Rogers is president; Mavericks win senate

By David Murphy
Staff Writer

In an election that saw a record voter turnout, Todd Rogers swept into office as the new student president. "Being realistic, we thought maybe we would win by 2,000 votes, so, "he said. "We were really surprised by how many votes we actually won by."

A heavy voter turnout in dormitory polls contributed to his victory margin. According to Rogers, who is the executive assistant to USO Vice President Bob Quane, "We were a heavy voter in Thompson Point that helped me," he said. "I lived there for two years, and so a lot of people there knew me. I campaigned hard there, too."

"We did really well at Threshold Hall, partly because we got the endorsement of the Neely Hall Council," he said. "We also had the benefit of some really hardworking organizers, in particular Fonz."

Levenhagen, who helped coordinate our campaign over there."
Rescuers work to save trapped coal miners

Redstone, Colo., AP—Rescuers wearing oxygen masks had to rebuild a tunnel's ventilation system as they moved with painful slowness Thursday toward 15 men trapped by an explosion 7,000 feet inside a coal mine high in the mountains of Western Colorado.

They were estimated to be about 800 feet of where one way or the other they'd said they are remote.

At 3:30 p.m. CST, almost 24 hours after the blast, the rescue team had advanced to within about 800 feet of where the men were last seen. Officials said the rescuers' progress would be extremely slow because of the need to test for explosive gases and rebuild the damaged ventilation system.

State, local social services may be future of veterans aid

By Tony Gordon
Staff Writer

ALTHOUGH THE FEDERAL government stands close to losing its direct support of veteran readjustment programs, not all hope for the services may be lost.

In tune with the conservative philosophy that "big government" should be replaced by an increasing emphasis on state and local support of social services, aid for veterans is moving off its long time Washington base and into smaller organizations with narrower scopes.

Community-based non-profit corporations, veterans organizations and a little-used 19 year old Illinois law stand a chance of at least partially filling the void that will be left if "Uncle Sugar's" attitude turns sour.

If the smaller local programs are to work, however, interest in their success will be the willingness of veterans themselves to come to the aid of their brothers and sisters.

DEMONSTRATED by the success of the Vet Centers, staffed almost entirely by vets, the common experiences that one vet shares with another can be the key to understanding problems and finding solutions difficult for the uninstructed.

Bob Fowler, veterans coordinator at SIUEdwardsville, said a non-profit corporation, VOICES, is developing "on a shoestring" in his area.

Fowler said VOICES, short for Veterans Outreach Investment Counseling and Educational Services, is based entirely on veteran volunteers and financial contributions, and is being formed to coordinate its efforts with others.

"WE PLAN TO catalog all manner of information of interest to vets, from how to start a business, to getting an education, to getting a job, said the new Illinois law.

"All of our counselors are veterans, who know or care about the troubles a veteran can have," Fowler said.

Fowler said, "Veteran veterans in need of assistance probably won't miss the federal government should it turn away from helping vets.

Parking lot projects to begin soon

By Mike Anton
Staff Writer

Construction projects totaling $283,000 for two University parking lots—one adjacent to the site of the new Law Building and the other directly across—will begin next month, Allen Haake, supervising architect and engineer of Physical Plant said.

Haake said the bids for work on the replacement of lot No. 18, south of the Arena, should come out this week. The project, which should take about four weeks to complete, will cost $123,000, he said.

Haake said the bids for work on lot No. 66, which is expected to see increased use once construction of the new Law Building is completed, should go out next week. Once construction begins, the $150,000 project will take six weeks to complete, he said.

The approval of Trustees of the April meeting approved the $253,000 budget for the two projects.

Editorial
Reagan is hypocritical in his dealing with vets

IT IS DIFFICULT to understand the hypocrisy underlying the Reagan administration’s proposed cut in funding for programs to aid Vietnam veterans. Because of a tremor in the Vietnam Veterans Administration’s budget for next year, unemployment centers are to be reduced.

Reagan and many in Congress have called for a reexamination of the G.I. Bill and support a plan that would increase the defense budget to an estimated $25 million by 1986. At the same time, Reagan’s assistant, David Stockman, has proposed a $10.5 million Vietnam budget for the next fiscal year.

Reagan advocates increased military personnel, a proposal that will not be well received in Congress. The House epidemic of 1982 approved funding of $20 million for Vietnam veterans’ programs.

The VA has not made a formal request for funds to continue the present level of services, but it has increased its budget for the next fiscal year by $10.5 million. The VA maintains that the level of services in 1982 is being maintained.

James L. Kilpatrick

Budget can’t spare tax credits for those in private schools

AN OLD ARGUMENT resurfaces in the debate on the proposal to grant income tax credits to parents who send their children to private schools. The argument is that the tax credit would destroy public schools by undermining the financial basis of the schools.

The argument is a complex one, involving the interaction of the tax credit, the financial status of public schools, and the income tax system. However, the argument is based on the assumption that the tax credit would cause a significant number of families to withdraw their children from public schools.

The argument is flawed because it assumes that families would make a rational choice based on the tax credit alone. In reality, families make a variety of decisions based on many factors, including the quality of the schools, the safety of the school environment, and the availability of extracurricular activities.

In conclusion, the tax credit would not cause a significant number of families to withdraw their children from public schools. The argument is based on a flawed assumption and does not accurately reflect the reality of family decision-making.

Commoner: End nuclear power

By John Schrag
Newsdesk, nonfiction

WHILE MOST PEOPLE see no easy solutions to the complex problem of nuclear waste disposal, environmentalist Barry Commoner has one.

