistance from SIM in the past.

In 1977, the SIU-C administration felt that the University was no longer limited to Southern Illinois in scope. Chu said.

"This really being the state and the country," Chu said. "It's really beyond the state and the country." Chu said.

"It's really an internationally-minded institution.

Currently, any international students graduate from SIU-C.

Senator to speak at education rally

Educational spokesman from Congress at the Illinois Legislature will speak and hear complaints about education during a rally at 9 a.m. Thursday morning on campus, in the Carbondale area.

Hart also serves as campaign manager, said Rep. Bruce Richmond and Sen. Ken Bushue, both Democrats in the 59th District. He has also been asked to address the students.

The visit comes at a time with the University including Felt Grant funding is facing challenges in Congress and the White House. Top officials talk about the state of education and then spend time hearing complaints from students and faculty.

Simon has been a spokesman for education in the House.

Beg your pardon

The article on the Black Group Career Planning, which appeared in the Daily Egyptian Friday, 11 October, mistakenly stated that Career Planning and Placement were just starting the newsletter. The program is run by Karen Washington and Mike Goodwin, of the Career Counseling Center.

YOUR VITAL FORCE

You may not realize it, but your vital force is expressed through your nervous system, circulatory system, and your ability to think and to move your body. It is the vital force that drives the body to be active and to function properly. Your health and well-being are determined by the strength of your vital force.

That's why the health of your spine is so essential to the health of your body. Any spinal strain or shock, even an emotional shock, can sometimes affect the vertebrae and discs, causing irritation to a nerve. This irritation can distort the body's normal function, causing pain and many other health problems.

Treatment of spinal disorders is essential to good health. Pain-killing drugs won't do the job. They can't remove the pain or hide the symptoms for awhile. Pain-killers are not the answer.

If you are bothered by back pain, please call. Symptoms related to disorders of the spine, seek the help you need from a specialist trained to treat these disorders.

Do you have a question? Write or call...

Contradance: expression in motion

By Cynthia Rector
Staff Writer

"Hips! Hips! Hips!" shouted David Zambrano, contradance instructor, to his class of 10 as they leap-froged from one wall to the opposite wall of the Glass House of the Student Center.

He said Friday night was the best class of the semester. "There was so much feeling in it," he said.

Zambrano, 22, in his first year of public relations, teaches contradance through New Horizons, an outlet of the Student Programming Council. His class meets from 5:30 until 7 p.m. on Thursday and Friday nights, he said.

Zambrano originally from Venezuela, has been in Carbondale for one year. Before leaving Venezuela, he studied contradance there for three months.

He finished SIU-C's Center for English as a Second Language program in May, but still concentrates on increasing his vocabulary everyday, he says. "I think that knowing more of the language will make him a more effective instructor."

"I hate to repeat words," he said, insisting that a phrase loses its punch the second time. But if there's a need for caution, students need simply to watch their instructor's muscular body demonstrate the movement.

Although he wants people to know about contradance, Zambrano is hesitant to dogmatically define the new dance form. "It's still an experience," he said, "I don't have many set concepts about it. I need to see the results of this semester's work."

For this reason, Zambrano said he will continue the class until the end of the semester, with little expansion in number. However, next semester, when he has more direction, he hopes to continue the course.

See, MOTION, Page 11
The actual volunteer service classes consist of the student going out to an agency in the surrounding area and negotiating a contract for services. They can earn up to six hours credit for 16 hours work per week. Fewer than six hours of credit can be earned depending on the hours worked at the agency. A log is required of each student recording the student’s experiences each day and their attitude toward the work.

The seminar class was formed so that students would have a chance to learn about volunteer service in the community and have a chance to talk this over with the instructor as well as other volunteers. "Seminars are a good opportunity for students to see what they’re doing and what they can learn from it," Denise said. "They have a chance to learn from each other and experience, reflect, analyze on what they’re doing."

The program was designed to provide any student with the experience of volunteer service in the community. "Nobody would get out of college without doing some community service," if I had my way," said Denise. "It is essential for students who want to be community leaders to get this experience early."

He said the experience may help the student when looking for a job. All it takes is the initiative to go out and get the work, according to Denise.

The volunteer work ranges from actual physical work to counseling depending on specialties or skills. Some agencies suggested are the Jackson County Mental Health Center, Carbondale Free School, Carbondale Senior Citizen’s, Women’s Center, United Way, and the Cancer Society.

The program replaces the University Year for Action service-learning program, and has only a handful of students enrolled. Both the class and seminars will be offered next semester and will continue next year also. "We hope the program will take hold," Denise said. "You’d be surprised how vital this type of volunteer service is to the community."

