## SHUTTLE EXPLODES

### Teacher, crew members killed in worst space tragedy

UPI Photos, Merion Daily Republican

Space shuttle Challenger blasts off from launch pad No. 39B. Moments later an explosion sends plumes of smoke across the sky as two solid-fuel rocket boosters twist away from the craft, hidden in the smoke. Debris from the orbiter, trailing smoke, showers toward earth.

## Challenger ends in fireball

By Edward K. DeLong  
of United Press International

CAPE CANAVERAL, Fla. (UPI) — The shuttle Challenger exploded in a boiling ball of flame 72 seconds after blastoff Tuesday, killing teacher Christa McAuliffe and her six crewmates in the worst space tragedy since man began reaching for the stars 25 years ago.

Ships, planes and helicopters rushed to a spot 18 miles off the Florida coast where flaming debris rained down for an hour after the mighty explosion, but all they found were parts of Challenger's booster rockets.

"I REGRET that I have to report that based on very preliminary searches of the ocean where Challenger impacted this morning, these searches have not revealed any evidence that the crew of the Challenger survived," said Jesse Moore, chief of the shuttle program, five hours after the explosion.

The shuttle, loaded at launch with nearly a half million gallons of explosive hydrogen and oxygen, carried no emergency escape system.

It was 10 miles high when it exploded. The earth-shaking roar of blastoff had subsided and the majestic contrail following Challenger into

space turned silently into a serpent of smoke and fire writhing across the sky.

ON BOARD the Challenger were commander Francis "Dick" Scobee, 46, co-pilot Michael Smith, 40, Judith Resnik, 36, Ellison Onizuka, 39, Ronald McNair, 35, satellite engineer Gregory Jarvis, 41, and McAuliffe, the 37-year-old Concord, N.H., social studies teacher picked from 11,000 candidates to be the first private citizen in space.

Cries of horror went up at viewing sites along the coast when the shuttle exploded at 11:39 a.m. EST, spewing burning pieces like a massive

fireworks display as a shocked nation watched the replays moments later on television.

MCAULIFFE'S HUSBAND Steven, and two children Caroline, 6, and Scott, 9, watched the disaster that claimed the 37-year-old teacher's life but were hustled away immediately by NASA officials.

"It's a day we wish we could have pushed back forever," said Sen. John Glenn, D-Ohio, the first American to orbit the earth on Feb. 20, 1962.

### 39 to 45 Americans captive in Laos, former agent says

WASHINGTON (UPI) — A former Army special forces agent told Congress Tuesday that he saw possibly 45 American prisoners of war in Laos in 1981 but that the government had suppressed the report. Scott T. Barnes said he and three other Delta Force members were sent on a secret mission arranged by Army Col. James "Bo" Gritz to seek out possible camps of U.S. servicemen reportedly held in Laos. He said he and the group crossed into Laos from Thailand in October 1981 and found an "armed camp" of with between 39 and 45 captives who appeared to be Americans.

### Pentagon accused of rigging weapons tests

WASHINGTON (UPI) — The Pentagon rigged tests on the Bradley Fighting Vehicle, the Maverick anti-tank missile and other weapons systems for which it seeks billions of dollars, raising serious questions about their safety, a veteran House investigator has charged. These "unrealistic" tests enabled the weapons to gain congressional financing despite design flaws that threaten the lives of service members, staffer Anthony Battista said in his report made public Tuesday by the House Armed Services research and development subcommittee.

### Federal grant program halted for rest of year

WASHINGTON (UPI) — The Reagan administration is shutting off a popular job-creating program for the rest of this fiscal year and wants to defer \$500 million in another grant program run by the Department of Housing and Urban Development, officials said Tuesday. HUD officials sent a memo to its field offices Monday, telling them not to accept any more applications for the Urban Development Action Grant program for fiscal 1986, which ends in September.

### \$2.6 billion in tax underpayments discovered

WASHINGTON (UPI) — The Internal Revenue Service said Tuesday it collected a record amount of income data in 1985, snaring enough underpayments to add \$2.6 billion to government coffers. Virtually all the mismatches uncovered by the Information Return Program, which uses computers to compare income documents and generate correspondence, will be reviewed, the tax agency said. More than 8 million taxpayers, including about 1.5 million who fail to file returns, will be contacted.

### Researchers say U.S. oil supply drying up

WASHINGTON (UPI) — Despite the current world oil glut, the United States will exhaust its petroleum supplies within 35 years and face — even sooner — a drop in industrial and agricultural productivity, researchers warned Tuesday. "We are very close to the point, perhaps as early as 1994, where it will take more than a barrel of oil to find a barrel of new U.S. oil," said Edward Passerini, president of the Washington-based research group Carrying Capacity.

### Schools accused of 'ripping off' U.S. public

WASHINGTON (UPI) — Education Secretary William Bennett charged Tuesday that many vocational and professional schools are "ripping off the American public" by turning out graduates who fail to meet minimum standards in their fields. Bennett told a Senate education subcommittee that vocational and proprietary institutions are the worst offenders, but said the problem extends to some colleges and universities.

### Scientology founder Hubbard dies at 74

LOS ANGELES (UPI) — The reclusive founder of the Church of Scientology, prolific author L. Ron Hubbard, 74, died last week but "lives on" in his spirit and will influence mankind for thousands of years, church officials said Tuesday. Church officials said Hubbard died of a cerebral vascular accident — a brain hemorrhage — in his sleep Friday night at his home near the San Luis Obispo County community of Creston, about 175 miles north of Los Angeles.

### Catholics warn of fraud in Philippine election

MANILA, Philippines (UPI) — Roman Catholic Church leaders warned Tuesday that fraud in next month's presidential election threatens to reach unprecedented levels and appealed to Filipinos to counter "this conspiracy of evil." The joint pastoral letter by the Catholic Bishops Conference of the Philippines was issued as President Ferdinand Marcos and challenger Corazon Aquino pressed ahead with their campaigns.

# Suspect admits setting ICG office building fire

By John Tindall  
Staff Writer

A man suspected of setting fire to the Illinois Central Gulf Division Office was taken into custody Monday night, according to Carbondale police reports.

Police say William J. Fabsik, of 302 S. Poplar, has admitted to setting the fire that destroyed the ICG office

at 104 N. Washington Jan. 10. Fabsik also admitted to setting a fire Jan. 13 in an abandoned apartment at 507 S. Ash, according to reports.

Fabsik was a student in SIUC's continuing education program at Vienna Correctional Institute, according to the Office of Admissions and Records. Police say he had been serving time on a robbery and burglary conviction from

Cook County and had been released in October.

Fabsik is being held in the Jackson County jail on a Department of Corrections parole hold.

Destroying property involved in interstate commerce is a federal violation, so federal charges were filed Tuesday against Fabsik. Other charges involving violation of state arson laws will be filed

later by Jackson County State's Attorney John Clemons, according to police reports.

No bond will be set until Fabsik is served with the warrant and appears before a federal magistrate.

According to police reports, officers involved in the case conducted more than 400 hours of surveillance with a team of

15 investigators from the Carbondale Police; the Department of Criminal Investigations; Illinois Central Gulf railroad; and the Federal Bureau of Alcohol, Tobacco and Firearms, before taking Fabsik into custody.

Other "suspicious fires" are being investigated to determine possible links with Fabsik, say police.

# Study links poverty, unemployment to crime

By John Tindall  
Staff Writer

A 1985 study conducted in Carbondale by an SIUC attorney and a sociology student links low education levels, poverty and unemployment to an increased tendency to commit felonies.

James Roberts, staff attorney for the Legal Clinic, and James Olivero, doctoral student in sociology, based their study on a list of all residents accused of committing a felony in 1984.

After pinpointing the addresses of the 45 accused felons on a map of Carbondale, Roberts and Olivero evaluated the neighborhoods in which the most and the least number of accused felons lived.

The study showed that one

Carbondale neighborhood, bordered on the west by North Illinois Avenue and on the south by East Main Street and labeled neighborhood seven for the study, was home to 43 percent of all accused felons — about one accused felon for every 86 residents — the highest proportion of accused felons living in any Carbondale neighborhood.

On the other extreme, there were no accused felons living in the neighborhood bordered on the north by West Main Street and on the east by Oakland Street and on the south by Chautauqua Street, labeled neighborhood three.

Roberts said he hopes that the results of the un-commissioned study will convince city officials to

continue funding social programs.

The researchers considered the possibility that a greater number of people lived in neighborhood seven and that population density would account for the disproportionate number of accused felons but data provided by the 1980 census proved that assumption false. Neighborhood seven had 1,677 people living in it compared to 3,275 living in neighborhood three.

Roberts and Olivero also used census data to compare both neighborhoods according to income levels, number of families below the poverty level, unemployment levels and the percentage of people over 25 years old with high school diplomas.

According to census data, the average income in neighborhood three was \$25,794 compared to \$13,001 in neighborhood seven. Also, 1.3 percent of the families in neighborhood three were below the poverty level compared to 28.5 percent of the families in neighborhood seven.

The differences in the percentage of people unemployed in neighborhoods three and seven were similarly weighted—3.4 percent in neighborhood three and 17.7 percent in neighborhood seven.

Roberts and Olivero also compared the average time residents of both neighborhoods were unemployed. In neighborhood three it was 8.3

weeks and in neighborhood seven it was 22.6 weeks.

Only 51.8 percent of people 25 years old and older have high school diplomas in neighborhood seven, but the figure for neighborhood three was 92 percent.

The researchers contend in their study that crime bears a direct relationship to social environment and that "the difference in crime (accused felons between neighborhoods) appears to center around areas of uneducation, unemployment and poverty."

Roberts said he was surprised that the survey showed such marked differences in the number of felons living in the two neighborhoods. He said he hopes to conduct similar studies in the future.

# Regional literacy programs get \$150,000

By William Walker  
Staff Writer

Calling illiteracy a "very serious problem in our society," Secretary of State Jim Edgar Tuesday awarded nearly \$150,000 to Southern Illinois groups that operate literacy programs.

"The problem of illiteracy is a problem that affects us all," Edgar said at an award presentation at John A. Logan

College.

"It is almost impossible to play a meaningful role in our society if you can't read. In fact, it's almost impossible to do anything if you can't read," he said.

