Six petitions filed on Monday; 10 persons seeking city offices
By Mike Nelson
Staff Writer

Six persons filed for Carbondale city offices Monday, bringing the total number of candidates to 10 for the Feb. 22 primary election.

According to City Clerk Janet Van Vleet, the petition papers were handed out by the clerk's office since they were ready Tuesday. No new candidates have been added. The general city election will be held April 1.

Bandits record book as they pull off $8 million heist

NEW YORK (AP) — Two masked men rob a garage with a shotgun, punched a hole through the roof and staged the largest cash robbery in U.S. history by taking an estimated $8 million from an armored car company headquarters, authorities said Monday.

The ski-masked bandits cut a two-foot hole in the roof of the Sentry-Armored Car-Center in the Bronx late Sunday night and swung into the two-story metal building on a rope according to city police and the FBI.

After handcuffing a guard, the robbers grabbed open the metal doors of a vault room with crowbars, police said. The pair then carried bags of $600 and $100 bills to the building's garage, loaded them into a vehicle they had parked there and drove away, police said.

The $8 million loss estimate was given to police by Jack Jennings, the company's director of security.

Detective Lt. Michael O'Shea of the 47th Precinct said no official figure would be set until company officials could conduct a thorough inventory and count whatever money remained.

"We are still waiting for a complete inventory," he said.

"There are numbers all over the place, but the (company's) president has to count the money himself." But a source close to the FBI investigation, who requested anonymity said $8 million seems to be pretty much the count.

Police said the company would have been able to lose its vault against records to determine how much was taken.

A secretary at the Sentry office said neither Jennings nor the company's president was available for comment. She refused to say why.

Police said the guard on duty at the office at 3048 Boston Road was not injured by the robbers after they swung down from the roof at 11:15 p.m.

Police spokesman Fred Elwick said the men apparently had no plans to break into the vault before breaking in, but police did not know how.

Previously, the highest sum reported stolen in a robbery in the United States was the $5.8 million in cash and jewelry taken from a Lufthansa cargo area at Kennedy Airport four years ago, on Dec. 11, 1978.

The investigation of Sunday's robbery was being conducted by the city-FBI joint bank robbery task force.

Two months ago a Sentry guard was killed and a second guard and a bystander wounded when four gunmen stole about $10,000 in checks and cash from an armored car outside a dairy in the Unionport section of the Bronx.

Court decides to hear recount bid

SPRINGFIELD (AP) — Democrat Adlai E. Stevenson's bid to overturn Gov. James R. Thompson's narrow re-election, Democrats Adlai E. Stevenson's bid to overturn Gov. James R. Thompson's third straight term by a 5.05 percent victory margin was the highest margin ever in Illinois never has had a gubernatorial election history.

Stevenson's narrow re-election will be argued before the full Illinois Supreme Court next week, the court decided Monday.

Justices ordered lawyers for both sides to submit further written documents, asking their contradictory points of view Dec. 3 in the court's Chicago hearing room.

News Roundup

NUKE PROTESTORS TRY TO BLOCK BASE

GREENHAM COMMON, England (AP) — Police cleared anti-nuclear protesters away from a U.S. Air Force base on Monday after hundreds of women converged on the gates to protest planned deployment of 96 nuclear missiles at the base.

Women carrying placards and staging a human chain link fence. Police said there were 700-1,000 protesters Monday and an estimated 26,000 women Sunday at the small base 40 miles west of London.

Martial law to be lifted Dec. 31

WARSAW, Poland (AP) — Parliament will meet Saturday to give formal approval to relaxing martial law at the turn of the year, but the government warned Monday that the military will remain in power and can reimpose martial law if it deems necessary.

Legislation to formalize the government's decision to ease martial law was introduced to the rubber-stamp Parliament. Or Sejm, on Monday, and government press spokesman Jerry Urban said it would reconvene Saturday to give its final approval.

Heart patient shows restlessness

SALT LAKE CITY (AP) — On Sunday, Barney Clark, who became the first human to receive a permanent artificial heart on Dec. 2, watched a football game on television and kissed his wife, according to Dr. Chase Peterson, University of Utah vice president for health sciences.

Clark has been in critical but stable condition since a series of seizures a week ago left him unconscious. He has been slow to regain full consciousness but doctors say that is normal in such cases.
Mining research effort gets $1.5 million boost

By Bob Delaney
Staff Writer

Congress is giving to universities across the country what President Reagan is taking away from the Department of Energy — fossil fuel research funding — and SIU-C has become a principal participant.

The U.S. House of Representatives recently approved $1.5 million in federal energy research funds for SIU-C to operate the DOE's Mining Technology Center in Carterville, which had been put on the selling block.

Rep. Paul Simon's plan would take the center off the excess property list and let SIU-C operate it until June, or until a permanent agreement can be reached.

Simon, D-Dist. 22nd District, said he expects the Senate to approve his plan.

Surely, mining research development funding has been cut by the Reagan administration, which also wants to dismantle the DOE. Simon says Congress will not get the DOE, but Reagan has been successful at getting budget cuts approved. Mining research funding, already down to $340 million this year from a one-time high of $490 million, will be $360 million in 1983, according to Simon aide Paul Morrill.

J. Craig Carrell, research development director of the SIU-C Coal Research Center, said funding for demonstration plants and other big projects may have been cut, but basic research funding has not.

He said he expects research to be stepped up with SIU-C operating the Carterville center.

The Carterville center has already undergone budget cuts that forced it to let a number of scientists go. Two former DOE employees are now associated with the Coal Research Center.

Morrill said much of the federal funding for SIU-C is from Congressionally approved fossil fuel research is expected to be contracted out to universities for high-sulfur coal research. SIU-C has contracted with the DOE in the past to participate in high-sulfur coal research at the Carterville center.

The University will continue to research there, using the $1.5 million in funding.

