This is a reproduction of the form which will be used in registering men for the draft.

### Draft registration set to start Monday

By Scott Carson

Staff Writer

Draft registration for 20-year-old men will begin Monday and last until Friday to be followed the week after by registration for 18-year-old men at the Carbondale Post Office near the University Mall.

All 19- and 20-year-olds are required to register or face possible prosecution. The maximum penalty for failure to register with the Selective Service is five years imprisonment and a $40,000 fine. Carla Oikoek, district examiner for the Carbondale Post Office, said post office employees will be unable to answer any questions about registration other than those questions pertaining on how to fill out the forms.

Vickie Rightmyre, a spokesperson for the Coalition Against Registration and the Draft, above leaves registration from 11 a.m. to 1 p.m. Monday at the post office. CARD will also pass out leaflets there for the next two weeks.

The post office is only involved with distributing the forms and forwarding them to the Selective Service.

The registration forms ask date of birth, gender, Social Security number, current and permanent address, full name and phone number. There is also a box on the form asking persons registering can check if they want to be contacted by an armed forces recruiter.

Garland Bonfant, a Selective Service spokesperson, said that following registration, letters will be sent out to those who registered to verify the information in forms.

Bonfant said a reply to the letters is not required unless the letter contains incorrect information. The letters will be sent within 90 days of registration.

### Electric bills may shock some people

By Dave Powers

Staff Writer

Central Illinois Public Service customers drooped in air conditioning to beat the heat may be in for a surprise when their electricity bills arrive.

"Customers should prepare for a shock," said Allen Booten, public and government affairs representative with CIPS' Southern Division. "As for estimating just how much of an increase other previous bills customers can expect, Booten said, "there are just too many variables" involved to speculate. However, he added that he is using a lot of electricity and increases will probably be "substantial."

Booten said demand for electricity reached an all-time summer peak Tuesday of more than 1.9 million kilowatt hours, up from the recorded 1.5 million kilowatt peak of July 18, 1974. Last year's consumption peaked at 1.1 million kilowatt hours on August 6. This year's increase is expected to be in the 100-degree temperatures will be included in the latest CIPS billings.

"Customers are being divided into 20 cycles, established by geographical location usually based on 30-days of service. Davis said that all customers included in the first five or six billing cycles, the heat contained incorrect in this month's bills. Those customers thought to have been pushed on Page 2.

### WTAO radio station withdraws from Saluki Sports Action Network

By Michael Mauon

Staff Writer

Radio station WTAO of Murphysboro has "discontinued any participation" in the Saluki Sports Action Network, station general manager Bill Varecha said Wednesday.

The move leaves the SSAN without a radio station in the Carbondale area to broadcast Saluki sports—a violation of University contract specifications clearly state that there must be a station with a grade A signal broadcasting in Carbondale. George Mace, SSAN vice president for university relations, said, "We expect the successful bidder to provide such an outlet."

A class A radio signal is the strongest classification available and is used in a major sized market, Paul Williams, an engineer at WEBS in Harrisburg, said.

Mackie Nicholes, owner of WEBS and spokesman for SSAN, declined comment on the new developments, except to say he was completely unaware of WTAO's withdrawal. In a letter published in the Southern Illinoisan on June 26, Nicholes listed Varecha as one of the five partners in the network.

Varecha said he decided to withdraw from the network last Tuesday, but he wouldn't give a reason for the decision.

"There are a lot of reasons, but I don't want to throw any stones," Varecha said. It's just my belief that broadcasting Saluki sports would not be beneficial to our station."

On Wednesday morning, Varecha appeared on WTAO to call "On the Air" with the show's hosts, Tony Espinoza and Tim Cavender, and asked for audience feedback about having WTAO broadcast SSAN's men's football and basketball games. The reaction was uniformly negative.

"Live" Earl Jive, a disc jockey and program director at WTAO, called the station's program "reinforced double we were already having about joining the network."

The withdrawal of WTAO is yet another blow to the fledging SSAN. The network was awarded exclusive 118ed box June 25 after submitting a bid of $30,000 for the next two years. WINT in Murphysboro, the other only four stations must provide the University and $7,000 in advertising credits.

WINT general manager Dale Atkins appealed the University's decision June 26 under state bidding and procurement procedures. The case was heard Tuesday by SIUC-C's chief business officer Robert Gentry. He said by will make final ruling on WINT's appeal July 22.

Mace has said several times that no contract will be signed until Gentry makes his decision, which is not until the delay is hurting SSAN.

"I met with several people associated with the network Wednesday night and they are very upset with the delay," he said. "The football season is only seven weeks away and the owners are having real trouble lining up advertising. That will probably continue until we sign a contract."

An agreement to stop the withdrawal of WTAO would be for radio station WUSB-FM, which was the only University contract specifications, SSAN would be re-established with a free feed of all Saluki (Continued on Page 2)
IAC sets two meetings for athletics discussion

By Jacqui Kossruck

Intercollegiate Athletics Committee members plan next week to listen to anyone who wants to offer suggestions for improving to intercollegiate athletics fund raisers, attendance, and even for the program's image.

Tuesday is the first day scheduled that the committee will hold the public discussions of athletics, said Chairman Shirley Friend, and more meetings will follow if the first is successful.

In order to accommodate people who work and who affiliate with the University as well as others who live and work off campus, the committee planned two sessions for Tuesday. Friend said. One will be at the Student Center's Illinois Room at 2 p.m. and the other is planned for 7 p.m. at the Carbondale Savings and Loan office, 300 W. Main St.

The success of the first meeting will be judged by the number of people who participate, Friend, associate professor in Comprehensive Planning, Design, said.

Before scheduling more sessions, "we want to see the results of the first one," she said, although adding that the committee is planning on doing it again in the fall when the regular student body is back.

She said the committee was surprised that the one session during the summer before this fall season starts. "If we get some good ideas, they might be useful for the beginning of fall semester."

Suggestions and statements are wanted, Friend said, and participants will each have 10 minutes to explain their proposals and respond to questions.

The idea, Friend said, is to solicit constructive suggestions that relate to increasing attendance at athletic events, increasing funding, and improving the program's image.

The committee will study the results of the discussions July 25 at its scheduled meeting.

"Depending on what the responses are, the next thing we have to decide is who can implement a suggestion," Friend said. She speculated that most suggestions would not be ones the IAC could act on, but said that the committee could pass them on to others.

For example, some ideas might entail involvement from outside the University. Friend said.

"When I was in Evansville attending a basketball game last year, I stopped at a restaurant and learned that the restaurant had a bus that took people to the arena free of charge. A whole busload of people got a free ride to the game, and it helped the restaurant out too.

