Group plans to protest bar's wet T-shirt contest

By Dennis Sullivan
Student Writer

A group angered by a scheduled wet T-shirt contest at Das Fass plans to protest the event at 3 p.m. Friday in front of the South Illinois Avenue bar. Carey Burke, an organizer of the event, charged that the contest is a "blatant prostitution of women's bodies and men's minds and an insult to human dignity."

Mark Grabiner, day manager of Das Fass, said that he didn't understand why there is a problem. "It's not like we're bringing Sodom and Gomorrah to Carbondale," he said.

The contest, which offers a \$75 dollar prize to the winner of a final "heat," will be the first of its kind at Das Fass.

"Judging will basically be done by the audience," Grabiner said, "but in case of a tie professional judges from the National Wet T-Shirt Association will be called in."

Charlotte McIntosh, the initiator of the protest, explained she felt that "it was time to do something."

"Everyone's saying it's the coming

thing but many people, including myself, think it's disgusting."

An organizational meeting was scheduled for Wednesday night at the Women's Center to discuss strategy for the protest.

Contestants will appear on the upper balcony of the beer garden, where they will be separated from the upper-deck audience by a wooden gate. They will be doused inside.

"We're going to throw a bucket of water on them inside the bar," explained Grabiner, "because we figured it would protect the audience from getting wet."

There have already been "a couple of potential contestants" who have inquired about the contest, Grabiner said, "but the actual registration doesn't start until tomorrow."

Negative response has been minimal, he added. "I got a call from one woman who told me I had to tell her who all the advertising supporters of the contest were and threatened me with a lawyer. I told her to go ahead. It wasn't any of her business."

Brandt: WSIU endangered because of old TV equipment

There is a "very real threat" that SIU will be forced to shut down operations of WSIU-TV, an educational television station unless it receives \$600,000 to repair or replace equipment, President Warren Brandt says.

Brandt told the Illinois Board of Higher Education (IBHE) Tuesday that it should not increase the number of educational television (ETV) stations if the existing ones, including SIU's have to close because of inadequate funding. Brandt said WSIU needs the money to repair or replace equipment.

Charles Lynch, chairman of the Radio-TV department said, "I don't see any sense in putting money in new stations."

"I don't see any sense in putting money in new stations," Charles Lynch, chairman of the Radio-TV department said. "Some of our equipment is antiquated...We're living on dangerous ground."

Brandt added that if aid is not available for WSIU, he would not take money away from educational programs to keep the station running.

IAC bars public from bonus meeting

By Mark Edgar
and
Andris Straumans
Staff Writers

Permission will not be granted to people who want to attend the meeting of the Intercollegiate Athletics Committee (IAC) to review guidelines on bonuses for coaches.

W. D. Klimstra, IAC chairman, said Wednesday, "It is the position of the committee that it will be closed."

Klimstra told the Faculty Senate Tuesday that if persons want to attend a committee meeting they must request permission.

Klimstra justified the decision to close the meetings, saying the IAC "does not fall under open meeting law."

He said Wednesday the decision to

close the meeting was based "on a number of considerations," but declined to name them.

Klimstra said he would not "delineate" the reasons.

Klimstra said the meeting is tentatively scheduled for 1:30 Friday in Anthony Hall.

He also said the Southern Illinoisan incorrectly reported that a meeting scheduled for July 6 was open to the public.

Klimstra said the statement was the "interpretation of the writer."

The IAC meetings are "simply not construed as open," he said.

The Southern Illinoisan reported that "Klimstra indicated the meeting will be open to the public." Regarding the Open Meetings Act, a written opinion by Attorney General William Scott regarding the Intercollegiate Athletics Board of Eastern Illinois University in Charleston said that the athletics committee could not hold closed meetings.

EIU's athletics board is advisory and the members are appointed by the faculty and student senates. It advises the president of the university on matters of policy and budget in areas relating to intercollegiate athletics.

Scott said advisory committees of public universities are subject to the Open Meetings Act.

Scott said "Anyone who undertakes a public office or membership on a public body should be aware that his actions will be subject to criticism."

"Secret voting by members of public bodies can only contribute to further deterioration of public confidence in government and undermine the very basis of representative democracy."

Scott said.

But, the 4th Appellate District Court ruled in May that University of Illinois Assembly Hall advisory committee could close its meetings to the public.

Shari Rhode, assistant University legal counsel said Wednesday the court ruled that the University of Illinois

Foundation: Gifts won't stop

Donations to SIU's athletic department will not decrease if Gale Sayers, athletics director, continues to grant cash bonuses to coaches, J.C. Garavalia, director of the SIU Foundation development office, says.

Garavalia said Wednesday that he does not foresee a dropoff in contributions to the foundation, a nonprofit organization which raises money from private sources to support University activities.

Sayers gave \$7,000 in bonuses to football coach Rey Dempsey and his assistants last December from funds contributed to the Saluki Athletic Fund of the SIU Foundation.

Sayers said he is also considering giving bonuses to basketball coach Paul Lambert and baseball coach

Richard "Itchy" Jones.

Garavalia said he "doubts that there would be a decrease in donations" as a result of Sayer's decision to grant cash rewards to coaches.

"Most people interested in assisting the athletics program would not be concerned about that," he said.

Garavalia said he could not determine if Sayers' action will be a boost to the contributions.

Sayers has said he would award bonuses to coaches—not just those of revenue producing sports—who bring SIU national recognition.

The Saluki Athletic fund, a private account under Sayers' control, had a balance of \$18,000 last week, a foundation spokesman said.

Gus Bode

Gus says the Mace-Sayers-Klimstra policy is clear enough—the public isn't to reason why but only to cheer and buy.

Scientology says government involved in narcotics

by Rick Isa
Staff Writer

The Church of Scientology has charged that government agencies, including the FBI and the CIA, are harassing the church in an attempt to "cover up a massive international narcotics operation."

Scientology spokesman Vaughn Young said Tuesday that the National Commission on Law Enforcement (NCLE), sponsored by Scientology, has investigated the French-based international police organization, Interpol and has "supporting evidence that the organization is involved in illegal drug traffic between France and the United States."

"We are not talking about a few dishonest cops," Young said. "We are talking about an operation that is being run with the blessing of France officials and the cooperation of American officials in Washington from where the orders for the raid came."

Kayne A. Mize, representative for the Carbondale mission, said that a story by the Associated Press in the July 9 issue of the Daily Egyptian contained only "fragments of the real story" behind a raid of churches in Los Angeles, Calif. and Washington, D.C. The raids were conducted after a former church official, Michael Meisner, gave information to the FBI and he was arrested and decided to cooperate with federal investigators.

Meisner was arrested after allegedly conducting covert investigative operations for the church.

According to an affidavit filed by an FBI agent, the church gagged and handcuffed Meisner to prevent him from returning, referring to the affidavit said that Scientology doctrine requires that "the church attack and destroy its enemies... and those like Meisner who leave the church."

Robert Toffness, regional director for Scientology in St. Louis, Mo. said

the affidavit is "off the wall" and that any Scientology action against Meisner would result in excommunication from the church and "nothing more."

Young has said that the raid is in retaliation for evidence he turned over to the U.S. Justice Department about Interpol after Young toured Europe early in 1977.

Young has in effect, proven to us that our research is correct, that there is a massive, international narcotics cartel which is operating with the knowledge and consent of highly placed government officials both here and abroad," Young said.

Young said that the FBI has not permitted the church to copy any of the material they look in the raid, and that the organization is "on a fishing expedition taking documents obtained by the church under the Freedom of Information Act (FOIA)."

In 1975, Scientology was involved in 13 lawsuits that asked the FBI to make public its files on the church. At that time, according to a book by Omar Garrison who is not a Scientologist, "The Hidden Story of Scientology" (Citadel Press, 1974), the FBI supplied church files to Interpol, who then gave them to Scotland Yard, who then gave them to the German Federated Police, (GFP).

The GFP, according to the book, requested files on Scientology after the church's publication, "Freedom" printed an article which allegedly exposed treatments used at a German psychiatric institute as being "roughly equivalent to the Middle Ages."

"We know we are getting close to something," Mize said. "This raid is nothing new. Our belief that the mind should not be tampered with by drugs, electro-shock or lobotomy, or other psychiatric methods, has made the church a lot of enemies, including the American Medical Association (AMA) and the

World Federation for Mental Health (WFMH)."

Mize said the Carbondale mission's only conflict with the government was in the IRS decision to refuse tax exemption for ministers "two or three years ago."

"The IRS has refused the church tax exemptions, even though Scientology was officially declared a church over 20 years ago," Mize said. "Only in the last year has the church been granted exemptions."

"The result of the recent raid was for the FBI to take whatever they could find in support of their case against the church," Mize said.

"People seem to think that now that Watergate is over, all government conspiracy is over," Mize said. "In reality, Watergate gives the government all the more reason to cover up any other illegal operations."