"The nuclear power and you end nuclear waste," said Commoner during a telephone interview.

Commoner said problems with waste disposal and nuclear accidents have hurt the nuclear power industry economically, and the elimination of nuclear power should be seriously considered, especially in coal-rich states like Illinois.

"The nuclear industry is unnecessary, dangerous and not economically beneficial," said Commoner. "The best course of action for Illinois and any other state where nuclear waste is stored, is to see to it that we stop producing waste by stopping nuclear power.

COMMONER, AUTHOR OF over 200 articles and six books, will be at SIU-C Monday at 8 p.m. in Student Center Room a, C and D to discuss past and future environmental concerns. The lecture is sponsored by the Student Environmental Center, the Graduate Student Council Programming Committee and the Student Programming Council Expressive Arts Committee, who will pay Commoner $1,000 for his appearance.

The Brooklyn-born Commoner, a professor of environmental science at Washington University in St. Louis, said his involvement in the environmental movement was a result of his background in science and some troubling experiences during his military service.

"In the Navy, I was responsible for developing a system of airplane dispersal for DDT to kill mosquitoes," he said. "Well, along with mosquitoes we killed snakes and who knows what else. It was the same thing we didn't know exactly what we were doing."

COMMONER CAME INTO national prominence in the late 1950s for his successful crusade against above-ground nuclear weapons testing. He said that as a scientist he "feels a responsibility" to make people understand the perils of technological developments.

"The most important purpose of the whole environmental movement is to illuminate some very fundamental faults in our society," he said.

One of the most basic faults, according to Commoner, is that corporations are motivated by profits instead of common sense. He gave the example of "big cars for big profits" without thinking about the effect on the environment. He said educators should take an active role in all social concerns.

"Those of us in the academic community have a special responsibility to learn about the problems and educate students," he said. "In Carbondale there should teach this right now, not only about nuclear power, but about nuclear war.

See COMMONER page 8

Counties’ spills not detailed in report

By Karen Guth
Focus Editor

Ten incidents of hazardous waste contaminations occurred in Jackson and Williamson counties last year, according to a recently released report by the Illinois Environmental Protection Agency.

The I EPA Emergency Response Unit cited five incidents in Jackson County and eight in Williamson County. Although EPA officials say that, to their knowledge, none of the incidents were classified as major, the details of the contaminations are not given in the report.

The Illinois Conservation and Recovery Act of 1976 requires industries that generate, store or transport hazardous waste materials to register with the EPA.

"In the EPA's latest listing of registered industries, six are located in Jackson and Williamson counties. There is no evidence, however, linking the companies to the incidents of hazardous waste contamination in the two counties," the report states.

Specific information about the produced spills, what hazardous waste materials were involved and where the spills occurred is not given in the report. The information or verifying the statements of EPA officials about the incidents in Jackson and Williamson counties is by no means easy.

According to John Muraro of the Emergency Response Unit, the details of each incident are not readily available to the public. The reports to EPA officials of the resources and manpower to provide information on each individual incident, he said.

When the EPA's emergency unit is dispatched to investigate hazardous waste contaminations, the response is entered into a log, Muraro said. A separate file is maintained on each incident in the log and there is no system for filing the information by geographical area. Therefore, the details of incidents which occurred in a specific area, such as Jackson and Williamson counties, can only be obtained by sifting through the log, which could take several weeks.

Some 185 incidents were reported in Illinois last year—the greatest number ever reported, representing a 9 percent increase over 1979. Of the reported incidents, 30 were classified as major large scale, 130 were major, 30 were significant and 337 were classified as minor.

An incident is classified as major large scale if a large number of the general public must be evacuated, or if more than five people are killed, or more than 10 people are injured, or local public safety agencies can't control the problem or more than 10,000 gallons of oil or hazardous material has been discharged.

In 1980, 11 people were killed and 4,403 were evacuated as a result of major large scale incidents, according to the report, which was released last month. Over 1.3 million gallons of crude or refined oil products were spilled in reported incidents.

A major incident, according to the report, is one which evacuation of the public is required, more than five people have been injured, more than one person has been killed and between 1,000 to 10,000 gallons of oil or hazardous material has been discharged. Massive fish kills and serious environmental impact which requires state assistance are also criteria for both major and major large scale incidents.

Significant incidents are those in which public endangerment is unknown but strongly suspected, discharges of less than 1,000 gallons of material occurs and adverse environmental impact can be handled by local officials.

Forty-one percent of the incidents reported in 1980 involved spills of oil or hazardous material which threatened or directly affected surface water.

Sixteen percent of the incidents involved the release of toxic substances into the atmosphere and 14 percent concerned spills onto soil or contamination of groundwater. Two percent involved contamination of municipal water supplies. The remaining 27 percent of the incidents involved a combination of the four divisions of environmental impact.

Daily Egyptian, April 17, 1981, Page 5
SIU program treats, reclaims waste

By Danpages
Staff Writer

Q: Are there any hazardous chemical wastes generated in Carbondale?

A: Yes.

Q: Are there any toxic waste storage facilities in Carbondale?

A: Yes.

A: On the campus of SIU-C

The production and storage of hazardous chemical wastes have been the center of controversy in recent years. Accidents involving improper waste storage, accidental spills, intentional "midnight dumping" of toxic chemicals and the notorious "Love Canal" situation have all brought the public awareness to the dangers of toxic and hazardous chemical wastes.