"But that is not something the University could do. It's something that might be arranged by a group of businesses in town," she said.

The IAC first explored the idea of gathering suggestions from the public at one of its meetings last spring. The proposal gained momentum after people responded to a newspaper account of the meeting with advice, Friend, said.

Early this summer an IAC subcommittee was set to work organizing the meetings, and Friend said the committee will hold July sessions at its last meeting July 25.

More information is available through any IAC member, Friend said.

CIPS: Bills may be shocking

(Continued from Page 1)

bills would be lower due to power outages caused by the storms which ravaged Southern Illinois, will also be surprised, Davis said.

Although under normal circumstances power outages would mean lower bills, Davis said that because of the continued average-temperature, appliances such as hot water heaters, air conditioners, refrigerators and freezers were forced to work overtime just to recoup. After power was restored, consumption was enormous, he said.

Booten suggested that customers who want to keep

VTAC leaves sports network

(Continued from Page 1)

bills with a few common sense moves, Botten, said, such as turning their thermostats up to 78 degrees, keeping curtains and shades closed to block out the sun. The outside of air conditioners shaded and delaying the use of major appliances during the peak consumption period before sunset

and a lot of arrangements would have to be made in the next seven weeks," Dybvig said. "As a public station, we would have to figure a way to filter out WEBQ's commercials and this presents problems."

Judge sentences man to work with Synergy

By Diana Presser
Staff Writer

A Carbondale man got a second chance in court Thursday — Jackson County Judge Richard Richman agreed to commit Russel Hughes, 27, to a drug counseling center rather than having him prosecuted for burglary and theft charges.

Hughes will work with Synergy, a Carbondale drug counseling agency licensed by the Illinois Dangerous Drug Commission, for two years to overcome his drug-related problems. If he completes the program successfully, the charges will be dismissed.

However, if Hughes violates the law or becomes involved in drug trafficking during that time, the states attorneys office can reopen the case and prosecute Hughes on the original charges. He would then be subject to a bench trial and face up to seven years imprisonment for the burglary charge and five years for the theft charge.

Both the prosecuting attorney, State's Attorney William Schwartz, and the defense attorney, Assistant Public Defender Michael Baird, agreed to the settlement.

Also at the courthouse Thursday, a man pleaded not guilty to a rape charge. Nosnaj Prommatharith, who is from Laos and speaks only Laotian, answered the charge through an interpreter.

Florence E. Blythe of Carbondale, also indicted by the grand jury, pleaded not guilty to a charge that she shot her husband, William Blythe, on May 24. She pleaded not guilty to the aggravated battery charge and is in charge that she subsequently obstructed justice by concealing the handgun she allegedly used in the shooting.

Please, Governor, sign the Davies bill

The day of reckoning for Davies Gym is approaching rapidly. Soon, Gov. Thompson will be making a decision on whether to sign or veto the bill which would provide funds to renovate the 30-year-old structure.

Sources who would be affected by the decision, such as Women's Athletics Director Charlotte West, believe the bill will be vetoed. This would mean that, for the fourth consecutive year, legislation providing for Davies Gym funding will have been snuffed out.

Hopefully, that scenario never will unfold. If SIUC is to be considered a first-class institution, it needs first-class facilities, and Davies, in its present condition, is far from being first-class. Most high schools in Illinois have "first-class" facilities.

It was planned that renovated Davies would be a boost for Women's Intercollegiate Athletics—although, as a matter of fact, it wouldn't. The first concern in the use of any facility should be safety, and the ancient gymnasium, which never has been renovated, is unsafe.

The building needs new plumbing, painting and lighting. Davies' faulty electrical wiring constitutes a fire hazard and must be replaced. The floor is the wooden gym floor in the gym nucleus, constituting another safety problem.

Other structural changes are needed. Faculty offices need an overhaul, and locker rooms for visiting teams are inadequate. New acoustical treatment is needed, and an elevator must be installed to provide easier handicap access. It is rumored that hot and cold water will not run at the same time in the building, and that electric typewriters in the women's athletics offices will not run while the copying machine is on.

These inconveniences and safety hazards must be taken care of. Others besides women's varsity athletics use Davies. Many of the Physical Education Department's classes are held in Davies Gym, and inadequate facilities will stand in the way of a quality education. Even visitors and intramural teams must be kept off place in the gym.

If a large number of students and faculty use Davies, the building's safety is a must. It's not an exaggeration to say that every time someone enters the gym, he is risking life and limbs.

Renovation legislation was passed by the Illinois House for fiscal year 1980, but it failed to pass the Senate. Thompson vetoed Davies bills in 1977, 1978 and 1979. The bill currently on Thompson's desk, which was sponsored by Rep. Bruce Richmond of Murphysboro, is a special session bill for $3.5 million.

Earlier this year, Davies Gym was ranked 19th on a priority list given to the governor by the Illinois Board of Higher Education, but action was taken. It is interesting to note that action was taken on several projects ranked lower, such as Northern Illinois University's new Students Services Building.

If Davies Gym isn't a high-priority item on Gov. Thompson's list now, it should be. Hopefully, the predictions of doom won't come true and the governor will order the bill passed through.

And if and doesn't, the students and faculty of SIUC should send him an invitation to visit the gymnasium himself. Perhaps a good Samaritan will be inspired to change the situation. That's a sure hope we never will take to.

Modern autos are pieces of junk

By Bill Campbell

Car Repair Center Service

A friend of mine was telling me the other day that the average American trades cars every two years and seldom in the seven years I knew that's true. But most car trade in is the result of car payments schedules are set up for three years, it probably is. On payment books, it is run against the baseball and John Wayne movies are second place in the gym.

As far as I know, my friend's saying is correct. I should now be on my ninth automobile since I acquired my first car when I was 16 years old. Thinking back, I can remember owning at least 18. Considering there was a decline in the period I owned no vehicles at all, I have apparently owned more than double my share of cars I have owned bug cars and compacts in the generation to generation I had a 1935 Ford with a generation more than six years. The longest I ever owned one car. I owned a 1941 Packard for less than two days. It was stolen in and since the time I left town the local police department and the county sheriff it was never recovered. It was most likely taken by professionals. I was told. There's a big demand for '41 Packards among professional car thieves, I guess.

The oldest car I ever owned was a 1929 Model A Ford. It was also the best car I ever owned. It was still running fine at age 32 when I sold it for $50.

I purchased five new cars in my life from most of the major American car companies. They were all junk and owned a Japanese import—also junk.