Scientology filed a \$750 million suit against the U.S. government in January 1977 claiming that the FBI, the CIA and Interpol have used informers, illegal wire-tapping, mail surveillance, and have forwarded false information to foreign governments "in an effort to provoke hostilities against the church in other countries."

Young said that Scientology has linked Interpol and U.S. government officials to an international narcotics cartel and that the cartel is behind the heroin and cocaine being smuggled into this country that it extends into the highest ranks of the French judicial and police systems.

"The raid of a church is keeping with their criminal mentality, and we are now dedicating ourselves to the fight not only for religious liberty but to expose those who are seeking to turn this country into a police state," Young said.

PREYING MANTIS

WASHINGTON (AP)—The praying mantis would be better named a praying mantis, says National Geographic, referring to the insect's predatory habits.

Although it is harmless to humans, an adult mantis gobbles up flies, bees, weevils, locusts, crickets, wasps, beetles, and grasshoppers. In addition the female often devours the male after mating, says Geographic.

Because of its dining habits, it has gained a new popularity among gardeners as nature's answer to pesticides. While stalking its victims, the insect waits patiently with its long forelegs raised, ready to strike. This "prayerful" posture gave it its name.

News Roundup

Blackout in New York: New baby boom?

NEW YORK (AP) — A major blackout affecting New York City and all its boroughs as well as parts of the Eastern Seaboard struck Wednesday night.

Racial violence spurs prisoner lockup

SAN QUENTIN, Calif. (AP) — San Quentin's 2,300 inmates were ordered locked in their cells Wednesday for an indefinite period, and an atmosphere of "tension and fear" was reported following fighting between Black Muslims and self-styled Nazis that left three dead. "The situation will be evaluated daily but, for now, they are confined to their cells," Mike Luxford, acting prison information officer, said Wednesday. "The lockdown is prisonwide."

Three convicts were killed and five others injured in two separate incidents Tuesday in the stone fortress on San Francisco Bay. Luxford likened the prison hospital to a "battleground. There was blood and people everywhere. It's an incredible mess."

Senate okays funds for neutron bomb

WASHINGTON (AP)—The Senate voted Wednesday to give President Carter authority to go ahead with production of neutron weapons. By a 58-38 vote, the Senate rejected a move led by Sen. Mark Hatfield, R-Ore., to cut out funds for the warheads intended for use by NATO forces in Western Europe. The voting was a victory for President Carter, who said Tuesday that while he has made no final decision on whether to add the weapons to the U.S. nuclear arsenal, they are needed in the national interest.

Senate tightens belt on fringe benefits

WASHINGTON (AP)—Those free haircuts that once were one of the privileges of service in the U.S. Senate now cost \$3.50. And senators now are being asked to drop such perquisites as free shaving mugs, hairbrushes and combs. The Senate Appropriations Committee approved without dissent on Wednesday a \$991 million bill that trims some, though not all, the benefits that go with service in the Senate.

Study shows rapid rise in poverty level

WASHINGTON (AP)—Reflecting inflation and a sluggish economy, the number of legally poor Americans increased by more than 10 per cent to 25.9 million persons from 1974 to 1975, the greatest annual increase since 1959, the government reports.

That means that 12 per cent of all Americans were below the poverty level of \$5,500 in 1975. The median family income was \$13,720 in 1975, or 6 per cent higher than it was in 1974. But during 1975, the 9 per cent inflation rate cut the buying power of such a family by \$380, or 3 per cent, another government report shows.

OPEC talks end in split over price hike

STOCKHOLM, Sweden (AP)—A meeting of the Organization of Petroleum Exporting Countries - OPEC - that began as a demonstration of unity ended discordantly Wednesday with the makings of another split among radicals and moderates over oil price hikes. Radical members of the 13-member oil cartel indicated they would oppose efforts by Saudi Arabia and Iran, the two biggest OPEC exporters, to freeze current prices through 1978.

Illinois corn crop expected to create near record yield

By William Frater
Associated Press Writer
PEORIA, Ill. (AP)—With growing conditions ranging from excellent to drought, Illinois farmers are expected to produce a fifth of the nation's crop, 1.21 billion bushels.

The Illinois Crop Reporting Service said that Illinois' 11.35 million acres of corn fields are expected to yield an average of 110 bushels per acre, compared to the national average of 89.4.

Last year the average Illinois yield was 107 bushels per acre and the all-time record set in 1975 was 116 bushels.

In its first corn harvest estimate of the season, the U.S. Department of Agriculture said the nation, led by Illinois, should produce about 6.33 billion bushels, about 2 per cent more than last year.

It also said that Illinois farmers have harvested a bumper winter wheat crop of 70.4 million bushels—44 bushels per acre and four bushels per acre more than predicted.

While much of Illinois is short on moisture, rainfall has come when needed most.

"If we get another rain and let our corn reach its potential, our county should do better than what they're predicting for the state," said Ken Bolen, University of Illinois county extension adviser in DeKalb county.

"I'd say this could be one of the best years we've ever had — 8 to 10 per cent over last year on corn." Last season the northern county averaged 115 bushels per acre.

The west edge of Illinois was hit by a costly drought last year, and still has not recovered.

"We were 15 inches short on rain last year and most of McDonough County has gotten less than four inches this whole season," said Dick Weller, farm extension adviser in Macomb.

Last year's yield of 103 bushels per acre, down about 20 bushels from 1975, "was more than what I felt it would be," said Weller. "...Our corn is fairing pretty bad now and I have to feel our crop will be lower than last year."

Illinois led the nation in corn and soybean production last year while Iowa, like western Illinois, was suffering through drought.

Primarily because of an unusually warm spring, corn growth in Illinois is well ahead of normal.

Twenty-four per cent of the Illinois corn crop is reported in excellent condition, 63 per cent good and 13 per cent fair.

IAC MEETING ROOM

Editorial

IAC closed-door policy not ethical

W.D. Klimstra, chairman of the Intercollegiate Athletics Committee (IAC), should open IAC meetings to the public.

While Klimstra says the meetings have been closed for at least as long as he has been chairman, his announcement Wednesday was in direct reference to a scheduled IAC meeting to discuss a policy on cash bonuses for coaches.

The question of whether such a bonus system is entirely ethical, and a concern over proper guidelines for the practice has become an issue of increasing public interest.

The IAC's policy of conducting closed meetings is wrong for both legal and ethical reasons.

Klimstra says that he has been advised that the IAC meetings do not fall under the jurisdiction of the Illinois open meetings law.

However, a previous opinion handed down by Illinois Attorney General William Scott seems to refute Klimstra's claim.

In 1975, the Intercollegiate Athletics Board at Eastern Illinois University (EIU) held a closed meeting at which it voted secretly to drop several intercollegiate sports.

EIU's athletics board served in an advisory capacity like SIU's IAC—except EIU's board reported to the president of the university rather than the vice president for University relations.

When questioned about the legality of the Eastern board's action, Scott wrote in his opinion that all advisory committees and sub-committees of universities were indeed covered by the act and were thus subject to all its regulations.

A May 1977 case involving the Assembly Hall Advisory Committee at the University of Illinois seems to contradict the opinion in the EIU case. The court decided that in this instance the advisory committee was not covered by the open meetings act.

However, the opinion on the U of I case specifically limited the effects of the decision to that particular case and said it should not be applied to others involving university committees.

Furthermore, the IAC operates on a much wider scale than an assembly hall advisory committee and is of more direct concern to a greater number of people.

The University, a public institution, asks the public to support its athletics programs. Public money, in one form or another, pays the way. Yet the IAC, a creature of the University, denies the public access to what it's doing to make — and to keep — the program worthy of support.

In the case of the coaches' bonuses, the defense of the secretiveness has been that the money was privately donated to the SIU Foundation.

But why should an expression of pride in a winner be kept a secret? Why the under-the-table approach, if what Mace, Sayers, Klimstra and Co. are doing is legitimate and, in their opinions and the opinions of the IAC, is in the best interests of the University?

That's what's so puzzling about this whole affair of bonuses and secret meetings. What are they hiding? If the legal argument as expressed in Attorney General Scott's opinion on the Eastern case doesn't convince Mace, Sayers, Klimstra and Co. that they ought to conduct the public's business in public, maybe they will respond to a suggestion that it seems to be awfully dumb public relations to shut the public out.

So, c'mon sports—let some light in.

Letters

D.E.'s handling of bonus issue pure horse (bleep)

To put it bluntly, the D.E.'s handling of the matter concerning Gale Sayers and his bonus policy is pure horse (bleep). Day after day I read an article somewhere within your paper on this matter stating the same shaky accusations with the same quotes and figures. In fact, this parallels the Rey Dempsey parking ticket fiasco, in which the D.E. served as nothing more than a gossip column rather than a media outlet.