Since 1976, the Hazardous Waste Division of SIU-C's Pollution Control has been charged with handling, treatment and disposal of the various toxic and hazardous wastes generated by campus departments.

Wastes generated by the University fall into two categories: operational wastes, such as pesticide waste from the University Farms and academic waste. Academic wastes are laboratory waste products which have outlived their shelf lives, materials of uncertain purity, contaminated chemicals and chemical by-products. These can include solvents, heavy metal residues, cyanide solutions and epoxy resins.

The SIU-C program for handling hazardous wastes is an innovative pilot program for waste treatment. Using advanced techniques of reclaiming and recycling, many potential waste products are reclaimed.

"Forty percent of the material that we receive is treatable and returned to various departments. We operate an exchange program," Ogle explained. "If we receive a waste product from one department, we can treat it and send it to another department for use in their labs.

This is done for educational and ethical reasons. Ogle said. The program is involved in teaching students in the safe handling and recovery of toxic chemicals.

The most recent figures available from SIU-C Pollution Control showed that, in 1979, over 1,000 different chemicals were treated, retrieved and returned to various campus departments.

See HAZARD page 1
**Editor’s note**

The bureaucracy of most federal and state agencies is staggering, but the true meaning of what journalists call ‘getting the runaround’ isn’t clear until you actually try to get information from a state office. Especially if that information concerns a controversial subject such as hazardous wastes.

The Illinois Environmental Protection Agency, which was born in 1970 and has about 500 employees and five regional offices across the state, began regulating the disposal of industrial wastes in 1972. The EPA’s Lands Division and Emergency Response Unit are charged with maintaining information on the generators of hazardous wastes and the disposal and transporting of waste materials in Illinois. The Emergency Response Unit even publishes an annual report of its activities.

**HAZARD from Page 6**

Various techniques are used by the Hazardous Waste Division to salvage usable chemicals from contaminated sources. Volume reduction methods such as evaporation and distillation are used to reduce the volume of waste and convert any unuseable chemicals. The residues left from such treatments and the untreatable chemical wastes are stored for shipment to EPA-approved disposal sites. A storage facility is maintained at the Physical Plant storage yard on McAlberry Road, near the University Farms. Ogle said that he is currently arranging for the first transportation and disposal of the accumulated waste in the program’s five-year history.

However, the report tells you everything about hazardous waste contaminations that occurred last year, everything except what companies were involved, what chemicals were discharged, the exact locations of the contaminations and the impact on the environment.

Getting that information requires hours of phone calling and interviewing to pin down the person or office who can provide the details. Only after over 100 interviews with EPA officials were DE reporters told that a formal written request would be necessary to obtain the information on hazardous waste spills in Jackson and Williamson counties. This process would take “a few weeks,” EPA officials said.

On Jan. 30, a written request for the information was sent to the EPA. As of April 14, this request has not been honored. When asked about the status of the request, the EPA response was dim – Compilation of the requested information was never even started.

EPA officials say that their office does not have the facilities or the manpower to readily provide information on specific incidents of hazardous waste contamination. Yes, they said, our office does have the information and of course, it’s public.

The Daily Egyptian has again requested information on the incidents in Jackson and Williamson counties. Reports on the contaminations and on the generators of hazardous wastes in Southern Illinois will appear in future issues.

“THE REAGAN ADMINISTRATION has already indicated that they think it is possible to win a limited nuclear war,” Commoner said.

This suicidal resolve is all too typical of the beligerent behavior of our current administration.

Commoner, who was labeled the “Paul Revere of Ecology” by Time magazine in 1976, said he sees the party as a legitimate political force in which environmental issues are now only one of many concerns.

The fact that it happens to be an environmentalist does not mean that is the only concern of the party,” he said. “We offer a well-rounded platform that presents a real alternative to the reactionary programs of the Reagan Administration and the failure of the Democrats to adequately address some basic concerns.

He said he thinks the future of the Citizens Party looks good especially in light of recent victories of Citizens Party candidates in some local elections throughout the country.

COMMONER SAID HE doesn’t think students are apathetic and would like to see student activism go beyond environmental concerns and into nationwide and worldwide issues. An immediate concern of Commoner’s is the situation in Poland, where he says political strife has caused economic problems for the Polish people.

He said he would like to see a campaign started to send grain to Poland.

“There is no reason why a campaign like that couldn’t start right here in our backyard,” he said.

Commoner said he is encouraged by the response he has received on college campuses throughout the United States.

“Everywhere I go,” he said, “students show a great interest in trying to help straighten out the crazy way this country is all too often run.”

GSC allots funds for deficit; elects officers and GC reps

By Carol Knowles
Staff Writer

In an effort to bail themselves out of financial straits, the Graduate Student Council passed a resolution Wednesday allowing carry-over funds to be used to cover the financial commitments already made by the council and the Fee Allocation Board. Carry-over funds are money funds are remaining from previous budgets. This amounts to $4,000 of the $8,000 in carry-over funds to pay for the remaining deficits. These funds are available for graduate students. At all conferences at the semester's end last fee board meeting scheduled for April 28, Little discussion prior to the vote, which passed the resolution 27-0 with one abstention.

The council voted to suspend all fee allocations at its April meeting after discovering allocations made were over the $15,441 budget. First estimates showed a deficit of $5,000, while later figures proved closer to a $2,000 debt. According to figures from the GN office, if the council had continued funding at its present level, it would have overspent $13,000 in the red.

