EPA threatens to fine SIUC for emissions

By Brian T. Sutton
Daily Egyptian Reporter

SIUC and Environmental Protection Agency officials disagree about whether or not SIUC's Physical Plant is within federal and state guidelines for air pollution.

SIUC's Physical Plant is allowed to emit 16,000 tons of sulfur dioxide each year, according to its EPA permit. SIUC officials say the plant only emits 4,000 tons of sulfur dioxide each year.

Still Capie, vice chancellor for Administration, said SIUC has always been within EPA guidelines.

He said SIUC has spent $34.2 million to construct and upgrade the Physical Plant's filter system on boilers by this fall — but not because the University is not complying with EPA standards.

"Under our owner's permit, we have always been in compliance with their standards," Capie said.

Capie said the University is negotiating with the federal EPA about a request for a fine against the University for not operating within the compliance of federal EPA standards.

"We are providing them with data from our studies," he said. "They disagree with our charge that we are violating their standards. Just because the EPA says it, it does not mean it is true."

Charles Rhyduck, an Illinois EPA specialist, said he has been inspecting SIUC since 1985 and said SIUC has been in and out of compliance with state and federal EPA standards during that time.

Rhyduck said the construction of new filters and the use of the new boiler will bring the plant into compliance with air pollution standards. He said past inspections have shown the plant to be out of compliance.

Allen Haake, supervising archivist for SIUC, said SIUC has already taken steps to meet the standards.

"We are upgrading and we can meet stiffer requirements by the EPA or easily upgrade them to meet the standards," he said.

Coming to class required

Excessive cuts may cost financial aid recipients funding under proposed attendance policy.

By Lori D. Clark
DL Assistant Politics Editor

Imagine arriving for class and having to punch in upon arrival and punch out when leaving. SIUC students receiving financial aid may not have to imagine much longer, University officials say.

To comply with requirements set by agencies that grant financial aid through grants and loans, SIUC must find a way to keep track of attendance for students who receive financial aid, an SIUC faculty member says.

Jim Allen, SIUC history professor and Faculty Senate president, said the financial aid agencies want to know how the financial aid money is being used and if students are attending their classes. He said the University will have to comply with this request.

"We have to be in full compliance with federal and state financial aid sources," Allen said. "This will involve or that if we're audited, we don't have to cough back all this money because students aren't coming class. We're in this if students do not come or if we have no attendance mechanism."

He said a Faculty Senate committee is trying to establish ways to ensure that the University is complying with the financial aid agencies.

Allen said the committee has come up with ideas that will not cause inconveniences for faculty and students.

The Frat item the committee considered is a punch-in system, such as those used in the workplace to keep track of employees' hours.

Allen said a system was used at Northwestern University in Chicago, but it was expensive as well as cumbersome.

The second idea would be for faculty members to maintain a class list for students to initial. Allen said those students who have attended class after a set period would lose financial aid.

USG candidates' debate

President hopefuls discuss WIDB, enrollment

by Signe K. Skipton
Daily Egyptian Reporter

Undergraduate Student Government presidential candidates were questioned Monday by a three-student panel on issues ranging from the Saluki Express mass transit system to funding sources for WIDB radio.

Panel members were Marco Nisca, USG election commission member; Jeff Lucas, a member of the campus group Gays, Lesbians, Bisexuals and Friends; and a representative from the Daily Egyptian.

Scott Pfeiffer, Saluki Party presidential candidate, said USG members should attend Mass Transit meetings to handle student complaints about Saluki Express not running during school breaks.

"In USG, we have members who serve on the Mass Transit Board," Pfeiffer said. "And we need those members to attend the meetings and let the board know that many are concerned with buses running during spring and fall breaks and that these issues need to be researched before any decisions are made."

"We need to determine if it is cost-effective, if there is a significant number of students who would use the service during breaks and if it is feasible," Allen said.

Candidates were asked if WIDB is a student-run radio station that perfectly works off the air because of equipment failure, should receive $24,000 or USG funding to get the equipment needed to get back on the air.

Pfeiffer said altruistic contributions and fund raisers might be other options, instead of a loan from USG to help the radio station.

Ahn said WIDB is seeking joint funding and contacting alumni for help, but he said it is not enough.

He said, if elected, students may be asked to support a lot increase to help WIDB.

Ahn's running mate is David Vingen, who is now a Thompson Point resident.

The traditions of Halloween and Springfest parties at SIUC were also discussed during the debate.

