Precipitator buildings to be started in August

By Greg Deardon
Student Writer

Construction of two buildings that will house four precipitators for Physical Plant smokestacks could begin this August, and the precipitators should be in operation by September 1982, according to Alan Haake, supervising architect and engineer at the plant.

Two companies are in contention for the precipitator housing construction contract, Haake said. The contract will be awarded by the Capital Development Board.

The precipitators are designed to collect particulate ranging from micro-sized to vaside-size by means of electrically charged plates. A mechanical system will shake the particles loose to be hauled away.

"We have purchased the four precipitators, and pieces are supposed to arrive in August," said Haake. "We wanted to hurry up and award a contract so we could install them."

Due to an $80,000 error in its proposal, Paragon Energy Corp. of Kansas City, Mo., was low bidder for the job, Haake said. Paragon's bid was $318,800. Nakan and Co. of Peoria was next-lower bidder at $328,000.

"The Paragon people sent me a letter saying that their bid was withdrawn because they forgot to add $80,000 worth of equipment to their proposal," Haake said.

"When there is a $75,000 difference in bids, the contractors get worried and start going over their prices," he said. That was when Paragon discovered the error, he said.

He said that if Paragon is allowed to withdraw the bid, Nakan and Co. may be awarded the contract.

Bensant Electric Co., of Centralla, has bid $318,800 for construction of the electrical hook-up for the precipitators, Haake said.

"In addition to the precipitators, we are going to buy four boiler economizers," he said. "The economizers will make theboilers in our steam plant more efficient."

The economizers and precipitators will be installed at the same time because the plant's steam boilers must be shut down for the operation. The equipment must be installed in the spring or fall to prevent the precipitators from being shaken by the boilers when the steam plant is not in operation.

"The cost of the economizers is estimated at $484,000, and Haake said they will pay for themselves in five years.

"They will save us about $800,000 a year," he said.

Haake said the buildings that will house the economizers will be 40 feet long, 20 feet wide and about 36 feet high.

The precipitator project was budgeted at $5.1 million. The equipment will capture up to 95 percent of the particulate emitted by the plant's boilers, Haake said.

Haake said the precipitators will bring the stacks well within EPA standards for emissions from coal-burning furnaces.

The standards specify that 92 percent of particulate matter must be removed before the smoke is emitted into the air.

"We are trying to look a little into the future just in case the federal government makes the standards and guidelines even stricter than they are now," Haake said. "The extra 2 percent will keep us within the guidelines for good, I hope."

Simon aide says both houses will pass income cap on loans

By Steve Moore
Staff Writer

Students in need of a Guaranteed Student Loan for fall semester who earn $2,246,800 or more will have to apply by Oct. 1 in order to receive a Loan, according to Marilyn McAdam, press aide to Rep. Paul Simon, D-Illinosh.

Under the new plan, which is expected to be sold out by both the House and Senate Friday, students whose parents earn $35,000 or more will be prohibited from getting loans unless they can show need. McAdam defined need as, "a situation where a family has been forced to spend $10,000 or more away."

McAdam predicted the measure would easily pass in both the House and Senate because, "when the Physical Plant is not in operation, they can't make the boilers in our steam plant more efficient."

According to McAdam, the measure could push one-third of the current three million borrowers out of the loan program. McAdam said that funds will be increased by $1,360 million by 1982, 2.5 billion in 1983 and $1 billion in 1984.

Professor builds high-flying project

By Cindy Clausen
Staff Writer

Jacob Bach, an SIU-C professor who is fulfilling a lifelong dream by building his own airplane, sits beside the shell in his garage.

"My wife was rather startled when I told her I was going to fly to Europe in it," said Bach. "I don't mind flying over water, I did it in the Navy. The only difference was that it was in a seaplane that could land on water in emergencies. Well, I don't intend to have any emergencies."

Bach is resigning his teaching post so he will have time to do things he wants to do like flying to see his three children and his four brothers, all former Navy pilots.

Jacob Bach, an SIU-C professor who is fulfilling a lifelong dream by building his own airplane, sits beside the shell in his garage.

The airplane can seat one passenger, can travel at nearly 200 mph and has a service range of 2,000 miles with the use of a reserve fuel tank.