Edgar said the grants are part of \$2 million that the General Assembly has appropriated for literacy programs throughout the state. In all, he said nearly \$200,000 will be given to

Southern Illinois to promote literacy.

The grants awarded Tuesday will go to Shawnee Library System, which will receive \$49,992; John A. Logan College, \$40,357; Quality of Life Services, Inc., \$18,400; and Southeastern Illinois College, \$38,254.

"These four programs will be coordinating their efforts to bring the best possible literacy services to this area of

Southern Illinois," a statement released by Edgar said.

"Working together, they will be able to reach more adults more effectively."

Edgar praised the work of local groups in combating the problem of illiteracy, saying that government must help by providing funds, but that it's up to local groups to provide the needed services.

"The war against illiteracy is not going to be won in

Washington or in Springfield," he said. "Where it is going to be won is at the local level."

Edgar also said he was happy that private organizations, such as Quality of Life Services, now qualify for funding through the literacy grant program.

He said he hoped Quality of Life Services would serve as a "model program" for other private groups in the state.

# Tragedy shouldn't halt space program

THE SPACE SHUTTLE Challenger exploded two minutes after its launch from Cape Canaveral, Fla. Tuesday morning, killing all seven crew members aboard. It is obvious to all Americans and to the entire world that this is a tragedy. The loss of human life in any endeavor is a tragedy.

But the loss of the crew members should not deter this country's conviction that an active, and above all, a safe space program must be maintained. When America lost three Apollo astronauts in January 1967 in a freak launchpad explosion during a practice firing of the craft's engines, NASA mounted a concerted effort to ensure the safety of future missions.

BUT THE APOLLO program went forward, culminating with the first manned moon missions from 1969 to 1972, during which there were six actual landings on the moon without the loss of one human life. No one can argue that these missions were an amazing achievement in the annals of human history.

The space shuttle program had a similarly safe history until Tuesday's tragedy. There had been 25 shuttle missions completed without incident, including nine missions by the shuttle Challenger. This is a remarkable safety record, especially when one considers the harsh environment in which all space missions are conducted.

PRESIDENT REAGAN, rightfully so, has cancelled all future shuttle flights until the exact cause of the disaster can be ascertained. This could take some time. It was almost two years before another manned space flight was attempted after the 1967 Apollo accident. While it is likely that it will not be that long before the next shuttle flight is launched, time and great care must be taken to ensure the safety of the next group of astronauts.

Sympathies are extended to the friends and families of the seven who lost their lives: Commander Francis "Dick" Scobee, co-pilot Michael Smith, Judith Resnik, Ellison Sizuka, Ronald McNair, satellite engineer Gregory Jarvis, and Christa McAuliffe, a high school teacher from Concord, New Hampshire. They did not die in vain.

## Letters

### Atlanta trip an eye-opener

I want to express my thanks to the SPC Travel Committee and to Kevin Valentine, Andy Leighton and Tom Marcinkowski, the organizers of last weekend's trip to Atlanta in honor of Dr. Martin Luther King. It was the best \$50 I ever spent.

In Saturday's symposium on poverty and world hunger I learned a great deal about the terrible problem of malnutrition, both in America and around the world. Much of what we heard was terrible, but we also heard that progress is being made. We left assured that an end to hunger by the year 2000 really is an achievable goal. We also left with the message from SIU alumnus Dick Gregory that we must be concerned not only with hunger but with sound nutrition.

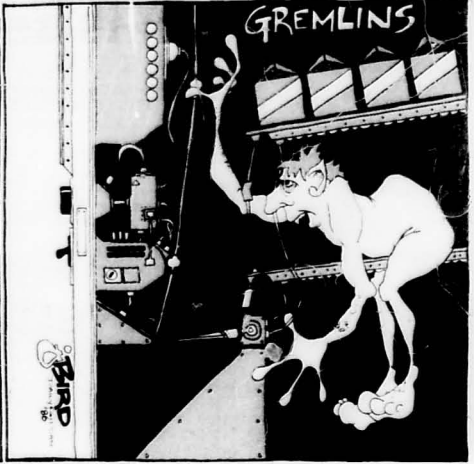

Sunday was the International Conference Against Apartheid with keynote speeches by Bishop

Tutu and the Rev. Jesse Jackson, and a statement of the Reagan administration's policy by Assistant Secretary of State William Robertson. I have never had any doubt about my abhorrence of apartheid, but the choice among conflicting policy options has often been confusing. I came away from this conference with no uncertainties remaining — the policy of "constructive engagement" has clearly been a failure from every perspective except that of the racist regime in South Africa.

Then came Monday with the Ecumenical Service and the march. It was a rousing occasion to see that march in tribute to a great man.

I am deeply grateful to all those who made this trip possible and to my 48 fellow bus-riders who made the ride down and back such a pleasure. — David F. Duncan, professor, Health Education.

WITHIN THE DEPTHS OF THIS VENDING MACHINE LIES THE MYSTERY OF MANY A PERSON'S FRUSTRATION...

# Vending machine gamblers: lucky ones win, others pay

By Paula Buckner  
 Staff Writer

Two years of working in the newsroom have taught me a few things.

I have learned how to survive on delectables from Vendoland, those mysterious machines which accept quarters, dimes and nickels for an assortment of eatables.

Because of the crazy hours we keep, Vendoland is a popular place for D.E. people. Someone always has a can of soda or a carton of milk with a bag of chips, a candy bar or something from Hostess. Ding Dongs, HoHos and Pepsi seem to be the big winners for the "breakfast of journalists."

One of the worst things about Vendoland is the change factor. Most of the people I work with don't have any. "Anybody got change for a buck?" is a common call in the newsroom.

Recently some weird things happened with the vending machine that dispenses milk. It first happened before the Christmas break and has occurred several times since returning from break.

One of my colleagues, Lisa, went to get some milk and came back with two. She said, "Anybody want a milk? I got two of them." I accepted the gift and asked her how she got two. She said she didn't know, that it just happened.

Soon after that, I went on a routine trip to Vendoland for Ding Dongs and a carton of milk. I placed my quarter, nickel and dime in the slot, pressed the selector button for a carton of chocolate milk, felt it connect and got nothing.

Naturally, I grabbed the top of the machine, shook it and heard two cartons drop down in the slot. I mumbled, "Well, that's more like it."

I returned with a grin on my face and two milks in my hand.

Paula Buckner  
 Staff Writer

Because Lisa offered me her extra milk, I returned the favor; she gratefully accepted.

We talked about it a while and decided that we were special because no one else was getting two milks for the price of one. Or if they were, they weren't bragging about it.

Since then, I have received two-for-one at least seven times. It's always fun to get unexpected gifts.

Last week I decided to get some quick energy from Vendoland. Chips and milk I remembered that to get two milks, I had always put a quarter, dime and nickel in the slot instead of two quarters.

So I deposited the coins, pushed the button and heard one carton drop. I thought to myself, "Oh, gee, not two?" when, like an answer to a prayer, a second carton dropped atop the first.

A few days ago I went to Vendoland for milk and passed a vending machine worker refilling the cigarette machine. I said, "Hi," and proceeded on my way. I inserted my coins, pushed the button, felt it connect and got nothing.

I called the machine an S.O.B., instinctively grabbed the top of it and shook. Still nothing.

The cigarette refill guy came up behind me and asked

if I had a problem. I told him the machine was screwy, that I had put in my money, pushed the button and didn't get my milk.

He told me that vandalizing the machine wouldn't do any good. He proceeded to open the machine and explain to me why it wouldn't fall.

He said that I had to hold in the button until the milk dropped. And if it doesn't, shaking the machine will cause the carton to come "off track" inside.

"People lose their milk because they shake the machine and the next guy gets two," he told me.

All this time, I figured that I was somebody important because the machine liked me enough to give me a two-for-one deal.

But I was getting a little something extra because someone else was getting gyped.

I think I'll wait to see my name printed in the phone book to feel important next time.

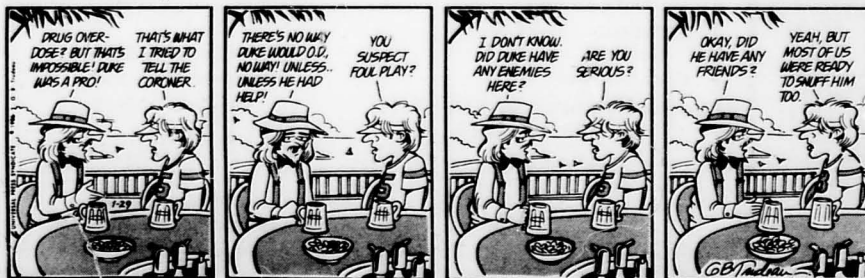

## Meet the cartoonist

Today's issue marks the debut of cartoonist Jay Hurder in the Daily Egyptian. Hurder, 26, is a graduate student in higher education administration. He drew for the Western Illinois University newspaper, the Courier, for four years, while studying art education and business administration. He then returned to his hometown of Freeport and taught art at the high school for four years.

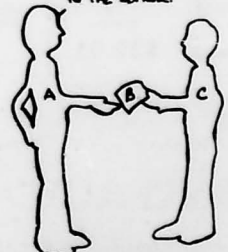

Hurder's cartoons put the classic struggle of the common person against the bureaucracy into a humorous perspective. We hope you'll enjoy his work.

HOW TO SUBMIT A LETTER TO THE EDITOR:

A: E FOR B: LETTER C: YOU

Photo by Dragan Zubic

Bella Manningham, a character in "Angel Street" played by Cara Webster, trades lines with her husband, Jack, (Roy Weshinsky) during a scene in the Stage Co. production.

## Solid suspense in 'Angel Street'

By Maureen Cavanagh  
Staff Writer

### A Review

The Stage Company's presentation of "Angel Street," a play by Patrick Hamilton, is a paragon of suspense.

"Angel Street," a Victorian thriller, was originally produced in London as "Gaslight," and later opened on Broadway starring Vincent Price. It was adapted twice to film — a British version that won critical acclaim, and an Academy Award-winning American remake starring Ingrid Bergman, Charles Boyer, Joseph Cotten and Angela Lansbury.

The Stage Company's production opened Friday. It will play again Jan. 31 and Feb. 1-2 and 7-9.

