DNA experts disagree on 'life forms' decision

By Dave Powers

Recombinant DNA experts at SIU-C have different opinions on a proposed U.S. Supreme Court decision to grant patent policies on life forms created through genetic engineering will have on research.

DNA—deoxyribonucleic acid—is a complex chromosomal constituent of living cell nuclei that determines the characteristics and functions of living organisms.

Recombinant DNA research, in oversimplified terms, is taking a piece of DNA from one organism and splicing it into another, forming a hybrid. Through this genetic manipulation, researchers have cause to believe that they can produce insulin, human growth hormone, and other substances that have potential usefulness for medicine.

An expert in the field is Dr. Doug Duggle, Associate Professor of Biology at SIU-C. Duggle has made so many suggestions to the City Council that the council has approved many of his recommendations concerning Halloween '80.

With its eye toward winding down the summer season actually eliminating it, the city's Halloween committee has asked for the recommendations presented its suggestions to the council Monday night. The city had expected to approve an ordinance next week against halloween policies based on the committee's recommendations.

Though most of the recommendations presented by the committee were approved, the suggestion that bottled beer and wine sales be prohibited for seven days prior to the city's Halloween weekend of Halloween, elicited an objection from one South Illinois University-Carbondale student entrepreneur.

Doug Duggle, manager and owner of the Old Town Liqueurs, went to the council to ask that they relax the bottled alcohol ban. He pointed out that beer sales only.

"I am more than willing to cut off sales of bottled beer, but two-thirds of my store is wine. Alcohol will not come in cans," he said.

"But down two-thirds of our sales would create tremendous problems in my business," said the old council.

Hans Fischer had solved the problem by saying that he might not be resolved Monday night.

"I don't know how to deal with that off the top of my head," he said.

Also among council concerns for Halloween was whether the city had the authority to shut down liquor establishments in the event of a "civil disaster." Mayor Matalonis defined such an event as "a natural disaster or man-made calamity." He said, no single person had the power to shut down liquor establishments should one occur.

That authority, he said, rests with the liquor commissioner, a position the city has abolished.

"If things get out of hand, I think there ought to be a predetermined authority to close down all establishments that sell alcohol. We need an ordinance that conveys that power," he told the council.

The council agreed and indicated it would include that authority in the ordinance as it is expected to pass next week.

Policy recommendations the council is expected to approve (Continued on Page 2)

Illinois House retains SIU's budget salary

The Illinois House of Representatives passed a 7.5 percent (on a 100 percent base) increase for next year, but the Senate upped that by 1 percent in mid-May.

With an 8.5 percent salary increase slated, SIU system would have a total of about $149.8 million in state funds to work with in fiscal year 1981.

The House will also act this week on a measure providing $2.5 million in renovation monies for Davies Gymnasium. The capital developments bill has already passed the Senate, but is expected to be returned there for a concurrence session on the amendments that were added in the House.

Council gets Halloween recommendations

By Marry Harmon

Staff Writer

Students will be able to indulge their partying "spirits" this Halloween, but it won't be the kind that comes in glass bottles. Instead the recommendations by the Halloween Council get Halloween safe. I don't want the movies. I think there ought to be a predetermined authority to close down all establishments that sell alcohol. We need an ordinance that conveys that power," he told the council.

The council agreed and indicated it would include that authority in the ordinance as it is expected to pass next week.

Matalonis believes the council may be doing enough to alleviate hazards.

"I'm glad they are going to ban glass bottles. I still wonder if there's more we all could do to prevent beer from getting hurt," he said.

At a council meeting Monday night, the council agreed to take off-campus concert to divert college students away from the area, where the bulk of the celebration takes place.

"The concert would run from 8 p.m. to 2 a.m. and would feature local bands and one big-name talent. It would take place about one mile off of Carbondale."

I'm figuring around 3,000 to 5,000 students to attend. The main problem right now is finding a place to hold it," he said.

Even though the council has said it does not want the University to hold any large events that would draw out-of-towners to the area, Matalonis says the concert the USC is planning is a small event that would not draw outsiders.

"The council was talking about events like a Bob Dylan concert, which would attract a few hundred people. I'm just trying to coordinate several small events to deter students from the uptown area," he said.

Other events Matalonis is planning for the weekend would include an activity fair in the Student Center, a Halloween costume contest, music in the Student Center ballrooms and movies.

Matalonis feels that the difference between Carbondale '79 and Halloween '80 is planning.

"Last year's student government had an ideal that sounded good but it didn't work. This year we have a planning committee that handles the event. Planing is a serious matter. That's why everyone is planning now," he said.
City Council decides not to implement energy code

By Mary Harmon Staff Writer

With thoughts of high construction costs and the uncertain future of its $22 million "Carbondale Plan," the City Council decided to forego, for now at least, the implementation of an Energy Efficiency Residential Building Code.