Michael Dingerson, acting director of the Coal Research Center, said the funds would be used to maintain the Carterville center, support present projects, develop new projects in precombustion desulfurization and perhaps establish a triangular think tank with government, University and private industry participation.

HEMPHILL from Page 1

... and a lot of homework on it.

An increase in myocarditis among young people has been found within the last year by the SIU-C examination office, Carrell said.

Morrill said it will cost about $100,000 to maintain the Carterville facility. If the project is approved, Simon said negotiations between SIU-C and the DOE would take place that could result in permanent operation of the facility by SIU-C. The center would continue to be owned by the federal government.

Dingerson said the facility has been valued at between $2 million and $2.5 million.

Carrell said a think tank is still in the "embryonic stage." He said private industry is up against the wall and would have to be enlisted into participation.

The SIU-C Coal Research Center was created in 1971 under Gov. Dan Walker and the University has been a national leader in coal research since that time.

Illinois recently pumped $1.5 million into coal desulfurization research, including $800,000 that established the Center for Research on Coal, a triangular effort including the University of Illinois, SIU-C and the Illinois State Geological Survey.
Is Bracy purchase a moral obligation?

THERE'S SOMETHING TO BE said about moral obligations. When people give their word, they have a moral obligation to keep it. When an institution gives its word, it has a moral obligation to keep it or suffer loss of credibility.

But when President Somit talked of SIU-C's having a "moral obligation" to buy the Bracy Building some 100,000 words or fewer was given to the fact that the SIU-C Board of Trustees, meeting last Thursday, had previously stated that SIU-C had a moral obligation to go with the Bracy purchase. At the time the purchase was made this Board had not even been in existence; it was a new board established by the newly elected President. The faculty manager deciding the purchase was the new Buckley faculty member.

Letters

Controversy over GSC election is not the fault of Steve Katsinas

Steve did nothing wrong in election

I am responding to the letter by Jami Kyriopoulos (Dec. 9).

I am not responding to the letter by Jami Kyriopoulos (Dec. 9). There are several issues involved in the Graduate Student Council election controversy. In addition to the alleged "sneakiness" of Steve Katsinas, there is the question of whether the election procedures, as outlined in the GSC by-laws, were followed. Furthermore, the adequacy of the by-laws has been called into question.

As Miss Kyriopoulos pointed out, Mr. Katsinas didn't announce his candidacy in advance of the election. This is permitted by the by-laws. Printed ballots weren't used, apparently because they aren't called for in the by-laws. But the by-laws weren't observed.

Having been a GSC representative for six consecutive terms, I can't remember when we used printed ballots. (We may have, but I clearly recall that during last year's election, we used a blackboard and slips of blank paper). Furthermore, I cannot recall a list of eligible voters being posted, nor can I remember this being a requirement according to the by-laws.

A new election may be the answer, but I think that this would be a very expensive and time-consuming "mea culpa." This would admit to all that the GSC's by-laws are unworkable or that Paul Matalonus handling of the election was questionable or both.

As to Mr. Katsinas' "style," well, "all's fair in love and politics." Cleverness can even be turned to the advantage of all of us. Heaven knows we need something out of the ordinary in this time of educational mediocrity.

-- Nancy Havens, Graduate Student, English

People will not be taken in by Reagan's MX propaganda

Last week President Reagan went on T.V. attempting to sell the MX missile to the U.S. Congress and the American people.

And always, he had charts designed to prove his point. His charts were designed to prove the American people that we need more rockets and more space to prove that the Soviets lead the United States in this field. "We have one thousand MX missiles as opposed to the Soviets' one hundred."

But the President compared only those missiles that the Soviets lead the United States in. If those are the missiles that the President has available, he has an incompetent staff.

In the final analysis, the President said that the MX is needed as a bargaining chip in the START talks -- but what an expensive bargaining chip! According to the charts he had on T.V., the U.S. is in need of some bargaining chips, but reference to the other, more complete, charts makes the existence of the MX systems questionable.

In the past the American public has not been very much sophisticated about the Chinese weapons.

The Chinese weapons

Indeed a close look at the status of the other is the U.S. Department of Defense or The Stockholm International Peace Research Institute shows that the U.S. has far more MXs, more MX missiles and more in production than the Moscows ever have. In fact the Russians have never had an MX system. The U.S. has had a MX system for many years. In fact the other side of the argument is that the MX is really no more a threat to the Soviet Union than the U.S. is to the Soviet Union.

-- John Patrick, Coalition For Change.
Say it isn’t so: ‘Doonesbury’ takes a break

A LOTT OF newspaper readers will share a sense of loss when Doonesbury cartoonist Garry Trudeau begins an extended leave of absence.

Trudeau announced Sept. 8 that after 14 years of producing ‘Doonesbury,’ he will “take a breather” beginning Jan. 2, 1983. The final ‘Doonesbury’ strip for the DE — at least for a while — will be published Wednesday, when the newspaper shuts down for Christmas break.

The specific length of Trudeau’s leave has not been announced, but he indicated he will resume the feature by the fall of 1984.

“Investigative cartooning is a young man’s game. Since the industry frowns on vacations, I’ll be taking a medical leave,” said Trudeau in a recent press release.

“This is simply a holl in the action. It is not, repeat not, a mid-life crisis.”

‘DOONESBURY” BEGAN daily syndication on Oct. 30, 1970 with 28 subscribing newspapers. The strip quickly established a reputation for iconoclastic and innovative, and is now the only comic strip ever to receive the Pulitzer Prize.

The strip has continually broken new ground and has progressed far beyond the status of a mere comic strip. ‘Doonesbury’ has become an institution. The characters have risen to the position of commentators on the conscience and beliefs of the American people.

In fact, it is the characters, according to Trudeau, that need the most rest.

“For almost 15 years, the main characters have been wrapped in a time warp, so find themselves carrying due, that need the most rest.

“For almost 15 years, the main characters have been wrapped in a time warp, so find themselves carrying due, that need the most rest.