The play, directed by Denise Josten Cocking of Murphysboro, is set on Angel Street in 1880 Philadelphia. The two principal characters are Bella and Jack Manningham, played by Cara Webster, a journalism student, and Roy Weshinsky, assistant professor of English.

Webster delivers a solid portrayal of Bella, a vulnerable woman who fears

she is drifting into insanity, much like her mother had when she was middle-aged.

In reality, Bella's husband, Jack, is wickedly seducing her out of her senses. Disguised with kindness, he convinces Bella that she is paranoid and diminishing mentally.

Weshinsky portrays Jack as a sinister man. He speaks to Eella in a condescending, but nervous, tone as he attempts to convince Bella that she is insane.

Weshinsky's stage movements are, at times, robotic. He is particularly automated during crucial moments in the performance when he is kissing his mistress, a house maid, and when he is gripping Bella's throat. He also misses chances to erupt with perverse impatience, missing the chance to jump on phrases such as: "...or I'll lock you in darkness, I've been much too lenient with you," and "If we are to be enemies, you and I, you will not prosper," that would make J.R. Ewing look like a choirboy.

A more erratic, but still

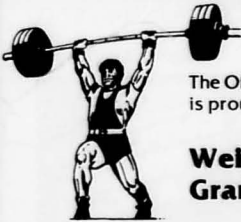

methodical, tone from Weshinsky would have helped counter Sergeant Rough's character, played by Shannon Bump.

Bumps' performance as Rough is top-drawer. He is able to play a light-hearted genius, sensitive to Bella, without detracting from the suspense of the play.

Rough is the infamous police detective whom Bella places her trust in after he reveals to Bella his suspicion that Jack is not the man she thinks he is. Rough asserts that Jack's real identity is Sidney Power, a greedy, malicious and rabid murderer who escaped Rough's grip five years before.

Carrie Foxx, who makes her Stage Company debut as Nancy, is convincing as the selfish and promiscuous 19-year-old servant who is Jack's main distraction. Joanne Cross, who plays Elizabeth, gives a natural performance as the Mattingham maid.

Tickets for "Angel Street" are available at the Stage Company theater box office from 4 to 6 p.m. weekdays and noon to 4 p.m. Saturdays. Weekend 8 p.m. performances ticket prices are \$5; 2 p.m. Sunday matinee tickets are \$3.

## ONLY 38 Days Left!

That's how much time is left to sign up for an SPC Spring Break Vacation. Sounds like a lot. But, invariably every year a few students wait to the last minute to decide to go. Being students ourselves, we understand these things. We always try to accommodate, but there are only so many ocean front views in the world. So, if you want to get a head start and guarantee your spot, come to SPC and see what we have to offer!

# City to seek \$40,000 grant for restaurant

By Tricia Yocum  
Staff Writer

The Carbondale City Council Monday gave its support to the building of a restaurant in the old downtown area, at the northeast corner of North Washington and Jackson streets.

The city agreed to apply for a \$40,000 grant from the Illinois Department of Commerce and Community Affairs on behalf

of Jeremiah's Inc. of Cape Girardeau to assist in the plans.

The restaurant also received confirmation for a Class A liquor license from the Local Liquor Control Commission, which consists of City Council members.

The steak and seafood restaurant will incorporate the old Tuscan Lodge Building, which also at one time housed

the A-G Grocery. It will also utilize the smaller building to the east and the lot behind the structure.

Plans call for the two buildings to be remodeled into one large building, with the vacant lot to be used for parking.

The company has proposed a \$200,000 financing package for the restaurant. The Boatman's Bank of Cape Girardeau is loaning \$120,000, the investors

are putting up \$40,000 with the remainder coming from Carbondale's DCCA grant.

The grant will be loaned in a second lien position to Jeremiah's Inc. at 3 percent interest. Payments made back to the city will establish a revolving loan fund for economic development.

The restaurant is expected to establish about 25 new jobs, mostly for low- and moderate-income people, said Frank Moreno, Carbondale economic development director.

A letter from David

McKinney, company president, stated the restaurant is slated to open this summer.

Jeremiah's Inc. is owned by David McKinney of Cape Girardeau and Tom Sanders of Paducah and operates restaurants in each of those cities.

The Cape Girardeau establishment contains two dining rooms, two lounges, a kitchen and an office. Food is cooked on a brick charcoal pit in the center of the main dining room.

## Weight room ceremony slated

By Catherine Edman  
Staff Writer

A ribbon cutting ceremony will be held Thursday afternoon at the Student Recreation Center to celebrate the opening of its newly renovated weight room.

Bruce Swinburne, vice president for student affairs, will be the master of ceremonies, cutting the ribbon across the entry to the weight room during the ceremony, which begins at 3 p.m.

The renovations, which began at the end of last semester, were completed by Jan. 6, prior to the beginning of this semester. The weight room was opened soon after the renovation to accommodate the large number of people make use of it, said to Brian Lukes, assistant coordinator of the Rec Center.

Prior to the renovations, about 7,000 to 7,500 people were using the weight room during a seven day period. Now, Lukes said, those numbers have increased to 9,000 to 10,000 people.

Previously there were 48 weight stations available, he said, but now there are 78 stations.

New equipment was purchased, some of the old equipment was restored,

mirrors were added, the walls were painted, platforms were added and the room received a new floor.

William Bleyer, director of intramural-recreational sports, said much of the equipment that was in the weight room had been there since the Rec Center was built seven years ago. He said that although new equipment had been bought since that time, many of the pieces did not match the originals.

The renovations, which Bleyer said cost approximately \$80,000, also included making some of the equipment more accessible to people in wheelchairs.

"Not only did the renovations allow us to rearrange the equipment and accommodate more people, but we feel the students should have the best," Bleyer said.

Lukes said he hopes to close the weight room for five to 10 minutes during the ceremony, but added that it might not be possible because of the large amount of people who would be using the weight room.

Coach Ray Dorr, recently appointed Athletics Director James Livengood, and representatives from the

physical education and athletics departments were invited to attend. The ceremony and the reception that follows are both open to the public.

## Talks bring little hope

By United Press International

Middle Eastern leaders held talks in several nations Tuesday, attempting to reconcile an array of contradictory demands blocking progress toward Arab-Israeli peace negotiations.

Little emerged from the meetings in Western Europe and the Middle East, however, to raise hopes for an imminent breakthrough in the long-stalled peace process.

In at least one area of agreement, Israeli Prime Minister Shimon Peres and Egyptian President Hosni Mubarak issued separate statements urging closer international cooperation in the fight against terrorism.

In Bonn, West Germany, Peres accused Syria and Libya of backing Palestinian gunmen who staged bloody terror attacks Dec. 27 at the Rome and Vienna airports, while Mubarak called for a "comprehensive convention to combat and deter terrorism" during a speech in France.

In Amman, Jordan's King Hussein met with Palestine Liberation Organization leader Yasser Arafat for a fourth time since Saturday but announced no agreement on calls by Hussein and other moderate Arabs for the PLO to accept Israel's existence as a prelude to peace talks.

With Arafat and Hussein still at odds, it was not clear when they would resume talks.

# Council delays decision on funding requests

By Jim McBride  
Staff Writer

Four community social service organizations will have to wait until next Monday to find out if they will receive continued city funding this year.

The City Council was divided Monday as to how to maintain city support for the service organizations, and is expected to decide the matter next Monday.

Prior to council discussion on the issue, City Manager William Dixon said that the city staff "isn't out to chop" funding for community social service organizations.

"I think we have an appreciation of the role of such organizations," said Dixon. "We do feel that it's our responsibility as a staff to point out the impact that the loss of revenue sharing has on funding for such organizations, as well as programs offered by the city."

Dixon said if the city chooses to continue funding those

programs, it will have to increase existing revenue sources or develop alternate sources of revenue.

"We're going to have to tighten our belts across the board in the city," he said.

The council received budget requests totalling \$83,125 from five organizations: the Attucks Community Service Board, the Senior Citizens Center, the Youth Services Program, the Women's Center and the Carbondale Public Library. The library's request was denied.

Councilman Patrick Kelley suggested that the city eliminate funding of community social service organizations.

"The council ought to consider that, given the real stringent revenue situation that we face with the elimination of federal revenue sharing," Kelley said.

Kelley later suggested that the city could fund the organizations at a reduced level by appropriating \$38,990

from the city's general fund and not include a proposed \$38,700 from revenue sharing funds.

The city faces a loss of \$600,000 in federal general revenue sharing funds after Oct. 1.

Councilman Keith Tuxhorn said he supported funding the organizations at the same appropriation levels as last year.

Council members Neil Dillard and Mayor Helen Westberg both indicated that they would not favor elimination of city funding for the organizations at this time.

Councilman John Yow said he would favor no cuts in funding for the Youth Services Program, but added that he would favor reduced funding for the other organizations.

Richard Hayes, representing the Carbondale Black

Coalition, presented a \$500 donation to the Parent's Council of the Eurma C Hayes Child Care Program and briefly addressed the council on the funding issue.

"I think that it is regrettable that we've reached this stage, not just within the city of Carbondale, but in the state of Illinois and across this country," said Hayes. "We've come a long way but we've lost so much to find ourselves forced into this position."

Milton Maxwell, chairman of the Attucks Community Service Board, spoke on behalf

of that organization's funding request.

Maxwell said that the board has received various state grants to help reduce operating costs of its programs and provide social services to the community.

"We are not asking for handouts," said Maxwell. "I want the record to show that this board contributes to this community, to its economic development, to the education of its citizens and to the training of its citizens. For that reason, we ask that the city continue to support these efforts."

## Quality of off-campus housing is subject of new USO survey

By Brett Yates  
Staff Writer

The Undergraduate Student Organization has begun a door-to-door survey to find out about off-campus living conditions for students.

David Madlener, city affairs commissioner for the USO, said the survey has been given to 10 people so far, but he hopes to eventually have the survey distributed to 795 students living off-campus in the Carbondale area. There are currently seven people conducting the survey, but Madlener said he is still looking for 50 volunteers.

The results of the survey will be tabulated by a computer to determine how the average student off campus lives. Madlener said the names of students surveyed will remain confidential.

Madlener said he came up with the idea for the survey after talking with Tim Larson, a graduate student working with the geography department. Andy Leighton, student member of the Board of Trustees, and the members of

the USO City Affairs Commission.