The Energy Efficiency Code returned to the council Monday night for further discussion after two weeks' fine-tuning by the Energy Advisory Commission, the Home Builders Association and the Carbondale Commission.

The code, designed to cut energy losses in new homes and set specifications for the place construction

Roaming buffalo taken home

SUFFOLK, Va. (AP) — The case of the roaming buffalo has been solved.

Dr. Aubrey Morgan, a veterinarian, and his brother, Lewis, chased the beast about animal control officers tried to find it owner for two days.

The buffalo wandered out of the swamps in Prince area and was calmly cropping grass in a yard when police arrived.

The Morgan brothers said they have been keeping the roaming buffalo to breed with surfing "Beefalo," said Mrs. James F. Hower, no-name officer.

The animal wandered from its home in northern Suffolk and was last seen about when it was found last week.

DNA experts unsure on effect of ruling

(Commented from Page 3)

will have a direct impact on the direction of recombinant DNA research, especially to individuals who must invest "significant investments," Doorenbos said. "It is now the time to put out more money for research." This means research grants will be readily available and industry will be looking for individuals with training in this type of research, he said. SIU now has some of the top men in the field, Doorenbos said, and the University believes there will be willing to produce personnel trained in the intricacies of recombinant DNA research.

"The key is not how much money is made into recombinant DNA research, but how much will be more important for significant impact on the future," he added.

However, others involved in SIU's Heding recombinant DNA research program see little significant impact on the program here—at least in the near future.

SIU's recombinant DNA research is still in the incubation stage, according to Jerry L. Slightom, head of SIU's University's recombinant DNA research laboratory. The laboratory, established in March this year, is not expected to begin research for another two months, he said.

Once in operation, researchers will explore the possibilities of gene splicing in bacteria, plant and animal life, Slightom said. With two recombinant DNA laboratories and trained personnel, plus potential in the United States and Canada prior to coming to SIU, there is some possibility of the high court ruling having any significant impact on the University's research, he added.

"Industry research is a lot different than university research," he said. "Scientists are already sharing their findings through publications. But for the publically owned patents, and patents are a primary method of protecting research findings." said James N. Benillier, a professor in the Department of Chemistry and Biochemistry and a member of the Faculty Advisory Committee which will set policies for the University's recombinant DNA research laboratory, agreed with Slightom.

"The patent decision won't immediately change the direction of research here," he said. "But it could later on." Benillier said researchers in Life Sciences and Industry, both locally and nationally, will probably be "much less willing" to share findings. Benillier said that SIU expects to be in a position next month to keep research secret without patents," he said.

Although the possibility of patenting new life forms has tremendous money-making potential, Benillier said the decision to grant patents will bring no more research money to SIU-C. Most of the funding for university research is provided by the National Institutes of Health, and these funds are not affected by profit-making potential, he said.

According to Michael T. Sung, a professor in the Department of Chemistry and Biochemistry currently involved in recombinant DNA research with plants, the Supreme Court ruling will "definitely slow down" research. But the effect on university research is yet to be determined, he said.

Sung's research, the only recombinant DNA project in full-swing at SIU-C, is an attempt to improve the nitrogen fixing capabilities of plants. Success could aid in lessening or eliminating the need for nitrogen-base fertilizers, he said.

Chris Robertson, chairman of the council, which worked 10 months on developing the code, met with the HBA. He told the council that he "came away with a strong feeling that the home builders wanted energy-efficient structures." But, he told council members, "we don't want it to start right away. We want some time.

Robertson said that a transition period between the council's adopting the code and implementing it would allow the builders time to learn the code themselves to meet the code and to start working on developing the Carbondale Plan.

Calling the two "twin goals," Robertson said that the EAC and the HBA had "come through a stormy period to what, I think, is an agreement in meeting the twin goals." Bill Cook, president of the Home Builders Association of Southern Illinois, agreed that Carbondale's construction trade wanted energy-efficient homes.

In fact, the most recent survey by the National Association of Home Builders showed that homes built today are 34 percent more energy efficient than they were three years ago," he pointed out.

"It has been on a voluntary basis. Home builders are concerned and they are doing something about it," he said. The cost of meeting the code's construction requirements seemed to be the main concern of those who opposed the code's immediate implementation.

Though the EAC told the council when the code was first proposed that the added costs would be between $300 and $390, the HBA members estimated the costs to be around $2,300, Robertson said.

But, he added, "the numbers are too dissimilar. And it occurred to me that we can't discuss the costs to an average house or building.

"It has to be on a case-by-case, house design-by-house design basis. The average cost on an irrelevant question and it doesn't make sense."
Prisoners file $1.2 million suit for alleged beatings in Marion

By Dave Powers

The Marion Prisoners’ Rights Project has filed a $1.2 million suit against the Bureau of Prisons and officials and employees of the Marion federal prison. The suit is based on the alleged beatings of inmates on April 14 and 28 during cell movement and transfers.

The suit asks $50,000 in compensatory damages and $100,000 in punitive damages for each of the eight inmates involved.

