CIA-supported harbor mining might not continue, officials say

WASHINGTON (AP) — As members of Congress voiced anger over covert U.S. activities in Nicaragua, Reagan administration officials said Wednesday that un­directed mining of Nicaraguan harbors might not be resumed under the administration.

A senior State Department official said the initial phase of the mining had been completed before the administration had time to reconsider the program, which was to be approved by the State Department's Director of Central Intelligence.

The official, who spoke on condition of anonymity, said that the CIA would be forced to halt support for anti­government guerrillas who are operating in Nicaragua if Congress rejects an administration request for $21 million to finance the insur­gency.

The official said that phase one of the mining was completed a few days ago, and denied there was any "cause­and-effect" connection with President Reagan's Central America policy.

Nonetheless, the official acknowledged that the CIA was more interested in mining the harbor after the Senate's 94-12 adoption of an anti­mining resolution proposed by Sen. Edward M. Kennedy, D-Mass., and Sen. J.D. Byrnes, D-N.C.

The Senate's resolution was passed with the support of a group of senators who believe that the CIA's operations are hurting the United States by supporting guerrillas who are not friendly to the United States.

The administration had also asked the Senate to approve a resolution opposing the use of military force in Nicaragua.

The Senate's resolution, however, was passed with the support of a group of senators who believe that the CIA's operations are hurting the United States by supporting guerrillas who are not friendly to the United States.

The administration had also asked the Senate to approve a resolution opposing the use of military force in Nicaragua.

News Roundup

Astronauts swap satellite parts

CAPE CANAVERAL (AP) — Zipping happily through their task, two astronauts made the first in-space parts swap on a satellite Wednesday and awaited test results that would let them push Max beta to work.

In the early testing of the satellite, everything looked good. "Commands go, commands go out, blem-stem flows," the report of the experiment was good," said Carl Christmas, the boss of the satellite repair mission. "It's all totally ecstatic.

Fighting spreads through Beirut

BEIRUT (AP) — Fighting between Christian and Moslem militants spread today from Beirut's southern suburbs to the city's green lines and radio stations reported artillery shells crashed into several neighborhoods.

The battles began at 11 a.m., after a bull that followed an overnight fighting along the green line that divides the Lebanese capital into Moslem and Christian sectors.

Polo and six government soldiers and 43 wounded in overnight fighting. On Tuesday, two people died and 39 were wounded, police and hospital officials reported. There was no updated casualty report for the morning battles today.

Doctors OK privation for elderly

BOSTON (AP) — New guidelines by a team of prominent doctors say it is ethical to withhold drugs and sometimes even food and water from mentally deranged elderly patients who are hopelessly ill, as long as they are kept comfortable while they die.

The report, published in Thursday's New England Journal of Medicine, was prepared by doctors who gathered at Harvard Medical School. It is intended to provide criteria for physicians who must make life-and-death decisions for gravely ill patients.

Chernenko made Soviet president

MOSCOW (AP) — A triumphant Konstantin U. Chernenko became the Soviet Union's 10th president Wednesday, giving him the top three cupboard jobs and a stature equal to that of his two predecessors.

Chernenko, 62, has been Communist Party secretary general, the most powerful position in the Soviet Union, since after the Feb. 9 death of leader Leonid Brezhnev. He also took over as chairman of the Defense Council.

By the Associated Press

The race for the Democratic presidential nomination became a close race by the end of the week. The candidates, in an effort to move ahead, are seeking to gain black support.

Utility tax relief bill stalled, but backers optimistic

By John Racinj
Staff Writer

A proposal to cut state utility taxes in half is stalled in the General Assembly, but a spokesman for the bill’s sponsor said optimistic that the Legislature will approve tax relief legislation this session.

Patrick Quinn, spokesman for the Coalition for Political Honesty, said that even if the Coalition-backed proposal is rejected, alternative legislation will likely be approved.

State Rep. Ralph Dunn, R-Du Quoin, said he opposes the bill and believes it will be stopped by the House Revenue Committee. The Quinn proposal would cut the utility tax from $5 to 2.5 percent, and it has the support of industry, politicians and the administration.