Although the fee guidelines state that funding requests must be made two weeks prior to an event, the council is suspending those guidelines to give students who were unable to request funds earlier an opportunity to make requests after the event. Some limitations will be in effect. However, funding of University-wide events and second requests for professional development were eliminated for the remainder of the fiscal year. Requests for special support such as departmental events, must now come before the full council. Previously, requests of $25 or less could be approved by the fee board.

Despite set funding levels for professional development, all the requests will be reviewed for funding on a proportional basis, based on amount of money available to full requests in all council elections held at the meeting Wednesday. Debbie Brown was re-elected president and Laura Nelson, 23, speaker communications, was elected vice president in the second round.

Members elected to the Graduate Council were Terry Mattias and Patrick Melia. Higher education studies, speech, and Jack, 20, history psychology. It will be the first term for Melia and Mattias.

The council postponed consideration of a $15 Health Service fee increase a policy on sexual harassment and approval of the revised GN constitution and by-laws. Dropping those issues were not pressing.

Annual cardboard regatta set to sail

It'll be sink or float Saturday for more than 400 participants in SIC-1's annual Cardboard Boat Regatta. The regatta, started on the University lake seven years ago as a problem for students enrolled in Design 102, an introductory course, has quickly evolved into an event which has attracted many spectators and entrants from as far away as Texas.

"We've had some superb solutions to the problem, a reasonably challenging problem — building a boat out of corrugated cardboard," said Larry Busch, assistant professor of design.

Busch said he expects competition to be keen as ever in the three classes: experimental, kayak, which Busch says has drawn some "fantastically effective entries," and instant boats. The latter is open to anyone who wants to build a boat out of materials provided on the spot Saturday.

Corrugated cardboard will be provided by the International Paper Corp., and individuals interested in entering the instant boats race will be required to be at Campus Lake by noon, according to Busch.

International Paper has provided cash awards ($500 for first prizes: first, second, and third) in each category, as well as special awards including the Titanic Award for the most spectacular sinking, Team Spirit Award, and Pride of the Regatta Award for the most creative use of corrugated cardboard.

The cardboard course is adjacent to the boat docks.

Regatta rules are available from Busch at the design program's blue barracks at the corner of Grand and Washington streets, he said.

Pope John Paul II washed, kissed feet of 12 men

ROMA — In a recreation of Jesus’ last meal, the Last Supper, Pope John Paul II washed and kissed the feet of 12 elderly men Thursday, before thousands of faithful, in a ceremony that Christianity’s holiest season.

Cardinals, bishops, diplomats and thousands of faithful, both local and foreign, jammed the huge Basilica of St. John Lateran for the pontifical Mass on Holy Thursday, the first of four days of Easter celebrations marking Christ’s crucifixion and resurrection.

The simple ceremony, which takes place in the cathedral as Bishop of Rome, the pope chanted Scriptural readings in Latin and Greek, then took off his ring and cross, donned a white-linen robe and the pope’s general vestments, and washed the feet of some 12 elderly men and women, as Jesus washed his disciples’ feet.

The ceremony celebrates the institution of the Eucharist, or Holy Communion. In his homily, delivered in Italian, John Paul emphasized the importance of that sacrament, a Christian rite in which bread and wine are consecrated and received as the body and blood of Jesus.

Early Thursday the pope and nearly 1,600 priests renewed their vows of celibacy in a ceremony at St. Peter’s Basilica. On Good Friday, the holiest day on the Christian calendar, the pope will attend an afternoon service at St. Peter’s. In the evening, wearing the purple robe of mourning, he will carry a wooden cross through the ruins of Rome near the Coliseum. The torchlight procession marks Christ’s ascent on the path to crucifixion.

In Jerusalem, tens of thousands of pilgrims are expected to retrace Christ’s walk to martyrdom up Via Dolorosa to Calvary on Good Friday. The visit of Nazareth, Bishop Giovanni Caldana, on Thursday celebrated the foot-washing rite at the Church of the Holy Sepulchre, revered as Jesus’ tomb.

Easter celebrations there conclude Sunday with a Mass of the Resurrection.

The faithful season has attracted tens of thousands of visitors to the Eternal City.

---

University Mall will hold an Easter bonnet parade and contest Saturday. Entrants in the contest must make their bonnets and will compete in the prettiest, funniest and most original categories. Competitors must register in the north corner of the mall by 2 p.m. The parade and judging will be held at 4 p.m. Prizes will be donated by the University Mall Merchants Association.

Voters for Christ will have their annual seminar and banquet Friday and Saturday. Church and community leaders will speak at 7 p.m. Friday in the Mississippi Room. The Rev. Lawrence James of Unity Point Baptist Church in Brookport will be the guest speaker at the banquet to be held at 7 p.m. in the Old Main Room. Tickets are $15 and may be purchased from any Voice of Christ member.

The Muslim Student Association will sponsor a lecture entitled “The Islamic Viewpoint of the Palestine Question” at 7 p.m. Saturday in Wham 160. The speaker will be Mahmoud Khadera, a member of the Muslim Student Association of the United States and Canada.

“Little Egypt,” the University’s literary magazine, will go on sale Monday in Foster 270 and in the Student Center. The sales will continue until April 24. The cost of the magazine is $2.

The Office of International Education, the Office of Research and Development, and the Division of Continuing Education will sponsor a workshop April 22 for graduate and undergraduate advisors to inform them of overseas opportunities for students. Any advisor wishing to attend must contact Thomas Saville at 653-5774 by Friday.
VETS from Page 3

"The facts have been consistent. Vietnam vets never had a voice to begin with, and now we are fading away in Uncle Sam's eyes," he said. "We have been the quota winners, this nation has seen, but most of us have made peace with that."