Ahn said even though he enjoyed seeing DEBATES, page 6

Thrilling ride: Rainy weather gave Kevin Montgomery, a merry-go-round operator with SugarAmusements of New Athens, time to catch up with some reading Tuesday. The carnival, located in the Kuemper parking lot, is open 3 p.m. to 11 p.m. Sunday through Thursday and 3 p.m. to midnight Friday and Saturday.
Michael Gulezian is regarded as one of the first solo acoustic instrumental guitarists of our time. His debut recording show was called "an epoch making record" by guitar icon John Fahay.

Gulezian's Distant Memories And Dreams (1992) was named runner-up "Disc of The Year" by CD Review.

The Creek had never looked so clean, Arch Connolly was in Carbondale for a day to meet with some of his old friends from high school. He had always been an outgoing individual, and was not afraid to state his opinion, whether it was about how soup tasted or about the

"Bemused, befuddled, confused" by Arch Connolly

This is a new development in American business, where until recently the culture model had been based almost entirely on competition, Harris said. He said that the economy forced him to hire fewer employees, companies are relying on teams to do more with less. When asked to rank desirable skills, employers rated teamwork second only to communication effectively and using technology effectively, he said. Harris said although his survey results are based on the replies of 56 companies concerning desirable qualities in agriculture graduates, the trend toward teamwork can be seen throughout the business world.

"This is not specific to any major, or any industry," he said. "Instead of the win or lose mentality of the competition," he said. "We need to win-win situations. Competition still exists, but it is based on a shared high team." Ryan Storm, director of the Underway Adventure Program at SIUC's Touch of Nature, said he has seen a growing corporate interest in the teamwork development programs he directs. He said his department provides the excel program, a corporate teambuilding workshop used by organizations such as the Holy Cross Hospital and other Fortune 500 companies. He said General Motors is considering "Touch of Nature" as a permanent site for developing teams beginning this fall. The Underway Adventure Program also hosts schools, youth groups and Boy Scouts, he said. Storm team said, participations team face obstacles that they must work together to overcome.

"We have found that 10-12 members in the optimum number in a half-day program," he said. "Facilitators guide the groups, but the teams learn to work together on their own — it's a lot of fun." Harris said the new study will be used in a review of the College of Agriculture's curriculum to support undergraduate education and long-term strategic plan for the college. He said the college may use the "teamwork development" program to be more responsive to employers in the fields its graduates hope to enter.

Sparks away: The sculpture in front of Life Science III, "Vigorine", which has been there since the fall semester, is erected Monday afternoon by JRL, Robinson Construction Company, 501 W. Carbondale Industrial Park Rd. Dave Barone uses an acetylene torch to shorten a bolt that was hindering the lowering of the sculpture.

Speaker explains how to repair ecosystems

By Lisa M. Pangburn Daily Egyptian Reporter

The breakdown and regeneration of a Northern European ecosystem under the pressures of population were used to illustrate Monday how people of other countries can repair their environments.

Thorkild Kjaergaard, of the Danish National Historical Museum, used Denmark as an example in his lecture at the University Museum Auditorium to show how a country with dwindling resources can rebuild its ecosystem. He said the year 1500 was the turning point in Danish ecological history.

"The soil erosion was catastrophic," he said. "The enormous woods were practically demolished and roughly 5 percent of the country turned into desert."

There were several reasons for the country's unhealthy environment, including the doubling of its population between 1500 and 1800, Kjaergaard said.

Kjaergaard said that at that time, action had to be taken so the country could survive and could find new kinds of fuel for heating and cooking. He said many trees had been cut down and wasted so coal could be raised on the land to feed the people.

"There was no reason to think that Denmark could not feed itself, but there was an energy crisis when the forests were cleared for food," he said.

The era when action was taken to see ECOSYSTEM, page 7

Acclaimed artist's work now on display at SIUC

By James Lyon DFE Features Editor

The world looks a little different through the eye of a kaleidoscope. Colorful objects from nearby are transformed into an array resembling something brilliant. And to see the world through the lens of the late Arch Connolly is like seeing the world through kaleidoscope-colored eyes.

Connolly made his mark at SIUC in 1973 with a bachelor's in ceramics. He died in 1995 as a result of complications arising from the AIDS virus.

In his lifetime he became an internationally acclaimed artist with a unique style of using everyday objects to create sculptures, art objects, jewelry and broken eggshells, and transforming them into something beautiful.

"He was a very exuberant and outgoing individual," Arch's brother Dan Connolly, who graduated from SIUC in 1979, said. "Arch was very flamboyant and extremely enthusiastic and was not afraid to state his opinion, whether it was about how soup tasted or about the

"Remused, betrayed and befuddled" by Arch Connolly

" Art is always a part of his life as far back as I can remember, and he was always very passionate about it. I think his work kind of reflects that," Connolly said Arch moved to San Francisco after college but moved to New York when he had the opportunity to put his work on display. He said he worked at restaurants for a while until he made enough as an artist to live on.