“I am doing it to give my characters a break,” Trudeau said. “They need to see and experience while I take my leave.”

The trip from draft beer and mixers to draft beer and mixers has become somewhat the general concern. The strip quickly grew up and eventually became an integral part of each day’s editorial page, a move that has not been regenerated.

In vain, the editorial committee of the DE searched for a replacement to fill in for the master while he took his leave. It just was not possible to find another strip that had the balance of social commentary and humor to deserve a place on the editorial page. Therefore, at the present time, no strip has been brought in to replace ‘Doonesbury.’

Not everyone has loved ‘Doonesbury.’ Of course. No other comic strip has been pulled from so many newspapers as Trudeau’s controversial treatment of issues and public figures.

AMONG THE MOST controversial highlights over the years have been the following:

- The characters, Mark Slackmeyer, gleefully proclaiming that John Mitchell, former head of the Nixon administration, was “guilty, guilty, guilty,” even before the Senate had begun its Watergate investigation.
- The introduction of a male homosexual character, Andy.

- A scene showing two characters, Joanie Caucus and Jack Redfern, lying in bed. They were not married until five years later.

A strip containing a mail-in coupon, in which it was implied that House Speaker Tip O’Neill was involved in the Korean scandal. Ten mail bags of coupons were delivered to the speaker’s office before the post office was alerted to stop.

A two-week sequence that suggested a connection between California Gov. Jerry Brown and an organized crime figure. The strip quickly grew up and eventually became an integral part of each day’s editorial page, a move that has not been regenerated.

Through all of the controversy, Trudeau maintained an incredibly high popularity among not only one extensive interview in over 14 years — a feat he claims to be proud of. Trudeau said one of two men who have turned down an interview was “60 Minutes.”

The other was Pope John Paul II.

Trudeau has agreed to take his leave in time off for study and writing. ‘We wish him the best luck I now that in 1964 when the characters of ‘Doonesbury’ will once more come to life.

As stated, man.

A tribute and farewell to Carbondale

WHAT CAN BE SAID about a place?

That it is beautiful, serene, peaceful and full of life. That the four seasons creep through each and every year, bringing with them the beauty and wonder that’s been seen before by my little brown eyes. There will never be a place like it in the world near exactly similar to it in the United States far me.

Carbondale is that place. Yet sometimes, if not most of the time, I have trouble realizing its existence and its influence in my life. It is funny that now am I beginning to comprehend how its destiny was intertwined with mine

This place helped me in adapting to a new and foreign surrounding. It gave me the confidence and courage to start my temporary stay in the United States and eventually my studies, far away from home, halfway around the world.

It affected my personal and professional decisions whether I realized it or not whether I wanted it to be so. I know it would have been different had I never come to this place. At times I wonder what that could have been of my life.

But the most critical part of it all was my awareness that I have spent four tantalizing years of my life. Yes, I guess I have had a taste of the American institution. I went. Here I discovered my first job full of responsibility, my first experience of independent living, alone, in an apartment all to myself and several other ‘firsts’ that included relationships, cars and pizza.

I witnessed the Iranian hostage crisis, the energy crisis, the unpredictable heavy storms and blizzards, the Midwest problem, the space shuttle and the shooting of a President. I was also able to venture out to most of the country and to see places that I had only seen in story books and photographs. These are but some of the things I was able to see and experience while I was there.

I was able to see the progress of my own community, too. From the 45 or so Malaysians in 1978 to about 800 now; from the close-knit group then to the unexplainable problems that arose from too large a group now. There were the occasional internal problems that presented themselves in the Malaysian community and the usual struggles that good times and bad times present every student academically, socially and personally.

There were numerous friendships made while I was here. I learned about the different cultures and understood somewhat the different perceptions of Americans toward life, the world and other important matters. I also learned something from me too.

All of these things happened to me in a place called Carbondale. In a few days, I shall be leaving Carbondale, never to fly back home. Maybe all this was meant to be. I know I am bringing home more than myself to Malaysia. I am bringing with me the sweet and sad moments, the memories of the people and the rights of the people and ultimately a small piece of the American spirit. I can only wish that the night of this grace and guidance had let me prolong my time here and witness His wonders and His bounty.

Goodbye. Carbondale. I am grateful for the great people to do to me. I know that I can do to show my sincere appreciation to you. I long to remember. If God permits, I shall return!! Johan Othman, Graduate Student, Secondary Education.

Question Begin’s actions

We thank the almighty for Dr. Robert Ashmore, an expert on the Arab-Israelis conflict, stated to the authenticity of his remarks during his candid lecture here in the Student Center. He spoke the raw truth.

There is a great need for the American people to come face to face with the duplicity of our country. As America loves America and all she stands for, I have said, we need more authentic Americans to tell the truth no matter who is in the wake. Truth never wrongs anyone. Prophet Jesus says “we shall know the truth and the truth will make you free.” John 8:32. Falsehood incebrates the mind.

Monarch Begin, prime minister of Israel, should be questioned on his concepts and precepts concerning non-Jewish people and the rights of the Palestinians. The American people are bankrolling Mr. Begin and his terrorism without, for the most part, being aware of it.

Do you know how much of your taxes are sent to support Mr. Begin? Don’t you want to know?”

We need to be aware of the economy of our country is right now.

It is good to witness civil-minded, devoted Jews speak out against the demagogue of Mr. Begin and his cohorts. The Jewish people who oppose the “60 Minutes” last Sunday warrants the respect of the world. More of such minds and hearts will come forth with more humane concerns in the future. — Imam Aladdin Shabaz, Carbondale.

Expresso year-end cavalcade

displays SIU-C dance talent

By Cynthia Rector
Staff Writer

The stage of Furr Auditorium was kept consistently alive with rhythm Sunday night, first with tap shoes and then with the beat of Darryl Perry’s congos. At other points, modern dancers offered a lighter step but no less enthusiasm at what coordinator Joni Stumph, senior in dance therapy, called one of the largest year-end recitals ever at SIU-C.