Considering that some of my earlier cars were relatively inexpensive, I figure I have spent about $40,000 in purchase price, sales taxes and interest on the cars I have owned. Costs for gasoline and maintenance I can't even begin to estimate. I see that the facts seem to be the facts. I own a car, that's more than sound than those I've been buying in recent years. And when they did require maintenance, the mechanics back then were able to make the necessary repairs. The mechanic in my hometown of yesteryear worked alone or in pairs in quaint wooden buildings and possessed a thorough understanding of the internal combustion engine. Today's mechanics are found mostly in huge, large gleaming service departments. The majority of them appear to be very old and baffled at what they find under the hood of your car.

Later, when you go back to the service department to get your car, they will have replaced the special method and remote control key and several ounces of $500. The car runs perfectly for a few weeks, and when you walk back to the service department they will have had a few of them, and as a result, you will have no choice but to buy the car.

It's not entirely the fault of mechnics, of course Model A's and Packards did not have computable, quattrometers and bypasses. Today's cars probably cost more than the parts of one of my first autos. The mechanics will have to break, and most of them will before the car is two years old.

LITTLE PEOPLE, I FEEL NOW, ISN'T LEPPICH, GENTRY GOOD.

SIU-C students drink little wine

It amuses me to read about the tobacco and liquor dealers' sudden concern that students are drinking too much during Halloween. Based upon data collected by the Alcohol Education Project, it is the spirit drunk least often by the students.

More specifically, 93 percent of SIUC students consume an average of 4.5 drinks per week. Forty-eight percent drink beer, 24 percent wine, and 21 percent wine. With the change in legal drinking age, hard liquor sales have increased about 25 percent.

As for the adults wanting dinner wines, it seems the cost of some advance planning and purchasing. If people are aware of the proposed ban, they can modify their last-minute buying habits.

The liquor dealers could be creating problems that may not appear — Nancy Logan, Alcohol Education Program
By Carol Knowles

Mother Nature has been raising Cain in Southern Illinois for the past few weeks, and most people have just one question to ask: What have we done to deserve this misery? Speculations ranging from Mount St. Helens to evil spirits have been made on the cause of the weather, but according to Bill Work of the National Weather Service in St. Louis, none of them can be proven. There hasn't been enough research done to prove that Mount St. Helens is responsible for any of the unusual weather we have been having." Work said. "Any shift in the weather trends we are having is only temporary."

Regardless of the reasons, the hot weather is here and seems to be affecting everything around us. Economic losses are climbing with the temperatures across the Midwest. According to the Associated Press, estimates of damage to crops, livestock and poultry already top $2 billion. Ranchers are sending cattle to market and thinning herds because grass has dried up. Poultry and egg producers are watching thousands of birds die, and the ones that do survive lay fewer eggs.

This summer's 'folklore forecasts' slightly wrong

By Andy Strang

Many "unscientific" methods have been developed to predict the weather, but this year the weather folklore has proven wrong more often than not. The 1980 Farmers' Almanac, for example, predicted the average temperature for July to be 79 degrees. It also predicted rain for the fifth through the eighth and rain for the end of this past week. But then, "The almanac-writer makes the almanac, but God makes the weather," states a Danish proverb.

According to another old tale, the first three days of any season will determine the weather for the remainder of that season. In Southern Illinois, the first three days of this summer had temperature highs ranging from 83 to 94 degrees.

Another saying, that may be checked this weekend, predicts when the sun is clear on Friday, generally expect rain on Monday. Although many folklore may not predict the weather with a great degree of accuracy, there is some scientific base to many of the "old wives tales," said David Jones, SIUC weather instructor. For instance, he explained, there is a saying that if the number of times a cricket chirps in 14 seconds is added to 40, the sum will be the outside temperature in degrees Fahrenheit. According to Jones, this is an accurate thermometer because of a biological reaction that crickets have to the temperature. There is also some truth to a person's rheumatism pains increasing before rain. Jones added due to the sudden change in air pressure before rain, the pressure inside a person's joints can't equalize at the same rate as the outside air. This Jones said, causes pain in the joints of people afflicted with rheumatism.

Jones added that it is unusual for a person's Almanac to be incorrect in its weather predictions. The predictions are based on past weather conditions, which is a fairly accurate method, Jones said.

The groundhog theory, which believes that when a groundhog comes out of his hole on Feb. 3 and sees his shadow, spring will begin, is more of a superstition than a fact. According to legend, if he does not see his shadow there will be six more weeks of winter.

Officials say the coming weeks are crucial to corn and soybean crops. Depending on the weather, we could have either tremendous yields or a disaster. Said Herb Coop, a soybean specialist from the U.S. Department of Agriculture in Illinois.

Locally William Lewis, director of the fisheries research lab at SIUC said if the hot weather keeps up much longer, the fish will be in for a lot of trouble. "There has been a major kill in the Big Muddy River that is partially due to the hot weather," Lewis said. "But there have been no major pond fish killed.

The weather is also causing havoc for those who live in areas where people with cable television are getting more for their money by being able to tune into stations from as far as 600 miles away. Unfortunately, the weather is also causing interference with local weather transmisions. Warren Bottorff, chief engineer for KFVS-TV in Cape Girardeau, said that sun spot activity is at its height and that the heat is not helping the interference problem. "A woman called after our Monday broadcast, and said she was in Hampton, Mo., and wanted me to know that our report came in clearly on cable television, but that she couldn't get the local station 30 miles from her home," Bottorff said.

Glen Monday, manager of Marlowe-Carbondale Cablevision, said that his company was also having problems because of the heat. "A larger problem than transmission for us is the fact that our men are exhausted," Monday said. "Since the storm on June 20, our men have been working 10 to 16 hours a day, seven days a week."

But Cablevision workers are not the only people sensitive to the present weather condition. The continuing hot weather has touched the local climate has (Continued on Page 52)

The heat wave that has roasting Southern Illinois has hit some residents harder than others.

For those with air conditioned homes, air conditioned cars and air conditioned offices or classrooms, the only inconvenience suffered might be a little perspiration while walking to and from the door or a high electrical bill at the end of the month.

But this is not the case for Kuei-Ying and Wen-Fu Lee, who were caught during the sweltering weather in one of the 60 Southern Hills apartments with malfunctioning air conditioners.

Since Lee's apartment windows face south, the noon sun has pushed indoor temperatures up to 100 degrees for most of the past two weeks.

As the weeks passed, Mrs. Lee developed headaches and stomach aches, her legs hurt and she soon became unable to eat.

The Lees called Southern Hills Area Office and Family Housing to complain about the air conditioner "almost every day, for the past two weeks," and even offered to pay for the repairs themselves or install another air conditioning system.