Honesty said that Congress is in favor of the measure, but is not sure if it will be passed. Dunn said that the measure is likely, but would not be as aggressive.

The Quinn proposal seeks to freeze taxes at $49 for individuals, it has the support of industry, politicians and the administration. Dunn said that the measure is likely, but would not be as aggressive.

Rep. Bruce Richmond, D-Murphysboro, said he would favor the Quinn proposal and would definitely favor the Homer legislation. He said he would vote for the proposal only if it is not overcounted.

Dunn said that he favors taxrelief but not at the expense of an unbalanced tax system. He said "we should all pay our taxes. The utility tax is probably the biggest one we pay, but Quinn’s proposal is a bad-aid approach to cutting taxes.”

WASHINGcON (AP) — The House neared a decisive vote Wednesday on the key element of the state’s deficit-reduction effort — a $49 billion tax increase affecting liquor, cigarettes, telephones and businesses.

The bill was written by the Democratic-controlled Ways and Means Committee. The Ways and Means Committee’s work is supported by the administration, provided that the tax bill is followed by legislation to cut federal spending.

Democrats are confident of success. Even before the debate began, House Speaker Thomas P. O’Neill, D-Mass., said a week ago that the measure would “close tax loopholes without hurting the average family.”

“If we reject Reagan’s supply-side economics, puts the government on the firm footing of pay-as-you-go, we’d cut the Reagan deficit,” O’Neill said.

Rep. Dan Rostenkowski, D-Ill., chairman of the Ways and Means Committee, said that the bill, which passed the Senate, would mean that revenues in the measure were fairly modest, Greg was against. The measure would bring the state’s entire tax system with as few loopholes as possible,” he said.

If you translate that popular support into votes in the House, then, churchgoers look good.” Quinn said.

He said that if the bill fails he is confident that other utility tax relief measures will reach the governor’s desk.

Quinn said that legislation introduced by state Rep. Thomas Homer, D-Canton, would be a good alternative to the Taxpayer Relief Act of 1986, but would not be as aggressive.

“The Homer legislation is not all that bad,” he said. “But it doesn’t go far enough.” The Coalition’s proposal is a little holier.”

Homer’s proposal seeks to freeze taxes at $183 levels. Also, the tax would be based on usage not on the utilities gross receipts.

Quinn said that both measures would save individuals $50 to $60 a year. The Homer legislation probably would save 500,000 people $100 or more a year.

The governor recently told the Quinn proposal would be a good alternative to the Taxpayer Relief Act of 1986, but would not be as aggressive.

Emergency fiscal plan repeats past mistakes

A BITTER past was called to mind Tuesday, when the Faculty Senate discussed a proposal to lay off non-tenured faculty members of Trustees the power to declare a short-term "fiscal emergency." Under a fiscal emergency the board would have the authority to order voluntary buyouts to meet budget shortfalls.

The proposal does not distinguish between laying off tenured and non-tenured faculty. The plans for possible board-endorsed layoffs is reminiscent of 1973, when SUU tripped into the national spotlight following the first large layoff in the history of the fledgling institution. Included among the 104 were 38 tenured faculty.

Under a fiscal emergency the board would have the authority to order voluntary buyouts to meet budget shortfalls. The invisible editorial hand deleted what I consider to be an essential part of understanding properly the ABM Treaty. In print, I was made to say, "Directed-energy beam systems are not prohibited by the treaty but are made subject to special regulations -- interpretation E, which was added to the ABM Treaty on May 26, 1972:"

Peltier article bad errors

The article about the evidentiary hearing granted Leonard Petrie, attorney for the Daily Egyptian, contains several factual errors which I feel are worth correcting. I've carefully read your recent article and warrant this letter.

First of all, there is no evidence upon which the hearing being conducted is based. The evidence of record is based on the ties between Felter and the murdie group's weapons. The evidence will prove that the weapon did not fire the bullets that killed the people in the car. The evidence is based on the ties between Smith and Petrie, which the judge allowed into the record.