In Tuesday's edition of the paper, Mr. Staumanis stated that a telephone survey was conducted by the D.E. indicating that no other Valley member granted "cash awards" to its coaches. If he had taken the time to investigate this further, he might have found that no other Valley school is even close to competing on the national level in the same manner in which Southern does.

Gale Sayers raised the money for the SIU Athletic Fund through a lot of hard work. I have yet to hear a complaint on this matter from those people who so generously contributed for athletic purposes.

Contrary to Mr. Koehler's opinion, SIU is a major sports university. Because of Mr. Sayers and the entire athletics department's efforts, it will continue to stay that way. In addition, I challenge you to find more than 15 other Division I schools with equal stature throughout their entire athletic programs.

Not only did Rey Dempsey and his staff deserve bonuses, but Paul Lambert, Itchy Jones, Lew Hartzog, Dick Meade and Bob Steele do as well.

Mr. Sayers is clearly in the public eye because of his background in the NFL and the nature of his job here at Southern. If you cheap-shot, glory-hungry journalists can look at Sayers' record at SIU and the performance of the coaching staff and still find fault, I'll file a retraction.

When and if that day ever comes, I'll look forward to reading some interesting material. But until you can get some concrete material on this matter, put the garbage in the can and some news in the paper.

Jim Vandiver
Former student and broadcaster

D.E. doesn't know what 'real' news is

This recent sports "controversy" stirred up in the Daily Egyptian this past week has me wondering again about the paper's ability to decipher what "real" news is. Reading about the bonuses given to SIU football coach Rey Dempsey and his staff and the proposed bonuses for basketball coach Paul Lambert and baseball coach Itchy Jones brought back memories of the Dempsey parking ticket mess. At that time I thought the paper had overblown the whole thing, but when this bonus story appeared on the front page I felt compelled to ask, "Where's the story this time?"

Is the story in the fact that Gale Sayers was wrong when he told two reporters, "every university gives its coaches bonuses for doing well?" If so, I hope the two reporters are held to every word they say from now on, whether they say it on the spur of the moment or not. I also want to sarcastically thank them for making it harder now to interview Sayers and his coaches. They will be hesitant to talk about

anything even half way controversial for fear of their statements becoming front page issues.

Is the story in the fact that the Intercollegiate Athletic Committee has no guidelines for giving coaches bonuses? I agree it's a story, but is it front page material?

Is the story the fact that they are getting the bonuses at all? I hope not, because I think they deserve the extra money. If the story is over where the money is coming from, it must be pointed out that we, as students, have no say over how the SIU Foundation spends its money. It is not funded by our fees nor by any taxpayer fees. It raises its money on its own and what it does with it is its decision.

So, where is the story in this "controversy?" I fail to see it and I wonder how many other Daily Egyptian readers do.

Mike Reis
Senior, Radio-TV

While we're giving bonuses, let's give one to Bucky and Bill and Marjorie and...

I think Gale Sayers' idea of giving bonuses to everyone who has brought "outstanding national recognition" to SIU is great.

Let's start with "Bucky" Fuller. He has brought "world wide" recognition to our University. Let's make it retroactive and give a bonus to Marjorie Lawrence. How about Bill O'Brien? Or Buren Robins? I'm sure there are many, many others.

Now if we can only get Thompson to come across with the money to do these things...or maybe we can get it from the Athletic Fund.

Sports isn't SIU's only reason-to-be

Gale Sayers is no doubt doing what works in the world of professional football. The flak should be directed at those responsible for bringing him here to give SIU prestige.

In academic circles it is pretty well known that the late Robert Hutchins gained prestige for the University of Chicago when he dumped football some forty years ago. When Father Hesburg de-emphasized football at Notre Dame that institution's reputation as a university was greatly enhanced. The real question seems to be: Just what is the function of a University?

'Bridge Too Far' too much gore

By Norman Carlson
Staff Writer

"A Bridge Too Far" went one step too far. Not since "D-Day" has a film incorporated so many big-name stars, or so much destruction. But the film is not a glorification of war; it's a glorification of the horrors of war. Bullets and bombshells litter the screen for an unbearable majority of the epic's three-hour battle.

The film is graphic. Its creator, Joseph P. Levine, uses blood and gore extensively, but for the most part, he uses it well.

In fact, his more unfortunate characters portray effectively an individual reaction to their wounds which is supplemented by Levine's

staff sergeant who saves his captain, who has a large bullet-hole in his head, by driving his jeep through a forest infested with German tanks and troops.

The list goes on, and on. But the plethora of headline actors defeats the intent of the film by extinguishing the impersonal chaos and confusion that is war.

The mission fails, too. The preparations and the planning depicted in the initial phase of the movie are tempered by the heavy-handed foreshadowing throughout.

Those awesome scenes—skies filled with airplanes and gliders, rows of military hardware gleaming defiantly in the sun, high morale and optimism written on the troops' faces—all give the reviewer that same feeling, we will win.

That is Levine's twist. When this movie pops up on the late movie, as movies of this calibre frequently do, it will be billed as the first "war epic" depicting unsuccessful allied war efforts.

The dialog is deliberately misleading. References to the cavalry (tanks) always arriving in time, the stereotype German officers—from stupid to shrewd—predicting defeat for their forces, and of course, the presence of Robert Redford contradict the foreshadowing of doom. It is not until near the end that the stark realization of defeat rises from the smoke and rubble.

And then, even, it is over-painted. Lawrence Olivier, magnificent and versatile actor that he is, plays the doctor witnessing the tragic spectacle of war with solemn frustration as he struggles to mend broken human parts amid the

groans and blood filling Liv Ullmann's villa.

The battle ends, and Connery's few remaining troops withdraw, leaving behind the wounded. The film shifts from the fray to the left-behinds, the fresh graves, the devastated buildings and the burning implements of destruction. It closes on the stone-faced, moist-eyed Olivier surveying the remnants of what had once been home.

A Review

adroit use of sharp, short, silent visual images designed to leave lasting impressions.

Precisely this effectiveness limits the picture's value as a whole. The story-line revolves around a strategically located bridge at Arnhem, Holland, and a daring allied plan to capture it.

Sean Connery leads English paratroops dropped near the bridge while Ryan O'Neal commands a tank battalion through over 60 miles of occupied territory en route to the site.

Gene Hackman plays the general who has reservations, and Dirk Bogarde, as Gen. Browning, is the man who conceals alarming aerial photographs in his ambition for the glory—and recognition—that war is supposed to bring.

James Caan portrays a crazed

Folk singer to perform

Erin Isaac, a female singer-songwriter will be the featured performer at a Student Government Activities Council (SGAC) sponsored Desert Playhouse event, at 8 p.m. Thursday in Student Center Ballroom D.

Admission will be \$1, which includes a choice of chocolate cake or apple pie with coffee, tea or milk.

Art deadline nears

The deadline for accepting entry blanks, an entry fee of \$5, and a maximum of three 2" by 2" color slides for this year's Southern Illinois Artists Open Competition is 5 p.m. Friday.

The entries of art work will be judged later this month by juror Michael Curch of Michigan.

Works selected for the exhibit will be displayed at the Mitchell Museum, Mt. Vernon, Sept. 3 to Oct. 2, 1977.

Entry blanks and information may be secured by calling the Mitchell Museum at (618) 242-1234.

A veteran of the Colorado ski resort circuit for the past several years, Isaac has appeared in performances at colleges and clubs in 18 states.

Isaac's strong, clear voice and unique left-handed guitar style make for a very distinctive approach. Known as an excellent songwriter, one of her recent songs, "Winter Moon," was a winner at the 1976 American Song Festival.

While she does sets consisting primarily of her own material, her repertoire also includes the songs of Joni Mitchell, Phoebe Snow and Bonnie Raitt.

Perhaps Isaac's strongest recommendation comes from the Wineskin Club in Aspen, Col., which has been her home base for the past few years. They call her a "great performer."

When an artist gets that kind of recommendation from those who have seen her many times, it's an indication that she is doing something right—not to mention different.

Stagnant water increases risk of encephalitis from mosquitoes

By Constantine Karahalios
Staff Writer

The cool breeze following a heavy summer shower usually comes as a relief to the humid Southern Illinois area. But when the breeze leaves, the water becomes the breeding ground for mosquitoes.

Stagnant water is the breeding ground for the northern house mosquito, primary carrier of St. Louis Encephalitis, a strain of encephalitis that got its name after a serious outbreak of the disease in St. Louis in 1933.

A viral disease affecting parts of the brain and spinal cord, encephalitis is usually marked by a

ticular mosquitoes do not start feeding off of humans until mid-July.