"It is a very colorful and unique original approach to art," Connolly said. "He would take things like costume jewelry and beads, which might look tawdry by themselves, and turn them into collages that are really quite remarkable." Still, as Connolly said by looking at Connolly's work, there does not seem to be "at all of an emphasis," but instead there seems to be a dramatic difference in style.

"Some of his pieces do not look like a natural movement between styles," he said. "It looks more like they represent his state of mind at the time. His work seems to bounce back and forth between different styles just like a person might go

"It bothered him a little, but not as much as someone might think," Connolly said. "During the times he was feeling well, he was his usual self. There were moments when he got depressed, but that was unusual. He was not as morbid as some people might expect."

Connolly said Arch was in a car accident a year after graduated college, and was in a wheelchair. He had mercifully finished his graduate studies, and had been working at a 9-5 job for several years. He had been "in a dark place," Connolly said.

"Dan Connolly, a 1979 SIUC alumnus, stands next at his favorite piece in a University Museum exhibit featuring works by his brother, Arch. "It is an honor to be featured," Connolly said. Dan Connolly was in Carbondale for the opening to the show April 2.

Sc仪ed every Tuesday...

"It is an honor to be featured," Connolly said.

New SIUC geology class will teach crime solving

By Tammy Taylor Daily Egyptian Reporter

Even something as common as pocket lint could be used to determine aspects of a crime because the samples could be used to identify the crime scene or suspect, a SIUC professor said.

John Crelling, a soil pedology professor, said a new course titled Forensic Geology offered by the SIUC Geology Department will teach students to use geology as a method to solve crimes. He said this course has never been taught at SIUC and exists at only one other college in the country. The only other forensic course offered at the University is forensic science.

Crelling said evidence of a geological nature is present in many crimes, but most forensic specialists are not trained in geology.

He said geologists can usually identify fingerprints, blood patterns, hairs and fiber evidence to prove facts about a crime.

Forensic geologists look at evidence such as soil, rocks, minerals, coal, spores and pollen found at the crime scene or on a suspect's clothing to attempt to link it to a crime scene.

Crelling said he plans for the class involves analyzing lint samples from several students' pockets by looking at the samples with a microscope and using evidence to identify soil and rock samples.

"By examining the list in someone's pocket, the students will be able to determine if the person smoked, what they have eaten or even if they used antacids because of the particles present in the lint," Crelling said.

Crelling said forensic geology is useful because some of the elements, such as minerals, rocks or pollen, could be unique to a specific geographical area.

"For example, if soil was found on the suspect's stuff or the under-side of the shoe, a forensic geologist could identify the soil and match it to the crime scene," Crelling said.

Crelling said the course will be offered during the fall semester as a Geology 499, advanced topics in a geologic science.

Crelling said the structure of the class, which will meet once a week for about three hours, will include a lecture and a practical exercise. The students will use magnifying glasses and microscopes to examine samples, which will be given to them to identify soil and rock samples, he said.

Crelling said there is no prerequisite for the class, and students from all majors are encouraged to take it.

"I plan for this class to be technical but not too tough to understand," he said. "I want to emphasize approach and attitude and teach the students to approach things skeptically."

Jim Crevea, an chemistry professor at the Illinois State Police Forensic Science Laboratory, said he has been approached by a number of cases that benefit from using geological knowledge, but he said geology can aid in investigating
EDITORIAL

Bottom is the best of the remaining trustee candidates

STUDENTS WILL HAVE ONLY TWO CHOICES in Wednesday's student trustee election. There should be three candidates, but poorly written election bylaws and a lack of initiative among the Undergraduate Student Government, Graduate and Professional Student Council and the Student Trustee Election Commission to change those bylaws in time for the election will prevent students from having all the options they should have.

The Saluki Party candidate for the position, Troy Arnoldi, was denied running, even as a write-in candidate, after it was found that the wording of the student trustee election laws do not allow write-in candidates. Instead of trying to amend the flawed laws so a viable candidate could run, our student government leaders put off the task until next year. This was a disservice to the student body.

OF THE TWO CANDIDATES LEFT, WE ENDORSE Students First Party candidate Eric Bottom over independent candidate Najjar Abdul-Musawwir. 

Bottom's sharper ideas include working with the SIU Board of Trustees as they develop a policy so he could gather student opinion on issues before the BOT presents a proposal, instead of after. Almost all student input regarding the BOT's most recent fee hike proposal came after the proposal was already on the table. This process doesn't work well. It's like handing someone a menu after you begin to cook his or her food.

We think this is a good way to integrate student opinion into policy formulation at SIUC, and we hope Bottom carries through on this if he is elected. 