Use Brady blessings for Farer snack bar

I have a proposal for the Brady Building. I know that the University already has plans to do something with it, but I would like to see the use of money to build an indoor snack bar in Farer Hall, across from the large terminal room on the first floor.

In the Brady warehouse building in Marion. Instead of spending millions of dollars for a building 15 miles away, why not use an already existing building and use the money not spent to build another snack bar in Farer Hall? I have a collection of money from just seven students to Room 110.

Once again in America the sky's the limit.

Meese congers grim memories

Once again in America the sky's the limit. I again prove that as a people we have a disdain for purchasing horrendously defective used cars.

After Richard Nixon's triumphant re-election in 1972, we watched with horror and anger as the "new Nixon" revealed to us his true self. Nixon is not the most discriminated political figure on the scene (TSL Rights Div. King transformed the executive branch of the government into a private cabal, populated with crooks, thieves, and felons. We learned of the ruthless and contemptuous methods of Nixon that is not of crimes, all of them dedicated to seeing the executive branch of government use their can- nibalistic hunger for money and power.

How many times will we have to go through the usual gibberish that '90% agree with the 44 per- cent," "return to moral values," and "privacy?" We have fallen for it once again. The nominee for the post of Attorney General of the United States, the people's lawyer, the head of the Justice Department - Ed Meese, an old friend of Mr. President.

We need to recall that Big Ed and the last half of the 1960s as Reagan's fixer, with a taste for cruising campuses in an unmarked patrol car, a mahogany, billy-club fitted with lead shot and modified tenderly in his sweaty hands, looking for a few in- nocent long-hairs that he could beatdown in the grab, throw in jail for no reason at all.

The Attorney General designate of the United States has been at it since then. In the first two years of the Nixon administration, Meese was one of the two or three most powerful men in the country. But through his career, Ed has had trouble keeping his acting job. Meese is currently the head of the FBI.

A few high-dollar, no-interest loans from buddies who aspirred to be the next President, a taste for cruising campuses in an unmarked patrol car, a mahogany, billy-club fitted with lead shot and modified tenderly in his sweaty hands, looking for a few innocent long-hairs that he could beatdown in the grab, throw in jail for no reason at all.

T HIS is a critical point since the ABM Treaty is dependent upon the arguments of beam defense opponents. - Lee Palgry, Gzta Student, Zoology

Sweepsstakes prize comes with strings

Greek tragedy to be presented

The Bacchae, a Greek tragic play by Euripides, will be presented at 7:30 p.m. Friday in the Quigley Lounge.

The play is about a young man named Pentheus who understands the order and reason of the universe, but from that order relates to divinity, but who does not understand irrationality and the darkness of human spirit, and does not recognize the divinity in turns.

Dionysus, also known as Bacchus, is the god who represents these instincts and decides to teach Pentheus a lesson when he refuses to recognize the god.

In English, will play the role of Pentheus, and Peter Elton, graduate student in theater, will play Dionysus.

Clothing exhibition scheduled

An exhibit of clothing titled "Looking Back to the 1960s" will be presented by the Comprehensive Planning and Design 306 class from 9 a.m. to 7 p.m. Thursday in Quigley Hall lounge.

The exhibit will present various aspects of history, with special emphasis on women's clothing and the changes that have been made since 500 A.D.

Three speakers will lecture on various aspects of changes in styles. Sarah Reep, graduate student in environmental design, will speak on "Social Aspects of Clothing" at 11 a.m. Teresa Zetter, former New York fashion designer, will present a demonstration of "Instant Dress" at 3 p.m. Arnold Bart, professor of history, will speak on the "Recurring Social Fashions" at 5 p.m.

The exhibit is open to the public.

Church to host Women's Day program

The Greater Gillespie Temple will hold its Women's Day program Sunday.

The play is about a young woman named Addie Gillespie, member of the church, who will speak about "Willing Hearted Women" at 11 a.m. at the 51st-11th Fellowship Church in Champaign.

Three speakers will lecture on various aspects of history, with special emphasis on women's clothing and the changes that have been made since 500 A.D.