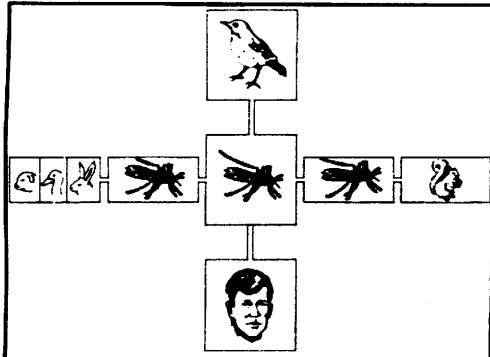

About 86 species of North American birds play host to the mosquitoes for the late spring and early summer, including house finches, house sparrows and pigeons.

"About the middle of July the mosquitoes go from birds to humans as an added source of food and continue to do so until mid-October," said Jacknik.

"The birds are considered the primary reservoir for the encephalitis. If the disease is not transmitted from one generation of mosquito to the other, uninfected

A person who believes he, or someone around him, is suffering from encephalitis should see his physician as soon as possible. Although there is no specific cure for the disease, a physician may administer antibiotics and help the patient be as comfortable as possible.

Also, every case should be reported to Jackson County's health department, 342-A North St., Murphysboro, to help stop any possible epidemic.

Gary Mabry

This chart represents the path St. Louis Encephalitis takes to reach humans. The disease is transmitted to man through the mosquito, but birds are the primary carriers. Mosquitoes also give the disease to other animals, such as rabbits and squirrels.

sudden onset of headache, high fever, disorientation, coma, occasionally convulsions (especially in infants) and spastic paralysis.

Since the 1933 outbreak, St. Louis Encephalitis has been found in all states west of the Mississippi River, in the Ohio River Valley, Florida and in the Camden, N.J.-Philadelphia, area.

In Illinois, sporadic outbreaks have occurred in McLeansboro in 1964 and in Eldorado in 1968. In the summer of 1975, 578 cases were reported throughout the state. There were 47 deaths as a result, a fatality rate of 8.1 per cent, one of the worst ever recorded.

Michele Jacknik, the Jackson County health department's associate health educator called it "a real epidemic year." "There is no special treatment, no immunization, no cure," Jacknik said. "The way to prevent it is to stop the source, the mosquito."

The virus is transmitted by the northern mosquito common to this area. The mosquitoes lay their eggs in rafts or clusters directly on the surface of slow moving or stagnant water or in raw sewage that is allowed to pool on top of the ground.

The mosquitoes also breed in water held in containers such as tin cans, old tires and broken bottles. Jacknik stressed that the homeowner can help prevent the disease if they discourage mosquitoes from breeding in their neighborhood by eliminating trash and containers that may hold water.

"Since all mosquitoes need water in the first stages of development, it's natural that the elimination of water where mosquitoes develop should be the foremost method of control wherever possible."

"These mosquitoes live around homes and rarely travel more than a mile from where they hatch," said Jacknik. "By properly disposing all trash and containers around the home which may hold water, the homeowner does a lot to help prevent the disease."

Other favorite breeding places for the mosquitoes are clogged rain gutters and downspouts. Both should be maintained regularly so that water is allowed to drain freely.

Although no cases of encephalitis have been reported this year, Jacknik emphasized that these par-

mosquitoes could possibly pick it up while feeding off infected birds."

Testing the bird population can give an early indication of how prominent the viral strain will be in upcoming months. This year, tests taken by the Illinois Department of Public Health in three southern counties, not including Jackson, show that 10 per cent of the birds sampled carry the virus.

The mosquitoes feed off secondary hosts, including domestic and wild mammals and other birds. But the basic transmission cycle of encephalitis centers on the primary hosts of humans and the 86 species of birds.

The virus usually incubates for a period of five to 15 days before symptoms occur. It is not directly transmitted from human to human.

Susceptibility to the disease is highest among young children and the elderly, but anyone can contract the virus.

Michigan judge orders toxic wastes to Illinois

STANTON, Mich. (AP) — Michigan officials said Wednesday they have been assured that Illinois can safely dispose of 7,500 gallons of toxic wastes a court has ordered removed from a Montcalm County, Mich., landfill.

Approved Industrial Removal of Grand Rapids, a liquid waste-hauling firm, was ordered Tuesday by Judge Charles Smon Jr. of Montcalm County Circuit Court to take the wastes from two tanks buried in Pierson Township in western Michigan and ship them to Illinois.

The action came after the state attorney general and the Department of Natural Resources (DNR) asked the court to force the firm to remove the wastes.

As much of the insecticide component C-56 and other hazardous materials as possible must be pumped out of the tanks beginning Monday, the court said.

C-56 is a component of a potent insecticide, Kepone, which scientists say can have long range toxic effects on people.

The judge added that once the wastes are removed, they must be taken to an Illinois landfill where

they can be disposed of safely. The contaminated tanks also must be removed and shipped to Illinois, which has a waste disposal site considered safer than any in Michigan.

DNR officials said they have been assured by the Illinois Environmental Protection Agency that the shipments will be allowed after Friday, when a moratorium on toxic waste shipment recently imposed by that state's governor will be lifted.

Judge Smon ordered the company to come up with an alternate disposal plan in case Illinois balks at taking the shipments. This would involve burning the hazardous waste material at an incinerator in Utica, considered the best-controlled commercial burner in Michigan.

Approved Industrial officials were ordered to return to Smon's court July 26 with more information about the thousands of gallons of additional wastes the firm claims it delivered to disposal sites in Michigan and other states over the past several years. The DNR and the attorney general charge the company has falsified these claims.

Winter chill responsible for summer heat wave

CAIRO (AP) — The heat wave that's dampening the brows and soaking the clothing of Illinois residents is the price being paid for last winter's extra-chilly conditions, says a professional weather-watcher.

"If you average up the temperature of all the air on Earth, you find it's the same from year to year," says Donald Semancik of the National Weather Service. "We only have so much heat around the Earth and that's it."

But there are hot spots and cold spots. "So normally, when you go through a period of four to six months of colder than normal weather, you have to even this thing out within the next four to six months. So generally speaking . . . after an unseasonably cold winter, you do come up with an unseasonably warm-type summer."

The culprit is a sluggish high-pressure weather system lingering over southern Alabama, Georgia and Florida.

"This happens every summer," says Semancik, who is in charge of the agency's office here. "It's sort of a wandering semistationary-type high that controls the southeastern quarter or third of the nation."

Even though Semancik is convinced that the hot, dry conditions will remain through August, the 100-degree temperatures in the region are rare.

There were two 100-degree days here in June. The one on June 5 "was the earliest on record. The other was on the 11th, which was only the fourth 100-degree temperature here in the last 10 years."

Even though Semancik understands what's happening in the nation's complex weather patterns, he is as powerless to change them as anyone else.

"I've got a good air conditioner here, one in the car and one at home. It's just a problem getting from the door to the car in the evening."

Campus Briefs

Two papers on the current research of Cal Y. Meyers, organic chemistry professor, were presented recently at the International Symposium on the Chemistry of Strained Rings held at the State University of New York at Binghamton. The two papers are: "Substituent Effects on the Disposition of Thirane 1,1-Dioxides and Thirene 1,1-Dioxides in Potassium Hydroxide-t-Butyl Alcohol" and "Alpha Halocyclopropyl Anions—Good Leaving Groups with a High Order of Electron Delocalization."

Keith Leasure, plant and soil science professor, received a \$3,400 grant from the Illinois Institute for Environmental Quality for a demonstration project for a statewide pesticide container disposal system. He also attended a June meeting of the National Science Foundation at Michigan State University.

Raymond Maleike, assistant professor of plant and soil science, received a \$250 grant from the Velssical Chemical Company to study weed control in ornamental plants.

Dr. Vera Kolb Meyers, who received her doctorate in organic chemistry from SIU last year, has been awarded a \$1,000 postdoctoral fellowship from the University Research Foundation of La Jolla, Cal., to help support research on fluorescent labeling of steroidal hormones and morphine-related compounds for studies of receptor sites.

A speaker unlike any other.

The Acoustic Matrix enclosure yields performance and maneuverability with a conventional wood enclosure.

Key to both performance and efficiency is the new 901 II driver, with modified frame and aluminum back of voice coil.

BOSE

Two drivers are mounted at the Acoustic Matrix enclosure, four on each rear panel and one facing forward.

A tapered Baffle Air Column isolates the sound base from the four drivers on each rear panel.

Introducing the Bose® 901® Series II: the most innovative new speaker since the legendary 901 Direct/Reflecting® speaker was introduced in 1968.

The original 901 set a standard for reproduction of sound with concert hall realism. The 901 II brings this high standard to a new level of perfection with improved bass reproduction, frequency response and spatial characteristics.

Yet, due to its new ultra-high-efficiency drivers, it can produce the same sound volume with a 20 watt amplifier as the original 901 with a 70 watt amplifier.

This is accomplished by advanced new technology consisting of the unique injection-molded Acoustic Matrix™ enclosure (shown in the above cutaway illustration of the 901 II) combined with the new high

performance driver and a far more sophisticated electronic equalizer.