He said the final cost for the airplane which will include a well-equipped instrument panel will be about $10,000.

Bach said money he began saving for his dream after the war when he began working on his homemade plane across the Atlantic Ocean.

"I should have known it was coming," said Bach. When he was in the Navy he found out she gave him a good airplane. Not a model airplane, not a model aircraft.

This time Bach's model airplane is a bit more elaborate. The small plane is called a "Long EZ." It is a well-known designer of small experimental aircraft.

"This one has most of the bugs worked out. It's a real fantastic airplane," Bach said. "It's possible 'bugs' that may worry potential passengers like Bach's wife. In fact, a few bugs can be viewed from the passenger seat must be attached reading, "This is an experimental airplane."

Mrs. Bach said, "He tells me to not think of it as an experimental, but as a custom-made."

"It is considerably more confident about his project."

"My wife was rather startled when I told her I was going to fly to Europe in it," said Bach. "I don't mind flying over water, I did it in the Navy. The only difference was that it was in a seaplane that could land on water in emergencies. Well, I don't intend to have any emergencies."

Bach is resigning his teaching post so he will have time to do things he wants to do like flying to see his three children and his four brothers, all former Navy pilots.

"I'm very lucky that I am able to do this," said Bach. "It is a real fantastic airplane. It makes me very lucky, very blessed."

Gus Bodc

Gus says a government loan and a scholarship will give him a big new plane. "I don't want to think of it as an experimental, but as a custom-made."

Iran wants Bani-Sadr return

BEIRUT, Lebanon (AP) — Demonstrators chanting "Death To Mitterrand!" raged at the French Embassy in Tehran for three hours Thursday and demanded the Paris government extradite fugitive ex-President Abolhassan Bani-Sadr to Iran for trial. There was no reaction from French President Francois Mitterrand.

Sources in Tehran telephoned from Beirut said there were about 200 demonstrators outside the embassy. But a Tehran police spokesman said there were some 30,000 demonstrators and more would show up Friday.

When told the small street where the demonstrators gathered could hardly hold that number of protestors, the spokesman insisted on his version and said, "I don't understand why you don't believe me."

He said there were no clashes during the embassy protest and none of the French diplomats were overcome by the compound to speak to the demonstrators. There are about 100 French nationals in Tehran.

The demonstrators chanted "Bani-Sadr a Criminal," "Give Us Back Bani-Sadr," "Down With French Imperialism," and "Death To Mitterrand!" whose government granted asylum to Bani-Sadr when he escaped to France in an Iranian air force jet Wednesday after 43 days in hiding in Tehran.

The protest was carried on with Tehran Radio, which reported in another broadcast that nine of whom French diplomats are hiding in Tehran.

In a telephone interview with The Times of London shortly after his arrival in France, Bani-Sadr was quoted as saying Ayatollah Ruhollah Khomeini "bears heavy responsibility for the appalling disaster that has fallen the country.

State salary panel panel illegal

by Steve Moore
Staff Writer

A bill creating a commission with the power to raise the salaries of public officials without the General Assembly ever having to vote is "unconstitutional" and should be vetoed by Gov. James B. Edwards, according to the head of a coalition for political objectivity.

The coalition is composed of several parliamentary procedures and is considered illegal.

Das Fass owner is ‘over a barrel’

By Joe Agnew
Staff Writer

Although the name Das Fass stands for ‘The Barrel,’ owner Herbert Vogel never thought he’d find himself there, but as he says he is now.

At Monday’s city council meeting, several members indicated they would vote to deny Vogel’s request for a Class A liquor license in order to strictly abide by the city’s ‘Halloween’ ordinance. A formal vote is expected at Wednesday’s council meeting. The ordinance prohibits bars closing to Illinois avenue between Grand and Walnut streets to reopen.

Vogel, in applying for a liquor license, had asked to be considered as a special case because although he was the original owner and developer of the property, he did not own it when the bar closed in 1978. Earlier in 1978, Vogel had sold the property to a Champaign company. Because that company went bankrupt, Vogel was forced to legally repossess the property — after the ordinance went into effect.

With the council’s decision to make no exceptions in the ordinance, Vogel said he is stuck with an unsafe building that was never built for the purpose of serving alcohol. He added that it’s costing him $150 a month to operate the bar in its present condition.