Goal of organization to help abused animals

By Elaine Wilkinson
Student Writer

A woman from Barrington who believed "one little voice raised in protest" was successful in 1971. However, she said, adding the encounter a decade ago when she realized the magnitude of animal abuse, and she said, "I was astounded by their owners."

"I thought the voice of the group was the voice of people in Southern Illinois," she said. "I am just an attack on the group because it is not totally responsible."

The Illinois Humane Society was instrumental in drafting the Animal Care Act of 1975. Ewing said. "We are a humane society, not an animal society."

The Illinois Humane Society is a non-profit organization and contributions to it will directly benefit the animals.

One major expense are horse stalls, which she described as "invaluable" in getting a downed horse back on its feed. The society makes the $600 stallings available for veterinary resources.

The IHASS has served as a model for similar organizations in other states, Ewing said, citing the Wisconsin chapter which she set up. She added, however, that Wisconsin members are still working to join the support of an enforcement agency and revision of laws.

Ewing said that the precise checks and balances of the Illinois system are major reasons for the program's success. She said animals, as well as owners, are protected.

Student Center to start international buffet

International cuisine will be offered at the Student Center cafeteria for the first time from 11:30 a.m. to 1:30 p.m. Thursday.

The International Student Council, together with the Student Center food service, has planned a meal of chicken curry with vegetables and rice — an Indian dish. The ISC hopes the international lunch is offered weekly, with food from different countries available every Thursday.

The meal is an attempt to offer a greater variety to students, according to Tamara Edwards, president for the ISC. The meal will cost $2.30.

Growth-regulating chemicals for grass being tested by prof

By Margaret Catlett
St. Louis Post Dispatch

While some homeowners are dreading lawn mowing duties, which are again in sight with the approach of spring weather, an SIU-C professor is trying to avoid the task of testing a chemical that will stop grass growth for six to eight weeks.

Donald Elkins, plant and soil science professor, said that early last year, homeowners may be able to spray their grass once every six to eight weeks instead of mowing it every week.

Elkins has been testing growth-regulating chemicals for four years on area turf grasses such as tall fescue and Kentucky bluegrass—typical types for homeowners' lawns.

Grass growth regulating chemicals were geared to be used because they cause discoloration, he explained, and will be "high-proof" with two·to-three-old flexibility. Elkins said this means that people who don't know much about the chemicals can apply two or three times the recommended amount without damaging the grass.

The new chemicals will be available in several convenient forms.

"If figured out several years ago that homeowners need the chemicals in an aerosol can with a foam carrier to spray are being developed of their lawn that would normally be trimmed," Elkins said.

The aerosol cans will probably be first on the market, he said, followed by a fertilizer-like form that can be sprayed, and finally a granular form that can be applied accurately with a lawn spreader. Chemists that can be applied with a hose attached may also become available.

Though the chemicals are presently on the market, Elkins said, "The advantage of the new growth-regulating chemicals is that they control growth as well as seedheads, as not certain.

Elkins said the chemicals will be particularly beneficial to older people, who can hire a lawn service to apply the chemicals every two months rather than hire someone to mow the lawn once every week.

The chemicals will also be advantages for vacationers, who can apply them to evenly mowed grass before leaving on a six-week vacation and come back to find their lawn exactly as they left it.

Large amounts of growth regulating chemicals would have no harmful effects on humans, Elkins said, pointing out that the chemicals would have to be non-toxic since children often play on lawns.

Elkins said all chemicals must be approved by the Environmental Protection Agency as safe in several categories, including danger of application and toxicity.

"You can imagine the volume of materials you have to submit to get just one chemical cleared," he said.

Though someone would probably make a fortune off the new chemicals, Elkins maintains that it will not be him. Companies formulate the chemicals, and thus have all the patent rights.

"That's not my job at the University," Elkins said. "My job is to discover things that will help people out, and that's enough credit for me."

The SIU Foundation has been given two pieces of radiological equipment by the Sara Bush Lincoln Health Center of Mattoon.