Staff Writer

“Each of the inmates were placed for the retaliation against the inmates. By Benton. says the inmates, prisoners are placed for higher salaries provided to faculty in other states in comparable institutions. When said the suit on behalf of the Prisoners’ Rights Project filed the suit on behalf of the inmates to "get this kind of thing stopped" and protect the prisoners. She said the Prisoners’ Rights Project will push for a preliminary hearing as soon as possible to gain the injunction against prison action. Getting medical attention for the injured inmates will be the first priority, she said."

Easter-Wells said the Prisoners’ Rights Project filed the suit on behalf of the inmates to "get this kind of thing stopped" and protect the prisoners. She said the Prisoners’ Rights Project will push for a preliminary hearing as soon as possible to gain the injunction against prison action. Getting medical attention for the injured inmates will be the first priority, she said.

New paths needed for bikers
This is my last testament to those who are concerned for cyclists' safety. I am in fear of being excommunicated every time I hit the road. My question is, why? The answer is simple: Gear-bash, unlicensed college students, local crews, impromptu semi-drivers, etc. I don't have a solution to the drivers' problems, however, I do have a proposal: Concerned bicyclists should unite with the City Council and design an extended and inexpensive bicycle pathway which would benefit the majority. It would cover routes extensively used which are now practically impossible even to attempt to use. Possible extensions: The corner of Grand Avenue, and South Route 31 to Lewis Lane, the entire entire length of Illinois Avenue, and Mill Street and Oakland Street.

J. WEBB

Draft for fairness' sake
A military draft is necessary in fairness to all citizens. Military intervention by the United States is a distinct possibility in light of recent world events. Yet, according to James Webb in the April "Atlantic Monthly," our army is at least 30 percent short in strength and our various reserve commands are at 75 percent strength. Without a draft, Webb indicates that 110 days would be needed to bring the army up to standards. If a draft were to be called, perhaps it would be made up of the draft age of 19-year-olds. However, if the draft should occur, it would be a rougher time in panic, of those who have already served.

DONESBURY

By Mike Monson
Staff Writer

"Condition 90, condition 90," the woman's voice blurted out over the stereo speakers.

"Sorry God," I shouted. "It's happened! The Soviets have launched a nuclear attack!"

I quickly stopped sipping green tea, and tossed the yogurt into my mouth and listened closely. I knew that my life was in the difference between living and death.

The message that followed, however, was a bit tamer than what I had first thought.

A soothing voice from Condition Information Public Service (CIPS) came on the air and told me calmly that since the temperature was expected to reach the mid-80s that day, CIPS would sure appreciate it if I didn't use my air-conditioning until 3 p.m. I noticed that I was using the air-conditioning until 3 p.m.; then I would let the heat out.

The woman's voice came on again, this time saying, "I noticed that you were using your air-conditioning until 3 p.m.

"As his trusted companion and chess enthusiast, I fell in love with my wife. She has become the principal of the school."

What electricity means to me

By Mike Monson

"I'm just so God-blessed cold in here!" I shouted out after a few minutes.

"Helps keep the VTD's (the machines that we write our stories) from overheating," Scott Stahmer, the DE's editorial page editor, offered.

"Great," I answered. I shivered through a couple of hours work and began my long walk home at about 4 p.m. The temperature was, at best, the high 70s, and a cloud bank had rolled in. Condition 90 had been proven a farce.

As I approached my apartment, I checked my bill from CIPS. My electric bill cost $102.95. To my mind off my troubles, I decided to read the news of the day in the Southern Illinoisan. I scanned the front page. A "seductive evening rate hike," read a headline on that page.

The point of this article? I'm not sure, but sometimes I wish that Benjamin Franklin never had flown that kite with a key on the end of it. I guess when I'm being played for a fool.
Kids limited only by their imaginations

By Anne Becker
Staff Writer

Ten people cut away at the underbrush as they made their way through the dark jungles of Africa. They passed a sleeping lion and jumped over pools of quicksand before setting up camp.

Suddenly, in the dead of night, two ferocious apes forced their way into the camp. "Freeze!" said Kaarin Johnston, instructor at the University Museum and Galleries Association visual and dramatic arts workshop for children. "What should we do now?"

"I'd scream."

"I'd run home."

"The best thing to do is put out nets."

And put out nets was what they did.

Led by Johnston, the five girls and three boys, ages 5 to 8, were taking part in one of many games and improvisations during the MAGA Summer Arts Workshop for Children which began June 16. Many activities are scheduled, but the students are limited only by their imagination which plays an important role in their learning, Johnston said.

"The ultimate goal of the dramatic arts workshop is to help the children's imagination grow, especially to help them socialize better and to expose them to things they are not exposed to everyday," she explained. "This will broaden their horizons and make them more well-rounded individuals."

During the workshop, Johnston reserves about an hour a day to keep the children occupied with only "empty space." The museum auditorium in Faner Hall is used, and the children are divided into groups of five, Johnston said.