The average 'Nam vet is a 33-year-old man who has married, has children and is working. But there is still a void to fill with organizations like VIGORS, what's being said is that the government can turn away if it wants to, but we can probably do a better job healing the wounds ourselves.

VOICES AND SIMILAR groups seek the participation of veterans. Fowler said, from a wide range of backgrounds and talents.

"The idea behind incorporation is to provide a legal entity to take an overloose management of funds to go for help. VOICES will apply for some grants and look for other financial assistance, but their best angle of attack is probably the vets with different degrees and specialties who can point others in the right direction. As a contact to help people do what it is they want to do," Fowler said.

The veteran's organizations are not unique to Illinois. Several Salt Lake City, Utah veterans recently established "The DMZ," which is a large building on a site vacant, which veteran organizations can reside in for short periods of time to provide meals and some financial assistance and learn of educational and employment opportunities in the Salt Lake area.

In San Francisco, Calif., an organization called Soldiers Into Plowshares was formed in 1974 by six VISTA workers assigned to the local Veterans Administration office who believed the VA was doing enough in aid veterans attempting to readjust to civilian life.

Judith, the administrative assistant for SIF, said last week that her organization, aided by more than 750 veteran members, works in the areas of information referral, veteran benefits counseling and discharge upgrading services.

SIP may face some of the same problems present in veteran services funded by the federal government, the she said, because many of SIP's employees are paid under the Comprehensive Education and Training Act. The CETA program, which SIP was able to continue, with the assistance of the Salt Lake City administration, and Judit said SIP "could be a thing of the past by June 30."

A THING OF the past of particular interest to Illinois veterans is in need of aid is the Bograth Act, drafted by the state Legislature in 1973, which developed the Veterans Assistance Commission.

Arthur Lindsey, state coordinator for the programs, said the Veterans Assistance Commission's programs are county based and its operations are funded by one percent of a county's personal property tax.

The commission must be formed by the county's representatives of the house passed veterans and to be granted a charter from the counties. County's, therefore, with Illinois' 102 counties have Veterans Assistance Commissions functioning as the present time. Lindsey said the reason for the fact that these commissions are not set up on the basis of the veterans organizations and the veterans themselves have set on their duties for more than 100 years and are waiting for the government to do something else to give a veteran's hand. This is on the books, and have a veteran's right to the aid, but nobody has been willing to take on the work of administering the aid," he said.

Lindsey said that only two counties south of Springfield have Veterans Assistance Commission, and that there are none south of Belleville. He said that there has been some interest in the commissions expressed by veterans organizations in the Southern Illinois counties of Jackson, Perry, Randolph, Williamson and Marion, and that he is working closely with the organizations attempting to set commissions up.

LINDSEY EXPLAINED that the veteran representatives on the commissions can provide after a case-by-case evaluation of applications, financial assistance for food, housing and other necessities for veterans, their spouses and children.

"The Act is named for General Bograth of the Union Army, who, after the Civil War, was gassed in battle and so crippled that his leg was in a plaster bandage and was forced to use a crutch. The money the veterans' organizations provide, then is to help a man or woman get on his or her feet after rendering service to the nation. To get one started, you have to have a belogew on the local scene, because the counties can't set them up unless the organizations are willing to help. Lindsey fears the program will be eliminated soon unless it catches on in more state counties."

"I know now who anybody is talking advantage of, and that just sets it up for the Legislature to use the sunset act and eliminate it. The vets will have no one to blame but themselves if that happens," he said.

Students get the chance to travel-study

By Berna Wilgenbach, Staff Writer

If spending a summer in a foreign country sounds like fun, maybe turning college credits at the same time is better. At least that’s what Lauree Blakely seems to think.

Blakely, who has participated in two travel-studies, spent nine weeks in Mexico last summer as part of SIU’s Division of Continuing Education travel-study program. She got a total of eight hours credit, she said. Blakely, a freshman whose only other courses at SIU have been Spanish, added that she wouldn’t go again this year.

Blakely is not the only one who considers studying and traveling a good combination, though. According to Colleen Murphy, a travel-study intern who helps coordinate the tours, the Division of Continuing Education organizes the studies and helps to coordinate them with international professors who lead the tours.

James Osberg, director and coordinator of the Division of Continuing Education, said that each year the number of people who participate rises. They are usually able to get the minimum hours needed for a tour, he said. However, this year will see a decrease because finances are low, he said.

Osberg said that they try to keep the costs under $2,000, but are sometimes unable to do it.

Murphy said that that is one reason why only some of the studies must be advertised in trade journals by the professors leading the tours. Some of the studies are aimed specifically at specialists in a field and graduate students, she said.

She said that the European chemistry tour, led by John H. Wota, professor of chemistry at SIU, is one tour aimed at professors and graduate students because it is the most expensive. Another study, Murphy continued, will go to Japan to study special education. Toshiaki Hisama, associate professor of special education, said that Japan is one reason why they went.

The other tours include a trip to Europe to learn the cultural heritages of electronic communication led by Charles W. Stupak, professor in radio-TV; a trip to the University of Vera Cruz in Mexico led by Arnold R. Eliner, assistant professor of foreign languages and literature; and two "special topic" tours in the United States, for the purpose of geological field study—one which will go to the western states, led by Bruce Peterson, associate professor of zoology, and the other to the Rocky Mountain area, led by Philip A. Robertson, associate professor of botany.