A weakness in Abdul-Musawwir's platform is his staunch opposition to cutting tuition waivers. SIUC authorizes too many people to attend the University without paying tuition. Although these waivers create opportunities for qualified students who may be unable to afford tuition, SIUC cannot afford to give away millions of dollars that would otherwise go toward higher education. About 12 percent of SIUC students receive waivers. Not only does this cost the University between $350,000 and $400,000 per year, it also opens up SIUC to still fines because of a 3 percent cap on waivers adopted by the Illinois Board of Higher Education. The University could be fined about $1.5 million if tuition waivers are not cut.

BOTTOM HASN'T RULED OUT KEEPING the waivers intact, but says they should be scrutinized to see where cuts are justifiable. We think not considering at least partial cut in the waivers, especially in the midst of an $8.6-million budget crunch, is a fiscally unsound position.

We also like Bottom's idea of looking at fees every few years to determine if students still want the related services. He says all fees were initially implemented because students wanted the services the fees funded. Over time, as he points out, student views toward the services may change. Every so often, students should be asked, "Do you still want to pay $114 every year for a recreation center?" instead of "Do you want to pay another $6 per year for a rec center?" If he is elected, Bottom should follow through on this different way of looking at fees.

Bottom also seems well-versed in the technical details of University policy. Such knowledge is crucial to being an effective student trustee. Without it, board members justifiably lose respect for the suggestions the trustee makes.

ALTHOUGH ABUDL-MUSAWWIR SEEMS TO HAVE more energy and a greater passion for the job, Bottom's superior ideas make him the better of the (unfortunately only) two candidates.
This perspective is aimed at clarifying some of the issues raised on the pages of the *Daily Egyptian* during the past week or so regarding the history and unification of Africa.

If we eschew any predisposition to tune on a binary paradigm, the facts of history prove that, necessarily in the conclusion; the unification of Africa shall be! Human memory, unfortunately, is very short and imperfect. It would have been termed a crazy couple of years ago to postulate that the United States would hear the day after shake hands with an Israeli Prime Minister or, in fact, dine in the White House! Similarly, at the time I was an undergraduate in the 1980s, it would sound like a daydream to sound the death knell of tribalism.

Yet, the basis of African unity and the unification of all African peoples is much more real than all of this. African peoples share the same historical experiences, the same rhythms of the universe, the same cosmological sensibilities. In other words, there is an African cultural manifestation in diversity. Now, if we are agitated by these "rhythms" and "cosmological sensibilities," then we probably belong to the disinterested educational concept.

So, our focus re-gained against this union will now be directly discussed.

Political Divinity: Thus historically African had no knowledge of one another until the advent of Europeans and therefore could not have been united. Let us assume that the seeds were correct. So, just because the people of the Oyo Empire had no knowledge of the subjects of the Kingdom of Zimbabwe precluded the unity of Oyo or Zimbabwe within its borders or delineated the linguistic and cultural affinity that they shared with African cultures.

I was at the St. Louis airport over the weekend, and I was chancing a couple of attendants at a local snack bar. It so happened that those two citizens of St. Louis had never heard of Carville or even of SIUC. But, strangely enough, they knew good deals about Nelson Mandela and about South Africa. By some peoples’ calculus, these two words or nothing in commons with Americans living in Carbondale, but in fact are the same South Africans in the basis of their knowledge alone!

Frequent War among African Societies: This has been argued as evidence of divinity. Note that the most profligate and consequent, by western standards, contributions of blacks and Africans to human development and civilization occurred prior to the arrival of foreign dynasties in ancient Egypt and before the commencement of slave trade and colonialism, in any case, if warfare to determine unity, Europeans could have never been talking about unity in any sense, as they have fought the most wars among themselves than any other species of the human family.

Different Cultures: I was rather surprised that scholars still speak of African cultures in terms of "West Africa and the Nile." Since these obviously conjure up different climatic and geographical systems, therefore, that the black yam varieties are culturally distinct in the Black fantastic.

We would rather think of culture and African unity in terms of diverse units. Think of the continent of time, as an example. It is the case with African peoples that time has been experienced in order to become real and therefore cannot be transformed into an object—sold or bought—at Millet and Tekno have shown. As part of African personality, there is the intricate fusion, rather than the opposition of the body and soul... So that the unity of the African culture and personality is based on individual identity and connection here is not the failure of consciousness but a higher level of consciousness. Then, in what gives interpenetration to the Black and African psychology.

--Kemokete Kwanza planned years ago, at a situation experiencing mind rather than a problem solving mind.

John J. hurkerson demonstrated, using the concept of African culture and personality, unity of Africans.