"I am really old-fashioned," Johnston said. "You walk into a store and see all these junky toys and think that's creativity."

Creating with imagination, she added, brings a high level of energy to the space.

Once the children arrive at the museum, their "energy" is warmed up by Johnston, leading them in 10 jumping jacks. Although Johnston is the leader in the exercises, each child is allowed to follow his own rhythm.

After warm-ups, imaginary games are played. In one such game, the children became seeds in the ground. Next came the rain, with sound effects provided by eight young voices.

Suddenly, out of the ground came cherry and apple trees, flowers and tomatoes. A farmer then came along and picked the fruit.

Throughout the exercise the children constantly chattered. "I turned into a salad," said one little girl.

"Were you a lettuce tree?" asked a small boy.

The energy level slowly dwindled as "horrible clowns and lions from a circus" settled down and once again became simply children. Story time followed.

As soon as she finished reading "The Secret Cat" to the patient youngsters, Johnston was surrounded by questions such as, "What are we going to do now?"

When another group of children, ages 9 to 12, replaced the youngsters, the pace of activities was slowed slightly. Johnston encouraged this group to use their imagination in similar ways but with a few variations. In a matter of minutes, colored scarves were transformed into blankets, sandwiches and the attire of a bullfighter.

Judy Addington, who instructs the visual arts aspects of the camp, said he group of children during art time. Some made pictures of men cutting sugar cane, and others drew a tally machine.

Addington said her basic method for the workshop is simple and involves plain white paper.

"We pass materials out, talk for a few minutes to all the children, and get some ideas rolling and as soon as I see their little faces light up, I say, 'Go,'" she said.

"It's not the picture that's important but the thinking process that goes into the picture," Addington added.

"People are creative in one way or another," Addington said. "Children have an innate sense of art. I want to help them remain the artists they are. As the children get older, they get ideas in their heads about the way things should look," she added.

The children, Addington said, are responsive to the workshops but lack patience. "They want instant results."

More hype than horror; 'The Shining' only glows

A Film Review

By Tim Pitman and Edward Berry

Somewhere, in the far reaches of outer space, lies the bizarre mind of Stanley Kubrick.

If the average movie viewer was to take a hard look at this vastness, he may see a distant glow— or better yet, a "Shining."

"The Shining," has some good moments, but it is not the ultimate horror film that it is advertised to be. It has good acting and a good plot but lacks in the horror department.

Adapted from a novel by Stephen King, "The Shining" deals with the story of a caretaker's family living in a snowbound hotel for the winter. Jack Nicholson is Jack Torrance, a washed-out teacher who retreats to the peaceful vastness in order to write.

Nicholson expertly portrays a man slowly driven to murderous fury by a hotel that is possessed with demons. His half-smile and raised eyebrows cue the audience that trouble lurks for the Torrances.

Shelly Duvall, who has to her credit such films as "McCabe and Mrs. Miller," was forced to endure some rather silly moments. She is haunted by a ghostly snowman who leaves a painting of akey behind for the "Losers." This key opens the hotel's secret passages and leads to the"Shining." In any case, it appears that the ghostly snowman has gone berserk.

Jack Nicholson peers in...

Who left that plane door open?

CHICAGO (AP) — The plane landed back at O'Hare International Airport but a piece of the baggage was carried landed in a suburban yard after the baggage door of a twin-engine Britt Airways plane flew open, officials say.

The baggage door opened shortly after takeoff Tuesday, spewing one piece of luggage which struck a propeller, officials said.

Bound for Sterling, Rock Falls and Galesburg, the aircraft returned safely to O'Hare and there were no injuries, said a spokesperson for the Federal Aviation Administration.

Steve Williamson, director of customer services for Britt, said eight passengers and two crew members were aboard.

He said the plane was above four or five minutes out of O'Hare and probably about 1,500 to 2,000 feet high when the door opened. He said the luggage flew out of the door and struck the left propeller and engine. The captain shut down the left engine as a precaution and landed without incident.

The luggage landed in Wood Dale, about three miles from O'Hare.

Wood Dale police Sgt. Walter McNeela said he received a telephone call from a woman who reported hearing a "loud boom" and noticed debris from the luggage in her back yard. "We recovered some of the baggage which was all banged up," McNeela said. "It looked like it went through a shredder."

Neal Callahan, an FAA spokesman, said it appeared that "the door was not properly closed or a faulty latch" may have caused the accident.

Britt is headquartered in Terre Haute, Ind.

Study: Multiple abortions may amplify miscarriage risk

CHICAGO (AP) — Women run a greatly increased risk of miscarriage if they have had two or more abortions, medical researchers said.

The study, published in the current issue of the American Medical Association, indicates that women who have had multiple abortions are two to three times more likely to have a miscarriage in the first six months of subsequent pregnancies.