"We were told, maybe tomorrow, maybe tomorrow, always tomorrow," Mrs. Lee said. "I offered to pay more, I don't want trouble. I can't go back to my apartment, it's a steamhouse." Mrs. Lee cried, even as she remembered the incident. "They didn't believe I was sick."

Mrs. Lee laid down in the office and when the closing hour approached, she was told that she would have to leave. She then asked to speak to the campus police, who, upon arrival, offered to take her to the Student Recreation Building where she could stay in the air conditioning.

Mrs. Lee eventually convinced the authorities that her sickness was more than a coincidence.

When she returned home that evening, the apartment was cool, the air conditioner was working perfectly. Southern Hills area officer Karen Ditlzer, a housing administrator who the Lees contacted several times, refused to comment.

As of today, the Lees are unable to eat for a week. Mrs. Lee was told that there were no vacancies for theapartment.

"I'm sick," she cried. "I don't want trouble. I can't go back to my apartment, it's a steamhouse." Mrs. Lee cried, even as she remembered the incident. "They didn't believe I was sick."

When she returned home that evening, the apartment was cool, the air conditioner was working perfectly. Southern Hills area officer Karen Ditlzer, a housing administrator who the Lees contacted several times, refused to comment.

Sam Rinnella, director of Housing Services Administration, confirmed the incident as a coincidence.

But this is not the case for Kuei-Ying and Wen-Fu Lee, who were caught during the sweltering weather in one of the 60 Southern Hills apartments with malfunctioning air conditioners.

Since Lee's apartment windows face south, the noon sun has pushed indoor temperatures up to 100 degrees for most of the past two weeks.
DENVER (AP) - Soaring temperatures mean shorter tempers and increasing crime — but only up to a point, says a psychologist.

"If it's 100 degrees, you're probably going to have fewer street crimes — the muggers are gasping for breath, too," Robert Baron, who specializes in developmental psychology at the National Science Foundation in Washington, D.C., told the Associated Press in a telephone interview from Washington, D.C., on Wednesday, when the mercury passed the century mark.

Baron, a Purdue University professor on leave to serve as program director for the behavioral sciences in the National Science Foundation, has published studies on the relationship between heat and crime in recent years.

"Up to a point, people get more reactive and less tolerant of other people's behaviors. They are less tolerant of the heat, too," he said.

But that effect is lost about the mid-90s. By that point, people get lethargic, he said. "Beyond that, people are more likely to be content. The temperature is just too hot for them to be bothered by anything," he said.

But temperatures mean shorter tempers in the sense that people are more likely to be irritable and less likely to be cooperative, he said.

Baron said he began his study of heat's effect on human aggression "because heat has always driven me up the wall."

"It's been on the rise here for some time," he said.

But Bl dispositivo, Ariz., Police Chief Bill Cox said he's noticed a difference. Temperatures have been above 100 for 17 straight days, and Cox said.

"There doesn't seem to be much tolerance with our fellow human beings," Cox said.

Survey lists top black figures

NEW YORK (AP) — The New Jersey Jackson has been ranked in a poll of black Americans as the nation's leading black figure.

The survey of 1,146 blacks by Data Black National Opinion Poll found that the director of Operation PUSH was given a favorable rating by 76.4 percent of those polled. But it also indicated that a large number of blacks did not recognize the names of many of the prominent black leaders listed.

The top 10 leaders in the order they were named in the poll were Coretta Scott King, New York Congresswoman Shirley Chisholm, Atlanta Mayor Maynard Jackson, Los Angeles Mayor Tom Bradley, U.S. Health and Human Services Secretary Patricia Roberts Harris, National Urban League President Vernon Jordan, NAACP Executive Director Benjamin Hooks, Gary, Ind., Mayor Richard Hatcher, and the ambassador to the United Nations Donald McMillan.

Data Black, headed by former Manhattan Borough President Percy Sutton, publishes four surveys a year.
Experts offer helpful information that could save lives during tornado

By Scott Canon
Staff Writer

You’re enjoying a warm summer evening when suddenly the weather takes an unusual turn. Winds begin to blow as the temperature drops 15 degrees in a matter of minutes and you sense that something is wrong.

Suddenly, the wind dies and the sky turns a eerie shade of green. Then the wind picks up again, stronger and stronger, and a tornado hits. What can you do?

Although there is no definitive answer as to what you should do in any given situation, experts who study severe weather conditions agree that watching the storm is ill-advised.

If at all possible you can save your neck by hightailing it to a shelter of some kind or another, preferably in a basement.

Richard Coleman, warnings program director of the National Weather Service, says the lowest level in a building, like a basement or a storm cellar, is the place to be when strong winds or a tornado strike.

While there are no guarantees anywhere, being in a basement can protect storm victims from flying debris and demolished superstructures. Not all buildings have basements however. If you are caught in a building without a basement or storm cellar, the safest place to be is an interior hallway.

Bathrooms can provide safe refuge for the storm victim without a basement Coleman said. An important thing to remember when searching for shelter is to avoid rooms with windows. Flying glass can also present a major hazard.

If you are able to find your way to a basement, what do you do when you get there? David Jones, an SIU-C professor of Meteorology and scholar of severe weather conditions, says the old adage has always been to go to the southwest corner of the basement. However, the research he has studied seems to indicate that the southwest corner is the most dangerous.

He says you should go to the northeast corner, crouch down, and protect your head.

He says you should go to the northeast corner, crouch down, and protect your head. Jones said recent studies have shown that the southwest corner is twice as dangerous as the northeast part of the basement. People who take shelter in the southwest corner stand a much larger chance of being hit by falling debris if the upper part of the house is torn from its base when a tornado hits.

If you are on campus when disaster strikes, you can consider yourself fairly lucky. Bob Harris, assistant security officer for the University Police, said most campus buildings have basements that can provide a safe haven when a severe weather situation comes on. He says all the campus buildings have signs posted instructing people where to go when a tornado hits. Most of these signs give directions to the basement, the safest place.

In the residence halls, the place to be is in the bathrooms or the stairwells since it is difficult to get underground. Their interior locations and absence of glass make these places safe from storms.

If you can find your way to a basement, fine. But what do you do if you’re out in the open and getting to a building is impossible? The best thing to do is to get to some sort of

(Continued on Page 10)
Experts offer helpful information that could save lives during tornadoes

(Abridged from Page 9) Depression in the Landscape

The depression will shelter you from the strong winds and laying low can provide some protection.

If you are in your car and not very near to a building, Coleman says you would be foolish to try and outrun the storm. His advice is to abandon the car and get into a depression of some kind. He warns, however, that you should be wary of an area that might flood from the rain. He says many people drown when they climb into a ditch that floods and swamps the victim away in its current.