Dance Expresso! The name was a take-off on both the expressive performance spirit and the hot coffee donated by Makanda Java. More then 12 SIU-C dance classes participated, as well as a contradance class, four young tap dancers from Carterville and an adult continuing education class.

Three musicians gave the evening added appeal and spontaneity. Perry, from Gus Papellis, played some fine percussion and Bret Hamilton and Steve Fargan, better known as the Bolsheviks, offered their original electronic compositions. One of the most interesting interactions between music and movement came during Cornell Williams’ solo performance. The music was last-minute improvisation for the Bolsheviks. The only information Williams had given the musicians before the collaboration was “it’s a slow dance with a lot of dynamic changes.” But it worked beautifully. Williams’s well-defined body seemed to be interpreting the music instead of the other way around.

Another similar, but more static solo was between Orna Frankel and Perry on congos and bongos. With jerky exactness, Frankel propelled her wiry body around the stage. From slithering movements on the floor to pendulum imitation to sharp turns which gave way to rigid bends, Frankel’s and Perry’s combined aural and visual appeal stood out as perhaps the sharpest performance of the evening. Dance Expresso gave a full-circle account of dance at SIU-C. The first part of the recital focused on nine tap performances. A rendition of “Hello Dolly,” choreographed by Vanessa Evans, was danced by four women in black-and-white attire complete with hard hats and bow ties. Their lively toe-tapping received cheers and whistles from the crowd. Evans choreographed the first four pieces of the tap section. Next came a crowd-pleaser. Four girls, about 14 years-old and wearing matching skirts and hats, took turns nibbling on their hats waiting for the music to begin. But when it began, it was obvious they wanted to continue their twirling and stepping forever. Their dances to “Stepping Out” and “Tea for Two” featured one little curly-locks-blondie who hammed it up.

One performer stood out for his visibility, creativity and control, it was David Zambrano, who led the section on contradance, a free-style dance he brought to SIU-C this year. He presented two solo performances, using in the first piece chairs, and in the second piece, a blue nylon bag as his prop.

There were few weak moments in the evening’s repertoire. The only thing that seemed a little hokey was an aerobic number, “Cut Loose,” since Jane Fonda has given the subject such a trite appeal that it now evokes laughter.

Anyone who didn’t fill up too much on all the Christmas goodies offered probably found the evening’s performances exhilarating in its diversity and "heart."
Gabriel leads album’s cultural journey

By Juliana Anastasoff
Staff Writer

Hold on to your seats, folks. You’re about to depart on a transcultural journey into a magical, magnificent world of music, art, and movement. Where the soul’s sensation is Beat-style ska, soft songs of Islamic mystics or koras of African giants, inspiration is unconditionally guaranteed.

Your journey has been made possible by twenty-first-century-shaman Peter Gabriel, who has experienced financial disaster in bringing together contemporary and traditional non-European music from all over Africa, Asia and the Middle East. An, he said, he’d do it again in a minute.

Music and Rhythm” is a double L.P., produced to serve as a benefit for the World Music Arts and Dance Festival, masterminded by Gabriel and held at the Royal Bath and West Showground, near Shepton Mallet, Somerset, England last July.

W.O.M.A.D. was an attempt in Britain to focus more attention and stimulate appreciation for non-European culture and its influence on popular Western musicians. The three-day festival was the forefront of innovation in new music involving folks like Gabriel, David Byrne and John Hassell, who has worked with Brian Eno, notably on an album of unidentified vocal material.

By one of the L.P. operas with the thundering drums of Mắcbeo, Brondi, pounding out African traditions of ancient ances. Gabriel’s rhythm of methodically reappearing as the “Crossing the River” followed by the “River” follows, side two, a piece with the use of unidentified vocal material that is characteristic of new musical leaders.

The African continent is further explored as the theme is, an Afro-Caribbean dance company driven by traditional Ghanaian music. Also Ghanaian in origin is a cut from Alhaji Ibrahim Abdula and his Dogumba Cultural Group, recorded by American ethnomusicologist John Chernew, X.T.I.’s “It’s Nearly Africa,” from their “English Settlement” album, closes this first side.

Side two rides on the tail of a tropical breeze, capturing a taste of West Indian-inspired music by the neoska of The Beat’s “Mirror in the Bathroom,” which was reused especially for this album. “Mirror” leads into Nigeria’s Prince Nino Mbara and Rockfields Jazz, a band which has had a profound influence on the Beast.

A cool Calypso tune from the Mighty Sparrow, a bit of reggae rhythm from the Jamaican music master, Ras, and a North African-Arabic Indian sounding piece called “Marrakesh” by Moris Peret, best known for his work with Band X, complete this exotic encounter with syncopation.

Side three includes a piece from Pete Townshend, “Accession Two,” which reflects the influence of Indian guru Meher Baba, whose visit to Townshend in 1969 has followed since the late 1960s. Centered on a great knowledge of and passion for Balinese culture is a piece by Vic Coppens, “The Cowgirl,” written in 1975, recording of traditional vocals from that Indonesian paradise. Coppenssmith-Heaven is an English producer who has done a lot of work with the Jam.

John Hassell and Peter Hammill also contribute on this side, as well as Nusrat Fateh Ali Khan and his party from Pakistan, who sing Qawwali, or devotional Muslim vocal music. David Byrne, a principal pioneer of new music frontiers, opens the last side with “His Wife Refused,” followed by the traditional Western African music of kora master Alhaji Bai Konte.

Classical Indian violinist, Shankar, who is best known for his work with John McLaughlin, teams up with Bill Laswell for a beautifully moving song titled “Himalaya,” which features a ten-string stereophonic double violin designed by Shankar. Shankar’s incredible ability to fuse his mastery of traditional South Indian music with contemporary Western music also lends a blessed touch to Gabriel’s “Across the River” on side one.