Like Jahn, Azame has also examined unity -- the transforming power of the body, as the basis of Afrikanism, as it connects Africans now with their past and serves as a functioning collective energy for the future.

In the future, we cannot see his way. Right now, largely due to their common historical forces, the unity of Africans along those themes has been truncated. But the fact of history is unaltered. And through these historical commodities, as images strong, the unity of Africa shall occur again.

Dele Omoleghen is a lecturer at SIUC in Black American Studies.

FAA re-evaluation of child pilots overdue

Seven-year-old Jessica Dubuff was trying to become the youngest person to pilot a plane across the United States. Jessica was a fisherman, her father a flight instructor, and her mother, Lynne, killed the three of them. Jessica’s was the latest attempt by a child to try for cross-country flight. Now, after the tragic crash, the Federal Aviation Administration will take a hard look at rules concerning young pilots. The time has long since come.

Jessica’s plane crashed in a residential neighborhood of Cheyenne shortly after takeoff. The weather was poor—gusty winds, heavy cloud cover. The Transportation Safety Board will make an inquiry on the cause of the crash in coming months. There should be a delay on a review of rules regarding young pilots. FAA regulations say pilots have to be at least 16 to solo. But children younger than 16 can take the controls of a plane if they are supervised by a licensed pilot. In recent years, children as young as 8 have set age records for cross-country flight. It is attempted to surpass those marks. At 4 ft 11 in, Jessica needed a booster seat to see the windshield. She wore extenders to reach the rudder pedals. Her flight experience amounts to a few hours. Yet no rules were broken when she took off from Half Moon Bay, Calif., to Falmouth, Mass. There should have been.

their financial aid for that class, he said.

A third option would be to install a mechanism, such as the one at the Recreation Center, for students to swipe their ID cards through, he said. He said the mechanisms would be used to keep track of attendance monitoring.

The final option is for faculty members to list the students who failed final exams, Allen said. He said this system would only require the initials of faculty members and financial aid agencies, he said. Faculty would not pick up the tab for the credit hour of failed classes. Allen said listing students who failed classes would be the best option.

"This would involve the least amount of paper work and the least inconvenience," Allen said.

Kyle Perkins, associate vice president for Academic Affairs and chair of the committee, said SIUC Financial Aid Director Pam Britton is meeting with the Department of Education to find out if the suggestions are viable. He said the committee has been working on the suggestions since January and hopes to have a plan by next fall.

Allen said the committee does not want to penalize students.

"We just want to make sure the government doesn't penalize us," Allen said.

"We can't afford to be slapped with a fine with the budget problem," Perkins said.

Roland Keim, director of Admissions and Records, said without tracking attendance, the University could be sued by the financial aid agencies.

"The University is liable for any changes from students who unofficially withdraw," he said.

Keim said the University could be required to pay fines plus any additional charges for student who are receiving aid without withdrawing.

Allen said he had mixed feelings about the possible attendance policy, but for the most part, he said the policy is good.

"The regulation might encourage faculty to get to know students and become more effective teachers," he said.

It's also good for students to know they are recognized by faculty, he said. They will want to go to classes instead of having to go to class if it's possible a good thing.

John Creeling, SIUC geology professor, said he thought the majority of SIUC faculty would be against attendance monitoring.

"There is a general resistance to anything that is imposed on you from the outside that doesn't have anything to do with teaching or learning," he said.

EPA continued from page 1

RosaMarie Cazenau, an attorney representing SIUC in the negotiations with the EPA, said SIUC has done more to meet EPA standards than is required.

Cazenau, assisted Illinois Attorney General, said after negotiations, the EPA wants to fine the University $585,000.

Cazenau said the University has made a counter offer to lower the fine amount.

But she said she has not heard from the EPA lawyers.

She said the University has made credible and persuasive arguments to reduce the fine.

Cazenau told the taxpayers' association they would suffer because the University would have to pay the fine and rely on the taxpayer to help recover the funds lost.

She said the University hopes to keep the continuing negotiations from turning into a lawsuit.

Debate continued from page 1

the activities before, he is not in support of continuing them because of the damage they do to the University.

He said such events can give the school a bad image.

"When you have a crisis like enrollment — that is not that kind of press you want to have," he said.

Perfetti said he does not support any Halloween celebrations.

In the student trustee debate, opponents Eric Bottom and Najjar Abdul-Musawwir disagreed on several key issues, including how student opinions on University issues should be presented to the SUI Board of Trustees.

The student trustee represents the student body at the SUI Board of Trustees.

Bottom said students need direct involvement and interaction with the board.

"We need to invite students to be at the (board) meetings and make a presentation on the issue that is well informed and that will gain the board's respect and influence," he said.