When caught out in the open in an electrical storm it is wise to avoid any tall isolated objects like trees. If you are in a grove of trees it’s best to get to a group of shorter trees. Tall isolated objects attract lightning and

budding under a tree could lead to electrocution.

One of the worst places to be, Coleman said, is in a trailer. While they may provide convenient, inexpensive housing, trailers are vulnerable to the strong winds that accompany tornados and bad rainstorms.

Many trailer courts have cement buildings that can provide the protection not present in trailer homes.

Coleman said that trailers can easily be ripped apart by strong winds. In a trailer park one trailer can be smashed into another and set off a domino effect, he said.

You can avoid being a victim of a storm by using your head. A tendency of most people is not to take warnings seriously. Coleman said the National Weather Service makes two types of announcements when bad weather hits.

The first is a watch. Watches are announced when conditions for a tornado or severe thunderstorm are present.

The second type of storm announcement is a warning. When a warning is declared, it is time to take action and find safe refuge.

All Recognized Student Organizations may schedule rooms in the Student Center for fall semester beginning at 8:00 a.m. July 21 in the 2nd floor Student Center Scheduling Office. Necessary information includes name of organization, dates, times, and number of people. All scheduling must be done in person. Questions, call 536-6633.
Heat triples summer road damage

By Andy Strang
Staff Writer

The present heat wave in Southern Illinois has caused road damage that is approximately three times worse than last year, Illinois Department of Transportation spokesman Carl DeWitt said.

Although no exact figures are available, there are "hundreds" of damaged road sections in Southern Illinois, said DeWitt, a district maintenance engineer. But, according to Wayne Whweles, assistant street superintendent, damage to Carbondale roads has been minimal.

Road damage occurs when high temperatures combine with moist soil and cause the roadway to expand. DeWitt explained. This expansion causes blow-ups, in which the pavement buckles, or small bumps in the road.

There have been approximately 25 blow-ups, ranging in length from three to 10 feet, in Southern Illinois this summer, DeWitt said. It takes between eight to 10 hours to repair a blow-up and most repairs require new pavement when damage is spotted, he added.

To repair a road, crews must totally replace the old pavement.

The most common type of damage caused by the heat is when small lumps of blacktop form bumps at the expansion joints of a roadway. Ed Kehl, state maintenance engineer, said.

A four-man crew can repair about 30 of the bumps a day, DeWitt said. A bump is repaired by heating up the road and then cutting off the bump. This is not an expensive procedure, he added.

The only road damage experienced in Carbondale at the time is on Freeman Street, from Murrie Drive to Glenview Drive, and on Glenview Drive, from Freeman Street to Main Street. These streets were repaved in June with an oil base and chip pavement, Whweles said.

Chatauqua Street has been closed for approximately two weeks this summer to experience too much traffic too soon after the repairs were completed, Whweles said.

The result is that the chips in the street have come out of the pavement and the oil base is rising to the surface of the street. The city plans to close both streets and lay a layer of oil on the chips to help hold them in place. The repairs will be done next week at a cost of between $7,000 and $8,000 per street.

The entire state has experienced between 400 and 500 blow-ups this summer, with the majority occurring in the past two weeks, Kehl said. Repairs have hindered the attempts of the road crews to clean up debris from the June 28 and July 2 storms that ripped through Southern Illinois. The street cleanup was already preventing the crews from performing their regular tasks, such as grass cutting, DeWitt said.

Keep your air conditioner healthy or prepare for an indoor heat wave

By Karen Clare
Staff Writer

About 80 percent of the residents in Southern Illinois communities have either central air conditioners or window units, according to a survey conducted by Central Illinois Public Service. However, what happens when your "coveted conditioner" breaks down?

Jerry Miller, owner of Air Tech, 609 W. Main, Carbondale said that since the "heat wave" began he has been swamped with calls. Miller said that he is so busy that sometimes it may be five days before he can get to an individual problem. "I've been averaging nine to 15 hours a day," he explained, "and I've been working half days Saturday and Sunday."

Although he usually does commercial and industrial work, such as roofing, he added that the biggest percentage of his calls have been for residential air conditioner repairs.

Other air conditioner repair shops in Carbondale are also working overtime to aid sweltering customers. Business, the owners say, has doubled and even tripled. The average wait before a repairman can fix the unit could range from four to 10 days, so what can the homeowner do in the meantime?

Bill Shupe, assistant professor of electronics at the School of Technical Careers, offered a few home remedies for owners of window units. First, he explained, check the circuit breaker box or fuse box. If the house has a circuit box, look to see if the switch is in the opposite direction. If it is, simply snap the circuit back just like one would a wall switch. If the house is equipped with a fuse box, check to see if the fuse is blown. A blown fuse will usually have a stump of metal through it, Shupe said.

Small air conditioners, 130 volts, operate from a screw-type fuse that can be replaced by the homeowner. Large air conditioners, 220 volts, will usually have a cartridge-type fuse. However, Shupe said, for a blown fuse in a larger unit an individual would need an ohmmeter, a device that tests for electrical resistance. Shupe added that it is doubtful, however, that "the average person would have one.

If the main electrical box has been checked and it is determined that the fuses and circuits are working properly, another check should be done on the unit itself. The unit may be malfunctioning because of a build up of leaves or other debris in the condenser.

"This is especially true on central air conditioners," Shupe said. "One remedy is to hose out the back of the condenser, being careful not to get water into the actual controls. For the small outside unit, one can flush out any debris that has accumulated in the back of the unit." (Continued on Page 13)

Lightning kills more people in the United States than tornadoes, floods or hurricanes reports the National Oceanic and Atmospheric Administration.

"Whatever you do, don't go out while the thunderstorm is going on, which is a lot of people do," advises Randy Jackson, coordinator of the Emergency Services and Disaster Agency of Carbondale. The best places to be during a storm are inside a home, large building or an all-metal automobile, the NOAA said. If a car is struck by lightning, the current is discharged harmlessly into the ground. If shelter cannot be found outside, don't stand under a large tree in an open area, Jackson warned.

Low: "You want to avoid being on extremely high ground or being the tallest object," he added. "Anything that is higher than you are, you want to try to avoid.

The NOAA also said that other dangers during lightning are open water, small metal voltages, fences, clothes lines, metal pipes, tractors and metal farm equipment. People in an open area should keep several yards apart from each other so that if lightning strikes, the smallest number will be affected. The NOAA added that if people are isolated in a level area and feel their hair stand on end, they should drop to their knees and bend forward with their hands on their knees. While indoors, one should be very cautious of utilities. Jackson said, "I'd say somebody may want to shut the power off if there's a severe enough storm.