“I can’t sell it. I can’t do anything with it. It’s sitting there deteriorating,” Vogel said.

An 18-year resident of Carbondale and coach of the SIU women’s gymnastics team, Vogel summarized the history of Das Fass since 1974, when he first helped operate the building.

Vogel said that with the help of his family and a $259,000 investment, he converted the former home, whose owners had died, to a three-level bar and grill. He said he received an award from the city council in 1989 for designing and remodeling an older building that upgraded that particular area of downtown Carbondale.

Vogel operated the bar until 1978, when personal reasons forced him to close the structure. At that time he sold it to Katsinas, Inc., a company which owned one restaurant and two bars in Champaign.

Vogel said Das Fass was sold to Katsinas on a contract for a lease in 1978. This meant Katsinas would gradually pay Vogel for the property. The sale was made at a time the liquor license for the bar was up for renewal. Vogel’s license was transferred to Katsinas, and Katsinas’ license was automatically renewed.

In October of the same year, Katsinas bought the building before Halloween for remodeling purposes. Vogel said he was allowed to operate the bar in the sale that he be contacted if any remodeling was to be done, the company demolished the building’s interior and beer garden in accordance with their plans.

Later, Katsinas Inc. experienced difficulties in running its Champaign operation. The company was behind in their payments to Vogel and gave him a bankruptcy notice.

Open meeting with director candidate set for Friday

By Brenda Wigenbuch
Staff Writer

The search committee for the director of computing affairs will hold an open meeting at 7:30 p.m. Friday at the Student Center as part of the interviewing process for the first of three finalists, according to Terry Mathias, doctoral assistant in the president’s office.

The former acting director of computing services, Hubert Massey, left June 9 to take charge of data processing services at Texas A & M University in College Station, Texas. Massey’s former assistant, George Flummer, succeeded him as acting director.

The finalist to be interviewed Friday is Arthur S. O’ster II, director of university computing, associate provost, and professor of computer and information science at the University of Oregon in Eugene, Mathias said.

Names of the other two candidates will be released as soon as ‘confirmation of their interview schedules is received.’ Mathias said during the search committee meeting Monday that the second finalist is expected this week, and the third finalist is expected the week after.

Though there were six applicants from within the University, the three finalists are from other universities. Mathias said. However, there

The CTV's refusal to grant a lease to the owners of Carbondale's Das Fass building is a case in point. They have been turned away by the city's Planning Commission in the past, and this time around their application has been rejected. The city's decision to deny them a lease has been based on the argument that the Das Fass building is in a residential neighborhood, and that it would be inappropriate to allow a bar to operate in such an area. However, the city's decision is not without its critics, who argue that the Das Fass building is an important part of Carbondale's cultural heritage and that it should be preserved for future generations. The city's decision to deny the owners a lease is likely to have a negative impact on the Das Fass building, and it is likely to be the subject of further legal challenges. The city's decision to deny the owners a lease is a clear indication that it is losing its footing in the community, and that it needs to do more to address the concerns of its residents.
Elderhostelers try not to act their age

By Vicki Olgsby
Staff Writer

Retirement is more than a series of dates filled with boredom and feelings of loneliness for one group of senior citizens visiting SIUC this week.

"Age is what you make of it," said 75-year-old Thomas, an academic vice president of the Illinois program.

The elderhostelers are taking three mini-courses taught by University professors.

Norman Doorenbos, dean of the College of Science, is teaching a class about drugs that are obtainable from nature. He said he planned to teach the class much like a regular college class except that he intended to allow more time for discussion.

He said the elderhostelers differ from average college students because their backgrounds are different.

Doorenbos taught the same course to a group of elderhostelers last year and said they made it the most enjoyable of all the courses he has taught.

Folkways of Southern Illinois is a subject of a course taught by Terry Alliband, assistant professor of social and community services. The class is of special interest to the five native Illinoisans in the program.

Selena Mack, a 70-year-old from Warranton, Mo., said that even though she grew up in the Pana area, she knows nothing about Southern Illinois. She said she didn't know the details of how the July 21 incident happened.