---To Your Health---

Editor’s Note: To Your Health appears twice monthly in the Daily Egyptian.

PARTY PLANNING SO THE DRINKING DOESN’T GET OUT OF HAND

First, don’t be a "pusher." Don’t serve extra-strong drinks or doubles to break the ice. And don’t rush the punchbowl, especially if someone appears to be drinking too fast. It’s important to serve food along with drinks because food slows down the effect of alcohol. Make soft drinks available, too. Remember, one-third of all adults prefer not to drink alcohol.

DON’T GET BURNED!

Sunburn damages your skin and can lead to problems in the future, such as wrinkling and dry skin and an increased risk of skin cancer. Before heading outside, here’s some practical advice to help you avoid sunburn.

First, when you begin to go out into the sun, limit your exposure to no more than 15 or 30 minutes. If you want to tan and not burn, increase your exposure by five to 10 minutes every time you go out. Be sure to use an effective sunscreen that contains PABA or PABA Benzene Acid (PABA). Read the label to make sure that it is included, since all sunscreens do contain it. Sunscreens are rated from one to 15, and the higher the numbers are the most effective in blocking out the harmful ultraviolet rays.

Remember that the sun can burn you on cloudy days, because 75 percent of the harmful rays can penetrate the clouds.

LEAVES OF THREE—LET THEM BE

Everything blooms in the spring, including poison ivy. Watch out for a vine with greenish-red leaves or groups of three. Touching the plant or rubbing the leaves releases a sap which causes the familiar redness and itching. Clothes and even pets can pick up and transmit the sap. After the itching starts, fluid-filled blisters appear where the sap touched the skin. Poison ivy is not contagious.

The best treatment is either calamine lotion or Cortizol, a newer medication. Cool compresses may also help. Leave the rash exposed to the air, or a doctor will be there if you are a doctor. If the rash is on your face, genital areas or if it gets worse after self-treatment.

New Michigan law protects workers who 'whistleblow'

LANSING, Mich. (AP) — A new law makes Michigan the third state to pass a law that protects workers who suspect his boss of illegal activity from reprisal for speaking out. The idea is arousing interest in at least three more states, including a Canadian province.

Other states and the federal government have laws to protect public workers from reprisals for whistleblowing — although a federal rule requires 70 percent of federal employees surveyed who observed wrongdoing on the job did nothing about it because they were afraid.

Michigan is the first to extend protection for whistleblowers to private employees, lawmakers in five states and Ontario have asked to see a similar law. Michigan, said state Rep. James Barcia, D-Battle Creek, who sponsored the bill.

"We've read about a similar case where a company mixed the ingredients for fireworks chemical with lead in our drinking water. But the workers said they were being watched because they were quiet, and they feared the loss of their jobs if they went to authorities.

The state knew nothing about it until an employee spoke up, said Barcia, and PBB worked its way through the courts. Tests show it lingers in the bodies of most people living in Michigan for years due to contamination. Its effects remain unknown.

Employees who think they have been victims of reprisal for whistleblowing can use the law as the basis for suing the employer.

Such suits were possible before, but "lack of a private right of action, depending on if you got a good lawyer or a good judge," said Judith McLean, who did much of the nuts-and-bolts work on the law.

Hostages see 'vets' viewpoint

WHITE SULPHUR SPRINGS, W.Va. (AP) — Several of the former hostages in Iran say they understand the sentiments of Vietnam veterans who recently demonstrated there. But they say the Iran crisis "is stirred up" by "the press and the politicians in a decade — made Americans think about the plight of Vietnam veterans who entered a stalemated war.

Some of the side benefits of what we went through was to help us start again on these Vietnam veterans. We've spoken to hundreds and it was a difficult time for them," said Richard Morefield, a congressional aide to the U.S. Embassy in Tehran when it was stormed in 1979.

Morefield, 30 other ex-hostages who did not go to the Thunderbird resort for a reunion this weekend, said 10 medical meetings designed to aid the former hostages problems they had since their release Jan. 20.

"Vietnam wasn't popular. It was popular to have a green uniform on the street," said Army Spc. Donald Hoffman.

---

Chicago schools get more time to plan desegregation

CHICAGO (AP) - A federal judge Thursday gave the Chicago schools two more weeks to come up with a school desegregation plan, after education officials said afterwards they weren't sure it could be done.

The plan was due Thursday, but U.S. District Judge Milton I. Shadur set April 29 as the new deadline following an effort that has gone on fruitlessly for months and has split the community over remapping and busing students.

Apparently peeved by the delay, Shadur warned school officials that additional time will not make the problems go away.

School board President Kenneth Smith said after court that he can't predict whether two weeks will be sufficient to overcome the political and social hurdles blocking the route to a widely accepted plan.

"It's hard to say. We've gone around so much on the issue, it's hard to say what the board is going to do," Smith said.

"It's hard to say. We've gone around so much on the issue..." Smith said.

"It's hard to say. We've gone around so much on the issue, it's hard to say what the board is going to do," Smith said.

The University Forums Committee will sponsor a discussion of the problems of child neglect from 9 to 11 a.m. Friday in Snigley Lounge. The discussion will focus on investigation and treatment issues. The speakers will include John Allen, field services supervisor of the Illinois Department of Children and Family Services; Dan Hipson, dean of the SJC School of Law; and Alan Hackett, regional coordinator of Project 12 Days.