Edits from short-wave radio broadcasts woven with the multi-ethnic presentation of vocals, guitars, keyboards and synthesizers end the last portion of this musical journey, controlled by German composer Hohem Wickey with “Persian Love.”

Thanks to Gabriel, W.O.M.A.D. and “Music and Rhythm,” the excitement of the coming-together of primitive and futuristic musical expression has become available to the global community. This fusion bears an affirming witness to the belief in elements of commerciality and unity in the human experience that find their essence expressed and universally communicated in rhythm, music and movement.

Some helped schedule last content: And expected crest of 41 feet. crested last week at levee could help raise the Kaskaskia Island residents who made time in their busy schedules last week to help save the island from flooding still have feelings of guilt and resentment. And, according to some they may have possibly helped the University's image. The volunteers showed that students care and are concerned," said Graduate Student Council President-elect Steve Katsinas. "The administration is concerned."

Katsinas said it was the idea to find student volunteers who could help raise the island's levee to accommodate the expected crest of 41 feet. The river, which would have flooded the island at 40 feet, crested last week at 40.4 feet, according to Randolph County Sheriff Ardell Currat. About 165 people were evacuated from the island, he said, and the bridge, which was covered with water last week, was reopened Sunday at 12:30 p.m.

Three busloads of students, ranging from dormitory residents, athletes and ROTC students, spent Wednesday filling bags with sand and raising the levee. Some helped again on Thursday.

Katsinas said the volunteers apparently raised the levee about 1.5 feet on the northeast corner of the island, which did help save the island. Currat said that if one part had flooded, the whole island would have flooded.

The student efforts were coordinated by the GSC, the president's office, the Undergraduate Student Organization, housing officials and university relations.

A lot of credit goes to the USU and dormitory councils. Katsinas said.

"It just shows that when we get together, we can do great things," he said.

Those involved said they were very happy with the number of students who volunteered and that the suddenness and time of the semester prevented more from participating.

"Those who volunteered were those who had time in their schedules," he said.

Company run by SIU-C grads works with microelectronics

By Robert Green
Staff Writer

A small Carbondale company whose employees are all former SIU-C students is trying to use their expertise to find new and environmentally beneficial uses for microelectronic technology.

Microstructures Inc., located south of Arnold's Market on Route 51, is in the business of "microprocessor-based programmable control," according to Jim Zimmerman, an engineer who graduated from the School of Technical Careers in 1978 with a degree in microelectronics.

Zimmerman said the company designs a microprocessor for microelectronic technology. "It can be used, for example, for energy management in commercial and industrial buildings."

The controller could control peak loads, which can save customers a lot of money," Zimmerman said. "It can also be used for industrial processing control such as assembly lines, for a home computer control system which could turn on appliances and control home energy use and for statistical analysis in the billing of commercial solar energy systems."

A microprocessor, he said, is an integrated circuit in the form of a single chip. Inside the chip are the essential components of a computer, and because it's programmable, it can perform in an almost infinite number of duties.

Zimmerman said that another main application of microelectronics his company has been for solar tracking units.

A solar tracking unit, attached to a solar collector, causes the sky to search of a level of light "hours" in the sun, Zimmerman said. With the help of a sensor on one of the collectors, the unit determines the sun's position and operates a motor, which adjusts the collectors.

The parabolic collectors, which are not made by Microstructures, are generally made of metal and glass and are designed to concentrate the sun's rays to a focal point. The resulting heat is used to heat water, and can also be used to supplement a heating system, Zimmerman said.

He said he believes his company's solar tracking unit "is probably the best one being made today. We try to do everything really state-of-the-art."

Zimmerman said the company was formed about a year and a half ago and has seven employees - three engineers, two technicians and two investors who take care of marketing and inventory. All employees were SIU-C students.

He said the company "operates on a shoestring," with much of the equipment donated, but prospects for the future are bright.

Zimmerman said the company is negotiating a contract to supply the tracking systems for solar collectors at a resort in Galena, and has negotiated an energy management contract with a local restaurant.

But despite the desire to expand, Zimmerman said the small corporation has a credo that we never intend to sell our technology to the nuclear power or weapons industry. He said the company's goal is to develop complete community alternative energy systems to take advantage of solar energy, conservation, energy management, methane conversion and other methods.

"With the prices of natural gas and electricity going up the market will be wide open for alternative energy," Zimmerman said.

December grads must wait; no diplomas given until May

By Dean Kirk
Staff Writer

Students completing graduation requirements this semester might have a bit of a wait before receiving their diplomas.

Fall graduates will not receive diplomas until May and there will be no commencement exercises until then, according to Kirby Browning, director of admissions and records, the office which handles commencement.

One reason for not having a graduation ceremony in the fall is that only 8 or 9 percent of the students who fill the graduation requirements in an academic year do so in the fall.

During the 1981-82 academic year, 6,600 students met the requirements and 2,400, or approximately 3.5 percent, completed graduation by the end of fall semester.

"To the students who do graduate in the fall, two major costs are involved," Browning said. "These factors might be a deterrent to families who would have to travel long distances for the ceremony," he said.

Browning also mentioned cost as a factor. The commencement ceremonies last spring cost $5,998, said Roland Kiem, assistant director of admissions and records. It cost an additional $5,300 to print graduation programs. The total commencement program expenses for fiscal year 1982 were $16,421.

Summer commencement costs $3,852, Kiern said, not including the $2,000 for programs. These costs are included in the commencement expenses for the 1982 fiscal year, which Kiem estimated will be about $50,000.

Some of the costs involved, he said, are for gown rentals, plants and flowers, rental of the arena for the ceremony, the orchestra, the choir and pay for Physical Plant employees.

For a commencement this fall, two major costs -- printing the program and renting the arena -- could cost $5,000 plus in addition to ones we already have," Kiem said. He did say, however, that a fall commencement "may be possible financially.

"All these costs are funded by a $160 graduation fee paid by all graduating students whether they receive a bachelor's, master's or doctoral degree," Kiem said.