"It (the leg) was not bent. You couldn't tell by looking at it. As I understand it, you couldn't eyeball it," Weiss said.

"The hospital is naturally afraid of being sued," Weiss said, adding that the hospital's surgical department is conducting its own investigation of why the doctors operated on the wrong leg.

The elderhostelers are leaving boy with as far as Tampa, Fla., and elderhostelers have come from a lawyer, an academic vice president, several school teachers, farmers and a government official.

The group is made up of elderly tourists who travel all over the world. The elderhostelers are known for meeting people who have traveled all over the world.

"Age is what you make of it," said 75-year-old Thomas, an academic vice president of the Illinois program.

SIU-C scientists to conduct study on fertilization

By The Associated Press

When it comes to foliar fertilization, it may not be how much you spray but how you spray it, so SIU-C scientists are looking for the ideal equipment.

Robert Woff, a farm mechanization specialist, and George Kapusta, a plant and soil scientist, will conduct the three-year project with a grant from Allied Chemical Co. It is sponsoring research at a number of universities into all aspects of foliar fertilization—the application of liquid nutrients to plants through their leaves.

The men will examine equipment now on the market to determine if it can be used to spray foliar fertilizers, or modified to handle them.

In the past, spray equipment has been used in most cases, for the destruction of something—mites, fungus on plants,” said Woff. However, with foliar fertilizers, accuracy may be critical.

The idea is to apply them to the upper part of the canopy; a fine mist,” said Ramon Garcia, a research and development at Allied Chemical.

Earl Jive still alive and kicking at CFNY in Ontario, Canada

By Diane L. Johnson
Student Writer

Whatever happened to "Live Earl Jive?" WTAO's off-the-wall disc jockey mysteriously disappeared from the Southern Illinois airwaves. "I really don't want to tell you," said Bill Pitchford, a now retired WTAO announcer. "It's a big disappointment for me." Pitchford is best known for his outrageous morning show on WTAO. He attended SIUC for three years, never following a prescribed curriculum or earning a degree.

"I basically wanted to have a good time," he said. "I studied things that I was interested in, like astronomy, radio and television, languages and computer science.

"It's a decision to move to Canada, was made only 30 minutes before he left town in June," he said. The move depended upon the financial affairs of the station, WTAO. "I just had to tell him," said Pitchford. "I was the first all-night television talk show in Newfoundland. He was, at the time, an employee of that station.

Jive, however, says that he has plans to move to Toronto for an interview with the The Student Life Advisor Program. He is an independent for each of his senate terms and radio show Earl Jive.

Jive did not limit his volunteer efforts to student government. He participated in the Dominican Student Life Advisor Program during the 1981-82 school year.

"There's a 99 percent chance that Beverly will work with me here at CFNY, too," Jive said. Before Jive went on the air in Toronto, the Toronto Star published a feature story on him.

Jive said, "But it's different up here. It's a European flavor, mostly punk and new wave. The crowds up here hit the top 40 charts that I have never heard before."

Jive, 34, has dabbled in a wide variety of activities and businesses. From 1969-71 he owned a company called Hot Air, a radio service that syndicated shows, offered tip sheets and record services to clients in Canada, New Zealand and the United States.

In 1973, he was responsible for the first all-night television talk show in Newfoundland. He was, at the time, an employee of television station CJOH.

Jive was elected to SIUC's Student Senate three times between 1979 and 1981—each time under his fictitious radio name.

Faithful WTAO fans, who, says Jive, "are very similar to CFNY's", can tell you who the Jive is. His disappearance is a disappointment. He started pouring out his feelings.

"I don't listen to WTAO much anymore," said Bill Pitchford. "I'm a super talent, a"—Jive did not limit his volunteer efforts to student government. He participated in the Student Life Advisor Program during the 1981-82 school year. Beverly Hills, who has worked with Jive for nine years, also was employed by WTAO. Live Earl Jive and Beverly Hills are a married couple.

"There's a 99 percent chance that Beverly will work with me here at CFNY, too," Jive said.

Camp helps visually impaired learn to enjoy outdoor sports

By Vicki Olgreny  
Staff Writer

Falling off a sailboat can cause a wave of panic in the best of swimmers. It probably is much more frightening to a swimmer who is visually impaired.