To fully appreciate the 901 II's spectacular performance, you must experience it for yourself. Come in for a live demonstration and hear the incredible impact of sound unlike any other.

Laetrile showdown set; government to test drug

By Janet Staihar
Associated Press Writer

WASHINGTON (AP) — Advocates and opponents of laetrile agreed Tuesday to a winner-take-all clinical showdown to determine, once and for all, whether the substance fights cancer.

Both sides said they would abide by the results.
The uneasy compact was forged by Sen. Edward M. Kennedy, D-Mass., while chairing his Senate health and scientific research subcommittee hearing into laetrile.

Kennedy pledged that if the government-conducted clinical tests prove laetrile is effective as a cancer cure, he will lead a move in the Senate to legalize it.
Laetrile supporters promised in turn that if the tests prove the substance is not effective, they will stop publicly promoting it.

Laetrile, a derivative of apricot pits used by many as a cancer treatment, is banned in interstate commerce, but 11 states have approved its use.

Food and Drug Administration Commissioner Donald Kennedy told the subcommittee that a new government review of evidence shows "beyond serious question" that laetrile is ineffective against cancer.

He called promotion of laetrile "a fraud" and said it could be properly classed with cancer cure hoaxes of the past such as karegenin.

Kennedy said he is angered by laetrile promoters.

"I do not believe that anyone has the right to debate the concept of freedom of choice by depriving those who are desperate for their lives," he said.

The findings of the FDA review

will be submitted later this month to the U.S. District Court in Oklahoma that earlier ordered the federal regulatory agency to re-examine its longtime position that laetrile is an unproven substance.

Dr. Guy R. Newell, acting director of the National Cancer Institute, said laetrile has been exhaustively tested in laboratory animals by the institute and by other scientists. He said the results of these tests conclusively show laetrile has no significant anticancer quality.

In Columbus, Ohio, on Tuesday, two Battelle Laboratories researchers announced results of tests on laetrile as a cancer cure. Drs. David Houchens and Artemio Ovejera used laetrile to treat human breast and colon tumors implanted in mice during six months of testing conducted for the American Cancer Institute.

"The drug had no effect on the growth of the tumors," Houchens said. "It was neither positive nor negative. We saw no toxicity. I would have to say in this particular test system, the drug is not effective under standard testing procedures."

"But this certainly does not say it would not work in some tumor in some other system," he said, noting the mice did not get a special diet some laetrile proponents claim is essential to treatment.

He said the test cases were "close to a human situation... You don't have the total human picture, but at least they are human tumors, and they do maintain their human characteristics."

The mechanics of the government testing will be decided later by Sen. Kennedy, the FDA and the National Cancer Institute and supporters of laetrile.

UMW head says strike by coal miners probable

By Bryson Hodel
Associated Press Writer

CHARLESTON, W. Va. (AP) — United Mine Workers President Arnold Miller believes it may be difficult to avert a national strike by the union's soft coal miners when their contract expires Dec. 6.

"The situation doesn't look good now, but that can all change," Miller said. "It depends on the reaction from the operating industry itself."

A nationwide strike by soft coal miners would seriously slow down the nation's coal industry, especially in the East, at a time when President Carter has urged increased reliance on coal and other alternatives to oil.

A UMW strike avoids only the small anthracite coal industry, which is under a separate contract, and scattered mines in the West and South which are either nonunion or covered by rival labor groups.

While the UMW says it has no firm figures on the number of bituminous, or soft coal, miners, the union's total membership is about 270,000—and most of those miners work in bituminous.

"There's nowhere to go but up when you're talking about the labor problems," Miller said. "We don't have any stability in this union, and it's because of their (the operators') reluctance to move away from the past... and sit down and talk about their problems."

Miller believes the path to union stability is through the negotiation of a limited right-to-strike clause in the 1977 contract to permit local walkouts over grievances. That has become a major issue within the UMW in recent years with miners frequently defying the contract and Miller by going out in wildcat strikes, which usually end in court injunctions and fines against the union.

But industry officials — including Joseph P. Brennan, president of the Bituminous Coal Operators Association (BCOA) — already have expressed opposition to the right-to-strike approach.

It is with the BCOA that the UMW must negotiate a contract for the soft coal miners.

Brennan calls the proposed right-to-strike clause "a step in the wrong

ARGENTINIAN PETROLEUM

BUENOS AIRES (AP) — Argentina will be self-sufficient in petroleum by 1980 and currently provides 90 per cent of its domestic demand, says engineer Mateo Oscaldo Juan, exploitation manager for the state-owned YPF petroleum company.

YPF plans for 1977 call for more than doubling the number of exploratory wells drilled in 1976 to enable Argentina to become self-sufficient, Juan said.

direction." He believes wildcat strikes will not end until there is a basic change in the psychology of miners and in their attitude that they must honor any picket line, no matter what the issue.

Miller's proposal would give individual union local the right to vote a strike over local issues, but it would prevent the spreading of a strike by a few pickets, a common practice.

"It's become evident that the major vehicle for solving labor problems is a limited right to strike, which establishes majority rule at the local level. And I've said that this must have a provision... that if somebody tries to violate majority rule that they'll be dealt with severely," Miller said.

Under the current contract, miners earn an average of \$60 to \$70 a day. Wages are not expected to be a major issue in negotiations for a new contract.

Welfare, mental health, prisons funds disclosed

By Skip Woltenberg
Associated Press Writer

SPRINGFIELD, (AP)—Slowly shaping the state budget to his liking, Gov. James R. Thompson has approved with few changes \$2.7 billion in appropriations passed by the General Assembly for welfare, prisons, child care and mental health services.

At the same time, the governor axed \$114 million from the \$2.1 billion appropriation for the state Department of Transportation. Those cuts were expected, however, because they involved so-called pork-barrel projects.

The budget action, which occurred Friday before Thompson left on a vacation to Massachusetts, was announced for the first time on Tuesday.

One of the chief bills on which action has not occurred yet is the new capital projects bill, which administration sources say is \$68 million above the request. Among the major budget actions revealed Tuesday were:

—Approval of a \$2.121 billion budget for the state Department of Public Aid, \$7.5 million less than requested. Among the cuts which the legislature approved was the deletion of \$1.9 million which legislators said would have been spent for abortions for welfare mothers.

—Approval of a \$122.2 million budget for the state Department of Corrections, \$1.4 million less than requested.

—Reduction by \$3.5 million of the \$111.5 million budget for the state Department of Children and Family Services, conforming with the request. The legislature had added \$3.5 million for increased rates for foster care, but Thompson told lawmakers in a veto message that the state is paying enough to cover actual costs of child care and assure placement of children.

—Approval of \$404.3 million for the Department of Mental Health, \$2.6 million less than requested.

Interest in budget actions hasn't been as keen this year as in the past four years, primarily because the legislature approved virtually the amount Thompson wanted in the critical general funds area.

This area is critical because general funds, used for day-to-day government operations, are generated primarily from the state income and sales taxes. A large increase in general fund spending could require an unpopular increase in one of these taxes.

Robert Mandeville, Thompson's budget chief, praised lawmakers Tuesday for their fiscal restraint in the general funds area this year.

He said in the legislative session ended July 2 that the General Assembly appropriated only \$30 million—less than 5 per cent more in general funds than the governor requested. "It's been one of the best years I've seen in eight years in state government," Mandeville said.

It was in sharp contrast to the administration of former Gov. Daniel Walker, who fought with the legislature, labeled its members big spenders and had to veto millions of dollars in appropriations.

Protect your thinker

No doubt about it—lots of people are discovering that bicycling is good, healthy fun. It means a chance to slow down life's pace a bit. Clear your head and organize the confusion of day to day living.

Concentrating on your fun means confronting the reality of riding a people-powered two wheeler in a world full of cars, trucks and untold road hazards. The people at Bell Helmets feel that we can help keep your mind on the pleasure of the sight and sounds around you. The Bell Bicycle Helmet is lightweight and comfortable protection for your head, engineered to help protect the body's most vital organ from injury.

The Bicycle Helmet has a tough Lexan shell and expanded polystyrene liner, the very best materials we've found for the job. Bell's 20 years of experience in helmet construction enabled us to create a practical design that offers unrestricted visibility, "flow through" ventilation and a very personal sized fitting system.

Quite possibly, the best receiver value ever offered.

When other companies design a low-priced stereo receiver, their big concern is how much they can leave out. When Pioneer decided to build the SX-150, they wanted to see how much they could put in.

There's continuous power output of 15 watts minimum RMS per channel at 8 ohms from 20 to 20,000 Hz with no more than 0.5% total harmonic distortion.

The FM section uses a phase-locked loop multiple circuit—just like the most expensive tuners—for great stereo separation. And there's a special integrated circuit to keep stations from interfering with each other.