The gift, which is valued at $4,500, will go to the allied health programs in the SIU-C School of Technical Careers.

The equipment, a Viamonte Hubba power injector and a Pack automatic film changer, will be used for classes in STC's radiological technology program.

These instruments are extremely valuable to our program, as that they will allow us to teach many more concepts on campus rather than traveling to local hospitals for instruction," said Steven C. Jensen, program director.

Cowboy Olympics slated Saturday

A cow chip throwing contest has been scheduled, but rainy weather has caused a shortage of suitable dry chips, the event's organizers said. Other events will include the cowboy decathalon, the slop bucket relay and tobacco spitting.

The day will also include the 1,600-pound tug-of-war over a mud hole.

Breast cancer in rats linked to high fat diet

CHAMPAIGN (AP) - Two University of Illinois researchers say the development of breast cancer in laboratory rats seems to be linked with a high fat and high calorie diet.

Steven Clinton and William Visek presented their findings during a meeting of the American Chemical Society in St. Louis.

They reported that as the percentage of fat increased, the number of animals with tumors and the number of tumors also increased.

They also said rats that ate more food seemed to have a greater risk of developing breast cancer.

"A drop in caloric consumption of 10-12 percent was associated with a 25 percent decrease in tumor incidence," said Clinton.

Clinton said their research has two purposes. One is to "quantify the effect that fat has on the incidence of tumors," he said.

"The other is - if there is an effect - to find the mechanism because if you can understand that mechanism, you may be able to interfere in a way to prevent the cancer from occurring."

Fitness training may create need for more protein

CHAMPAIGN (AP) - People who engage in exhaustive exercise may need more protein in their diets, a University of Illinois nutrition expert says.

Donald Layman said people assumed for a long time that "protein wasn't important in endurance training," but his research indicates that is not true.

Layman told the American Chemical Society that vegetarian diets have been popularized by some running magazines but athletes "should be cautious" about them.

He said exercise seems to break down certain amino acids - the building blocks of proteins - in the skeletal muscles to produce energy.

The loss of those protein building blocks may increase the need for protein in the diet, he said.

The National Academy of Sciences recommends 56 grams of protein a day but the average American consumes 110 grams, said Layman.

Panel to discuss Marion prison killings

A panel discussion titled, "The Many Faces of Marion Penitentiary: Five Months of Lockdown," will meet from 7 to 9 p.m. Wednesday in Student Center Ballroom B. The discussion, sponsored by Concerned Citizens About Marion Penitentiary, will focus on the recent killings of two guards and an inmate at the Marion facility.

Group member Cyril D. Robinson, of the SIU-C Crime Study Center, said viewpoints will include that of prisoners' wives, former prisoners, prison administrators, a sociologist and a psychologist. Robinson will be moderator.

President of university to give speech

George E. Ayers, president of Chicago State University, will speak at a Graduate Professional Opportunities Program recruitment workshop, to be held from 8:30 a.m. to 5:30 p.m. April 28 at SIU-C.

For more information on the workshop call 536-7704.

WASHINGTON (AP) — Despite the competition of television, more than half of American adults read books, says a study released Wednesday, and one reader in three manages to go through a book a week.

"In the age of electronic entertainment and personal computers, books are thriving," said the study, conducted for the Book Industry Study Group, a non-profit organization representing publishers, book makers, suppliers, librarians and others in the book business. The study was based on 1,961 hour-long interviews last October.

The percentage of Americans who say they read at least an occasional book has barely changed in five years, the study said. It is 56 percent now and was 55 percent in a similar 1978 survey.

"But the distribution of readers in the population has changed," said the report, and it terms the trend "disturbing."

Heavy readers are reading more books and spending more time reading than readers of fewer books. And young people aren't reading as much as the young used to.

The proportion of heavy readers has doubled, from 18 percent of all book readers five years ago to 33 percent today. Heavy readers are those who claim to have read 26 or more books in the last 12 months — at least one a week, on average. They said they spent 14 hours a week reading books.