This is just one of the events that the staff of the Little Grassy Lake camp have dealt with this week. There are 84 visually-impaired youths who will be at the camp until Sunday.

Terry Mace, the 15-year-old who fell off a sailboat twice, said that he was never really in danger because the counselors were right there to help him. "When my counselor shouted for me to watch out, I had the choice of me and him tipping over or me jumping off," Mace said.

The eight-day camp, sponsored by the Christian Record Braille Foundation, is offered at no cost to any legally blind person between the ages of 9 and 21, according to Chris Etheredge, member of the CRBF staff. The campers at Little Grassy are from Illinois and Missouri.

The counselors are physically able to cope with the rigors of the camp situation and their vision must be 20/300 or worse in order for them to qualify for the camp, according to Tom Lowe, associate field director for the North American continent for CRBF.

"The program affords the opportunity for young blind campers to excel in activities that are not otherwise available to them," said Etheredge, who also is blind. "This gives them a psychological boost that can carry over into the rest of their lives."

Activities ranging from water skiing to archery to tandem bicycling are available to the campers, according to Jeff Wilson, camp director.

"Beeper" softball and frisbee enable the blind campers to play games that are traditionally for the sighted.

Most of the campers are enthusiastic about trying new activities, according to Doug Crow, a 17-year-old counselor.

Parents keep their children under such tight restrictions because they are blind that this is one of the few opportunities for them to be active.

The campers do the activities that they think they can and the staff encourages them to do just a bit more, said Elsi Miller, a 14-year-old volunteer staff member.

Precautions are taken by the camp staff to ensure the safety of the campers, Wilson said.

Each camper is a charge of four children instead of the usual 10 or 11, he said.

Each blind child is paired up with a camper who has some vision, Wilson said. Children who are not totally blind can see well enough to get around in daylight hours, he said.

The counselors learned what it is like to be blind in a training session last June, Wilson said. The counselors ate and walked around the camp grounds blindfolded.

It is difficult at first for the staff to cope with their emotions, Wilson said. "Our

Keeping cool takes work in summer's hottest jobs

By Doug Hamm
Staff Writer

Summers are notoriously hot and humid in Carbondale and it's a good idea to hang out at the beach or your favorite watering hole on those 95- to 100-degree days. But if you work outside, you can't escape the heat. You can only bear with it.

Don Gettinger and Mark Grither are bricklayers for the H and B Masonry Co. of St. Genevieve, Mo., one of the construction firms working on the Davies Gym renovation project. The men work outside from 7:30 a.m. to 4 p.m., Monday through Friday, and say the heat definitely affects them.

"If you're working on a concrete floor in the sun it feels like it's 136 degrees," Gettinger said. "The heat really slows you down, but you have to bear with it."

Gettinger said he takes salt tablets and drinks plenty of water on the job because "the heat takes a lot of water out of you and you have to put it back into your system." He added that if it gets too hot, work will stop for the day and everyone will go home early.

Grither is a hod carrier for H and B. A hod is a device used to carry bricks to high locations that can't be reached from the ground. Grither estimated that one hod weighs 30 pounds, and he said he carries 100 hods a day.

"I've been doing this for five years now," said Grither. "And the heat doesn't really bother me anymore. When it gets too hot, I'll just take a longer break and dunk my head in some water."

Tommie Perkins, director of the Davies Gym renovation, said the men have been advised by the heat on the job and being comfortable.

Perkins also said that people working in the heat should wear appropriate clothing and drink plenty of fluids, but they must be the right fluids.

"People don't drink coffee, tea or cola when they're working outside because these will go home early."

Coal researcher to visit England

A coal researcher in the Department of Geology has been invited to spend three months this fall lecturing and studying at a coal research laboratory in Great Britain. Jack C. Cretill, associate professor, will go to the University of Newcastle-Upon-Tyne.

Fast pace of language courses challenges students, teachers

By Julie Guadagno
Staff Writer

When some foreign language students at SIU are studying hard this summer, they really mean it. They are flying through what is normally a year's worth of material in eight weeks.

The Foreign Languages and Literatures Department is offering concentrated courses in German, French, Spanish, Portuguese, Russian and Latin this summer. The courses are "exhausting," and students and teachers are "completely wiped out" at the end of the lessons, according to Department Chairman Eugene Timpe.