Once candles are lit, the danger of fire exists, he said. "If you have some type of gas leak, you don't want to be lighting candles," Jackson suggests replacing candles with light sticks, which can be bought at hardware stores.

He added that telephones should not be used except in emergencies. If electricity does shut off, refrigerators and freezers should be kept closed. He said cool packs can be bought to keep food frozen. In addition, a battery-operated radio is essential during a storm, Jackson said.

By Edward R. Berry

*Nudist Writer*

Listening to the "Blues Brothers" album is like the feeling Ray Charles' own movie, where the blues all the music, but you wish you could see the performance, too.

If you haven't seen the "Blues Brothers" movie yet, there is a possibility that you won't rave about the soundtrack album. After seeing John Belushi and Dan Aykroyd (aka Blues Brothers) stomp their way to the feet of the beat, it's hard not to think about their hilarious antics as you listen to the album.

One good point about this album is that it gives credit where credit is due—Chuck Berry and Bo Diddley sing "Sweet Home Chicago," a song about his love for the Wind City, the band strums together to produce a progressively jazz and rhythm and blues sound.

As Cab Calloway, the "boogie-woogie" man, sputters out a quick done of "scat lyrics" on "Minnie the Moocher," the crowd tries to mimic the old master of blues, but the silver-tongued Cab still out-scat them all.

Steve Cropper displays a sizzling guitar picking solo here as the jazzy piano sounds of Murphy Dume blend in and out throughout this number. The most impressive part of the band has to be the horn section. The horn arrangements were composed by Al Clyde, band member Tom Malone, but the real show-stealer is "Mr. Fabulous," who squeals out the muted sounds of his horn.

"The Theme from Rawhide" has to be the funniest song on the album, as Aykroyd sings tales of round-up days in a Barrett style. He even suggests to drooling for more.

"The Blues Brothers" album is a great memorabilia piece, if you already saw the flick, but if you were one of the less fortunate and didn't see the movie, then you'll probably enjoy its sounds.

(Author's note: this review was written by Andrew Zinner, Varsity Writer, and originally appeared in the April 10, 1979 issue of the Daily Egyptian.)

**Stanley Clarke's new album drifts from fusion roots into rock and roll**

By Andrew Zinner

Stanley Clarke has been recognized as one of the best jazz bass players of the turn of his new album, "Rocks," a mix of rock and roll-type sounds with plenty of recognition.

"Rocks" won't fit the mold.

The title track, "Danger Street," is basic rock and roll, a real hot number with plenty of energy. Simon Phillips, who also played on the new Jeff Beck album, provides a heavy, pounding drum sound which makes this tune work, but it's nothing special.

The title track features the unique quick and clean bass playing of the legendary Clarke. His experiments with different sounds here, and with keyboard support from Steve Bach, as well as his terrific guitar solo from Charles Johnson, this song works well.

Stanley's band on "Rocks" is superb, especially with the relentless Phillips attacking the drums. Johnson's ability to sound like various great jazz guitarists, from Al Di Meola to Jeff Beck to talent band member Larry Carlton. Help from others, including old friend Chuck Corea on keyboards and Steve Gadd with vocals, give this album plenty of fine support.

The best tune on the album is (Continued on Page 17)
Crusader’s disc is good or bad, depending on one’s perspective

By Bill Turley
Staff Writer
Having a half-good record album isn’t such a terrible thing, except when you remember that the album is also half-bad.

The Crusader’s new album, “Rhapsody and Blues,” is 50 percent perfect and of the album’s six tunes, three of them are dynamite. However, the other three songs don’t help an otherwise fine offering from the talented trio of Wilton Fender, Stix Hooper, and Joe Sample. Fender, as on every Crusader album, shines. His tasty saxophone is omnipresent on the album and almost saves even the most boring songs.

Hooper’s drums and Sample’s keyboards are the artists’ laid back best. In addition, the guitar and bass music is handled throughout the album by some talented guest like Phil Upchurch, Larry Carlton and Alphonso Johnson. Fender, who plays bass on two songs, should have left the bass to the guests, for the two tunes which he is the bass man for are among the worst on the LP.

Clarke’s album moves from fusion to rock

(Continued from Page 16) doesn’t belong on the album, and is boring. Another low spot is the typical, all-to-sentimental love song, “You’re Me Together,” complete with maracas-string section. Though Marcy Levy has a beautiful voice, the tune is too common. Lyrics like “You’re me together until the end, I’ll be your lover. And your best friend,” contribute to the ho-hum nothingness of this tune. Without the voice of Levy and Woman,” side two, with the two above songs, would be a real drag.

The instrumental “All Hell Broke Loose,” is a strong, aggressive number, especially with Phillips’ go-nuts drumming. Johnson sounds Reek-like here, with mean guitar licks. Another nice guitar cut, “Understatement,” which features a great, screaming solo. Phillips again plays the heavy-duty beat, and with Clarke again surrounding himself with unique string-grabbing bass work, the song cooks. Corea on Moog doesn’t hurt, either.

“Rocks” is an interesting collection of diverse music, with Clarke again surrounding himself with talented musicians. While side two contains two nothing songs, the rest of the album is definitely worth hearing.

(Absent courtesy of Plaza Records)

Side one opens with “Soul Shadows,” which is somewhat the group’s opening tune on their last original album “Street Life” for it is the only song with vocals. But the similarity ends there.

The instrumental segment of “Shadows” holds very well, with Fender giving the first view of his strong sax playing. However, Sample’s piano solo is nothing to write home about.

The second song, “Honky Tonk Strut,” is the same as the second song on side two, “Last Call.” Both have Fender on bass and they both sound the same. In fact, they sound a lot like early Crusaders’ work and it is Fender’s sax that saves “Last Call” from total anonymity. As for the other, “Honky What?”

But forget the second song and enjoy the best cut on the album, “Elegant Evening,” whose title is descriptive of the mood set by this slow-building winner. Sophistication permeates the tune throughout, with Felder’s sax urging the listener to execute decidedly unsophisticated handsprings. This song alone is reason to own the album.

Almost reason enough until listening to the title song, which opens side two and is Blah. Sample’s synthesizer attempts to sound majestic, but only comes off as court-jesterish. The song is too drawn out and makes the tune turn dull.

The second song is the aforementioned “Last Call”—remember it—and the last song on the LP is a gentle tune appropriately named “Sweet Gentle Love.” It is a mellow instrumental, with some nice bass work from Alphonso Johnson, and a pleasant way to end an agreeable album.