Union backs candidate to 'unemploy' Michel

PEORIA — Unemployment in this city has been running 15 percent, and G. M. Michel is expected to be the latest to hang around with strong labor backing, who would like to add Rep. Robin Roberts to the parade.

Michel, 18 House Republican leader, is seeking his 14th term in Congress. He has used personal re-election bid that usually draws yawns from reporters seeking a political fight.

But this fall Michel's opponents think they can smell political blood in the air. The father of his close association with President Reagan's political policies, which many labor leaders blame for the current unemployment rates.

"If everybody who says they're going to vote for him, it'll be a real race," says United Auto Workers member Dan Foy, who is the hall bedecked with signs for Michel.

Stephens, 31, is a lawyer who often represents the UAW in work stoppages and has been a vocal opponent of Caterpillar Tractor Co., the Peoria-based manufacturer of earth-moving equipment, which has been proposing to lay off 200 workers.

He is the son of a Baptist minister and says he would go for another special election if he thinks the terms his union head is.

Michel says he is an example of how the pocket of a special interest, at that in a special election.

But Michel's portrait of Stephens as a "union man" is a bit too standard and "commercial" he believes politicians should be getting in their minds.

Michel never has asked that the news media will take a special election.

"I'm Kepler to see such an election because it's all the pocket of a special interest," says Michel's assistant.

"I'm Kepler to see such an election because it's all the pocket of a special interest," says Michel's assistant.

"I'm Kepler to see such an election because it's all the pocket of a special interest," says Michel's assistant.

He almost suffocated once

In magic he’ll try anything

Doris K. Harrah
Student Writer

Brad Lancaster, senior in radio-television made his childhood dream a reality: Lancaster is a self-taught magician.

His interest in magic started when he was small and his father entertained him with a handkerchief trick. He would put the handkerchief behind his back and make it disappear.

"I was mystified, not realizing he just studied it in his back pocket," recalls Lancaster.

He learned his first tricks by spending hours in the library reading magic books. Then he got his first magic set when he was about eight years old.

"The tricks never worked," said Lancaster. "I didn't fool anyone. But I stuck with it and didn't give up even though the tricks didn't work until about eighth grade."

He started informal shows during lunch at Cortice High School in Chicago. While he was showing tricks to a few friends, a crowd would suddenly appear, said Lancaster. He started doing backyard parties and at Calvin College in Grand Rapids, Mich., he began charging for shows.

Now in his second semester at SIU-C, Lancaster will be performing at The Open Night and at various shows for the Student Programming Council.

His tricks range from "Mentalism," such as his planned blindfolded drive around human obstacles, slight of hand, card tricks and escaping from everything from straight jackets to mail bags.

"I almost suffocated once when I was handcuffed inside a mail bag with a plastic bag over my head," said Lancaster. "I couldn't get the handcuffs off, so I couldn't get the plastic bag off my head," he explained.

He has to make time for his magic because he is involved with many other things. He is co-editor of the East Side Story, and assistant editor of the Black Observer and is learning classical guitar. He is a published fiction writer and writes what he refers to as "demented poetry."

Lancaster believes the secret to his success is the way his act is presented.

"You have to make the audience relax," he said. "My show is full of audience participation. Success depends on the atmosphere and the relationship you develop with your audience."

He almost suffocated once

In magic he’ll try anything

GOLFERS from Page 16

and Jones each had 75 while Schafer had 77, Stoff had 81 and Hammond 82. That day the Salukis had 383 which put them in fourth place.

Besides finishing first in team competition, Miami also had the tournament’s medalist as Redskin Brad Worthington took first with rounds of 71 and 70. Miami featured a strong team, as all of last year’s Mid-America Conference runner-up team returned this year, according to Seasholt.

Following Miami was Morrow with 72, Kentucky with 736 and Eastern Kentucky with 742.

The Arlington is not a real hard course, but it’s not a real shot course either, he said.

Smurbeck, who coached golf at Miami, was a Saluki graduate who took the Gateway Conference title when Jeff Lampie forfeited the final.

In doubles action, Skalsky avenged his singles loss by teaming with Cecil Brown to beat Steve King and Darelle Jenkins, 6-2, 6-1 in the Advanced Division.

In the Intermediate Division, Samah Bahraam was handed the Novice Division title when Jeff Lampie forfeited the final.

The Men’s Advanced Singles title was decided when Curtis Lentzberger took the best-of-five showdown.

ST. LOUIS (AP) — In the shadow of the Gateway Arch, a rare Midwestern World Series gets under way Tuesday — and city officials are poised to make the most of it.