All of the courses except Portuguese are designed so students complete the equivalent of one semester's work in four weeks, and another semester's work the last four weeks. Some courses are designed this way, students who wish or need to take only one semester of these languages can do so in four weeks. However, most of the students who took the first four weeks remained for the second four weeks, according to instructors who teach the courses.

Latin and Russian follow the same credit pattern, but these courses are geared toward graduate students who wish to receive five credit hours. Those who complete the eight weeks of French, German, Spanish, about 15; and French, about 11; students too much. because he said constant correction tends to discourage them. One disadvantage of such intensive courses is that "missing a day is of more consequence than in an ordinary course," Hartman said. McDermid said dealing with the same subject for long periods of time can be tiring. Jenkins agreed, saying that varying the material is a challenge to teachers.

Portuguese class meets eight hours a week; Latin, 10; Russian, about 11; German, 14; Spanish, about 13; and French, 15.

Students who complete eight hours a week can earn five credit hours. Those who complete Latin or Russian will earn six credit hours, and students complete Portuguese will earn five.

Karen Rudnick, freshman in general studies, said she was never bored in her Spanish class because of the fast pace. Most students talked to said they took the course to get it over with quickly or so they could spend more time on their majors during the regular school year.

Instructors who taught the first four weeks were Bob Jenkins, who taught German; Judith Aydt, French; Hensley Woodbridge, Spanish; Olga Orechwa, Russian; and Craig McVay, Latin. Lee Hartman is teaching eight weeks of Portuguese.

Teaching the second half of the courses are Erika Heisterberg, German; David Gobert, French; Charles McBride, Spanish; Joseph Kupcek, Russian, and Charles Speck, Latin.

Instructors have taken many different approaches to teaching the classes. Jenkins said he addressed questions to individual students and encouraged every student to be prepared to answer.

Since Latin is used only in literature, Jenkins said they stressed grammar and reading. Hartman said he concentrates on speaking skills because speaking is basic. Other skills are derived from that.

He said that if students learn one subject for long periods of time can be tiring. Jenkins agreed, saying that varying the material is a challenge to teachers.

Study of foreign languages helpful

By Byron McChure
Student Writer

Democratic Congressman Paul Simon of Southern Illinois is a strong believer in it. So are English teachers Timpe and about 179 SIU-C summer students. What they believe in is foreign language study, which, according to Timpe, chairman of the Department of Foreign Languages and Literatures, has proven beneficial to the American student.

The benefits are most apparent among children. "From studies that have been made during the past decade, it appears that early study of a foreign language expands cognitive skills, enhances conceptualization, and improves verbal fluency in the native language of the learner. Some studies also show that divergent or creative thinking is strengthened," Timpe said.

Actual proof of these benefits was found in a recent study conducted by Timpe. "It has for some time been suspected that one of the reasons the recent decline in SAT and ACT scores has been that foreign languages have been studied a great deal less over the past decade than before," Timpe said. With the aid of an SIU-C computer, Timpe compared ACT scores of those students who studied foreign languages against those who did not. With over 7,000 students in the foreign language category, Timpe found his hypothesis to be true. "The foreign language students' ACT scores were high, and the more foreign language they had studied the higher the scores got," he said.

But that was not the end of the study. Timpe divided the foreign language students into two groups, made up of the apparently advanced students and those whose performances in school seemed to be average. Basign this separation on the class standings, grade point averages and descriptions of the students' programs of study, Timpe had what he called "a very big surprise" when he compared the two group scores in English.

"As expected, scores in English were benefitted by foreign language study in both cases, but the students from the lower group received the greater benefits," he said.

Timpe said that while the top group improved English and composite scores by an average of 2.2 points in English and 1.2 points overall, the lower group on the average improved English scores by 4.6 points and composite scores by 3.5 points. Students in both groups had had four years of a foreign language.

"The early study of a foreign language enhances ability to learn other skills and concepts," Timpe said. "It also makes you more aware of the world around you. It is strengthened."

Timpe added that foreign language study is not only beneficial to the student writer but also beneficial to the American student.