“Rhapsody and Blues,” like all Crusader albums, may not sell the millions that some groups do. But, the disc should be considered a typical offering from the talented trio. If you love the Crusaders, you’ll love ‘Rhapsody and Blues.”

**Dream ticket doubted by some**

**News Analysis**

Detroit AP - In the heat of the Republican Convention floor, few questions that it was a "dream ticket." Ronald Reagan for president and Gerald R. Ford for vice president. But the ticket that would assure victory over Jimmy Carter in November.

Or would it?

Gov. William Milliken of Michigan, a leading Republican liberal, had no doubts. Neither did Sen. Strom Thurmond of South Carolina, a leading conservative.

Yet, the political mix might have been as muted as the notion that a former president could be satisfied with a subordinate role in someone else's administration.

Imagine a campaign in which the presidential candidate is addressed as "governor," and the vice presidential candidate as "Mr. President."

"It would never have worked," said Mike Monnington, former California GOP chairman. "Ford will always be President Ford. It would be like Reagan going back in the movies with Errol Flynn. He'd be number two, no matter what the billing."

And the protocol problems would have foreshadowed far greater difficulties.

"Anyone who does not have a job that would seem to be running against each other as much as against the Democratic incumbent."

The Panama Canal treaties, a major issue in the 1976 GOP primaries in which Reagan and Ford ran against each other, would have been resurrected. So would Ford's assessment in his memoirs, "A Time to Heal," that Reagan had a penchant for "offering simplistic solutions to hideously complex problems.

Reducing it further, the well-known fact among politicians is that Ford and Reagan don't like each other.

That wouldn't matter much if their roles were clearly defined.

On the Reagan-Bush ticket, no one questions that George Bush is No. 2, that Reagan is the boss.

"One man has got to be boss," said Sen. Jacob Javits of New York, Wednesday night, when he was one of the few Gergles to express "grave concern" about a Reagan-Ford ticket.

Former president's don't take well to bring their tongues and forgetting differences.

One of the major arguments used in favor of persuading Ford to join the ticket was public opinion polls saying Ford was the only vice presidential candidate who increased the Republican ticket's standing against President Carter and Vice President Walter F. Mondale.

Ever that benefit may be attributable more to the esteem all presidents enjoy once they leave office. Ex-presidents always seem to look better to the American people than they did while in office.

To listen to the talk on the convention floor about the dream ticket, one might have thought Ford had won in 1976.

**Selective Service officials expect 98 percent compliance with sign-up**

Springfield AP - Charles Hershe? doesn't have a draft card to burn. But the 18-year-old said Thursday he doesn't want one, and joined young men in other U.S. cities who announced they'd go to prison than register for a draft.

Hershey, who turns 19 on Aug. 4, encouraged other men born in 1964 and 1965 to refuse to register with the Selective Service when the nationwide draft sign-up begins next week. Hershey said he would refuse induction because I don't think this country should have a draft," he said.

Hershey said a few of his companions have disabused his decision. But he said he is "not getting any bold" about the possibility of going to prison for his belief.

He said the draft register could draw a penalty of up to five years in prison and a $10,000 fine. Encouraging others not to register could result in the same penalty.

Selective Service officials say they anticipate about 98 percent compliance with a draft registration order by the approximately 4 million young men affected. Even at the height of anti-Vietnam War activity, they said registration remained well above 90 percent nationwide.

Registration is the first step toward a draft, said Hershey. He said war, and government's conscription of men to fight one, is wrong.

Hershey in the fall is to return to the California Institute of Technology, at Pasadena, as a sophomore in electrical engineering.

At President Carter's request, Congress this year reinstated compulsory draft registration, ordering 19- and 20-year-old men to sign up at post offices between July 21 and Aug. 1. There is no draft at this time, and Congress would have to act to begin one.

"I am not saying I would not support our country by not registering for a draft," he said. "I would not support our country by killing other people."

Two men announced at Chicago they also would refuse to sign up for the draft. They said their actions were part of a nationwide effort by the National Resistance Committee.

Young men in at least 20 cities across the United States announced similar decisions Thursday, the New York Times said.

"It would never have worked," said Mike Monnington, former California GOP chairman. "Ford will always be President Ford. It would be like Reagan going back in the movies with Errol Flynn. He'd be number two, no matter what the billing."

The protocol problems would have foreshadowed far greater difficulties.

"Anyone who does not have a job that would seem to be running against each other as much as against the Democratic incumbent."

The Panama Canal treaties, a major issue in the 1976 GOP primaries in which Reagan and Ford ran against each other, would have been resurrected. So would Ford's assessment in his memoirs, "A Time to Heal," that Reagan had a penchant for "offering simplistic solutions to hideously complex problems."

Reducing it further, the well-known fact among politicians is that Ford and Reagan don't like each other.

That wouldn't matter much if their roles were clearly defined.

On the Reagan-Bush ticket, no one questions that George Bush is No. 2, that Reagan is the boss.

"One man has got to be boss," said Sen. Jacob Javits of New York, Wednesday night, when he was one of the few Gergles to express "grave concern" about a Reagan-Ford ticket.

Former president's don't take well to bring their tongues and forgetting differences.

Ever that benefit may be attributable more to the esteem all presidents enjoy once they leave office. Ex-presidents always seem to look better to the American people than they did while in office.

To listen to the talk on the convention floor about the dream ticket, one might have thought Ford had won in 1976.
Government says oil industry not behind gasoline shortage

WASHINGTON (AP) — The Justice Department, citing Energy Department investigations, said Thursday that oil companies deliberately held back fuel to no force price increases.

Gasoline shortages caused long lines at service stations in most parts of the country last summer, leading President Carter to order the two departments to investigate oil company actions.

The two departments said their investigators found the shortages were promoted partly by a cutoff of oil because of the revolution in Iran, bad weather that slowed production from U.S. oil fields and flaws in the Energy Department regulations that control allocation of fuel.

The Justice Department, which had been asked to search for possible violations of federal antitrust laws, said in its report that it found none. The agency reported that the evidence "is not substantial enough to warrant further investigation."

The Energy Department, in its report, said some reasons for the gasoline shortage was that some oil companies diverted oil that normally would have been refined into gasoline, turning it instead to petrochemicals

"Diversion of oil from gasoline refineries to petrochemicals, used for a wide variety of materials including plastics, is legal."

In a detailed report of its findings, the Energy Department said it found gasoline supplies during the first nine months of 1979 averaged about 463,000 barrels a day less than predicted. The report said about 62 percent of this shortage was caused by reduced imports, 16 percent by reduced U.S. crude oil production and 22 percent by reduced refinery yields of gasoline.

The report said the import reductions were caused largely by the oil industry cutback and the investigators found no reason to believe that oil companies diverted oil to other countries or showed out of the tanker movements to the United States.