In the 25-question survey students are asked how much they pay for rent and utilities, whether or not they feel their house is properly weatherized, whether their landlord requires post-dated checks or whether or not they feel their landlord is fair and responsible.

Madlener said some questions such as ones concerning race and citizenship will attempt to determine whether or not students are treated differently because of their race or nationality. He said he hopes the results of the survey will define the problems students living off

campus may have.

"The purpose is to find information about the quality of housing off-campus," Madlener said. "By obtaining this information we will give the City Affairs Commission, the Landlord Tenant Union and the city of Carbondale a chance to improve that quality of life for the SIU students that live off campus."

The results of the survey will be given to the Carbondale Code Enforcement and the Housing and Energy divisions.

Those interested in volunteering for the survey can leave their names and numbers at the USO Office on the third floor of the Student Center.

## Fast food plan spurs objection

By Darci Allen  
Staff Writer

Mary O'Hara, graduate assistant at the Women's Center, is preparing to make a plea to the consciences of Student Center Board members.

O'Hara is concerned about the destruction of tropical rain forests in South America by fast-food companies. Each of the two companies bidding for the food service contract at the Student Center is proposing to install a fast-food restaurant.

Interstate United wants to put in a McDonald's and Marriott Corp. wants to put in a Roy Rogers, a chain restaurant similar to Arby's.

Fast-food restaurants are among the major causes of the near-extinction of Central American rain forests, O'Hara says, and she intends to point this out when the two bidders present their proposals at a public hearing Wednesday.

According to the Food and Agriculture Organization of the United Nations, rain forests are being demolished at the rate of 77,000 acres per day, O'Hara said, adding that her interest in the issue is in no way related to her work at the Women's Center.

"At this rate, rain forests will be extinct by 2000," she said.

Corporations buy the Central American land to raise cattle more inexpensively than they could in America, according to O'Hara.

"In Montana, the average cost of raising a cow is \$95. In Costa Rica, it is \$25," she said. "They can do this because of the cheap land and labor."

The wholesale price of beef

rose steadily from 50 cents to 70 cents a pound from 1975-79 and corporations had to find new sources when domestic producers could no longer keep the prices down, according to Natur, a German magazine.

The magazine also noted that Central America offers beef for half the American price, and has grown to

produce 100,000 tons a year.

Rain forests are an intense source of life, O'Hara said, adding that half of the species on the planet live in rain forests.

The U.S. National Cancer Institute reports that 70 percent of the 3000 plants with cancer-fighting properties grow in rain forests, she said.

## Food service bidders to present plans

The two companies vying for the food service contract for the Student Center will present their proposals Wednesday night in Ballroom D.

Interstate United, whose presentation starts at 6:30 p.m., plans to put a McDonald's where the Oasis dining area is. The company offers a management fee contract under which the center pays Interstate a set fee for their services and shares the profits.

The Marriott Corporation's presentation will begin at 7:45 p.m. Marriott plans to install a Roy Rogers. The company offers a guaranteed percentage fee contract that will pay the Student Center a set percentage of the profits.

Winkler School teacher Mona Marcec reflects on the Challenger disaster. Staff Photo by James Guigg

## Tragedy hits close to home for former flight candidate

By Wm. Bryan DeVasher  
Staff Writer

Tuesday one of America's teachers was killed in the first major space shuttle accident.

Mona Marcec, a third grade teacher at Carbondale's Winkler School, could have been that teacher.

Marcec was one of the Illinois finalists in the competition to be the first teacher in space. She did not make it to the national finals from which teacher Christa McAuliffe of Concord, N.H., was selected.

In reaction to Tuesday's accident, Marcec said that she was "shocked and sorry" for those involved.

"I feel so sorry for the family, all the children in her school, for the people responsible," she said in a classroom interview.

Marcec also said that her sentiments were extended to Alan Ladwig, an SIU-C graduate who was involved in the teacher-in-space program.

"Because Alan is in charge of the teacher program, I feel for him," Marcec said.

Marcec said that her pupils were equally stunned by the accident. She said that most at first expressed horror when they learned that the shuttle exploded 72 seconds into the mission but then expressed relief when they realized that Marcec could have been the teacher on board the doomed flight.

"The children were very upset," she said. "It was a strange mixture of sadness and happiness that I wasn't on it. I think they understand what happened, though."

In reaction to the incident, one of her students drew an exploding shuttle on the chalkboard at the front of the room during recess. Next to the shuttle was a drawing of Marcec, smiling because she escaped injury.

"One boy, a very macho type of young man, asked me if he could be excused so that he could go to the restroom to cry," Marcec said. "I excused him and he returned a few minutes later, obviously shaken."

"Another girl turned to me

and said, 'They can't have a funeral,' because there were no bodies to speak of. I was amazed that she could realize that." Marcec recalled a reaction from one of her students when it was learned that she was being considered for the program last year.

"One of the children said, 'You could die, to me when I was selected to compete,'" Marcec said. "I told him that we all die sometime and that I'd rather go that way than not go at all."

Marcec said she learned of the accident at about 11:30 a.m. when she was called out of her classroom by a fellow teacher. She said that following reports of the failed mission she received telephone calls from her husband Andy, an administrator in the Division of Continuing Education, and from her daughter, Megan, in Yuma, Ariz.

Marcec said that she hopes Tuesday's accident will not halt the shuttle program.

"The program itself is just too vital," she said.

postponed for a week Tuesday night's State of the Union address and in a brief statement on television at 5 p.m. told the country that "today is a day for mourning and remembering" the crew.

"WE SHARE this pain with all the people of our country," Reagan said.

Challenger was hurtling toward space at nearly 2,000 mph, propelled by two solid-fuel booster rockets and its three main hydrogen-burning engines when disaster struck.

"It appears there was an explosion," Moore said, but there was no indication what caused it. He reiterated earlier NASA statements that data streaming in from Challenger appeared perfectly normal until it ceased to arrive.

MOORE SAID the shuttle program, which had hoped to launch a record 15 missions in 1986, had been suspended until NASA determined what caused the tragedy.

It was the 25th shuttle launch and the 10th for the workhorse Challenger. It turned into the first in-flight disaster for the nation's space program and came exactly 19 years and a day from the night Virgil "Gus" Grissom, Edward H. White and Roger B. Chaffee died in a fire aboard the first Apollo moonship on the launch pad here. The Soviet space program is known to have lost four cosmonauts.

MCAULIFFE'S PARENTS, Edward and Grace Corrigan, were watching from a VIP area three miles from launch pad 39B when the tragedy struck. Cheers turned to shrieks of horror in the crowd and the Corrigan's clutched each other in tears. NASA officials rushed to shield them from the crowd and led them away.

In classrooms and the auditorium at McAuliffe's school in Concord, students watched in silent disbelief.

The Commercial Appeal of Memphis published an extra edition, its first since the assassination of President Kennedy, to report the tragedy. Condolences poured into Washington from the governments of the world.

REAGAN WAS in a meeting in the Oval Office when aides rushed in with the news. He went into a nearby study to see a televised replay of the explosion and spokesman Larry Speakes said the president's

face was lined with grief. Reagan sent Vice President George Bush and acting NASA chief Bill Graham to Cape Canaveral to lead the investigation.

Moore, at an outdoor news conference late Tuesday, said "all records of the flight, including informal notes by launch and flight controllers, have been impounded" for investigators.

SPEAKES SAID despite Reagan's sorrow he had no intention of curbing the space program.

"These people were dedicated to the exploration of space. We could do no more to honor them — these courageous Americans — than to go forward with the program," Speakes said of the seven people aboard the Challenger. McAuliffe was the first private citizen-astronaut, chosen from more than 11,000 applicants. She had planned to give lessons aboard the shuttle to be televised to millions of schoolrooms to increase student interest in science and technology.

Lloyd's of London said McAuliffe was the only one of the crew insured by the venerable agency. Lloyd's did not say who took out the \$1 million policy in her name.

THE SPACE shuttles were the first manned spaceships launched without an emergency escape system. Only the original shuttle, Columbia, had ejection seats and then only for its first four test flights.

NASA said the launch appeared entirely normal until one minute and 12 seconds after launch. At that point, at a speed of 1,977 mph, three times the speed of sound, it was 10.4 miles up and 8 miles offshore.

Mission control in Houston sent the routine order: "Challenger, go at throttle-up," the command to throw on full power.

SCOBEE INCREASED power to the main engines as planned and his final words were "Roger, go at throttle-up."

The ship was suddenly enveloped in a ball of fire.

Rescue efforts were launched instantly, and television commentators excitedly showed their viewers a parachute floating down to the ocean. But it was only a paramedic dropping to the crash site.

## Liquid fuel leak suspected in blast

By William Walker  
Staff Writer

Although it may be weeks or even months before inspectors determine the exact cause of the explosion that destroyed the space shuttle Challenger, members of the Illinois scientific community have speculated that the disaster was the result of a problem with one of the fuel systems.

William Orthwein, a professor of mechanical engineering at SIU-C who worked on the Apollo space program, said in a telephone interview that slow-motion replays of the disaster indicated a small flame on the side of the main fuel tank.

He said the flame and resulting explosion were probably caused by a rupture in the partition that separates liquid hydrogen and oxygen in

the main liquid fuel tank. Such a combination of volatile hydrogen with oxygen would have caused an explosion, he said.

Shee Mang Yen, acting head of the aeronautical and astronautical engineering department at the University of Illinois, agreed that there was probably a leak. He said such leaks are especially deadly during the launching process.

"Launching is always the critical stage," said Yen, who served as a consultant to NASA from 1978 to 1980. During the launching stage "the propulsion system has to work perfectly, but it's obvious that one of the elements of the propulsion system has failed."

Challenger was propelled by two types of fuel, solid and liquid, explained Harry H. Hilton, a professor of aeronautical engineering at

Ed Hedden

the University of Illinois, who agreed that the explosion was likely caused by one of the two fuels.

But Hilton, who worked on the Apollo project and helped develop solid rocket fuel, said

it is impossible at this point to tell exactly what fuel system is to blame.

Hilton did say, however, that if there was a leak in the liquid fuel the leak likely began after lift off, because had it developed prior to that time it would most likely have been detected.