The heavy readers account for 75 percent of all books read and they also buy 85 percent of all books. They also read more magazines than non-book readers, but fewer newspapers, and are more likely to be filmgoers, to have cable and pay television and to watch public TV than non-book readers.

But the study found that book reading has declined among the young.

In 1978, three-quarters of those aged 16 to 21 said they read books, and that's now down to 63 percent. The proportion of young people who confine their reading to newspapers and magazines grew from 19 percent to 29 percent. People who said they read 10 to 25 books within the last six months accounted for 26 percent of all book readers, about the same as the proportion in 1978.

Those claiming to have read four or more books in the last six months, accounted for 23 percent of all book readers. That's down from 31 percent of the book reading population in 1978.

Light readers — one to three books in the past six months — account for 16 percent. It was 24 percent in 1978.

Washington urged to OK rail compact

WASHINGTON (AP) — Midwest officials urged Congress on Wednesday to approve an interstate compact that is studying the prospects of building a high-speed passenger rail system in Illinois and four other states.

Congressmen and state officials testified before a House Judiciary subcommittee on behalf of a bill that would grant congressional consent to a rail compact between Ohio, Illinois, Indiana, Michigan and Pennsylvania.

The measure also would create a council to coordinate the rail studies, with two representatives from each state.

Under the Constitution, interstate compacts are subject to approval by Congress. Ohio became the first member of the compact in 1979.
PIZZA parlor linked to heroin smuggling ring

OLNEY (AP) — Until news of the Pizza Connection put even the notorious French Connection to shame, this was the biggest story to come out of the tiny town of 11,000 in its 140 years in Illinois.

So when some of the southeastern Illinois town's 9,100 residents turned on their television sets Thursday night and heard that Joe's Pizza Parlor was accused of being mixed up in an international heroin smuggling conspiracy, they were, to put it mildly, stunned.

On Monday, federal authorities in New York accused the small town's only pizza parlor of being the linchpin in an international heroin smuggling ring.

The Pizza Connection is allegedly one of several New York-based illicit drug rings that have infiltrated the small-town pizza parlors generally known as "pizzeries" across the country.

The Pizza Connection was reportedly a major transfer point for the sale, transport and distribution of heroin from Central America to the United States.

The ring operated under the control of a group of more than 20 individuals, including many pizzery owners and managers, who helped to transport and distribute heroin from small-town pizzeries throughout the country.

The ring was involved in the laundering of funds through the use of pizzeries as financial transaction facilities, as well as the transportation and distribution of heroin to other countries.

The ring allegedly operated for over two years, from 1986 to 1988, and was responsible for the distribution of millions of dollars in heroin.

The ring was also involved in the trafficking of other illegal substances, including cocaine and marijuana.

The ring operated under the control of a group of more than 20 individuals, including many pizzery owners and managers, who helped to transport and distribute heroin from small-town pizzeries throughout the country.

Students lobby for bill to stop state investment in South Africa

By Nina Thompson  
Student Writer

An SIU-C professor and 11 students recently lobbied in Springfield for passage of an Illinois House bill which would require state pension funds now invested in South Africa to be reinvested in Illinois.

Lake Travis, provost in the Black American Studies Department who serves as a regional coordinator of the bill, took 11 students to Springfield April 4 to talk to representatives in an attempt to gain support for the bill.

One day ago the bill had been scheduled to be voted on by the House of Representatives April 4; the day of the rally. However, opponents of the bill made "strategic hour moves" by distributing packets of literature opposing the bill, and cranking up representatives to say it would endanger Illinois pension funds.

Rep. Braun pushed the voting back to give time to inform representatives of the situation in South Africa, and gain more support for the bill.

Introduced by Reps. Carol Mosby Bruin, D-Chicago, and Wood Bowman, D-Evanston, a year ago in March, the bill would require that state pension funds be divested from corporations doing business in South Africa, and would make banks ineligible for state funds if they loan to such firms for activities in South Africa.

The bill was co-sponsored by Reps. Jesse White, Robert LeFlore, Ethel Alexander and Howard Brooks, all Democrats from Chicago.