The report blamed an unexpected drop in U.S. oil production on severe weather, possible inaccuracies in original production forecasts and "the impact of regulatory uncertainty on drilling activities."

Investigators found no pattern of collusion among oil companies, the Justice Department said. The report said the companies probably had no real influence on the gasoline shortage.

The Justice Department found what it called some "conservative" management of gasoline supplies, but no evidence of deliberate withholding of supplies.

Edwin Rothschild, a consumer advocate who has charged that the oil companies created the shortages to boost their profits, said both reports were "limited in scope and methodology."

Rothschild, director of the Energy Action Educational Foundation, did say, however, that the Justice Department report "demonstrates an effort to deal seriously with these issues."

Police arrest 46 for drug dealing during crackdown in North Chicago

CHICAGO (AP) — A nine-month investigation into drug dealing on the North and Northwest sides has led to the arrest of 46 persons. Seventeen others were charged.

The U.S. Drug Enforcement Administration and the Chicago Police Department's Organized Crime Unit coordinated the investigation that led to the bust.

The investigation originally focused on a drug-dealing operation allegedly run by a Northwest Side street corner by the Latin Disciples street gang. It then spread to four other locations.

"We think we made a big dent on the Latin Disciples gang," said Sgt. Terry McHugh of the organized crime unit. "And hopefully we've made a dent on the sale of drugs in the city."

The arrests began Monday. Police said they expect to have all 63 of those sought by the end of the week.

Among those arrested was Joseph C., 25, of Chicago, who police described as the leader of the Latin Disciples and the boss of one of the drug operations at least 250 sales a day at Rockwell and Potomac," McHugh said. "We believe this was probably the biggest street operation yet in Chicago where you could buy anything and drive up and have to wait their turn. All the parking places would be taken. Cars were double parked."

The officers said that the wholesalers were primarily white suburbanites. During the investigation, undercover policemen bought drugs that varied in price from $5 to $500 a bag of marijuana to $25,000 worth of cocaine.

McHugh said even the youngest gang members — those aged 8 to 12 — participated in the drug sales.

"These little kids could easily make $50 a day," McHugh said. "It would be unenlightened for us to stop a 10-year-old and he'd be hard at work in this product."

All arrested were being charged with delivery of a controlled substance.

Lack of time playing together hasn't hindered volleyball team

By Carol Kowless

The experience playing together is critical to the success of the volleyball team that was formed almost a year ago at SIU last month is still in contention for the championship at the U.S. Volleyball Association Tournament.

The team just began practices together for the national tournament last week and only has two more weeks to prepare for the 42-team tournament at the University of Texas at El Paso July 21-Aug. 2. It is one of two teams from the Midwest that advanced from a journey played last week in Joliet. They finished second behind a Chicago suburban team.

Individual commitments prohibited the team from playing together more than two or three times a week. Each member practices individually under the supervision of the coach.

Legion tourney to start Saturday

By Bill Tyler

Staff Writer

Carbondale is the No. 1 seed in the 25th district American Legion Baseball Tournament which kicks off Saturday afternoon at Farley Field behind Evergreen Elementary School.

The tournament is the culmination of the American Legion summer league that began in June and ended earlier this month with the Carbondale team in first place. This makes them the favorite to win the double-elimination bracket and receive a bye for the first round, according to Bert Newman, Carbondale team coach.

The league is set up for players who haven't reached their 19th birthday. Newman said the league is strictly for Carbondale and it's one of the oldest amateur programs in the United States.

The Carbondale league is made up of teams from Carbondale, East Carbondale, Marion, West Frankfort, Anna, Freeman Spur, and DuQuoin, who is seeded second in the tournament.

The Carbondale tourney is one of 36 district tournaments throughout the nation, which is also double-elimination and starts July 20. The Carbondale State League, which includes the Carbondale tourney, is the first stop for the state and county tournaments.

The state tournament, to be held in Springfield Aug. 8-10, is the next stop for the division winners. It all ends at the World Series in Minneapolis Aug. 27-31.

Newman said.

Spunky boxing trainer fights to keep kids off street

MVC baseball games now for keeps

By Ed Dougherty

The Missouri Valley Conference has decided to begin conference play in baseball, according to Saluki baseball coach Art Rust.

The new conference play will start in the 1980-81 season.

To accommodate possible financial aid, the Valley has divided the conferences into two geographical divisions.

The conference will be comprised of Wichita State, Missouri, Nebraska, and Creighton. The east division will be made up of SIU, Bradley, and Indiana State and the MVC's newest member, Illinois State. The Redbirds will not be eligible for the conference title until the 1982 season.

According to SIU's head baseball coach Art Rust, the team will play each other eight times for a total of 24 games. Teams in the west division will also play each other eight times.

The division winners will play a best two out of three series to determine the conference champion and NCAA playoff representative.

Jones said the divisional play is a good idea but it's not quite fair. "I think a team that has a bad start and loses its early conference games will then come on strong at the end of the season.

Jones said determining the conference champions will be a best two out of three series (which includes a double-header) is very difficult.

"I would like to see a four team playoff," Jones said. "Baseball is kind of a funny sport. Some of the other coaches maybe I agree — it shouldn't come down to just two teams."

Jones said the two team playoff just not college baseball. And being a member of the NCAA Baseball Committee is what we should know.

The committee is the rule-making body of college baseball which said it also decides the site of NCAA Tournament games and selects the tournament's at-large teams.

Jones returned from the committee's three-day semiannual meeting in Chicago with no drastic changes in the college baseball rulebook which was completely rewritten last year.

Jones said the committee is trying to find a solution that would curtail injuries at little during double plays. The committee is also looking for ways to cut down unfairly.

"These boys are out there trying to learn," Jones said. "They shouldn't be harrassed.

Jones said recent efforts to curtail intense league games have succeeded and should be expanded to include collegiate baseball.

Cagers to play five new foes

There are 14 regular season home games and five new schools on SIU men's basketball schedule. To tip off the 27-game season the Salukis will host the English National team in an exhibition game.

Tulane, Southern Illinois College, University of Charleston, Bradley and Missouri State are the new foes.

The Salukis have played in Tulane as part of Metro-Conference doubleheader. It will be the first time SIU has faced Memphis State since 1950.

When SIU plays in Chicago it will be the first time the Salukis have played in Chicago since they lost to Michigan State in 1968. The Salukis will play Memphis State in addition.

Tulane, home in 1980-81.

The Salukis will play Lamar and Valparaiso will make up the remaining games that are not a member of SIU's 16-game Missouri Valley Conference schedule.