Recreational Sports will hold three weight training clinics Saturday in the Recreation Center. A progressive weight training clinic will be held from 10 to 11 a.m. A body building clinic will be held from 11 a.m. to noon and a power lifting clinic will be held from 1 to 2 p.m. The sessions are open to both men and women and interested persons may sign up at the Recreation Center information desk.

Faculty staff and students are invited to attend the first open meeting of the Vice President for Academic Affairs and Research Search Committee from 3 to 5 p.m. Monday in Morris Library Auditorium. John C. Guyon, candidate for the office, will be present.

Pi Sigma Epsilon will hold an Easter egg hunt at 10 a.m. Saturday in Evergreen Park. The Easter egg hunt is open to all children in the sixth grade or younger.

The annual Mundale Easter egg hunt will be held at 9 a.m. Saturday in Turkey Park next to the Mundale shopping center. Children 10 years of age and under may participate. The Easter egg hunt is sponsored by the Mundale Merchants Association.

Traveling netters to play four matches

By Cindy Clausen
Staff Writer
If you go for a scenic drive or jog Saturday, keep your eyes open for portions of the SICU women's track team, as the team has a "home" meet against the University of Illinois at Carbondale.
Circle. Bleyer Field will be the locale for all running events on Saturday.
The first running event, the 5,000-meter run, is scheduled to begin at 12:30 p.m. Because there is only one entrant in that event, Saluki Linda Nelson, Coach Claudia Blackman plans to send the race with the 3,000-meter run.
Circle is bringing only a small group down for the meet and will have no competitors in the 800-, 1,500-, or 3,000-meter run. That makes an automatic winning situation for the Salukis. But Blackman says that is no concern in this meet.

SAYRE wins decathlon at Kansas

By Greg Walsh
Staff Writer
Saluki John Sayre turned in eight personal best performances Wednesday and Thursday to win the decathlon at the Kansas Relays.
Sayre, a sophomore, compiled 7,503 points in the 10 decathlon events to out-distance Steve Rubelt, a former Kansas trackster, two time Kansas Relays Champion and 1980 Olympic qualifier, who finished with 7,406. Greg Culp of Arkansas was third with 7,235, followed by Mississippi's Garry Kurtz, while hoping for continued consistency from the No. 2 tandem of Martin and Sherman.
"Debbie and Stacy have been running consistently," Auld said. "Jeanne and Lisa have sort of gone through a slump recently. I hope they'll break out of it this weekend. Our third doubles team has been giving up too many points on service faults and service return errors. They have to slow down their serves."
Mizzou favored in softball tourney

By Michelle Schwent
State Bureau

The softball team is in a hitting slump, but it has scored in 12 of its last 14 games and has compiled the best record in school history under Coach Ray Brechtelsbauer in a season.

It is almost inconceivable that the Salukis, who are 15-11, will be the underdogs.

The situation, however, is not the same because nationally ranked Missouri, the Division II power St. Francis will be the opposition.

The Salukis have a 2-4 record against Wichita State, who beat Mizzou 3-2 in the first game and 6-3 in the second game before the Salukis defeated the Wildcats 9-5 and 9-7.

The Salukis have won the last three games against Wichita State, who has a 1-3 record.

The Salukis are favored to win the third game against Wichita State.

Men netters lose; to face Wsu

By Rod Farlon

The Salukis men's tennis team lost 6-1 on Wednesday at SIU-E.

The loss drops the Salukis' record to 4-6 as they prepare for Friday's home match against Southern Illinois-Urbana.

"Edwardsville is really strong," said Coach LeFevre of Division II SIU-E. "You have to beat them at your best three singles spots.

The Salukis beat the 11-8 Cougars at two singles spots and won only one doubles match.

Douglas had been the Salukis strong point this season, but has been out of action since the win over Southern Illinois-Urbana.

"He has a 2-4 record and has knocked off some powerful teams this season," Coach Kent DeMars said.

"If our courts have to be considered the underdogs," said LeFevre.

LeFevre hopes his team can stay in Friday's match against Wichita State and Illinois State, who have a 2-4 record.

The Salukis will play Wichita State at 1 p.m. and meet Illinois State at 3 p.m. Saturday in the NCAA Tournament.

The Tigers were ranked fourth nationally in singles and have an extremely strong pitching staff.

The Salukis have a 2-4 record and has knocked off some powerful teams this season.

The Salukis beat Indiana, 9-1, in the NCAA Tournament last year.

The Salukis have a 1-3 record and has given up only 23 hits in 31 innings pitched.

The Salukis will play Northwest 4-1. The Saints also sport good pitching as sophomore Lori Hicks pitched the win over Indiana and allowed only three hits and also took the win over the Wildcats, allowing only one hit.

"Hicks has been one of SIU-C's steadier elements this season," said Coach LeFevre.

The Salukis have a 1-3 record and has given up only 23 hits in 31-13 innings.

The teams will play round-robin doubles matches and the team with the best record will be declared the winner.

The Salukis play Friday against St. Francis at 1 p.m. and face Missouri at 3 p.m. SIU-C will play Missouri State Saturday at 11 a.m. and face St. Francis at 1 p.m.

The Salukis have won 11-8 over the Wildcats.

The situation is almost inconceivable that the Salukis, who are 15-11, will be the underdogs.
Bradley nine invades SIU for four games

By Dave Kane
Associate Sports Editor

If at first you're rainied out, try again.