Browning said that commencement ceremonies have traditionally been held in spring and summer. "Breaking that tradition would require some healthy justification," he said.

One group that investigated the possibility of breaking that tradition was last year's commencement committee, a standing committee whose four faculty members are appointed by the vice president for academic affairs for a term of two academic years.

In addition, one representative from the Undergraduate Student Organization and one from the Graduate Student Council are appointed by their respective groups to serve a one-year term.

Kiem said that he and Lavida Cruz, an admissions and records office, function as resource personnel while Browning is the ex-officio member of the committee. Kiem, Browning and Cruz are permanent members but have no vote on committee decisions.

In a memorandum to John Guyon, vice president for academic affairs and research dated Nov. 11, 1981, Paul Logay, last year's commencement committee chairman, said that after discussing 'among other things, changes in the organization and programming of the University commencement ceremonies, the committee recommended that there be no ceremony held during the fall semester.

The committee also recommended that the current practice of conducting two ceremonies in May and one in August be continued.

This year's committee, headed by Walter Schmid, a faculty member in English, also considered the possibility of a December commencement.

"We thought about it and decided we wouldn't recommend it," Schmid said.

Browning said that in the last two or three years, about three students have talked to him about the lack of fall commencement.

He also said that of the number of students eligible to take part in commencement, 50 percent do so in the spring ceremonies while 50 percent do so in summer.

Browning said that more graduate students graduate in the summer than in the spring due to the "greater preponderance of students with higher degrees in summer."

Miracle maker keeping the secret

MURDOCK (AP) — The little "miracles" which came every month for three years have stopped, but not for good, Ann Reed hopes.

Anonymous benefactors sent Mrs. Reed checks for $20—36 of them to use as she saw fit to help the needy, said the 84-year-old grandmother.

Only Mrs. Reed knows where the money came from and why it stopped, but she is keeping the secret.

"Miracles do happen, you know, so maybe they'll happen again," said Mrs. Reed, who writes columns for three weekly newspapers in east-central Illinois.

The benefactors had decided that Mrs. Reed should distribute the money. After each gift, she would write to them and explain how it was used. Each time, they would reply, complimenting her on her choice, she said.

The gifts helped an elderly woman buy a walker; provided toys and clothes for the children of an unemployed worker; bought shoes for the children of a divorced mother; paid for dentures for another elderly woman; and provided spending money for poor nursing home residents.

"I could see the appreciation in people and that's all the reward I ever needed — just to see them appreciative."

During the Christmas season of 1980, while 52 Americans were held hostage in Iran, Mrs. Reed used the money to buy 52 electric candles for residents to display in their windows.

The gifts never were considered charity, she said.

"We just called them miracles."
SIU-C names house for millionaire

By Lisa Tecklenburg
Student Writer

When W. Clement Stone came through with $1 million in stock in 1902 to fund the construction of the SIU Conference Center — better known as the University House — he may have saved a lot of people's necks.

Back then, the country was a storm center of protest. Students protested the Vietnam conflict, the draft, the civil rights movement and, at the construction of new houses for the University president.

Amidst an ever-increasing construction cost estimate, the general student body protested and the Illinois Board of Higher Education and the Illinois House of Representatives made investigations into the construction plans. The Student Senate demanded resignations of the Board of Trustees, the University president and the chancellors at both the Carbondale and Edwardsville campuses over the matter.

But Stone came through with the needed funds, in the form of $1 million in insurance stock in 1969. Now, 13 years later, the Board of Trustees has approved a motion to rename the house after the W. Clement and Jesse V. Stone University House.

Stone will accept the honor when the University House officially adopts its new name in a dedication ceremony scheduled for Saturday.

W. Clement Stone has been hailed as a philanthropist. Born in Chicago in 1862 and left fatherless two years later, he became one of America's most notable self-made millionaires.

Stone stepped into the business world at the age of 6, hawking the Chicago Examiner newspaper on street corners.

By the time he was 15, he owned his own second-hand store when he was 16 he sold insurance and, at age 20, with a savings of $100, Stone set up his own insurance agency.

By 1979, with assets estimated at $1 billion, Stone's Combined Insurance Company had become one of the leading insurance companies in the nation.

Stone has attributed his success to a "positive mental attitude" — a philosophy he espouses through books and lectures.

Speaking from experience, he has insisted that "everyone can become wealthy, no matter how poor the start in life.

Stone has also been noted for his civic leadership.

He has devoted service to the areas of criminal justice, imprisonment rehabilitation and guidance for troubled adolescents.

He was named Chicagoan of the Year in 1960 for his work with the Boys Club.

Stone was nominated for the Nobel Peace Prize in 1961 and throughout his adult life, he has received 10 honorary degrees from colleges and universities.

Honorary alumni from SIU-C are nothing new to Stone, however. In 1969, the College of Business and Administration awarded him its second international Leadership Award for Entrepreneurship.

Facts About Book Buy-Back

You Can Now Sell Your Books At The University Bookstore

1. The University Bookstore will buy back books at 50% of the current list price, based on information received from instructors.
2. Representatives of Follett Book Co., a major used book wholesaler, will be on the premises to buy those books not being used again. Prices for these books are determined by the national wholesale market and vary from approximately 10-37% of list price.
3. Minimum waiting time.
5. We tell you how much you are getting for each title.

NO ONE PAYS BETTER!!

*Exceptions are those books which the bookstore is already overstocked or those that are discontinued.

Police officer plays Santa Claus

By Michele Iman
Staff Writer

Along with society's dreaded words such as nuclear blasts, tax cuts and global destruction ranks a new word — genital herpes.

This sexually transmitted disease will affect half a million people in the United States and the 20 million who already have it. The disease will suffer the same recurrences and will continue to spread in the United States.

According to Richard, there are two types of herpes virus. Herpes simplex virus I used to be associated with cold sores or fever blisters on the lips and herpes virus II with genital herpes. But Richard said, either type of virus can cause herpes infections anywhere on the body through direct contact with mucous membranes and secretions of an infected person.