For operating convenience, the SX-150 has a dual-function tuning meter, tape monitor circuit, five-input function selector and even a microphone jack.

No one else gives you this much, for this much.

Lack of funds, volunteers cited in credit union death

By Dennis Sullivan
Student Writer

A three-year-old credit union created by students and townspeople has been dissolved due to "lack of interest."

The Carbondale-University-Community Federal Credit Union (CUCFCU) was a cooperative consumer organization owned by its members. It provided loans at a much lower interest rate for people unable to establish credit at a bank.

The union was dissolved because its board of directors felt the union had failed to grow.

"We tried," said former president Louis Cerutti, "but we figured after three it wasn't going to make it."

Cerutti said membership had shrunk from 300 to 100 members in the final year.

Cerutti, a Carbondale restaurant owner, said the credit union failed because it was run on a volunteer basis which "resulted in a lack of continuity."

"People wouldn't show up during their assigned hours, and we had no one to replace them," Cerutti said.

John Hardt, co-founder of the credit union agreed, saying, "A lot of credit union workers were working another job in addition to working at the credit union and going to school. They didn't always have time to be there."

The result, said Cerutti, was "in-

consistent office hours. We had a problem with just keeping the office open," he said. "Definite office hours might have saved us."

Hardt, another local restaurant manager, said the lack of funds hampered the obtaining of full-time help.

"The credit union needed a balance of \$100,000 at all times in order to hire a permanent bookkeeper," he said.

However, the union was never able to exceed a balance of \$9,000, Cerutti said.

It would have been possible to increase funds to \$100,000, Hardt maintained, if a payroll-deduction plan could have been instituted for student workers.

But "the University was unwilling to

enter into that kind of agreement with the CUCFCU," he added, "and most of the Carbondale stonemasons were unsympathetic to the idea."

"The credit union's location within the Student Center tended to place it out of reach of most townspeople," Hardt explained.

Cerutti added that "when the building closed over breaks, no one could get in for loans, deposits or withdrawals."

The CUCFCU, which had only \$3,000 when it was dissolved, guaranteed that members would receive their money back.

The federal government is currently contacting CUCFCU members to make refunds.

Shelter home acts as final breakout for runaway girl

CHICAGO (AP) — For 16-year-old Susan Roy, the shelter home where police took her on Saturday was not just another in a long series of places that she needed to flee—it became her last.

She had run away on Friday after staying only one day at a private group home, where she was taken after being released from a state mental hospital. Authorities said she had been under psychiatric care.

Police took her into custody Saturday and brought her to Herrick House, a state-operated shelter care facility on Chicago's Near West Side, on advice of the Illinois Department of Children and Family Services.

She escaped several hours later and voluntarily returned briefly to her mother's home, authorities said. Police, notified by the girl's mother, brought her back that night to Herrick House, which is a temporary home for state wards.

Late Sunday afternoon, alone for what authorities said was no more than five minutes, Susan Roy executed her last attempt to flee. She took some sheets to a fourth-floor conference room, knotted them together, tied them to the radiator and climbed out a window.

She fell four stories to the pavement, where paramedics found her lying injured beside a heap of knotted sheets. Miss Roy died late Monday.

University offers sandcastle course

SAN DIEGO (AP) — Your sandcastles falling down a lot lately? Try "An Introduction to Sandcastle Building" at the University of California at San Diego.

The teacher of the university extension class, Gary Kinsella, usually a pottery instructor, says the class will not only help students build castles that stand up but will help them deal with the inevitability of the tide knocking them down.

WSIU-FM

The Daily Egyptian cannot be responsible for more than one day's incorrect insertion. Advertisers are responsible for checking their advertisement for errors. Errors not the fault of the advertiser which lessen the value of the advertisement will be adjusted if you do not appear incorrectly or if you wish to cancel your ad, call 383-2111 before 2:30 p.m. for cancellation on the next day's issue.

The Daily Egyptian will not knowingly accept advertisements that unlawfully discriminate on the basis of race, color, religion or sex, nor will it knowingly print any advertisement that violates city, state or federal law.

Advertisers of living quarters listed in the Daily Egyptian understand that they should not include as qualifying consideration as deciding whether or not to rent or sell to an applicant their race, color, religious preference, national origin, or sex. Violations of this understanding should be reported to the business manager of the Daily Egyptian at the business office in the Communications Building.

Head wanted ads in the Daily Egyptian are not classified as sex ads. Advertisers understand that they may not discriminate in employment on the basis of race, color, religion or sex unless such qualifying factors are essential to a given position.

The above anti-discrimination policy applies to all advertising carried in the Daily Egyptian.

Classified Information Rates

One Day—10 cents per word minimum \$1.50
Two Days—9 cents per word, per day.
Three or Four Days—8 cents per word, per day.
Five thru nine days—7 cents per word, per day.
Ten thru Nineteen Days—6 cents per word, per day.
Twenty or More Days—5 cents per word, per day.

15 Word Minimum

Any ad which is changed in any manner or cancelled will revert to the rate applicable for the number of insertions it appears. There will also be an additional charge of \$1.00 to cover the cost of the necessary paperwork. Classified advertising must be paid in advance except for those accounts with established credit.

Soviet critic claims 'Rocky' filled America's need for optimistic tales

MOSCOW (AP)—A Soviet critic told his readers Wednesday that the film "Rocky" became a box-office hit and won three Academy Awards because it catered to the hunger of U.S. moviegoers for an encouraging story about America.

"The arguments that triumphed in giving 'Rocky' its Oscars were linked... with the effort to inspire in millions of viewers the impression that all is not lost in life, that everyone has a chance," Yasen Zaslursky wrote in the weekly Literary Gazette.

"By Hollywood standards this film ideally accords with what the

public needs," said Zaslursky's review of Oscar-winning films of 1976.

He said the story of an unknown young boxer who nearly wins the heavyweight title "is a film with the traditional happy ending, a film about a poor man who, in the well-told Hollywood scenario, breaks out of poverty."

Sylvester Stallone, writer and star of "Rocky," was a little-known actor with few connections in the Hollywood-based movie industry when he wrote the script and had the film produced on a modest budget.

The Soviet critic added that the

film "Network," an indictment of television manipulation of audiences, attained popularity because it exposes the "behind-the-scenes games of big corporations."

He said Paddy Chavelsky, who wrote "Network," had "convicted himself on the basis of his own experience of the endless cynicism and prostitution of American television."

Zaslursky said "Network" never could have won the top Oscar for best film of the year, an honor that went to "Rocky." The critic said the men who control Hollywood could not accord such an honor to a film about television, their competitor.

Award-winning professor believes teachers must relate with students

By Susan Fernandez Student Writer

Donald M. Elkins, who was recently given one of the most prestigious awards given in the agricultural field, feels a professor should project him or herself as an individual who has been on the other side of the lectern.

Elkins, a plant and soil science professor, was awarded the Distinguished Teacher Award last month at the annual National Association of Colleges and Teachers of Agriculture (NACTA) conference at Pennsylvania State University.

"An instructor must project himself as a warm human being who has experienced many of the same difficulties and problems as the student, as one receptive to student needs, and as one concerned with the best way in which he can help the student with the learning process," Elkins said.

"He has always had a good response from students and has worked very hard in developing a Self-Instruction Center, which makes manual aids available to students," said Don Stucky, the plant and soil science professor who nominated Elkins for the award.

"Don works very hard to improve his classes, and I felt he deserved a crack at the award," Stucky added. Other criterion for nomination include student and peer evaluation and receipt of the NACTA Out-

standing Fellow Award, which Elkins got in 1976.

"One of the ways in which an instructor can develop student interest and motivation is with what I term as the 'X Factor,'" Elkins said. "The 'X Factor' mixes equal parts of humility, kindness, patience, empathy, sensitivity and understanding."

He feels an informal, open-door policy in the class... and in office hours encourages students.

"Quite often, students will try to answer their own questions or solve their own problems rather than fight through a mass of red tape to confer with an instructor," he said. He stresses the use of visual aids and topic-related experiences which can emphasize a point or explain a new concept.

"One thing that is particularly valuable to me as a crops teacher has been the establishment of a crops nursery to observe growth habits and other characteristics of crop species, varieties or strains that are discussed in class," Elkins said.

Elkins advocates moderate use of self-instruction because it frees and further encourages the student from the usual confines of a class outline.

"Such a method of instruction gives the student more freedom and flexibility as to when he completes an exercise and the depth to which he explores the subject," he said. His "X Factor" is a success.

student evaluation comments seem to exemplify. "A person ahead of his time and very in touch with his students," and "Sometimes the word outstanding seems very inadequate." Were some of the evaluations Elkins received.

Elkins has other "top teacher" honors. He has received a Good Teacher Award from the Amoco Foundation, the Agriculture Faculty Service and the Outstanding Faculty Member award, and the NACTA Central Region Distinguished Teaching Award.