Ray convicted of contempt of court

SPRINGFIELD (AP) — A federal court judge has sentenced the brother of the convicted assassin of civil rights leader Dr. Martin Luther King Jr. to two years in prison for contempt of court.

John Ackerman, 47, was sentenced Tuesday by U.S. District Court Judge John Ackerman for failing to provide prosecutors with handwriting samples in his first federal bank robbery trial. Ray was convicted of the contempt charge in March.

That same month, a federal court jury found Ray, 47, guilty of robbing the Farmers State Bank in Liberty in May 1980. But Ackerman tossed the verdict after it was learned that a document written by Ray containing his criminal record was given to the jury by mistake.

Ray was retried and acquitted July 10. His lawyer, Robert H. Ziesman, had argued that the case against the defendant was circumstantial and indefinite.

Defense attorneys said Tuesday they will appeal the contempt sentence.

Hollywood Premier at the Oasis

Saturday Night

Fashion Show and show presenting past and present in todays fashions. August 1st will be a great evening of entertainment at the Oasis.

- Flowers by Studio One

Come early and enjoy an excellent dinner at the Oasis Dining Room before the show.

Review

The Ramones, Pleasant Dreams. Reviewer's Rating: 3 1/2 stars (4 stars tops)

The addition of a keyboard player is a pleasant surprise and the lyrics show the Ramones at their most pretentious best. They make references to Phil Spector, their previous producer; Graham Gouldman, formerly of the 10 Cc's, and of course, Phil Spector, their present producer. Jack Nicholson, and of course, himself. It's a rather silly song. Side two starts out with a good AM song. "She's a Sensation" is the next tune. "Pleasant Dreams" is lyrically Ramones of old. It even sounds a bit of emotion.

Two Dee Dee Ramone songs follow. "You Didn't Mean Anything to Me" and "Come on Now." The last two songs finish the side with a bang. "This Business is Killing Me" is a pure pop tune. The closer is another stab at the music business. It is "Sitting in My Room" and says that if other rockers don't like what the Ramones present, maybe they should go sniff some glue. It represents one of the more ambitious riffs the group has tried.

Gouldman, formerly of the 10 Cc's, is partly responsible for the band's more revved down feel and better use of background vocals. "Pleasant Dreams" will keep old fans loyal and may persuade people who have always thought of this band as unlistenabe to do it a listen. But new listeners be warned: You may like it.
Men and machines

By Jim Cagle
Staff Writer

The motorcycle races may have been postponed, but there was still plenty of action at the Du Quoin State Fairgrounds Saturday.

The race fans and the machines they rode made the seven-hour delay that finally resulted in postponement an event in itself.

The fans waited, and while they waited they partied. Some amused themselves by waving signs that requested barring of others' anatomies. Some amused themselves by complying with the requests.

Their ages and lifestyles were quite diverse. They ranged from the 20-year-old Harley-Davidson rider, who rode in on a 20-year-old "Panhead," and sported a T-shirt that read "Freto Toes Harley-Davidson, Fairbanks, Alaska," to the 60-year-old couple on the brand new gold Electra Glide.

There were accidents and arguments, parties and punches, and finally racing on Sunday. The only thing missing, happily, was a fatality, which had become a common occurrence at Du Quoin in recent years.

Photos by John McCutchen

A battalion of cycle enthusiasts came from throughout the Midwest for the Du Quoin race. These bikes are parked outside the grandstand.
Vogel said the present ordinance hadn't yet gone into effect, and that the company notified him that it had a buyer for the property. Katinas said the conditions of the sale were on an "as-is" basis. Vogel said that meant the buyers would get the property in its present state and without equipment.

Vogel said Katinas then proceeded to remove between $35,000 and $35,000 worth of equipment from the bar. The sale by Katinas eventually fell through because the buyer couldn't come up with the money, Vogel said.

Paul Katinas, of Katinas, Inc., was contacted in his Champaign office and denied that the equipment his company removed was worth the amount Vogel said. When asked why he disregarded Vogel's request that the company notify him before doing any remodeling, Katinas deferred all further questions to his attorney, who could not be reached.

On July 8, 1980, the ordinance went into effect. Two months after Vogel was given official notice of Katinas' bankruptcy, Vogel said he was in a neutral position at the time, and not able to apply for a new license because the property was not legally his.