The amount of the Illinois investment is said to be well over $1.8 billion and, according to sponsors of the bill, this money could be used to invest in job-creating enterprises in Illinois.

Connecticut, Massachusetts and Michigan, and the cities of Philadelphia, Wilmington and Grand Rapids have all enacted legislation to force the divestment funds in U.S. firms doing business in South Africa.

Most of these places have not shown losses from divestment but several have shown gains by reinvigorating in corporations not affiliated with South Africa.

Black Muslim calls Jackson "sissy"

CHICAGO (AP) — Louis Farrakhan, the controversial Black Muslim minister, asked his followers to reject the "female-acting sissified" image of award-winning entertainer Michael Jackson.

Farrakhan blamed the 25-year-old Jackson, recent winner of eight Grammy awards, for his style that "actually ruins your young men and makes your young women have nothing to look up to." 

Farrakhan's criticism of Jackson was made in the same March 11 radio broadcast in which he allegedly issued a threat against Washington Post reporter Milton Coleman.

House passes bill to appoint elderly to state agencies

SPRINGFIELD, Ill. (AP) — The Illinois House on Wednesday approved a measure that would require the appointment of at least one senior citizen to 25 state boards and commissions.

Representatives voted 97-10 in favor of the measure, which would put a pension over the age of 60 on state boards that deal with health, education, the economy, culture and other issues.

The bill now goes to the Senate for consideration.

The bill has the backing of House Speaker Michael Madigan and State Attorney General Neil Hartigan, and has been the subject of intense lobbying by senior citizens groups.

Supporters of the bill said it would guarantee that senior citizens have a voice in discussion of state issues that affect them.

"The state should go on record as recognizing the role senior citizens can play in providing a unifying role for the senior citizens of this state," said Rep. Ellis Levin, D-Chicago, a sponsor of the measure.
The platform, 400 feet square and built of 12,000 tons of steel, is located in 367 feet of water in the North Sea. The structure is 782 feet from the sea floor to the top of the twin drilling derricks. Light feet higher than the "Zastor," Peachtree Plaza hotel in Atlanta.

"It was the largest single financial undertaking ever for Marathon Oil in its 95-year history," said Louis "Corky" Frank, president of Marathon Oil's British subsidiary, said during a recent tour of Marathon Oil is itself a subsidiary of Marathon Corporation.

In his Texas drawl, Frank gave the platform the business executive's superlative: "It was completed on time and on budget."

Marathon's publicity brochures show photos of a black gold gusher from the seabed and pumps them through a labyrinth of machinery festooned with warning signs.

Platform manager Bill Watson, whose native Edinburgh is heard in the burr of his accent, said safety was a major aspect of life on the platform.

"We drill ourselves every week like the military, so in the event of an emergency everyone knows what to do," he said.

In fact, immediately after a visitor lands at Brae's helicopter, he gets a lifeboat assignment in case the platform has to be abandoned.

About 450 men live and work on Brae, 12 hours on and 12 hours off for two weeks straight. Then, wearing rubber suit, a suit in case of a crash in the frigid water, they board helicopters to Aberdeen for two weeks of rest and relaxation.

The lowest wage is $1,810 a month—good pay for Britain—and the jobs are highly sought-after. Scotsmen make almost the entire labor force, and some farm or have other jobs in their half-month free.

Among the rules of platform living: no alcohol allowed, very few places to smoke, no fishing, and working without a written permit to do the job.

The platform is built of stacked modules. Each is crammed with machinery to treat the oil, remove corrosive carbon dioxide gas, separate natural gas from petroleum liquids, and pump crude oil into a 70-mile pipeline to the Forties Field where it joins another underwater pipeline to the shore.

Four modified Roll-Royce jet engines drive turbines that produce enough power for a town of 20,000 people.

Maguire said recent nationwide surveys show about 62 percent of high school and private U.S. universities limit co-ed dorm visits.

The University of Kansas now allows 24-hour co-educational visitors, except where a residence hall's students vote against it in the fall.

"We have listened to the students' objections to the rule," Maguire said. "But we must decide what type of residence hall environment is offered," Gierhan said.