He is listed in "Outstanding Educators of America," "American Men in Science," "Personalities of the West and Midwest," and "Who's Who in the Midwest." Elkins is also involved with research, has published 17 professional articles and almost as many non-technical articles. He has presented 15 professional papers and has served on 19 University committees since he came to SIU in 1967.

Elkins is a member of four honorary societies including Phi Kappa Phi and Alpha Zeta. He also belongs to the Crop Science Society.

Elkins is from Woodville, Ala., and received his bachelor's degree from Tennessee Polytechnic Institute in 1962 and his M.S. and Ph.D. degrees from Auburn University a few years later. He was appointed assistant professor at SIU in 1967 and became a full professor in 1974.

Elmhurst installs toilet dams to eliminate city water waste

ELMHURST (AP)—This Chicago suburb of tree-lined streets and well-watered lawns, is blaring new trails in government control The toilet tank.

A brigade of city employees wearing T-shirts with dripping faucet emblems are knocking at homeowners' doors with orders to install or distribute tiny dams for the tanks of all the toilets in town.

The plastic dams save one or two gallons a flush, say city officials. That may seem like a drop in the bucket when siphoned off the city's total water use of 5.3 million gallons per day. But it adds up to about 9 per cent of the city's daily water usage or 183 million gallons a year, enough to fill a small lake.

A small lake might not be a bad idea in Elmhurst, an affluent town of 51,000 residents about 20 miles

west of Chicago and Lake Michigan's water supply.

Plans are underway to lay pipeline from Lake Michigan to supply Elmhurst with about 6 million gallons of water a day by 1980. But meanwhile, the water level in seven of the city's nine wells has been dropping at an average rate of 14 feet a year for 17 years, said Neil Fulton, assistant city manager.

So while the multimillion-dollar pipeline is in the works, the somewhat less glamorous dams, two plastic devices that sell for about a dollar per toilet and block about five or six inches of water from flowing out of the toilet tank, are a central part of the city's effort to stave off drought. Fulton said. The cost to the city is about \$55,000.

Freight plans to be discussed

Public comment about information and plans for a future rail freight service in Illinois will be heard at the Ramada Inn Thursday.

The plan being considered is a preliminary draft. It only contains information which the Illinois Department of Transportation will consider for making recommendations on state financial assistance.

According to the department, details on specific lines eligible for financial assistance will be compiled after public input has been received.

The hearing will be held at the Ramada Inn, 2400 W. Main from 2

p.m. to 5 p.m. and from 7 p.m. to 9 p.m.

Everyone invited to 'say cheese' for DE fall issue

All SIU students, faculty and staff interested in appearing in a group picture which will appear in the Daily Egyptian back-to-school issue are invited to meet 10 a.m. Friday in the stands by McAndrew Stadium.

The picture will be the color cover for a "people of Southern" section of the special issue.

New teaching equipment on display at Education Department's exhibit

By Michele DeBoschere
Staff Writer

Recently revised textbooks, career aid kits, improved audio-visual equipment and other educational materials are part of the Educational Materials Exhibit Thursday at the Student Center.

The exhibit, sponsored by the Division of Continuing Education, features displays from 60 Midwestern companies. Lowell Hall, acting dean of the Division of Continuing Education, is coordinator.

Teachers, students majoring in education and administrators are attending the exhibit. Most participants are from communities within a 100-mile radius of SIU, but a few educators from New York, Missouri and Indiana are in attendance.

The exhibit provides educators with an opportunity to view materials and equipment developed within the past two years.

Colorful textbooks, which exhibitors said encourage children to participate, reflect the new approach teachers are taking in education.

"Educators are finding that kids today are too sharp to have dull materials drilled into their heads," John Stumpf, audio-visual specialist and one of the exhibitors, said.

"Kids used to have to sit stiffly at their desks and learn by rote. It's just not working anymore."

New materials include learning textbooks that develop the child's communications skills while he is learning to write, metric survival kits, anatomical figure

models and newly organized math kits.

"The materials are the same, but the way they are presented is different," Stumpf said. "There are many innovations in the presentations of materials. The materials have a high interest level. They are more colorful, better illustrated and organized. The materials invite the student's involvement."

According to Stumpf, audio-visual materials are now updated and easier to handle. "Films, such as the one that tells about changes in China, are needed today. A film like this one (about China) informs students about what is happening in the world," Stumpf said.

"These types of materials are necessary in a world that is changing with such speed."

Hemingway's widow visits Havana

NEW YORK (AP)—Fifteen years ago, Mary Welsh Hemingway told President John F. Kennedy that his Cuban policy was stupid and ineffective. Ernest Hemingway's widow volunteered to parachute into Cuba.

Kennedy rejected her suggestion, and Mary Hemingway didn't get back to Cuba until this month, on a mission of a much different nature. Accompanied by a movie producer, director and screenwriter, she returned to Havana at the age of 69 to do research for a film based on Hemingway's life.

Mrs. Hemingway spent only a few days in Cuba this time—she arrived Saturday and planned to leave Wednesday night. She will be coming home via Mexico City.

On her final day in Havana, she posed for pictures with Cuban President Fidel Castro—who took the occasion to praise Hemingway's works and to say he had read "For Whom the Bells Tolls" more than once and "The Old Man and the Sea" three times.

Runway takes all they feed into it

PLANT CITY, Fla. (AP)—Two years and \$100,000 worth of asphalt later, the Hillsborough County Aviation Authority has surrendered to a sinkhole.

A runway of the Plant City airport was being gobbled up by a sinkhole in the underground limestone and the city has shoveled asphalt—20 tons of it—into the hole in the past two years.

They've decided to shorten the runway from 3,200 feet to 2,600 feet, post a warning notice and see what happens.

"Right now we have the sinkhole covered over, but if it collapses again, we'll just bulldoze over it and fill it with dirt," says Glen Durst, head of the aviation authority.

It was Mrs. Hemingway's first visit to Cuba since 1961, the year Hemingway shot himself to death in his Ketchum, Idaho, sitting room while his wife slept upstairs.

A few days after the funeral, Mrs. Hemingway flew to Cuba to retrieve her husband's manuscripts, from Finca Vigia, the estate in suburban Havana which had been Hemingway's home for nearly a quarter century.

The Cuban government took over Finca and turned it into a tourist attraction, visited by 40,000 people a year. Some visitors came from the United States, as the once forbidden island opened up to trade delegations, student organizations and a few tourist groups.

But until last week, Mary Hemingway never went back.

"Finca without Ernest is just another place," she said last fall during an interview in her Manhattan penthouse. "It's a beautiful place full of bougainvillea and puerria, but the heart of it is gone as far as I'm concerned."

Mary Welsh was a war correspondent when she met Hemingway in London in 1944, a lady with accomplishments of her own, a reporter for London's Daily Express and later for Time magazine.

In June 1944, almost a year before the war ended in Europe, Mary Welsh gave it up and flew to Cuba to join Hemingway.

IM golfers win trophies

By Jim Mousan
Sports Editor

Four golfers captured trophies and one player won the "closest-to-the-pin" plaque in the SIU intramural golf tournament held this week at Midland Hills Golf Course.

Don Galman fired a 78 to win the championship trophy. Galman toured the 5,878 yard, par 70 Midland Hills layout with nine-hole rounds of 36-42.

Galman's 78 earned medalist honors by one stroke over Max Halberg and Kevin Dailey.

Three handicap flight winners were also decided by a modified Callaway system which takes a golfer's worst holes away from his total score.

Carteville's Brad Joseph scored 71 (86 minus 15 handicap) to win Class A. Jeff Muzzarelli, a senior in liberal arts, won Class B with a 70 (91-21), and Jim Richards shot 73 (94-21) to capture Class C.

Harvey Welch, SIU's dean of student life, won the closest-to-the-pin contest on the 131-yard hole No. 2 with a shot 19 feet from the hole.

"I hit a smooth wedge," Welch said. "The ball hit short and kicked right towards the hole."

Welch, who scored 97 for his 18-hole round, said the wedge shot was one of the few good shots he hit. Welch said he parred No. 2, one of four pars on his 18-hole round.

Galman won the tournament by shooting a 36 on his first nine-hole round, then fading to a 42 as Halberg and Dailey missed tying him by one shot. Galman, who birdied two holes, bogeyed No. 18 to insure his one-stroke victory.

Galman, from Bellwood, said he putted well and hit most of the greens in regulation on his first nine holes, but then ran into trouble on his second nine-hole rounds as he carded sevens on two different holes.

"I thought it would be close although I would've thought a 77 or 80 would've won," Galman said. "When I won I said great! I had a lotta fun."

Halberg birdied three holes enroute to nine-hole rounds of 40-39 and Dailey shot 38-41.

Joyce Craven, assistant coordinator of intramural sports said the competitors seemed to enjoy themselves.