Abdul-Musawwir said having students participate at board meetings will not help any issue.

"We need to focus on translation of the student's opinions and work with the board on the issues," he said.

Abdul-Musawwir said he would be good for the student trustee position because of his ability to be known by the student body.

"In looking at past student trustees, most were either confrontational or so lax and low-key people that they wasn't efficient," he said.

I would get out and meet people and be known by the student body," Bottom said. He said he is the best candidate because he is interested in all student opinions.

"You can't represent the student to the board by talking to only two students, and that is what has happened in the past," he said.

The election is Wednesday from 7 a.m. to 7 p.m. with polling places at the Student Center, the Recreation Center, Lewis Hall at Thompson Point and Trueblood Hall at University Park.
Budget impasse creates fiscal nightmare for states

Los Angeles Times

WASHINGTON—The inability of President Clinton and Congress to find common ground on welfare reform has become a fiscal nightmare for some states, a policy straitjacket for others and for a few a good reason to stall in the face of public clamor for change.

In California, the federal impasse has blown a $1.6 billion hole in the state budget. In Connecticut, it has forced officials to ease a proposed 31-month limit on welfare benefits. In Kentucky, it has allowed state officials to buck a broad national consensus for fundamental reform.

President Clinton and Congress have yet to find a mutually acceptable solution to welfare reform. It is not clear whether they will ever find one. In the meantime, state officials are struggling to find ways to balance their budgets and continue providing services to people in need.

SIUC is the last stop in a tour of university museums in Illinois, and Connolly said the artwork will be returned to the family after the display ends May 31.

"Right now there are no plans for a permanent display anywhere, so his works will be put up in family members' houses," said Whitlock. "It is very good that the display is going on at Southern because the school was a very special time for Arch. It was his passion for SIU that made me choose to go there. It was kind of important for Arch to have a display at the school because of his ties to it, and it was always something he had wanted.

"If you look at a cut stone, you can see many different aspects depending where you look," he said. "This is true for Arch's work, and it also applies to his life. When you look at his work, you are pretty much looking at the type of person Arch was."
TREES to plant new seedlings

By Melissa Jakubowski
Daily Egyptian Reporter

New trees will be sprouting up around Thompson Point this May as part of the efforts of some concerned residents, students say.

The Thompson Point Residents for the Enrichment of Our Environmental Society (TREES) get approval in early April for a 23-year-old proposal to plant eight trees around Lentz and Bailey halls in Thompson Point.

Tony Earls, coordinator of Resident Life at Thompson Point, said the proposal was not the first one to be planted at Thompson Point, but they have not been planted as a result of a joint effort between different organizations.

"They were not just about just asking someone for money to plant trees," he said. "This has been an ongoing process of working with different groups to make this happen.

But aside from a few instances, Earls said she has been surprised at how the majority of people would react.

"People who I have not met before have come up and congratulated me," Earls said. "But some people who have never spoken to me before have been incredibly nice and supportive of the project.

The Thompson Point Residents for the Enrichment of Our Environmental Society (TREES) get approval in early April for a 23-year-old proposal to plant eight trees around Lentz and Bailey halls in Thompson Point.

Tony Earls, coordinator of Resident Life at Thompson Point, said the proposal was not the first one to be planted at Thompson Point, but they have not been planted as a result of a joint effort between different organizations.

"They were not just about just asking someone for money to plant trees," he said. "This has been an ongoing process of working with different groups to make this happen.

But aside from a few instances, Earls said she has been surprised at how the majority of people would react.

"People who I have not met before have come up and congratulated me," Earls said. "But some people who have never spoken to me before have been incredibly nice and supportive of the project.

People who I have not met before have come up and congratulated me," Earls said. "But some people who have never spoken to me before have been incredibly nice and supportive of the project.

New trees will be sprouting up around Thompson Point this May as part of the efforts of some concerned residents, students say.

Transportation industries fight for highway money

The Baltimore Sun
WASHINGTON—Fearing that federal budget-cutters are heading their way, the transportation industry and its allies in Congress are making a big push this week to put billions of dollars in highway and airport construction money beyond the penny-pinchers’ reach. The House is set to vote Wednesday on a bill to free the $30 billion a year collected in gasoline taxes and other user fees from the budget process so it can be funneled directly to transportation projects. The bill’s chief sponsor, Rep. Bud Shuster, who, as chairman of the House Transportation Committee would gain broad new

authority over how this money is spent, described the effort as a crusade for “truth in bonding.” Shuster, R-Pa., says he wants to make sure that federal taxes collected from motorists and airline ticket buyers are used for their rightful purpose — improving and repairing the nation’s crumbling infrastructure — instead of financing unrelated programs or being pocketed to pay down the deficit. But leaders of the Republican budget-balancing crowd — as well as the Clinton administration, anti-tax groups and even Federal Reserve Chairman Alan Greenspan — are agin at what they consider a return to the bad old days of profligate spending on pork-barrel goodies.