Keeping that in mind, the Saluki baseball team and Coach Lew Hartog feel they temporarily got its Missouri Valley Conference season underway when it swept a four-game series against Bradley. The Braves will be at Abe Martin Field for a 1:30 p.m. doubleheader Friday and another twinball starting at 11 a.m. Saturday.

Saturday, SIU-C will go to Champaign and take Illinois and if it wins in better than the MVC players, the best college track teams in the state, and the Salukis will lose.

This weekend's events are similar to the ones weeks ago when Lee flew to Austin, Texas before the Inter-varsity track and field championships in the world this year.

This time also is over two weeks after any inter-middle hurdle slats to the Salukis on the weekend in the Kansas meet.

Lee is the only one of the fastest in the world in the world record in the world record.

The Saluki header with the fastest time is Lee of Kansas with a best time of 51.22.

Since then, the conference title hasn't changed a thing.

The Salukis are still tied for first in the MVC Western Division with 2-2 records, while MVC-C is 4-0. At the end of the regular season, the Eastern Division champ will meet the Western Division champ in a best-of-three series for the conference title. Since the Salukis swept the Salukis home from Terre Haute, Ind. last weekend with only two games—of their four-game series with the Terre Haute Indians—since then.

Since then, SIU-C has played one game—an 18-1 drubbing of Western Illinois—Sunday, Apr. 16. St. Louis Monday—and is 1-0. On Tuesday, Bradley split a doubleheader with SIU-C Edwardeville and is 15-22.

The Salukis, coming off the biggest offensive day of the season, are understandably anxious to conquer a conference opponent. SIU-C Coach Ithch Jones, however, wants them to remember Mother Nature's influence on the game.

"We want them to remember the weather and how things move around here," Jones said. "They should never get too high on their game, but he's been on the team with that attitude."

With only 16 games against MVC opponents, each game that is rained out makes the race for first place a bit more difficult. If the Bradley series were rained out, what would happen?

"We both Jones and Bradley went to rain city," Jones said. "They really do get a lot of rain. And if you can't make up the games under the MVC rules, the championships depends on it." Jones said what is really meaningful to help us win the conference title with our best pitchers.

The sun shines on Abe Martin Field, however, an interesting blend of pitchers will perform. On Friday, SIU-C will pitch Ken Klump (3-2) and Rob Clark (3-0) against Bradley's Todd Brooke (1-1) and Ben Fzipus (4-0). Brooke and Clark are left-handers. Prior to Tuesday, Brooke had a 2.37 earned run average, had struck out 20 and walked seven. Fzipus, a junior college transfer for the Salukis, had a strong showing last season's Eastern Conference, and has fit in to SIU-C's cleanup spot.

"Our biggest improvement is that Dwayne has been up about 20 extra times and has fit in to SIU-C's cleanup spot.

"I do Joe Richardson, P.J. Schramm, and Joe Greco get consistent with the bats about 10 extra times and I'm not too bad right. (Mike) Blumberg is a better hitter than he's shown," Jones said.

The Salukis, meanwhile, have shown improvement in an important spot—designated hitter. Left-handed-hitting Dwayne Flowers has fallen in love with the idea of taking the team lead in batting average. Previously, the record was in a slump at the outset of the season, but has bounced back the past few weeks and has fit in to SIU-C's cleanup spot.

"Our biggest improvement is that Dwayne is designated hitter," Jones said. "He's leading in hitting, and he's been hitting over .300 about 20 extra times and has gotten on base more than 20 times in the past 15 games. He's always making contact.

"Joe" Joe Richardson, P.J. Schramm, and Joe Greco get consistent with the bats about 100 extra times and have been hit right. (Mike) Blumberg is a better hitter than he's shown.

So far this season the biggest improvement is that Dwayne is designated hitter," Jones said. "It's not really meaningful to help us win the conference title with our best pitchers.

"We're really coming along," Monday. McGirr said. "I wouldn't be unhappy if we made it a fairly tight meet for them. say 15 or 20 points."

During the indoor season, Illinois outdistanced SIU-C, 125-135. In the Illinois Invitational track meet, the Salukis felt the lane will be the advantage over everything over the 440-yard dash. On the track Hartog feels the lane will be the advantage over everyone over the 440-yard dash.

Hartzog predicted the put put and discus will go to the Salukis, however SIU-C may have an advantage in the javelin with Ken Mathias and pole vault with John Sayre.

"We have too many areas where we will not challenge them," Hartog said. "And in our strong areas they could beat us."

Golfers crushed in Kats' tourney

By Red Farlow

The Saluki women's golf team has its best score of the season and finished in 15th place in the women's NCAA tourney Monday through Wednesday in Lexington, Ky.

"It was a great, great tourney," Coach Mary Beth McGirr said. "The competition was unbelievable. Eight of the teams will qualify for nationals, and Georgia hosts, so they'll probably win."

Georgia won the Lady Kats' and had four of the top 10 individuals, while Illinois lost its best possible score of the season.

This was the 54-holer Lady Kat Invitational Monday through Wednesday in Lexington, Ky.

"We still need to play consistently well for three days," McGirr said. "It was a great, great tourney."

Coach Mary Beth McGirr said. "The competition was unbelievable. Eight of the teams will qualify for nationals, and Georgia hosts, so they'll probably win."

Georgia won the Lady Kats' and had four of the top 10 individuals, while Illinois lost its best possible score of the season.

Two Salukis shot 18-hole rounds under par 80, the lowest SIU-C score of the season. Barb Anderson shot one in the first day, Sue Arbogast the last.