Furthermore, the more abortions a woman has had, the greater the risk that she will miscarry, the researchers said.

The study indicates "that there is a direct relationship between the number of prior induced abortions and subsequent risk of having a pregnancy loss," they said.

This may result, they speculated, from the woman's uterus having been damaged during the abortion procedure. However, there was no evidence that the risk of miscarriage is increased by the number of doctors who have done the abortions.

They said the increased risk they found was not related to other factors, such as smoking, which have been shown to endanger pregnancies.

In general, the study said, multiple abortions may lead to miscarriages, the researchers said. One abortion procedure, dilatation and curettage, might be the culprit.

After an egg is fertilized in the uterus, it becomes implanted on the uterine wall and develops a network of blood vessels connecting it to the mother's system.

When dilatation and curettage is performed to induce an abortion, an instrument with a blade shaped like a small spoon is used to scrape the developing fetus off the uterine wall.

In their report, the doctors said that the scraping could affect the uterine wall so that the egg cannot become properly implanted, resulting in a miscarriage.

The report says there is no conclusive evidence to support this theory. But it cites a previous study of pregnant women, which showed that women who had had abortions reported an increased frequency of bleeding during the first weeks of pregnancy and that the frequency of bleeding increased with the number of abortions.

Drug scene to be topic at Hill House banquet

Hill House Residential Center, a drug abuse treatment center established in Carbondale in 1972, will host its Second Annual Friends of Hill House Banquet in SIU Student Center Ballrooms A and B at 6:30 p.m. Monday, June 30, Thomas Kirkpatrick, executive director of the center, said.

Gary Graham, director of Hill House Residential Center, will be the keynote speaker. Kirkpatrick's topic will be "The Drug Scene—What's Happening." Graham said the banquet will be held in honor of the center's 19th year. He expects over 200 to attend this year.

Tickets for the banquet are $7.50 and may be obtained by calling the Hill House offices at 549-7291 or 549-1151.

Wedding melee delays honeymoon

BERWYN, Ill. (AP) —- The honeymoon of Marlyn Moll, 28, of Carbondale, and her bride, Kyri Dake, 28, of Carbondale, was cut short.

The couple was being received at the local Elks Club hall Saturday night when five men, including Moll's brother, crossed swords.

The honeymoon was delayed because the bride had to wait until Monday to bail the groom out of jail.

Moll's brother said the brawl began after an usher became enraged at the sight of his wife dancing with the bridegroom's 15-year-old brother. The bride's mother, Barbara Dake, said the usher "just went insane" and hit the guy, touching off the fight.

Ronald Volante, commander of the Berwyn police juvenile division, said nine officers responded to a call for help and they were forced to use assistance from the police department of two neighboring Chicago suburbs.

"They were using chairs and bottles and glass to do what they wanted to the officers," Volante said.

"One officer's gun was taken but we were able to subdue the guy before he was able to shoot at us."

Volante said order was restored after more than 35 reinforcements arrived at the hall.

Damage to the hall was minimal, said George Langerman, manager. He reported that two to four broken glasses and a small hole was poked in the wall by a champagne bottle or a fist.

"They spent $5.99 for a wedding present and now L. Langerman said, "That was all over the place."
Fast-buck artists uncover cash in ash

By The Associated Press

When Mount St. Helens coughed the ancient volcano hurled vast quantities of dust across the United States, the sales pitch was made in winning's a great "Shades of Pompeii!" advertised as in a New York newspaper.

"Who knows? Could be good for your garden. Or fashion. Great for the kids who have everything. And makes an excellent mulch."

"Repackage it yourself and get rich by selling it to a friend. There's more where this came from."

Yes, friends, there's profit in garbage. Cash in ash. Mount St. Helens' dusty residue is the pet rock of eastern Washington. The fallout from the May 18 eruption had hardly settled before some 600,000 tons of the stuff was flooding across the Pacific Coast were offering up treasure for the taking.

Two brothers in Nortel (uh-toll) P., gave up their scrap hauling business. Brought a truck, and hauled back 40,000 pounds of the gray powder from a public works garage in Yakima, Wash. They envision selling 600,000 two-ounce plastic containers of ash as souvenirs at $5 a pop. That would gross a cool $3 million.

A mail order specialist in New York waged an advertising campaign to sell a sandwich of St. Helens' ash for $1. He told his employees if the orders start flooding in they would be promptly dispatched to the Northwest. "I'll give you guys some trowels, airplane tickets and some Baggies."

Two college students in Akron, Ohio, are getting bottled ash from a neighbor's stater who lives in Yakima and reselling it in smaller bottles in $2 and $1.50 sizes. They've even thought of a practical use for the dust. They plan to sell hour glasses and egg timers filled with ash instead of sand.

Closer to the source in Joe James, owner of Ye Olde Curiosity Shop on the waterfront in Seattle, who says, "We've got all varieties. the real fine ash and the coarser stuff that fell closer to the mountain."