If the virus is contracted, blisters like sores develop two to 20 days after exposure as near the site of virus entrance. The person may also have swollen lymph glands, and general malaise and fever. Richard said.

After two or three weeks the sores heal, but the virus remains in the body where it may be dormant for a lifetime or be reactivated by perhaps sunburn, fever or fatigue.

Thus with herpes are concerned about spreading the disease to sexual partners. Richard said.

For preventing the spreading of the disease, she said to avoid sexual contact or contact with other infected areas when the sores are present. The virus may also be spread during the prodrome period, when the sores are not present, when the initial signs of tingling, itching and burning occur, Richard said.

The group, Richard said, is not an information workshop for the general population. Instead, the group will focus on people who have herpes and their partners or people who are in close association with those infected.

Richardson and Jan Pregel, Wellness Center graduate assistant, will attend all meetings.

"As a nurse, I'll be more like a medical resource and I will help coordinate," Richardson said.

It is planned that the group will meet one evening a week for an hour, half a hour, but Richardson said, "it really will be up to the group as to when we'll meet and how the group will be structured."

Those interested in the group are asked to call the Wellness Center at 536-644. The first two weeks in February will be devoted to conducting an interview, Richardson said, "to make sure that what they're looking for is what the group will offer."
The final tally and traveling award will be given at a victory party for the United Way campaign. It will be held from 5 to 7 p.m. Tuesday at the Prime Time restaurant, located at the old Court Club behind University Mall.

Traveling awards are plaques given to various divisions for outstanding achievement in different categories, according to Dr. Linda Stockman, coordinator of the SIU-C United Way campaign.

The Contributor Growth Award will be given to Campus Services, which increased its number of contributors from 39 to 56 contributors and 23 of 28 employees contributed at the Physical Plant, which received a 1982 plate to add to their 1981 Outstanding Unit Award.

The award for dollar increase will go to the Student Drive. In 1981 the student drive brought in $196. This year, $362.65 was collected.

The Outstanding Unit is the Rehabilitation Institute, where contributions increased from 8 to 14 and dollars donated increased from $697 to $1,437. The Outstanding Division Award will be given to the College of Human Resources, to which the Rehabilitation Institute belongs. Contributions in the College of Human Resources increased $726. from $3,494 to $4,220.

The Student Center will receive a 1982 plate for its continued support and service that it has given the United Way campaign.

The Interstate United Food Service more than doubled its contributions, although half as many people this year contributed than in 1981.

"The level of giving isn't down," said Davis. "But contributions are being carefully considered when given."

SIUC surpassed its goal of $41,000 by $1,475.21. Davis said she was pleased with campaign response. "Many of the units increased their contributions and most of the smaller units had 100 percent participation," she said. She said another $3,491 collected had been designated for other town.

UNCERTAIN—Mrs. Gardner was working in her garden, bent over with a trowel, when she lost all interest. She couldn't straighten up. She lost all interest in gardening and was ready to throw in the towel. She had joined the Achin' back club.

Mr. Gardner was working in his garden, bent over with a trowel. "Let's put down a few quarts of seed."

Mrs. Gardner said, "I saw a lightening bolt."

"Now, that's an interesting point," said Mr. Gardner.

George bent down to pick up his daughter — bending at the waist and hips rather than at the knees. He has become a member of the club.

Mr. Gardner tried to calm his daughter — bending at the waist and hips rather than at the knees. He has become a member of the club.

Mrs. Gardner seems to have had back problems all her life. Probably starting from her early school days when she stumbled at her desk with poor posture.

What most of our patients want to know is "HOW DO I RESIGN FROM THE ACHIN' BACK CLUB?" Our answer is to help them realign misaligned vertebrae, that is causing nerve irritation. If you are a member of the Achin' Back Club, remember, the five most dangerous words are "MAYBE IT WILL GO AWAY.""

HOME from Page 20
ted or let down the ball. And the coach just
left early Tuesday.

"It's not true," she said. "I could never
have a book on it. It was all done with the
Gamecock's game. It's very difficult to explain
why the coach just left at the last minute.

By mid-season, Peeples

wanted to leave, but was talked

into staying at the team. She was
offered a new deal, but refused to sign it.
"It was so frustrating and
frustrating," she said. "I was

making no progress, we were losing
every game and I just felt like I was going
to close to losing my mind."

Illinois State was interested and
began recruiting Peeples, but Peeples refused to
consider the possibility of playing for
another team. She was determined to
make the most of her time at Illinois State, even if it
meant leaving early to pursue her goals.

ENOUGH

from Page 20

Efforts to keep her at Illinois State were

well underway, but Peeples' decision to

leave early was a blow to both the coach
dr. Brian E. Woodard

and the team. The coach was disappointed,

but respected her decision and

wished her well.

Peeples was reportedly
going to stay at Illinois State,

but the coach didn't want to

discuss her future plans.

That was when Scott

Smithson stepped in.

Smithson, who was drafted

by the Chicago White Sox in the 3rd round of

the draft, is a pitcher for the Sox and is

considered one of the best prospects in the

Major Leagues. He is known for his
calming influence on the
team and his ability to
focus on the game at hand.

Peeples chose to stay with

the team and work hard to

prepare for the next game.

The team was
determined to carry on with their
efforts and make a
statement in the remaining games of

the season.

Peeples' departure was

difficult for the coach and the

team, but everyone was

proud of her decision and

wished her well in her future
(adapted from a real-life
situation).

DIVERS

from Page 20

The decision to release Peeples was

a tough one for the coach,

but he felt it was necessary to

make a change in order to

keep the team focused on their
goals.

The coach believed that

the team could benefit from

a new perspective and

approach, and that releasing

Peeples was the best way to

achieve this.

The coach also

recognized that

Peeples' departure

would be a

lot for the

team to

handle.