The solid fuel also could have been at fault, Hilton said, if the fuel, which he compared to a piece of rubber, had cracked. He said the solid fuel is designed to burn in the center, but if there was a crack it might have begun to burn through the crack and through the outer shell of the rocket.

Asked if solid rocket fuel is safer than the liquid form, Hilton said that there was a "trade off" involved, since solid fuel is easier to control but does not provide as much thrust for the spacecraft.

But Orthwein discounted the

possibility that the solid fuel was to blame, saying it is more reliable and safer than the liquid propellants.

Orthwein also said that the explosion occurred too quickly to allow the crew to take any evasion action. Had the problem happened slowly, he said, it may have been possible for the crew to jettison the shuttle away from the flaming boosters, but as it was, the crew probably only knew for a second that a problem existed.

Among those expressing shock over the incident was William "Ed" Hedden, art director of the SIU-C Broadcasting Service who worked as an illustrator in the space industry for five years.

Hedden said he was "very upset" about the accident, which he described as "a tremendous setback for NASA."

The crew of the space shuttle Challenger: Seated from left, co-pilot Michael Smith, Commander Francis "Dick" Scobee, and

Ronald McNair. Standing are Ellison Onizuka, Concord, N. H., teacher Christa McAuliffe, Greg Jarvis and Judy Resnik.

## McAuliffe saw herself as a pioneer

By United Press International

Social studies teacher Christa McAuliffe compared herself to the pioneering women of the West. The shuttle Challenger was to be her horse-drawn Conestoga wagon and outer space was her frontier.

She acknowledged her role as the first regular citizen into space as the once-in-a-lifetime opportunity it was, but saw her task as more important — sharing her experiences with America's schoolchildren in history's largest classroom.

"I see this as an extraordinary opportunity and a wonderful year out of what I would normally have been doing, but I think it's just going to enhance the teaching that I do, get the students more excited about their future, which is important," she said before blastoff.

McAuliffe, 37, and six crewmates had endured delay after delay before the Challenger lifted off Tuesday morning.

McAuliffe, a teacher at Concord High School in Concord, N.H., was selected from more than 11,000 applicants to fly on NASA's space shuttle.

When she and nine other finalists were announced in Washington last July, McAuliffe said she wanted to "bring back the wonder of it all" and convey that sense of wonder to her students.

"We hear about military and political and economic history, we don't find out what the ordinary person was doing," she said then. "So like a woman on the Conestoga wagons pioneering the West, I too would be able to bring back my thoughts in my journal to make that a part of our history."

## Resnik flew Discovery 1

By United Press International

Astronaut Judith Resnik was looking for a way to broaden her career as an electrical engineer when she learned NASA was looking for trained scientists — including women — to fly on the space shuttle.

The Akron, Ohio, native once said she knew she was qualified for the job, but didn't think she had a good chance of landing it.

As it turned out, Resnik, 36, was among the first female astronauts selected by NASA in 1978. By being named to fly on the initial flight of the shuttle Discovery in August-September 1984, she became America's second woman, after Sally Ride, to fly in orbit.

She always played down the distinction.

"I think the major significance of my being on this flight is not so much that I'm the second woman," she said, "but that I am the 40th or 45th, or whatever the number is, American astronaut to go on the space shuttle in a period of a couple of years and how far we've come in a few years."

Born April 5, 1949, Resnik, who enjoyed being called by her initials, "J.R.," said she never hesitated to pursue an engineering career despite the few number of women in the field.

"I was always good in math and science and I liked it.

## Smith co-pilot Scobee made satellite rescue of fatal flight

By United Press International

Naval aviator Michael Smith was one of the most experienced pilots in the astronaut corps, logging more than 4,300 hours in 28 types of aircraft, and was co-pilot of the Challenger flight that ended in flames Tuesday.

It was Smith's first shuttle flight.

Smith, born in Beaufort, N.C., April 30, 1945, earned a bachelor of science degree from the Naval Academy in 1967 and a master's degree in aeronautical engineering from the U.S. Naval Postgraduate School in 1968.

Smith, married to the former Jane Jarrell and the father of three children, held the Navy Distinguished Flying Cross, three Air Medals and the Vietnamese Cross of Gallantry with Silver Star.

After earning his master's degree, Smith completed jet training in 1969.

## Jarvis nixed for politicians

By United Press International

Gregory Jarvis, a civilian engineer with Hughes Aircraft Co., had been scheduled for two previous shuttle missions but was bumped when NASA assigned a representative and a senator to those crews.

Jarvis was assigned to the crew of the ill-fated shuttle Challenger to conduct six days of orbital experiments in fluid dynamics to figure out better ways to build satellites.

Born Aug. 24, 1944, in Detroit, Jarvis described himself as a "workaholic" before the launch and said he eagerly awaited his chance to fly in space.

"You get very comfortable that for any contingency they know what to do, so I feel very, very comfortable," he said. "I'm excited but not nervous."

Jarvis had been scheduled to fly aboard the shuttle Columbia in December 1985 but he was bumped to Challenger's January flight.

By United Press International

Francis "Dick" Scobee, who once flew aboard the shuttle Challenger on a daring satellite rescue mission, was commanding the ill-fated shuttle flight.

Scobee, 46, took off April 6, 1984, as the pilot of the Challenger on what was the most ambitious shuttle mission to that point — the capture and repair of the faltering sun-watching Solar Max satellite.

He was to command Challenger again Tuesday on the flight that hosted the

nation's first teacher in space, Sharon Christa McAuliffe.

"My perception is that the real significance of it, and especially a teacher, is that it will get people in this country, especially young people, expecting to fly in space," Scobee said in an interview.

Scobee was born May 19, 1939, and he said his fascination with airplanes began during his childhood in Auburn, Wash.

"That's why I ended up working on them," he once said in an interview.

Scobee got his first hands-on

experience in the military.

Lacking self-discipline, desire and money for a college education, Scobee worked briefly for the Boeing Co. in Seattle before joining the Air Force in 1957.

He worked as a reciprocal engine mechanic on propeller-driven airplanes.

Scobee attended night school in San Antonio and later graduated from the University of Arizona with a degree in Aerospace Engineering. He completed officers candidate school and then talked his way into pilot's school.

## Onizuka was on 1st military flight

By United Press International

Air Force Maj. Ellison S. Onizuka turned his elementary school dream of being a space explorer into reality, becoming an experienced flight test engineer who went on to fly aboard the space shuttle Discovery in America's first manned military space flight.

Onizuka, born June 24, 1946, in Kealahou, Kona, Hawaii, was selected as an astronaut by the National Aeronautics and Space Administration in 1978 and was a crew member aboard Discovery almost

exactly a year ago for the 15th shuttle mission.

But it was long before that when he thought about being a space explorer.

Onizuka said he developed an interest in aircraft and aviation "pretty early" and by his later years in elementary school he already was being inspired by the Mercury space flight program that began in 1959.

In 1964 he enrolled at the University of Colorado to study aerospace engineering.

In an interview this month, Onizuka, a mission specialist aboard the shuttle Challenger, said his first day in space

would have been to deploy "one of the largest communications satellites ever."

Another project would have had Onizuka helping deploy another satellite from the shuttle to study Halley's comet. A recovery of the satellite would have been made later.

At that time, he said, "I'll be looking at Halley's comet. They tell me I'll have one of the best views around."

Even at 39, Onizuka said he hoped to keep participating in NASA space program flights.

"There's no cut-off age for astronauts," he said.

## McNair was 2nd black astronaut

By United Press International

Ronald E. McNair, one of five crew members assigned to the shuttle Challenger for the 10th space shuttle flight in February 1984, also was the second black American astronaut in space.

His big job aboard the shuttle Challenger was to operate the ship's mechanical arm with a spacewalking astronaut riding at the end in a sort of space cherry picker.

He went on to serve as a crew member aboard the ill-fated Challenger mission that exploded Tuesday. He was to have launched a small but important science platform to study Halley's comet.

McNair was born Oct. 12, 1950, in Lake City, S.C., where his mother taught elementary school and his father worked as an auto body repairman.

As a black in a small Southern town in the 1950s and '60s, McNair learned quickly not to let racial discrimination impede his goals.

"It means trying a little harder, fighting a little harder to get what you perhaps deserve," he said. "It means building up a tolerance and not being discouraged by some of the obstacles that get put in front of you."

McNair received a bachelor of science degree in physics from North Carolina AT&T State University in 1971, where he graduated magna cum laude, and a doctorate in physics from Massachusetts Institute of Technology in 1976.

At various times in his academic career, he was named a Presidential Scholar, a Ford Foundation Fellow, a National Fellowship Fund

Fellow, a NATO Fellow and winner of the Omega Psi Phi Scholar of the Year Award.

McNair was an expert in laser physics. He studied at Ecole D'ete Theorique de Physique in France and worked as a staff physicist with Hughes Research Laboratories in Malibu, Calif., before being selected for the astronaut corps in 1978.

His wife, the former Cheryl Moore of Jamaica, N.Y., also works at the Johnson Space Center training flight controllers to operate computer consoles in Mission Control.

There was more to McNair's life than just being an astronaut. He was a fourth-degree black belt in karate and taught the sport at a Baptist church in Houston during the week.

## Tragedy and grief

Grief reflected on their faces, the parents (above) of teacher-astronaut Christa McAuliffe leave the VIP area at Kennedy Space Center after seeing Challenger explode. In a school auditorium at Concord, N.H., a science teacher watches a TV screen in disbelief as the space shuttle blows up. Debris trails from a cloud of smoke (far right) moments after the explosion. Teachers (below) who were among 112 runners-up in the Teacher in Space Project grieve at the Kennedy Space Center where they watched the liftoff.

Photo by United Press International

## Last walk

Crew members of Challenger were greeted by unseasonably cold weather early Tuesday when they filed out of crew quarters toward launch pad 39B to begin what was to become the fatal flight. They are, from front, Michael Smith, Christina McAuliffe, Ellison Onizuka and Greg Jarvis.

## Campus flag to be lowered in salute to shuttle crew

The American flag in Old Main Mall will fly at half-staff this week to honor the deaths of the seven crew members of the space shuttle Challenger.

The flag will be flown at half-staff Wednesday until next Monday. President Albert Somit said Tuesday that a ceremony may be scheduled for later this week.