Nurses study modern birth techniques

By Gabriella Ludwiczak
Staff Writer

Billings, LaMaze, LaBoyer. Thirty registered and licensed practical nurses in Southern Illinois recently had the opportunity to learn the techniques behind the names of these modern birth control, labor and delivery methods.

The six and a half hour maternal nursing update program, held July 7 at John A. Logan Community College, was sponsored by the SIU Division of Continuing Education to enable obstetrical nurses to keep up with changes in this area of medicine.

Sister Helen Lester, a registered nurse at St. Joseph Memorial Hospital in Murphysboro, said that today's concern with health and body care has created a desire to return to the "purest level possible" and is responsible for the slow-moving but growing interest in the Billings method of birth control.

The method is "natural family planning," Sister Helen said. "A woman observes her cervical mucus and charts it daily."

The changes in appearance that occur in the cervical mucus, during a cycle, help the woman distinguish her fertile periods from nonfertile ones.

During the four or five fertile days a woman's vaginal discharge will be more clear, slippery and stretchy than it normally is.

The couple then practices abstinence during a certain span of time surrounding the fertile period.

Sister Helen said that John and Lynn Billings found the method to be 99 per cent effective when used correctly.

The couple began studying the method in the early 1950s in Melbourne, Australia, but it was not introduced into the U.S. until the 1970s.

They found it to be much more successful than rhythm, which is a rough system of guessing a woman's fertile time from the regularity of her menstrual cycle. It is also more successful than the basal temperature method, which operates on the knowledge that a woman's temperature rises upon ovulation.

The basal temperature method is sometimes used in conjunction with Billings, Sister Helen said. It can help to make the woman feel more secure in her discharge observations.

Doctors also recommend that a couple abstain from sexual intercourse during a woman's first cycle. Sexual intercourse can change the appearance of the mucus and hinder observation, she added.

Although "a person really has to know what they're doing" to use it successfully, Sister Helen said the Billings method reduces the risk attached to the use of the pill and IUD, and it also brings a couple closer together.

"The husband also understands how his wife's body operates," she said.

Shelia Bowles, a registered nurse at the Carbondale Clinic, spoke to the nurses about the LaMaze method of labor and delivery.

Bowles, who has taught LaMaze classes in Carbondale for the past four years, said that this is a method of preparing a couple for the birth of a baby in every way—physically, emotionally and mentally.

A couple receives instruction on hospital procedure, variations in medication, what to expect in labor and

Marc Galeasini

Terry Raynor of Marion (left) and Sheila Stewart of Elkville practice one of three basic breathing techniques of the LaMaze method of labor and delivery. Looking on are Sheila Bowles, instructor, and Danny Raynor, Terry's husband and labor-coach.

infant care, but one of the most important LaMaze lessons is on breathing techniques used during labor.

Bowles explained that there are three basic breathing "gears," and that each one is harder to do than the one before. In the first one the mother breathes in through the nose and out through the mouth, the second is in and out through the mouth, and the last one is in and out through the mouth but with a pattern of blows in between.

The shallow breathing techniques serve a number of purposes. The breathing is kept up high in the body, taking pressure off the abdominal cavity. It also gives the mother something to concentrate on, reducing fright and pain.

"If you're thinking 'breathe in and breathe out,' you're not thinking about the contraction," Bowles said.

A common misconception, she added, is that the shallow breathing reduces the oxygen supply to the baby. The breathing is shallow, but it is also even and the balance of oxygen throughout the body is maintained.

Practice is important for developing proper breathing. Bowles said an expectant mother and her coach are told to practice a half hour each night for five nights during a week.

Bowles does not start classes until the last six to eight weeks of pregnancy because the motivation to practice is usually greater at this time.

The person who comes to class with the woman is the person who goes into the labor with her, and therefore, must know as much as the mother, she said.

This coach interprets things to her when she is in labor. The coach can tell her how dilated she is and how far she still has to go. He reminds her to relax and to empty her bladder.

"A full bladder can slow a labor or even end it," she said.

Both, the coach and the mother, in

essence, learn all the techniques that have made labor easier in the past. They know that "lollipops can keep the mother's mouth wet" and that a wet washcloth will keep the mother cool.

Bowles said that the baby benefits from all this because "a mother who's prepared in any way is less frightened." Being less frightened decreases pain, which in turn decreases the need for medication. The less medication a mother receives, the more alert the baby is when it is born.

But Bowles added that deciding beforehand not to have any medication is foolish. Medication can be used advantageously to relax the mother during a difficult labor, and a woman should be "able to make an intelligent decision with the staff" about medication.

She said that the use of more natural delivery techniques has grown in Southern Illinois, and "some doctors are very supportive of women knowing what's going on."

Some hospitals in the area allow the father into the delivery room, some allow the mother to hold the baby immediately after birth and some allow her to nurse the baby on the delivery table.

A delivery method that has not been as widely accepted in this area is the LaBoyer technique. Dawn Hoover, a nurse at Salem Hospital, said that a doctor in Herrin is the only one who uses the method here, but it is gaining acceptance in other parts of the country.

Hoover said Dr. Frederick LaBoyer, the French physician who introduced the technique, believed that "when babies are born they go through a very traumatic process." Because all the infant's senses are working, the birth is "horrifying" for the baby.

LaBoyer suggested that delivery room methods be altered to reduce trauma. The room is kept quiet and in semi-

darkness.

When the baby's head appears a hand is inserted under his shoulders and he is lifted out rather than pulled out. The baby is then placed on the mother's belly, "stomach to stomach," and the umbilical cord remains intact for four to five minutes. He is then put in a warm bath and wrapped on a warm blanket.

Hoover said that in the usual delivery the infant is pulled out, placed upside down and "all of a sudden he has to do it all himself." She explained that he had to breathe alone, eat alone, and was placed on cold scales, making his temperature drop.

She added that not only is the LaBoyer baby more active and alert because of the lack of anesthetic used, but is also more calm and quiet in personality because of the reduced birth trauma.

The mother who chooses to give birth this way prepares herself by using LaMaze, yoga or hypnosis. Hoover said. The result of her preparation is a sense of pride and an added closeness to the baby.

Hoover seemed to sum up what all women are striving for when they choose the new, more natural methods of birth control and delivery when she said, "the objective is a healthy mother and a healthy baby."

Public not allowed at IAC meeting

(Continued from page 1)

committee was advisory and informal and dealt with internal university affairs and therefore was not subject to the Open Meetings Act.

A spokesman for Scott's office said Wednesday that the decision was limited to the University of Illinois boards only.

The operating papers of the IAC say that the committee "serves as the operational clearinghouse for athletic programs and policies and is primarily responsive to Mace."

The President of SIU, the guidelines say, appoints the IAC's members and "eligibility for membership on the Committee should reflect a demonstrated interest in intercollegiate athletics and support the concepts therein."

The 13-member committee includes seven faculty members, one of which is the chairman, three students and three "others."

At the present the three "others" include an SIU alumnus, a Carbondale businessman and SIU's personnel manager.

One of the committee's responsibilities is to give advice and recommendations to Mace "on substantive policies and programs."

Kennedy requests change of venue

By Pat Holden
Staff Writer

The Defense attorney for former Carbondale Police Chief George Kennedy will argue in a pretrial motion Thursday in Circuit Court to move his client's September trial to another county.

Paul G. Schoen, Kennedy's attorney, said that there exists "such prejudice against the defendant on the part of the inhabitants that the defendant cannot receive a fair trial" in Jackson county.

Schoen declined to comment on the case this week.

Four other motions were entered in early June along with the change of venue on behalf of the defendant.

The motions include a bond extension, disclosure of information, a bill

of particulars and impoundment.

Kennedy pleaded innocent April 7 to charges of theft of more than \$150 and obstructing justice after a grand jury brought the indictments against him, capping off a three-month investigation into irregularities in the Carbondale Police Department.

Kennedy is charged with removing \$1,880 from a Carbondale police evidence locker between Oct. 17, 1974, and Jan. 26, 1977.

The obstruction of justice charge accuses Kennedy of planting false evidence amounting to \$1,880 in cash in an evidence locker at the police department with the intent to conceal the alleged crime of theft over \$150.

Schoen alluded in the change of venue motion to the "enormous amount of ad-

verse and prejudicial pretrial publicity" in the case that has appeared in local newspapers.

The defense also will argue for extending Kennedy's bond to an indefinite date.

Kennedy, who is residing in Oklahoma, is out of jail on \$500 bail, which is 10 per cent of the \$5,000 bond ordered by the court.

The motion for disclosure asks the state to share with the defense material it has gathered in the case.

The bill of particulars asks the state to give the exact time, date and place that the offenses allegedly occurred.

Arguments for the pretrial motions will be heard before Jackson County Circuit Court Judge Richard Richman in Murphysboro at 1:30 p.m. Thursday.