Oglesby said she thinks the team played well as a whole, considering the length, difficulty, course, and playing in the rain on the second day.

"It's not easy to play in the rain, it eliminates your mental focus on the game," she said.

Hudgins said she was pleased with the end results of the invitational considering the caliber of the teams that competed.

"I was glad to see how our team finished in respect to the high powered teams that competed in the invitational," Hudgins said. "I don't think the scores reflect the capability of our team.

Oglesby said the team did not really struggle, but was struck with some penalty strokes for hitting the ball into the water.

The home course had three different island greens surrounded by water and golfers had to hit the ball at least 140 yards to get it over the water.

Hudgins said the rough winter weather damaged the course, which contributed to the team's high score.

"The greens were hard which made the ball roll a lot further," Hudgins said. "If you're not hitting the greens, and making a lot of putts, it's tough to score on that golf course.

Hudgins said competing at Athens served to prepare the Salukis for the Missouri Valley Conference Championships April 22-23.

"Getting a chance to play in the warm weather helped us get into our swings and get into the groove for the conference tournament," she said.

her.

"She beat me last year so I was glad to win this year," she said.

"I was frustrated because I couldn't hit my shot because in the heat of the day, I was thinking about the match I lost last year," Auld said Gutierrez performed well and she had good movement, focus and concentration.

"I played well, point for point she had a good match," Auld said.

"In the match she lost I felt she was a step back to where she was," Auld said.

Auld said SMSU has had a disappointing season and she misses the competitiveness that the team is known for.

"I really hate to see Southwest down this year," Auld said.

"The stronger the teams are in the conference, the stronger everyone else is in the conference." Auld said the match against Illinois State was an intense match because of the long standing rivalry between the two teams.

"I was nervous when I played, and I came prepared that attitude over to my team," Auld said.

Auld said the two team did not capitalize on the opportunities to win the match with Wichita State.

"We have our chances to win some sets, but we didn't pull out the matches we needed to win," she said.

Auld also said a successful season has maintained the team a good standing in the conference championship.

The Salukis next match is against the University of Evansville Tuesday.

The home match is scheduled to begin at 3:30 p.m.

SMSU

continued from page 16

Junior pitcher Chris Schullian started the second game of the twin bill, hit the first batter he faced, and did not make it out of the first inning after surrendering two walks and four runs in two hits.

The game started bad, and did not improve from there, as the Bears hammered every hitter Southern had to offer.

SUC utilized four pitchers in the game, three wild-pitchers, and hit three SMSU batters.

SMSU scored four runs in the first inning, one run in the third, five runs in the sixth, and one run in the eighth.

Callahan was ejected in the sixth, and the game was ended after eight innings due to a 10-run rule.

Callahan said the game started as a sour note with Schullian plunging the first SMSU batter, and his team never recovered from there.

"If that's going to be the tone that's set early in the game, that's obviously not a good sign," he said.

"That's basically what happened, and it didn't get any better than that on Saturday." Following the embarrassing second game of the double-header, the Salukis looked to prove themselves better than the 11-1 loss, but the weather conditions were not favorable for Southern Illinois.

The wind was blowing over to center field at about 30 miles per hour, and Callahan said he mentioned to Wilson that he predicted one of the teams would win by a score of 15-10.

Callahan was not far off, and the game ended with a final score of 14-13 in 10 innings.

Unfortunately, the Salukis ended up on the short end of the stick in a wild game.

Each team traded runs that culminated to a 12-7 lead Bear lead at the end of the sixth inning, but the Dawgs shot SMSU down and batted back to tie the game at 12 in the ninth inning.

In the 10th inning, the Salukis scored to put SUIC up 13-12, and came within one out of a victory, but watched the win disappear on a two-run RBI double by SMSU catcher LJ Schnitt.

"I have to give credit to our defense and defense, I thought we did a tremendous job in those two areas just to get back in the game," Callahan said.

"Unfortunately, we put ourselves in a position to win it, and just couldn't close the door.

"We're literally one pitch away from winning it, and on the very next pitch we go from up by one to losing by one.

"That's probably the toughest loss since I've been here." Don Callahan

Saluki baseball coach

BECAUSE YOUR BRAIN DOESN'T HAVE WHEELS.

SIUC finishes 19th in 'up and down' tournament

By William C. Phillips III Daily Egyptian Reporter

The SIUC women's golf team placed 19th out of 22 teams in the 4-hole Liz Murphy Collegiate Classic held at Athens, Ga., during the weekend.