President Reagan has declared a week of mourning to honor the deaths of New Hampshire teacher Christa McAuliffe and the other six aboard Challenger when it exploded 72 seconds after takeoff Tuesday.

Flags across the nation flew

at half-staff Tuesday. Officials in Wisconsin, Hawaii, Washington, Los Angeles, Ohio, West Virginia, Florida, Idaho and Nevada ordered flags lowered in honor of the dead, and state houses, in the throes of their legislative sessions, fell silent in mourning.

In Washington state, home of Challenger commander Francis "Dick" Scobee, Gov. Booth Gardner opened his weekly news conference in somber tones.

"It's an unfortunate thing," Gardner said. "It's a bit sobering. It's a bit hard to get into this press conference."

# Reagan cancels address, vows to continue 'quest'

WASHINGTON (UPI) — President Reagan scrapped his State of the Union speech Tuesday to mourn the crew of the shuttle Challenger as fallen heroes and he promised, "We'll continue our quest in space. ... Nothing ends here."

"The future doesn't belong to the faint-hearted. It belongs to the brave," Reagan said in a nationally televised late-afternoon address from the Oval Office less than six hours after the spacecraft blew up. "The Challenger crew was pulling us into the future, and we'll continue to follow."

Leading the nation in mourning, Reagan postponed his fifth State of the Union address to Congress for a week. Instead he spoke somberly about the explosion that shattered Challenger and left no evidence of survivors among the its seven-member crew — including the first teacher in space, Christa McAuliffe.

Reagan, for whom Tuesday was to have kicked off an aggressive weeklong campaign to promote his political agenda for 1986, said the day instead had been transformed into one "of mourning and remembering."

"Nancy and I are pained to the core by the tragedy of the

shuttle Challenger," he said. "We know we share this pain with all of the people of this country. This is truly a national loss."

Some nine hours before his scheduled appearance before Congress to paint a bright future for America, Reagan watched the worst disaster in the history of the manned space program in what an aide described as "stunned silence."

The State of the Union postponement was announced less than one hour after Reagan told network correspondents that although a pall had been cast over his speech, "you can't stop governing a nation because of a tragedy of this kind."

"I think the president, like all Americans, has seen this tragedy unfold on television," White House spokesman Larry Speakes explained to reporters, "and has felt keenly what those family members must have felt watching that shuttle go into the air at the Cape — first, pride, and second, horror."

In response to the shuttle catastrophe, Reagan sent Vice President George Bush to Cape Canaveral, Fla., to convey his "personal concern" to relatives of the Challenger

crew, Speakes said. He also ordered acting NASA Administrator William Graham to accompany Bush and "begin an effort to find out the cause of this tragedy," Speakes said.

Reagan also ordered the space agency to "go forward with the nation's space program" as a tribute to the shuttle crew of six astronauts and New Hampshire teacher McAuliffe, the first private citizen chosen for a space mission.

In his TV address, Reagan said, "These people were dedicated to the exploration of space. We can do no more to honor them, these courageous Americans, than to go forward with the program."

Addressing the nation's children, who were especially drawn to the flight because of McAuliffe's presence, Reagan said:

"I know it's hard to understand, but sometimes painful things like this happen. But they're all part of the process of exploration and discovery, all part of taking a chance and expanding man's horizons. The future doesn't belong to the faint-hearted. It belongs to the brave."

## Search teams swarm impact site

CAPE CANAVERAL, Fla. (UPI) — Rescue and recovery teams swarmed over the impact area of the shuttle Challenger Tuesday, desperately seeking survivors and hoping for clues to explain the spaceship's explosion 72 seconds after blastoff.

Air Force spokesman Lt. Col. Robert Nicholson said debris from the fireball rained down over the Atlantic Ocean 18 miles east of the Kennedy Space Center for "nearly an hour," slowing rescue teams from entering the area.

Three and a half hours later, Nicholson still had no word on

the progress of the search for survivors among the ship's seven-member crew in water that a local scallop boat captain said was between 100 and 200 feet deep.

"The principle concern right now is the rescue and recovery of the crew," he said. "The location of them and rescue of them is appropriate. The debris that's being spotted from the SRB's (solid-fuel rocket boosters) and that sort of thing is being collected by the ships that are out there."

The space shuttle was designed so a crew could

survive an emergency landing in water and to keep an intact shuttle afloat, as long as it can glide to the surface of the ocean under full control.

A C-130 Coast Guard airplane and two Air Force H-3 helicopters led the recovery effort from the air. In addition, one NASA solid-fuel rocket recovery ship and a Coast Guard hydrofoil already were routinely on station to keep ships from straying into the area where the shuttle's solid-fuel rockets fall by parachute after being jettisoned from the ship.

## Students stunned by shuttle blast

CONCORD, N.H. (UPI) — The cheers from students at Christa McAuliffe's high school quickly turned to tears Tuesday when the space shuttle Challenger exploded and the stunned teenagers were sent home.

Some students were incredulous and others were grief-stricken.

"I didn't believe it happened," said junior Mark Letalien. "They made such a big thing about it. Everyone's watching her and she gets killed."

"We're all shaking. It's just so upsetting," said Lennie Barnes, a junior at the school where McAuliffe, 37, had taught since 1982.

The 1,200 students and 140 faculty members at the red-brick Concord High School had expected a joyous day as McAuliffe, a social studies teacher, was to make history.

Instead, the students were sent home about 1 p.m. EST, filing out with their heads bowed, wiping tears from their eyes.

Principal Charles Foley,

choking back tears, cancelled classes for Wednesday, saying the crash had "destroyed anyone's ability to learn."

The city's wide Main Street, which had been filled with thousands during a homecoming parade for McAuliffe, was empty as residents sat before televisions to watch updates on the crash.

"She's dead," said Colleen Murray, who stood with tears streaming down her cheeks. "She followed her dream and she died. It's just unfair."

# Shuttle problems thought to have been fixed

CAPE CANAVERAL, Fla. (UPI) — The space shuttle program had development problems for years, but 24 straight successes indicated that the revolutionary ship's troubles had been licked.

Because of spending restrictions from the beginning, NASA planned the shuttle development on a "success oriented" schedule, meaning things would proceed as long as there were no serious developmental problems.

That worked for some of the

systems, but not for its main hydrogen-burning engines and its heat shield tiles.

The tile problems were corrected but problems with the shuttle's main engines lasted longer. Not only were the powerplants the first designed to be used again and again, but they were designed to operate at much higher internal pressures than any rocket engines before.

Engine testing by the Rocketdyne Division of Rockwell International began in 1975 and problems quickly

became apparent. There were engine fires, explosions and shutdowns due to cracks, fractures and a variety of leaks.

William E. McInnis, who served as a senior NASA staff engineer in Washington before taking a job with private industry, said in an unpublished report last year that some of the ground test failures "were so destructive that it was virtually certain that had the failure occurred in flight that the adjacent engines would almost certainly be

destroyed."

But, one by one, the troubles were fixed. Test-firing results improved and before Columbia was launched on the initial test flight, NASA reported that the engine certification testing had been completed with 13 successful test firings on one engine totaling 5,040 seconds of operation at full power.

McGinnis said one of his jobs in the Chief Engineers Office at NASA headquarters was reviewing the reports of the Failures Investigations Board. He said that in many of the

early ground tests the faulty engine was not shut down either because the oncoming failure was not detected or the onset was so rapid that there was no time to react.

"The whole rationale of aborts during a launch was that failures would not propagate to adjacent engines," he wrote. "The design deficiencies of the main engines are so numerous that there is virtually no possibility that the engines will ever be capable of 25 missions."

# Group pairs troubled kids with big brothers, sisters

By Martin Folan  
Staff Writer

A child is lonely, has no friends and no one to look up to, struggles in school and can't face the challenge of growing up.

Christy Levine suggests calling the Jackson County Community Mental Health Center to pair up the child with a big brother or big sister.

The Jackson County youth advocate program operates similar to Big Brother-Big Sister programs across the nation, said Levine, volunteer coordinator of the youth advocate program. Students at the University and local townspeople sign up to sponsor children who need a big brother or big sister.

Boys and girls ages 5 to 16 have signed up in search of a friend, Levine said.

"The majority of them are from single families with low incomes," she said.

Most children who join the youth advocate program are from families which can't provide all the attention and care that children require at their ages.

"Volunteers of the program are more of a friend figure to the children, not authority figures," Levine said.

Volunteers are required to spend four hours a week with their brothers or sisters.

Younger children may go to the movies with their big brothers and big sisters, while the older children spend time on a one-to-one basis with their volunteers.

"A 16-year-old may not go out with their brother or sister," Levine said. "They may cook dinner at home together."

Activities involving the volunteers and children must be approved by the children's parents, Levine said, but parents are advised to cooperate with volunteers.

Teaching the children to use their time constructively and to assist them with their school work is an important part of the program, said Levine, senior, majoring in social work.

"Many of them have benefited from tutoring by their volunteers," Levine said. "At least one hour per week is spent tutoring if a child is having trouble with school."

Personal attention given to children has helped them improve in school, she said.

Problems with schoolwork and with peers trouble all children in the early years, Levine said.

Boys are paired with male volunteers and girls with females.

"I can't hook up a big brother with a little sister because I just wouldn't want to put him in that situation," Levine said. "It's for their own protection."

People in psychology, sociology and education help children to adjust to the new big brother-, or big sister-child relationship, but even still, "some children just aren't appropriate for the program," Levine said.

Along with the troubles of helping children, parents themselves can be a problem, she said.

"Usually all adults are cooperative, but we have had trouble with parents not being at places on time," Levine said.

Aside from the problems with children and parents,

volunteers are a problem for Levine.

"There's never enough volunteers," she said.

Twenty-five children have big brothers or big sisters, but 12 boys and 7 girls are on a waiting list, she said.

Local townspeople are most reliable, but students can earn credits through certain

classes, or through internships, she said.

Although named "Jackson County youth advocate program," the name "Big Brother-Big Sister" is used because it's better understood.

"We're not affiliated with the U.S. Big Brother-Big Sister charitable organization," she said.

# Carl C. Lindegren, 89, famed researcher, dies

Carl C. Lindegren, founder of SIU's first laboratory designed solely for research, died Jan. 19 in Des Moines, Iowa. He was 89.