Vogel said that under a bankruptcy agreement and a quick claims deed, the property was returned to him in its demolished state, without equipment. All mortgage payments also reverted to his responsibility.

Vogel said he now has a piece of property which was designed as a bar and which is not adaptable to any other type of business. "And without the ability to use a license, the interest accumulated in the property since 1984 was deemed worthless because I had nothing to sell or operate," he said.

Vogel said he had the support of the city's Liquor Advisory Board, the Carbondale Chamber of Commerce, Towne Central, and various residents in his attempt to reopen Das Fass. After the unofficial denial Monday, Vogel indicated he would take other legal actions. "I would have liked to do it this way, but if it doesn't work, I will be forced to take my tongue out of my cheek," he said. Vogel has told the council that if he was denied a license, he would seek to reopen Das Fass to serve soft drinks and feature female mud wrestling. He also mentioned that rentals by the hour of hot tubs and triple X movie theaters were considered as well.

Vogel blamed the council's reaction to SIE students' yearly Halloween celebration for the current ordinance. "I don't feel I should be regulated because of the problems that occur one day out of the year in Carbondale."

There were 12 applicants from outside the University, which he said probably made the difference.

There were no female applicants, he said, which was disappointing. "The three finalists will go through the committee's staff, search and academic computing committees. Mathias said, the public will have a chance to interview the candidates in open meetings, he said.

Mathias said the applicants will also visit several colleges to get acquainted with the University.

The search committee began the screening process last Friday, Mathias said. The committee reviewed resumes and letters of recommendation and "with that information, reduce the number from 18 to three," he said.

The committee hopes to make its recommendation by Aug. 10, Mathias said.

*Each day the major league strike drags on, Tommy Lasorda bleeds more Dodger blue*

By Joe Moschitz

**Associated Press Writer**

**CHICAGO**—Los Angeles Dodger Manager Tommy Lasorda, facing a strike that he calls "an atrocity," today said, "I think we're doing something and it isn't happening," said Lasorda, who was in town to make an appearance on the local television show ABC-Chicago.

"Sometimes I think it's the worst thing that's happened to the Dodgers," Lasorda said. "I've been in all kinds of things, but this is different. We want to get our own way, but we can't do it. We'll have to get together and work things out."

Lasorda has been somewhat of an ambassador of good will during the strike. "I've been to meetings with the owners and the players," he said. "I've been to meetings with the players and the umpires."

But there is also the reality of the strike and Lasorda's admiration for the players who are still working hard. "The players are doing the best they can," said Lasorda. "They're not making any money, but they're still working hard."

*Lasorda said that the fans will be back once the strike is over.*

"I think the fans will be back when the strike is over," said Lasorda. "They're only human beings and they want to see baseball."

Lasorda has been a part of the Dodgers for over 40 years, serving in various capacities from player to manager. "I've been in every position in baseball," said Lasorda. "I've been a player, a manager, a general manager, and now I'm here as a commentator."

**Casebeer left Festival with happy memories**

By Michelle Schwent

**Sports Editor**

Not all of the 2,500 athletes who participated in the National Junior Swimming Festival in Syracuse, N.Y., went home with a medal. But there were a few who had a good time.

Dan Casebeer, a swimmer for the Sullivan Cycle Club, was one of them. "I had a great time," he said. "It was a lot of fun meeting all the other athletes."

Casebeer said his team could have finished higher if they had a few more swimmers. "We were short a few people," he said. "But still, we did well."

Casebeer was one of the winners of the 100-kilometer road race that he said was fun. He thought he had two good swims and was satisfied with his previous performance.

"I didn't really matter," he said. "I was just glad to be there."

**Summer vacation isn't all play for many Saluki swimmers**

By Rick Biehler

**Student Writer**

"A big reason why swimmers come here and swim in the summer is, college age swimmers don't have a chance to make foreign trips," said Bob Steele, SJCU men's swimming coach.

"Swimmers train long and hard hours and practice twice a day during the week to finish in time for the meet," he said. "They work hard and they have fun doing it."

"I know what it's like to be a swimmer," Steele said. "I swam in college and I know what it's like to train hard."