For instance, a $2.25 two-ounce, wide-mouth glass bottle has an attractive black and white label that reads, "Genuine Washington State Mount St. Helens Volcanic Ash. Date of eruption May 18, 1980." It's from the Ellenburg area, which was ankle-deep in ash.

Jones figures about 60 percent of the people who buy ash are tourists from out of the state.

Anderson urges voters to put their country above their party

ST. LOUIS (AP) - In Missouri's two biggest cities, independent presidential candidate John B. Anderson pleaded for Americans to put aside partisanship and elect a president who can unify the country.

With the giant Gateway Arch as a backdrop in St. Louis, Anderson called for "an over-arching national purpose" that would heal divisions in the country.

Earlier in Kansas City, he said that polls show that a majority of the American people object to being limited to choosing between President Carter and Republican Ronald Reagan, and added:

"I believe if an independent candidate survived in 1980 and I believe he can be — that would send such an electric signal to the country and I think to the Congress that people want for the next four years to lay aside the kind of partisan jockeying and partisan in-fighting that we have seen over energy policy and over economic policy the last four years."

Anderson said that because of the severity of the problems the country faces it is not too much "to ask people to put country above party."

Both in Kansas City, where he spoke at a breakfast meeting of businessmen and women, and in St. Louis, where the talk was in the noon hour at the outdoor Kansas Plaza, Anderson said that he is not out to destroy the two-party system.

"The parties will survive the election of an independent," he said. Anderson added that he hopes his election would reinforce the two-party system and cause re-examination of the whole process of nominating candidates.

In Kansas City he spoke of restoring health to the economy; in St. Louis the topic was strengthening the country so that it can regain its position as a world leader.

"I'm not an isolationist," Anderson said. "I'm not a neo-isolationist. But I believe leadership belongs to this country."

At a news conference he told reporters that he hopes to be able to personally argue some of the court challenges he plans in states where the deadline has passed for him to get on the November general election ballot as an independent.

THE GOLD MINE

A TASTE OF CARBONDALE'S BEST!

Serving up a piping hot deep pan pizza is Don Medley, owner of The Gold Mine restaurant at 611 South Illinois Avenue, Carbondale.

The Southern Illinois University magazine yearbook concluded after two months of surveys and tasting that the number one pizza in Carbondale was The Gold Mine's cheese and sausage.

Hot deep Pan Pizza and good times are what The Gold Mine is all about. Stop in and see for yourself why The Gold Mine is number one in Carbondale.

Former Illinois principal eyed for school superintendent post

SPRINGFIELD, Ill. (AP) — A former Illinois educator now working in Florida has been offered the position of school superintendent, a legislator influential in education issues said Tuesday.

Rep. Larry R. Stuffle, D-Charleston, said the post has been offered to Donald Gill, superintendent of Volusia County schools at Daytona Beach, Fla.

Gill reportedly was selected from a field of six finalists interviewed over the weekend by the state Education Board.

Lee Milner, a spokesman for the board, confirmed that Gill was among the finalists interviewed but declined to say whether the board settled on him as its top candidate.

Parking problem in one-horse town causes commotion

PALMYRA, Ill. (AP) — The city fathers in this Macoupin County community will meet next month to discuss a parking problem. A horse parking problem.

Mayor Oral Cooper has called the council meeting to discuss the problem. Someone has been riding her horse seven miles from her town to the city for the past 10 years. In recent weeks she has received several parking tickets and has asked the mayor to consider a hitching post, or easing of the parking regulations.

Her problems began three weeks ago when she rode her horse to Palmyra to see her mother who works in a local lounge.

"I tied my horse where I always do — to a sign which has a horse and a horn," she said. "No parking from here to corner." My horse is always on the right side of the sign," she said.

Two tickets and several weeks later she took her problem to the mayor who called the meeting and asked her to keep her horse out of town until after the July 10 council session.

"Horses are no trouble and I take a shovel and clean up around them when they've been tied to the sign," she said.

Jewish group practices self-defense in reply to anti-Semitic candidates

LOS ANGELES (AP)—The 32 people, some of them in their 80s, had their guns. They'd never fired before. They're 22-caliber L.C.'s, Marlin's, Browning's and others—experienced shoot semi-automatic guns.

Their targets are silhouettes of human figures, each with a weapon. The maneuvers are being practiced near the Klu Klux Klan's Los Angeles headquarters.

"We want to psych up the Jewish community here," said Lawrence Quilley, national chairman of the Jewish Defense League. The militant group has stepped up classes in weaponry and martial arts this month in response to what Rubin sees as a trend toward anti-Semitic candidates running for office in varying degrees of success.

In 1973, Michigan passed the Primal Cut and Carcass Weight Law. The law required an itemized statement listing weights, cuts and quantities purchased. The state's Attorney General said that stopping beef baiters is close to impossible.

"You can't close them down based on suspicion," said Assistant Attorney General Douglas Carlson of Iowa. "Just about the time you get a suit against them, they have a knock of closing up shop."