The team was

upset by the

coach's decision,

but they

were

determined to

come together and

focus on the remaining

games.

Peeples was

understandably

torn

between

her desire to

stay and

her need to

move on.

She talked to

the coaches

and

tried to

understand their

thinking.

The coaches

were

determined to

make the

most of

the

remaining

games of

the season

and

achieve their
goals.

Peeples' departure was

a blow to the

team,

but everyone was

determined to

move forward and

achieve their
goals.

(adapted from a real-life
situation)
Three-point shot losing coaches’ favor

By Dan Deive
Staff Writer

Sahki basketball coach Allen Van Winkle doesn’t like the newly instituted three-point play rule. Neither does Wichita State’s Gene Smithson. Nor does Drake’s Gary Garner think much of it, even though his Bulldogs have had more success with it - hitting nine of 19 three-pointers in four games - than any other Valley team.

Bradley’s Dick Versace thought it was all right for a while, but one game experience changed his mind. Bradley made just three of 19 shots from outside the 19-foot three-point stripe in a game against Murray State. Versace spent the next week taking the play out of his offense.

“We devoted a week of practice to learning the three point line,” said Versace. “We now use it as a gauge to shoot outside.”

Few of the Valley coaches were ardently supporters of the new rule when it was approved in May. The coaches had voted unanimously. though some were ardent supporters of the new rule when it was approved.

That made the coaches even more leery of the rule. Except the fervent supporters like West Texas State’s Ken Edwards, most of them have adopted a wait-and-see attitude towards the long jump shot.

So why was it established, and why is it unanimous?

Perhaps as part of the nationwide rush to experiment with college basketball this year, major collegiate conferences rushed each other to institute the three-point play and the shot clock.

Nine conferences adopted three-point play and eight adopted the shot clock. From these two shot clocks, ranging from 30 to 45 seconds. The MVC did not adopt a three-point play.

It was felt that the three-point play would add excitement to the game, especially in the closing moments, and also keep teams from taking time offensively.

The closest line is in the Atlantic Coast Conference, one of the first conferences to adopt the change. The line is measured at 19 feet, 19 1/2 inches. The MVC line is at 19 feet, 9 inches. The ACC line is at 16 feet. oven 9 inches.

The MVC vote to approve the three-point play was unanimous. At the end of the year, it probably will be taken up for consideration again. If it ever comes up, the coaches are divided, though some indication, it may have a little to be removed.

“The coaches at the end of the year probably won’t be for it,” said MVC Director of Public Relations Jeff Hurd, “I’m sure it will be discussed.”

As of Dec. 12, MVC teams had been in 15 games where the three-point play was used. They were 23 of 63, for a 36.5 percent accuracy.

The Salukis have taken three shots in three games and have missed all of them.

Van Winkle thinks that the rule will definitely shoot less than 25 percent from downtown, probably less, and maybe at low as 15 or 18 percent.

Drake is the only Valley team that has had measurable success with the three-point play this season, and even then, it was an exception,” he said at press time. Van Winkle said his team has not worked on, or even thought much about, the play.

Van Winkle thinks that the rule eventually will shoot less than 25 percent from downtown, probably less, and maybe as low as 15 or 18 percent.

Transfer guard finds a home at SIU-C

By Jackie Rodgers
Sports Editor

Rose Peeples said she was brought up not to be selfish, and maybe that’s why she’s always passed the ball to an open teammate before taking the shot herself.

Peeples’ why she was elected co-captain of the 1982-83 women’s basketball team. Her teammates indicated that the transfer she would be unable to play if the Salukis are to win at least 19 games this year. That’s my goal,” said Peeples. “To know Rose Peeples is to love her.”

By Brian Higgins
Staff Writer

Southwest of Portage, Ind., and northeast of Clearwater, Fla., lies Carbondale, Ill., the home of Southern Illinois University, for the most part, a college town surrounded by many small cities, as diverse socially and economically as the people within it. Climaically, hall SIU-C freshman divers, Angie Faihderbe and Cindy Mullin have converged under the watchful eye of diving coach Dennis Golden to form the SIU-C diving team.

When diving, you must call out your拆ne. For the divers from these two schools, it’s a world closer to that of learners to that of performers.

Faihderbe and Mullin are both 18, were recruited by SIU-C after outstanding prep careers. Faihderbe was the top diver in both her city and district, while Mullin, a native of Indiana, was well-placing in the state meet. Mullin, who kept pace with Faihderbe by winning the 3-meter championships several times.

“Since Saundra was injured, it has helped her to get at a meet.”

“She has yet hit the magical score of 200, which, if accomplished twice, would qualify them for nationals.”

Rose Peeples’ coach at Illinois Central College where Peeples studied her major in education and played sports. “She’s just a marvelous person,” said Van Winkle.

“Rose Peeples is a great person, then a great player,” said Cindy Scott, Peeples’ current coach.

Peeples said she isn’t sure why she has earned high praise from those who know her, but she gives the credit to her parents for molding her into the person she is today.

“Mom and Dad did a lot for Peeples,” said. “If it wasn’t for them, I wouldn’t have turned out the way I did.”

Faihderbe has four brothers and sisters, all adopted as she is. The Faihderbes said life was tough in the Peeples’ home, but it was an experience she will never forget.

“She’s not a kid. I used to go home and cry because kids used to tease me saying your mommamma didn’t want you.”

Peeples said, “But that was when I was a kid. Now I’m proud and glad I am adopted.

My mother always tells me you should be glad you have someone who loves you, and I know they do.”

After completing her two-year junior college stint, an at SIU-C, Peeples is major with coaches, including SIU-C – Kansas, a Big Eight school, mostly because Peeples knows each other. You know, you, looking at you like you

You know, you, looking at you like you

Rookey divers chalking up victories

Coach Cindy Scott said Rose Peeples is one of her most consistent players. Peeples is averaging 9.7 points per game, 4.2 rebounds per game while shooting over 60 percent from the floor.