Western initiated limited co-ed visitation in the 1969-70 school year, said John Maguire, university's assistant director of student affairs. In 1970-71, open-hour visitation rules were followed.

"While we have listened to the students' objections to the rule," Maguire said. "But we must decide what type of residence hall environment is offered," Gierhan said.

The new policy affects eight residence halls for undergraduates. It does not affect visits in Brae, 12 hours on and 12 hours off for two weeks straight. Then, wearing rubber suit, a suit in case of a crash in the frigid water, they board helicopters to Aberdeen for two weeks of rest and relaxation.

First win ‘glorious’ for Saluki netters

By Daryl Van Schouwen
Staff Writer

The drought is over.

After losing its first 17 matches of the year, the SIU women’s tennis team trumped Evansville 7-2 Wednesday at the University Courts.

The glorious day has arrived,...said Saluki Coach Dick LeFever.

The Salukis’ top five singles players knocked off Evansville’s best quartet, setting up the win before the doubles action — making Per Wadmard and Lars Nilsson’s fifth win in their last seven doubles matches academic.

“They thought we’d win going in,” LeFever said, “and we loved playing well.”

W edmard, the Salukis’ No. 1 singles player, came from behind to defeat Dan Flanigan 5-7, 6-2, 6-1, while No. 2 Gabriel Coeh did the same — by a 3-6, 6-3, 6-2 count.

LeFever got straight-set wins from No. 3 Nilsson and No. 4 Chris Viocci. Nilsson returned an intrasquad 6-2, 6-1, and Viocci prevailed 6-1, 6-4.

The Salukis’ No. 2 doubles team picked up SIU-C’s other singles win, a 6-3, 6-7, 7-5 decision over Pat Hyman. Steve Quaray returned the only Saluki to suffer a singles defeat, but he bounced back with Ranch in doubles action with a 6-1, 6-2 win at No. 3.

“It’s a good win,” LeFever said. “Evansville has a pretty good program.”

The netters have three more tune-up matches remaining, against St. Louis, Illinois State and Southeast Missouri, before the Missouri Valley Conference Championships April 19-22.

“We’re building for the conference tournament,” LeFever said.

DeNa signs 3 recruits

By Steve Koulas
Staff Writer

First-year Coach Don DeNaioiio has his first recruiting class toward rebuilding the Salukis’ women’s cross country and track teams by signing three recruits Wednesday to national letters of intent.

DeNaioiio signed a pair of in- tersection 8 runners, Sarah Gore of Wiltsie, England, and Lisa Reed of Onta rio, Canada. The other recruit signed to Laura Friedle of Old Bridge, N.J.

“These three can take our program a giant leap forward said DeNaioiio. “Each is a national caliber athlete who should be competitive immediately in a big way. Together, they should make us competitive regionally and maybe nationally.”

The three recruits should make the Salukis more competitive in the Gateway Conference. The cross country team finished just seventh last fall in the GCAC meet while the track team turned in a disappointing sixth-place showing at the GCAC indoor meet this season.

Seven to compete in equestrian regional

The SIU equestrian team, which finished as reserve champion stock seat last year after competing in seven shows within Region VI, is nearing the end of its show season.

The final events of the season will include regional and national competition. Those qualifying for the regionals include Kris Osborn, Carol Horm, Justin Bohn, Kelly Gore and four other women.

The Salukis are preparing for the Regional Four-H Day at the University Courts.

Full Tilt in Ultimate Bowl III

Full Tilt, SIU-C ultimate frisbee team, will compete in Ultimate Bowl III this weekend at Atlanta.

SIU-C teams are entered in the tournament and the winner will receive an automatic berth to the World Flying National Disc Championships in the fall.

Full Tilt, 3-1, will play three games Friday in pool play against teams from Orlando, Fla.; Richmond, Va., and Atlanta.

If Full Tilt finishes first or second in pool play it will advance to the quarterfinals on Saturday. The semifinals and finals will be held on Sunday.

Raycroft, a tri-captain on the team, will be one of the top shoes in the tournament should Full Tilt earn a berth.