Sometimes, the legal experts say, the "great deals" aren't real, but still take advantage of a consumer's search for savings.
First damages awarded in crash suit

CHICAGO (AP) — A federal court jury has awarded $277,500 to the family of a man killed in last year's crash of an American Airlines DC-10. It was the first verdict on the nation's worst air disaster.

A small part of the award — which was less than one-third of the amount sought — will be appealed, said an attorney representing McDonnell Douglas Corp., manufacturer of the aircraft.

After a three-day trial, a federal judge demurred a little more than an hour Monday before making the awarding. They gave the widow and daughter of Craig Valladares, 26, of suburban Arlington Heights, $250,000 in compensatory damages and $27,500 in prejudgment interest — accrued since the day of the crash. Valladares was one of 273 people killed May 27, 1979.

The case against the air carrier and McDonnell Douglas was being watched as a barometer of awards that might be expected in the numerous remaining suits. The defendants did not dispute liability but fought the day in on the central issue of how much money they should pay. Attorney Joseph Morris said "we have a profound disagreement" with the judge over the issue of prejudgment interest and will appeal that part of the case. The question, he said, is "whether or not it is awardable at all."

James C. Kellogg, one of the attorneys for Jewel Valladares, 29, and daughter Michelle, 5, said he knew of no plans by Mrs. Valladares to appeal the award although she had sought $916,500.

"Mrs. Valladares took the same position I did — she had a fair trial before a fair judge, and that's the way our system works."

According to evidence in the trial before U.S. District Judge Hubert L. Will, the amount was based on figures showing Valladares had been taking home $17,731 a year salary after taxes, spending about $1,000 a year to support his family. The figure was multiplied to allow for inflation and a life expectancy of 70 years, according to projections of a Northwestern University economist.

But the defense argued about the amount of money Valladares spent on himself. Final approved the amount he spent on his family and introduced evidence that the victim was unmarried and unlikely to continue for a long time.

In testimony that Mrs. Valladares' attorney called "ridiculous speculation," McDonnell Douglas attorney Norman J. Barry said the couple had been separated for about a year before the crash and introduced a witness who said Valladares had considered the possibility of moving out of state.

"What kind of guidance (to his daughter) would he have given (had he departed)?" Barry said. "I suspect not very much."

Kellogg said that shortly before boarding the plane Valladares contacted his wife by phone to see how she was.

"In the eyes of the law, this marriage was as good as any in Cook County," Kellogg said, chiding Barry for his portrait of the marriage.

The DC-10, bound for Los Angeles, crashed shortly after departing from O'Hare International Airport when one of its engines fell off. The immediate cause of the crash was determined to be a crack in a pylon bulkhead supporting an engine.

Chrysler lent $500 million; $1 billion more is promised

WASHINGTON (AP) — The Chrysler Corp., engaged in a day-to-day struggle for survival, received $500 million in government-guaranteed loans Tuesday — but only after a fire in a New York City skyscraper added one more element of suspense.

The federal Chrysler Loan Guarantee Board voted to approve the $500 million loan and affirmed its commitment to back another $1 billion in future credit, if needed, to help the nation's No. 3 automaker stave off bankruptcy.

Immediately after this action, loans were issued. The Chrysler a check for $496.75 million — $500 million minus underwriting costs — in a New York ceremony.

The proceedings were postponed 45 minutes, however, because paperwork relating to the loan settlement had been located in a Park Avenue office building destroyed by fire Monday.

The fire-alarm blaze didn't destroy the documents, but delayed lawyers' efforts Tuesday morning to assemble them for final closing.

The incident seemed symbolic of the agonizing, drawn-out process leading to the first credit installment.

Final approval was delayed repeatedly last week when a handful of Chrysler creditors balked at the deep restructuring. Heavy pressure by Chrysler and Treasury officials assured them that agreement on the loan package by all of the auto company's 400 creditors.

Deputy Treasury Secretary Robert Carwell acknowledged Tuesday that the loan "has some real chance of not working out."

"Chrysler's eventual return to pre-eminence in the auto industry will require continued imagination, hard work and dedication," he said in a statement issued after the board's action.

The automaker, which lost $1.1 billion last year, is expected to lose as much in 1980. Federal officials expect Chrysler to seek another $500 million in government-guaranteed loans before the end of the year, which will necessitate a similar vote by the loan board.

The check issued Tuesday by Salomon Brothers gives Chrysler much needed cash to pay off suppliers and help finance assembly of its new X-car — a lightweight, front-wheel drive vehicle the company hopes will fight off the import challenge and attract gas-conscious consumers.

Chrysler chairman Lee Iacocca has scheduled a news conference for Wednesday at New York's Waldorf-Astoria to detail how his company will spend the money.

State’s attorney candidate plans on keeping in touch with police, public

By Charity Gould
Staff Writer

Easing communication among himself, law enforcement agencies and the public would be a major concern of Mike Kimmel if he is successful as a Republican candidate for state’s attorney.