Southern finished the classic with a high score of 907, as the University of Tulsa won the invitational with a score of 917.

Junior co-captain Molly Hudgins was the Salukis' top finisher and placed 42 out of 114 golfers. Senior co-captain Kristen Oglesby tied at No. 70 and sophomore Jaclc OxlC! at No. 98 finished in the number 98 scoring 259. Sophomore Stacy reconstruction 289, scoring 250 for the weekend. and 191.

The other two wouldn't perform well in the weekend. tournament.

The Salukis also played good. With 260, while junior Jennifer Johnson is far from consistent.

The Salukis also were ranked 114 with a score 282. Oglesby said the team's performance was far from consistent.

When two players played good, the other two wouldn't perform well in the weekend. tournament.

Women's Tennis

Netters serve record-setting weekend at Wichita State

By William C. Phillips III Daily Egyptian Reporter

The Saluki tennis team tied at No. 25 in the University's record for consecutive wins at a season after the weekend. defeating Southwest Missouri State University and Illinois State University at Wichita State.

Southern defeated Southwest Missouri State University 7-0 Friday, and then the Redbirds 7-2 Saturday, to become the Saluki's longest weekend 5-10 to end the winning streak.

The last time the record, which was set by the 1981 squad, came close to failing was 1990 when it was tied.

Berksoy extended her match win streak to 12, and sophomore Helen Johnson has won 10 of her last 11 matches at the No. 5 spot.

Molly Card said she is even of her last six matches at the No. 2 spot, while Patricia Zihler has won five of her last six matches at the No. 4 position.

Junior Liz Gardner, who has split her last six matches, was both of her matches against SMSU and Illinois State at the weekend.

Senior Liz Field, 6-3, 6-2 of WSU Sunday, is ranked 62 in the nation, and was ranked as high as 39 at this season.

She was able to key the way to a winning streak at the weekend, and taking one match at a time, not about her win streak or how high a school is ranked.

"It's the hard work you put in at school. Play everyone as individuals," she said. "I hope to continue to play well in the champion ship of the conference." Berksoy said defeating Allison Passmore of Wichita State University was ranked because last year Passmore defeated her.

Dawgs split with Bears during four-game series

By Chad Anderson

The Saluki women's tennis team tied at No. 25 in the University's record for consecutive wins at a season after the weekend. defeating Southwest Missouri State University and Illinois State University at Wichita State.

The SIUC baseball team split a four-game weekend series with Southwest Missouri State University at the Volleyball Arena Saturday and Sunday.

Southern opened the series Friday with a 6-2 victory over the Bears. Before the Saturday double-header 3-2, lost the second game Saturday 1-1 and came up short in a tough 14-13 loss Sunday in 10 innings, the Salukis baseball coach Dan Calhoun said the victory against Missouri was a definite momentum builder going into the weekend.

That was a nice win, and people talk about mid-week games being insignificant, but I thought that was very significant," Calhoun said. "We beat a good team, and that was a win of significance."

Dan Calhoun, Saluki baseball coach.

Between the Lines

SIUC men's tennis squad defeated St. Louis University Friday; 5-2 at home. The team's record is now 8-11.

Sophomore Mick Smith playing at the No. 1 spot, sophomore Jack Oder at No. 2, senior Bejan Voskanian at No. 3 and sophomore Brian Esklin all won single matches.

The Salukis also won two out the three doubles matches.

Southern's two matches on Saturday against Bradley University and the University of Tulsa in Terre Haute, Indiana were cancelled.

The Saluki next match is April 20-21 against Oklahoma State University and the University of Oklahoma.

The Los Angeles Lakers' 1971-72 regular season record of 69-13 will be in jeopardy tonight at the Chicago Bulls look to surpass the record when they travel to Milwaukee to take on the Bucks.

The Chicago Bulls, owning a 69-9 record, will have three regular season games remaining after tonight in which they can expand on their current record.

Baseball's Cal Ripken Jr. is not the only sports figure to establish a remarkable record.

NASCAR Winston Cup circuit driver Terry Labonte, whose nickname is "Iron Man," tied Richard Petty's Winston Cup record by competing in his 513th consecutive race Sunday.

Labonte's streak which began in January 1979, can be extended with a start in next week's race in Martinsville, Va.

The Indiana Pacers will have to cope for at least the next two weeks without their small forward, Reggie Miller.

Miller fractured a bone surrounding his right eye socket during Sunday's game against the Detroit Pistons, and underwent surgery Sunday.

Vash Rider of the Minnesota Timberwolves has finished an undisclosed amount by attempting to coax the Minnesota Timberwolves to win their first game at the Cow Palace Monday afternoon.