For only the second time since World War II, the perennial powerhouse teams from both coastlines have been excluded from a best-of-seven matchup between the Cardinals and their northern rival, the Milwaukee Brewers.

For St. Louis city officials, stung by a spate of bad publicity, the series presents a welcome opportunity to shine.

“We’re trying to get some of the national media in town to take a new look at St. Louis,” says Mayor Vincent Schoemehl. Adverse publicity was generated by 1880 census figures, which showed that the city posted the nation’s largest population loss — a 28 percent decline — during the preceding decade.

A record 2,111,906 fans pushed their way through the turnstiles of Busch Memorial Stadium to watch a team that Whitey Herzog put together through a series of trades since taking over as manager in June 1980.

Not the least of the trades was a Dec. 13, 1980, deal with Milwaukee that brought to St. Louis outfielders Sixto Leccano and David Green and pitchers Larry Sorenson and Dave LaPoint in exchange for catcher Ted Simmons and pitchers Rollie Fingers and Pete Vuckovic.

St. Louis has won eight World Series titles, more than any other team in the National League. The most recent series appearance was the 4-3 loss in 1980 to the Detroit Tigers.

TRES HOMBRES presents Mercy Playing Jazz

TWO HAPPY HOURS EVERYDAY

2pm-6pm 9pm-close

Bloody Maria $1.99 Mozzarella Sticks $1.98

OFFICIALS’ MEETING: 5:00 p.m. Wednesday, October 18, Room 158 SRC
QB Johnson is okay, but Salukis’ pride hurt

By Dan Devine
Staff Writer

SIU-C returned from a run-in with its major league opponent, the University of Tennessee-Martin, Saturday night, possibly with bruised egos, but it didn’t show in the 15-mile cycling event. Lassen finished the triathlon in 1:56:38, while Durham was second.

The rain makes it hard to hold clubs, gets in the players’ eye and causes puddles on the course, he said.

“QB Johnson is okay, but Salukis’ pride hurt.”

Swimming Coach Tim Hill had better hope his “Iron Women” don’t sink when they begin training in the Natatorium this week.

Hill and his swimmers sponsored a scaled down triathlon last weekend. Twenty-six women participated, most of them members of the SIU-C swim team.

All-American Barb Larson was the top finisher, with a time of 1:55:28 for the three-part event. Swimmer Jenny Durham was second with a time of 1:56:31, and Stacey Westfall, yet another swimmer, finished third at 1:56:25.

Hill said that Durham was minutes ahead of Larson at the end of the three-mile run which began at McAndrew Stadium and looped around Campus Lake.

Swimming Coach Tim Hill had better hope his “Iron Women” don’t sink when they begin training in the Natatorium this week.

Hill and his swimmers sponsored a scaled down triathlon last weekend. Twenty-six women participated, most of them members of the SIU-C swim team.

All-American Barb Larson was the top finisher, with a time of 1:55:28 for the three-part event. Swimmer Jenny Durham was second with a time of 1:56:31, and Stacey Westfall, yet another swimmer, finished third at 1:56:25.

Hill said that Durham was minutes ahead of Larson at the end of the three-mile run which began at McAndrew Stadium and looped around Campus Lake.

When the runners returned to the Stadium and mounted their bikes, Larson had about 2.5 minutes to make up. Larson, described by Hill as a strong cyclist, made up the time during the 15-mile cycling event. Durham hung right with Larson most of the race. Hill said, but fell back to finish third, behind Larson and Amanda Martin.

The cyclists dismounted at the Recreation Center, and jumped into a familiar place for most of the contestants – the swimming pool.

Jennie Counts, another All-American, won the 1.8-mile swimming event, edging out freshman Stacey Westfall and Larson, but Larson’s overall times were the best. The swimmers were also divided into teams to instill team-support atmosphere into the most individual of sports. The winning team of Larson, Durham, Brenda Freeman, Martin, Linda Bell, Sue Harkness and Shayla Hill had a combined time of 15:18:42.

Hill said that he believes that some of his swimmers with proper training, could become professional triathletes. He pointed out that there is money to be made in this sport, both in sponsorship and participation.

Triathletes have gained in popularity since the television networks have included coverage of the “Iron Man” competition, held annually in Hawaii.

Hill said that he was very pleased with the turnout of this year’s event. He indicated that the team may sponsor a triathlon every year.

more encouraging news for a team that has watched the Valley Conference showdown with Tulsa Saturday night, possibly with bruised egos, but it didn’t show in the 15-mile cycling event. Lassen finished the triathlon in 1:56:38, while Durham was second.

The rain makes it hard to hold clubs, gets in the players’ eye and causes puddles on the course, he said.