Mr. Lindegren was a microbiologist and internationally recognized "father" of yeast genetics. More than \$1 million in outside research grants were awarded to the University because of his pioneering studies on the structure and mechanics of the yeast cell.

A native of Ashland, Wis., Mr. Lindegren received bachelor's and master's degrees in plant pathology from the University of Wisconsin and a doctorate in genetics at the California Institute of Technology.

Mr. Lindegren came to SIU-C in 1948 and organized the Biological Research

Carl C. Lindegren

Laboratory. The Life Sciences Building I, which was opened in 1954, was renamed in 1977 for Mr. Lindegren and his first wife, Gertrude, who was his

research partner for more than 40 years.

He established SIU's microbiology department and served as its chairman until 1964. He retired from SIU-C in the mid-1970s.

Before joining the SIU-C faculty, the Lindegrens worked as a research team at the University of Southern California and Washington (Mo.) University. They continued to work together until Gertrude Lindegren's death in 1977.

Mr. Lindegren, who had been living in San Diego, was visiting family members in Des Moines before Christmas when he entered Veteran's Medical Hospital, where he died, for a heart ailment.

He is survived by his wife, Zella, a daughter, sister and brother.

## New York official attempts suicide

NEW YORK (UPI)—One of New York City's top elected officials, who Mayor Edward Koch called a "crook" in a widening bribery probe, temporarily stepped down Tuesday as chief executive of the city's second-largest borough while he recovers from a suicide attempt.

Queens Borough President Donald Manes turned over "the powers of his office" to his deputy, Claire Shulman, "while he is ill," according to Manes' lawyer, Michael Armstrong.

Armstrong emphasized that Manes, 52, who was inaugurated to a fourth four-year term on Jan. 7, "is not resigning. This is not a resignation." He said the

borough president, who is recovering from a slashed wrist, would be too sick to resume his duties for another four weeks, but would keep his

title and receive his annual \$80,000 salary.

Manes remained in seclusion at his home and had no comment.

## Rifle team officer gives retraction

Steve Moore, public information and recruiting officer of the Pershing Rifle Team, said he wants to retract a statement he made during an interview with a Daily Egyptian reporter.

"In the article on the Pershing Rifle Team, I said the ROTC program had bad planning. This statement was wrong. In fact, only superior planning from the ROTC, and that success has given us the opportunity to return to the Mardi Gras," Moore said.

## Correction

It was incorrectly reported in the Daily Egyptian Jan. 24 that the Student Center Board unanimously passed a motion saying that sexually explicit magazines could continue to be sold in the University Bookstore.

The decision was not unanimous. One board member abstained and another did not vote.

## Election rules session set

A session about the rules and guidelines of Undergraduate Student Organization elections will be held Thursday, 1:8 p.m. in the Student Center Ohio Room.

Tony Appelman, USO president, John D. Rutledge, former East Side senator and chairman of the USO Committee of Internal Affairs, Lamont Brantley, last year's election commissioner, and

Andy Leighton, student member of the University Board of Trustees, will speak about the guidelines and rules of USO elections.

Appelman said the purpose of the meeting is to inform students interested in running in the USO election or serving on the election commission about the responsibilities they will have.

## GTE proudly introduces the SOUTHERN ILLINOIS REGIONAL DIRECTORY containing all business and residential listings of

CARBONDALE  
 ANNA  
 SPARTA

HARRISBURG  
 MARION  
 METROPOLIS

WEST FRANKFORT

Beginning in December 1985, the GTE Carbondale directory will be the only directory Carbondale residents will ever use. Why?

- The GTE directory contains all business & residential listings for the surrounding areas. Users won't have to keep a stack of directories by their phones or fumble through that stack to make a call.
- When the GTE directory arrives, users will no longer have to collect directories from surrounding areas that are published at different times throughout the year.
- Every resident and business will have the directory. GTE guarantees 100% distribution.

Talk with a GTE representative before you sign with someone else. The advertising dollars you save will be your own.

# Women cager games offer contests, prizes, freebies

By Sandra Todd  
Staff Writer

The women's basketball Salukis have a lot more to offer their fans than an aggressive style of play, a style which has resulted in a 12-3, 7-0 season record.

With much more to offer, the Salukis have spunky halftime entertainment, ranging from jazz bands to the Saluki Shakers along with contests and numerous material giveaways.

When Eastern Illinois comes to town on Feb. 7, fans should make sure they hang onto their ticket stubs because from this game on, the stubs are redeemable for a free drink after the game at the Holiday Inn of Carbondale. The same applies for the men's home games.

Halftime entertainment for the EIU game is a head jazz combo from the SIU School of Music, and as always, the Cruise Shooting contest, in which contestants attempt four shots for prizes, the making of each contingent on the next.

First, a layup is attempted and if successful, the shooter

gets a small pizza from Quatros. Following is a shot from the freethrow line, yielding a luncheon buffet at the Ramada Inn, while a hoop from the top of the key gets the contestant 30 days use of a VCR and 10 free movies, provided by Curtis Mathes.

The pinnacle of the contest comes at the halfcourt shot, where if the ball sails through the bucket, the contestant wins a \$6,000 cruise sponsored by B and A Travel and Diederich Insurance.

Nobody has been successful on all four shots to this point of the contest, however, there was practically a winner at last Saturday's halftime contest, said Gary Carney, assistant women's athletics director.

"It was a really close one," he said. "It was an in-and-out type of shot."

"People think we're swinging bullets when that happens, but we really do want someone to win it," Carney said.

For the game on February 14, against Western Illinois, the Holiday Inn is sponsoring a giveaway of \$5 "hollow bucks" coupons, good for \$5 towards a

room or dinner at the inn. Holiday Inn also is giving away a weekend for two via a ticket-stub drawing.

The halftime activity is the Murphysboro Zips, a group of youngsters who perform a basketball-handling routine to music.

An activity tentatively scheduled for the game on Feb. 17, against Bradley is a "stupid human tricks" final contest, in cooperation with University Housing. A guest appearance by Tom Van Borkel, the SIU student who gained fame by guzzling a pitcher without use of his hands on the "Late Night With David Letterman" show, is also tentative.

Against Northern Iowa on the 28th, Coors is sponsoring a giveaway of one or two Coors silver jackets, said Carney, and the Marion Poms will perform a pom-pom routine at halftime.

After the game, the Carbondale Elk's Club will hold a reception for the team, the Booster Club and other Saluki women's basketball supporters.

## Sanders named Player of Week

Derrick Sanders, Illinois State's 6 foot 6 inch junior forward, has been named as the Missouri Valley conferences Player of the Week for the week of Jan. 27.

In three games last week, Sanders averaged 20.7 points per game average, ending up

with 62 total points during the spree. Sanders also pulled down 31 rebounds for a 10.3 rebounds per game average.

Sanders is ranked sixth in the Valley in scoring and eighth in rebounding.

A part-time starter last season, Sanders averaged 5

ppg and 2.6 rpg while shooting .545 percent from the field.

Earlier in the season, Sanders scored 23 points against Creighton, came back with a scoreless game and followed up with a 27 point performance against Illinois-Chicago.

"D" difficulty level) and it may have affected some of the scores.

Spillman took first place in three of the four events. The fourth event, the balance beam was won by fellow Saluki Steele, who scored a 9.30.

The Salukis did a "very nice job as a team," said Vogel. It was a "satisfying" victory, according to assistant coach Donna Kramer. The team was much better, got the opening-season jitters out and was at a higher competitive level, said Kramer.

"It was the level that we expected at Indiana State," said Vogel. ISU was not as difficult an opponent since two of the team's top gymnasts were injured and did not compete, said Vogel.

Margaret Calcott, a senior, scored a 8.95 in the uneven bars to take second place behind Spillman (9.30). Calcott said she thought the score was "good" even though she would have liked to score a little higher.

## MVC, from Page 24

would be pretty good but no one expected them to have five conference wins under their belts at this point of the season," English said.

At 5-2, 13-5 the Bulldogs have already won more games than all of last season (4-12, 12-15). Fifth-year coach Gary Garner has yet to have a winning season as Drake's head coach.

The second place Tulsa Hurricane is also somewhat of a surprise this season, pulling in right behind Bradley in the conference standings.

# Woman cager guard focuses goals on career

By Anita J. Stoner  
Staff Writer

A late change of program will delay Petra "Pistol Pete" Jackson's graduation by two semesters — which could cause a problem if a European professional league drafts her after this season.

However, the Saluki women's basketball senior star's goals beyond this season do not center on sports.

"If they want to draft me after I've finished school, then that's fine," Jackson says. "I've come this far, I'm not about to give it up — my degree is most important to me."

Jackson says her one and only competitive love is basketball, so she will not try out for other intercollegiate Saluki athletic teams while she finishes her education. If the opportunity arises in her spare time, Jackson says she would enjoy working with kids in basketball summer camps.

When she completes her marketing major, she wants to find a job advertising products or bringing new products to market with a well-known firm that pays lots of money.

Saluki Coach Cindy Scott, who is strict about the academic progress of her squad, said Jackson's got the right stuff.

"When Petra's got her mind set, she will make it happen. She's matured into a young lady who knows her professional goals. I know she'll become a success and make good things for herself," Scott said.

While Jackson pursues her goals on and off the court, she will not allow anything, not even the most subtle peer pressure, to distract her.

"I'm not a follower. I do the things Petra wants to do," she said. "Like, I can go out and have a good time without drinking and my friends respect me for that. But they don't really tease me — you just have to act nonchalant and say you're in season and they understand."

The rigor of the college athlete's season plus schoolwork not only demands

Petra "Pistol Pete" Jackson

abstinence from excesses, but also places a strain on the development of personal relationships. While Jackson plans to have a family someday, she realizes she cannot take the first step.

"I don't have a boyfriend now, because in a relationship I like to be fair. Between basketball and school, I don't have much time for myself, let alone have time to share," she says.

The man who catches Jackson's eye need not be a professional athlete.

"I just want someone who'll be home, someone I'll be able to love and care for, for what he is — not what he has," she said.

When she returns to her family home in St. Louis, Jackson likes a non-competitive hobby to roll away from her troubles.

"I like to roller skate because it gives me a chance to be me. When I'm out there on skates, I feel free," she said.

The risk of a skating injury did not bother Jackson as much as the risk of getting fat last summer.

"I knew I couldn't stay in my mom's kitchen, plus all my fast food favorites are close by home," Jackson said.

In order to burn off calories, she ran and started lifting weights. The results are obvious in photos taken last year

compared to recent photos — Jackson looks thinner, but actually gained a few pounds as she muscled up.

During this school year, Jackson discovered that teammate and roommate Marialice Jenkins can bake a favorite diet temptation — brownies, a must dessert when Jackson cooks a dinner of pork chops on rice with gravy and biscuits.

"When we had time before the season, Pete would cook the main dish, and me, well, I'm mainly a box-mix cook — and I can do the dishes," Jenkins confessed.

Jackson and Jenkins go through the ordinary give and take of all roommates, but living in the same place and participating on a sports team together seems like a good way to get sick of looking at each other.

"Actually, we're both gone so much to classes and whatnot, we only see each other in practice or on road trips," Jenkins says. "We get along well mainly because we're both kind of crazy, so we act a little silly and have a

good laugh."

For instance, at Christmas, Jenkins said they selected a Charlie Brown-type Christmas tree but forgot to bring a saw and they still laugh about how they had to yank the poor thing out of the ground. But even when they aren't laughing, they stick together by communicating about any problems which come up.

Although she dislikes a couple of Gateway towns, Jackson makes it clear she holds no animosity toward any Gateway player — especially Indiana State's Kim Humphrey. Jackson struggled during the game against ISU at Davies, and after she

missed a free throw, she leaped out of bounds in an attempt to knock the rebound off Humphrey. The ball slammed into Humphrey's face, knocking out her contact lens and causing her to stumble over the 30-second shot clock, stunned.

"I wanted to hit the ball off her legs — I didn't mean to do that," Jackson said.

In fact, Jackson would hate to see any Gateway player get hurt — even her archrival Wanda Ford of Drake.

"I don't wish for anyone to have injuries. I don't want it said that SIU won because so-and-so was out," Jackson said.

## Women gymnasts top in all-arounds for win

By M.J. Starshak  
Staff Writer

The Saluki women gymnasts captured three of the top four spots in the all-around competition Monday night claim a victory over Jacksonville State University at the Arena.

All-American Michelle Spillman took first place with a score of 36.15, while teammates Lori Steele and Maggi Nidifder taking third and fourth places with scores of 35.50 and 34.95.

JSU's Laurie Sparrowhawk grabbed second with a 35.65. SIU was leading by over two

and a half points going into the last event (floor exercises). The first gymnast for SIU was Nancy Sanchez, a sophomore, who had "one of the best routines she's had," according to Coach Herb Vogel, but "ran out of gas" toward the end and scored a 8.65.

The meet was made close by

the fact that many of Jacksonville's routines were not as difficult as SIU's so they scored higher and kept the scores close, said assistant coach Donna Kramer

Spillman, the last competitor of the evening, electrified the crowd with an exciting routine that scored a

9.45. Her performance was described as "a clean, solid routine" by Vogel, who added that a routine of that quality should get a 9.60 or a 9.70. According to Vogel, some of the judges were using the old system of scoring (without the

See GYMNASTS, Page 22

## Cager guard takes time out for plants

By Ron Warnick  
Staff Writer

When one walks into the fresh-smelling Abbott Hall residence of Saluki guard Brian Welch, one is reminded more of a tropical jungle than a college dormitory.

Welch, who could be best described as an amateur botanist, has about a dozen plants of varying sizes and shapes in any open spot in his tiny dorm room, but has cared for as many as 25.

"Sometimes people ask me how I can find space for them. I say, 'For a plant, it can be found,'" Welch said.

Welch said he first became interested in plants during his high school years when he had to care for his mother's plants.

"The more I take care of them, the more attached I grew to them," he explained.

After years of looking after them, Welch can't imagine being without his "No.1 hobby."

"I'm so used to doing it, it's part of a routine and it's something I would miss. I like to study around them because I like the environment. I've tried to make it feel more like a home than a room.

"If I didn't have them, I probably wouldn't study or play as well," Welch said.

Welch, a junior averaging 6.6 points and 1.6 rebounds per game, has performed well as starting guard and/or general for the Saluki cagers, but said he would like to help his team more by raising his scoring average.

"I like to watch people score. I guess," Welch said, explaining his point numbers. "I couldn't care less if I put it in or if my teammates do. The only scoring I enjoy is dunking it to get the fans into the game."

But Welch says he enjoys his role as the man who calls plays on the floor.

"I don't necessarily like to be bossy, but I have an idea what Coach Rich Herrin wants. Besides, it's something I've always done in high school," Welch said.

Like roommate and Saluki forward Doug Novsek, Welch has battled against various ailments throughout the

season. "I don't know if I have a white blood cell deficiency, but when I get a cold, I never seem to get well until the season's over. I haven't gone a day without a cough or sore throat," he said.

At Carbondale High School, Welch was an All-State Honorable Mention guard in his senior year. Welch was an even better baseball player, as he received All-State honors, but a rotator cuff injury kept him from pursuing a college career on the diamond.

"To this day, I'm physically a little weaker in my shoulder than I should be," he said.

Welch said he chose SIU-C, the same town he grew up in, because of its educational programs. Carbondale fans were another reason.

"The same fans who saw me play in high school could come back and cheer me in the Arena. I wouldn't have to break in a new set of fans. I was molded into this little society, so I was comfortable with it," he explained.

When he isn't practicing and playing on the court, Welch, an accounting major, studies approximately five hours a night until 2 a.m. To catch up on sleep, he takes early evening catnaps.

"It's a hard major, but it's something I want to do. You have to pay the price, and it's going to prepare me for life down the road," Welch said.

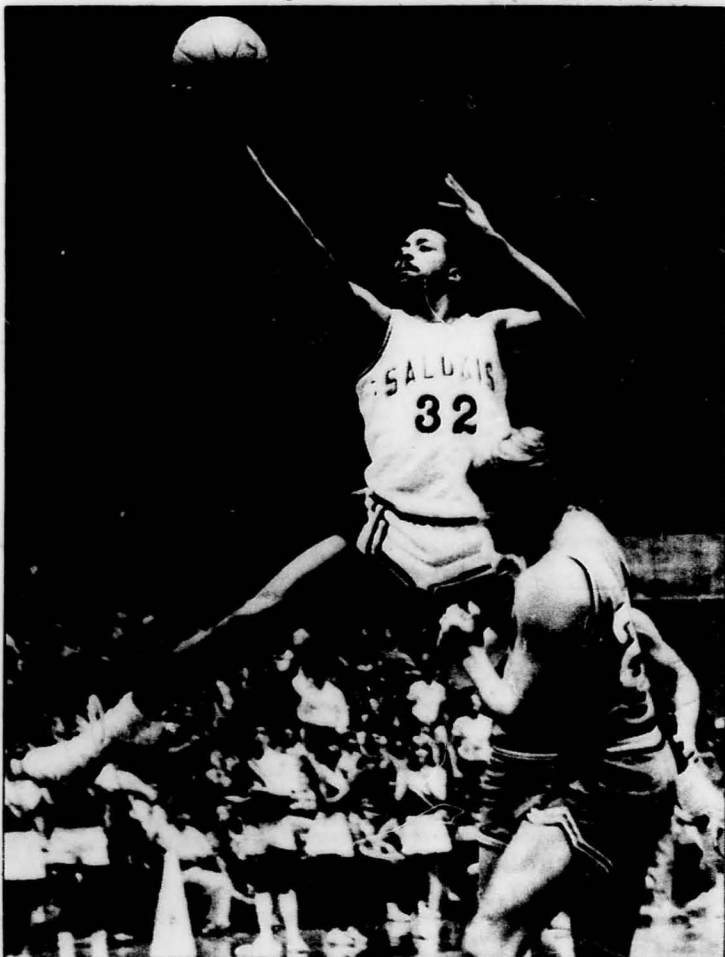

But he said juggling his time as a student and an athlete still costs him 0.5 to 0.7 on his grade point average at the end of the semester.

with a 96, 97 average, but everything is so crammed together that I have no chance to study. So I usually come out with B's," he said.

Welch is rooming for his second year with Novsek, who cares for a few plants of his own. Welch says they have been almost perfect roommates.

"We both are in similar majors, so there's a lot of common ground there. The two years we've been together, there hasn't been one argument," he said.

When Welch gets a break from his studies, he listens to the jazz of Dave Grusin and

Staff Photo by Dragan Zubic

Saluki floor general Brian Welch rolling in a MVC while leading the team in assists with 52 and placing second on the team with 19 steals.

Weather Report while expertly caring for his plants.

"There's a myth; people think that plants need direct sunlight. But direct light is bad because it comes through the window and burns the leaves. That's when you have to mist them a lot. Filtered or indirect sunlight is best. This room is perfect. We get sun most of the day when the sun rises and sets, but it's never direct.

"I check at the soil moisture

once a day. Watering once a week is usually a good rule of thumb, but humidity makes a difference. Right now, the plants don't need much water because it's so cool and dry. But in summer, you really have to keep an eye on them.

"I hate to say it, but pointsettias are one of the worst gifts you can give. It dies, and the person ends up feeling bad when there's no reason to.

## Bradley heads MVC, No. 13 in nation

By Steve Merritt  
Sports Editor

With little more than a month remaining on the Missouri Valley Conference schedule, the Bradley Braves remained in control of the MVC last week and improved their national rankings.

With a 67-62 overtime win over Illinois State and a 74-56

thumping of Creighton, the Braves improved their ranking in the UPI coaches poll to No. 13 in the nation.

Ron English, public relations assistant for the MVC office, said that even though everyone knew the Braves would be good, few people expected them to be quite this good.

"Bradley was the over-

whelming preseason conference favorite, so they really aren't that much of a surprise," English said. "Now they're winning the close games, which is usually a sign of pretty good chemistry and coaching."

The Braves have notched overtime victories this season over Illinois State, Dayton and Villanova, while winning close

games against Drake (69-67), Wichita State (57-55), SIU (65-62), Loyola (76-75), Marquette (66-64) and Northwestern (76-72).

English said that Drake, Tulsa and Wichita State have also been surprise teams for the MVC this year.

"Everyone knew Drake

See MVC, Page 22