Kimmel, a lawyer in a family business, said that if he is elected he would publish a quarterly newsletter for law enforcement officers.

“The state’s attorney’s office has to stay current on everything that goes on like new laws, or new court cases of interest. Why not prepare a document in a lawyer’s terms so the police officer will know what’s going on too?” Kimmel said.

In addition to the newsletter, Kimmel said he would go to police departments and “talk with them on their territory. “I can listen and explain to them why I’m running my office the way I am,” he said.

He said his experience in the Air Force as a pilot and flight commander have taught him about team work. Kimmel said, “While flying, there were 14 people who had to work together to get the job done. It’s the same way for the law enforcement agencies.”

He added, “We’ll have a tremendously effective system if we all work together. We’ll build on our strengths and get rid of our weaknesses.”

A Carbondale native, Kimmel also wants to communicate with local people.

“During my campaign, I’m going to have several meet-the-candidate forums in the various townships. People can come in and ask me questions. I want to get to meet as many people as possible,” Kimmel said one of the reasons he is running for state’s attorney is to win the hearts of people. “Here at the office, I’m always involved in a conflict—fighting other people’s battles,” he said. But during his campaign he hopes to meet other people.

Once elected, Kimmel said he would continue communicating with the public through public forums and speeches before local organizations.

Kimmel stated two reasons for starting his campaign early.

“I want to address my issues in a way that will make sense to the people, and this is going to take time. Also, I want to meet as many people as I can. This is a huge county, so it’s going to take some time covering the area.”

Kimmel wants to campaign on campus during September. A father of two children, Kimmel sees some of the difficulties of the office will be “keeping up with the law, and organizing the office for people to get the most out of it.”

Kimmel, who graduated from the Air Force Academy in Colorado in 1968, is also a guidance counselor for high school students who want to attend the academy.

After five years in the Air Force, he married the former Mary Alice Brown of Carbondale. Kimmel graduated from law school at the University of Illinois where he was selected for the Order of Coif, a national honorary law fraternity.

In 1973, he moved into one of the five oldest homes in the city to practice law with his father, brother and cousin.

Marine deserter may be executed

CAMP PENDLETON, Calif. (AP)—A Canadian Indian who deserted from the Air Force during the Vietnam War but decided he didn’t want to come back to the brig Tuesday to wait another month for a court martial on desertion charges that could lead to his execution.

The 18-year-old case of Michael Ducros, an Iroquois Mohawk who is now 29, was reopened in March after he was arrested in Huntington Beach for making an illegal left turn.

Ducros, who had moved back to California in mid-1977 after almost eight years in Canada, was arrested in the Camp Pendleton brig after a routine check of the national crime computer listed him as a military deserter.

During a brief seven-minute court martial Tuesday, Lt. Col. Donald J. Kaye, the presiding military judge, granted a defense motion to delay Ducros’ trial until July 31.

Ducros, one of 18 children born to his Iroquois Mohawk parents, was living in one of the federal camps near Camp Pendleton and had frequently been involved in a conflict—fighting other people’s battles,” he said. But during his campaign he hopes to meet other people.

Once elected, Kimmel said he would continue communicating with the public through public forums and speeches before local organizations.

Kimmel stated two reasons for starting his campaign early.

“I want to address my issues in a way that will make sense to the people, and this is going to take time. Also, I want to meet as many people as I can. This is a huge county, so it’s going to take some time covering the area.”

Kimmel wants to campaign on campus during September. A father of two children, Kimmel sees some of the difficulties of the office will be “keeping up with the law, and organizing the office for people to get the most out of it.”

Kimmel, who graduated from the Air Force Academy in Colorado in 1968, is also a guidance counselor for high school students who want to attend the academy.

After five years in the Air Force, he married the former Mary Alice Brown of Carbondale. Kimmel graduated from law school at the University of Illinois where he was selected for the Order of Coif, a national honorary law fraternity.

DEADLINE FOR APPLYING FOR STUDENT MEDICAL BENEFIT FEE REFUND IS FRIDAY, JUNE 27, 1980

To apply for a refund, a student must present their fee statement and insurance policy or the schedule of benefits of their insurance coverage to the Student Health Program, 112 Small Group Housing, Room 118. Students who have deferred their fees must apply for the refund before the deadline. However, a refund will not be issued until all fees are paid.
He lived eight years in a closet; receives grade school diploma

CHICAGO (AP) — Vincie Jones, deaf as an infant, spent most of the first half of his life locked in a clothes closet. It was 1913 when a welfare worker discovered him there. His mother lived on the city’s West Side on public aid. She had five children and a twisted notion that a deaf child who could only utter noises was best off. She placed him in a school for the deaf, where he spent most of the day looking out through a keyhole. When author’s research ended, the baby doctors guessed was caused by the clipping of his growing bones.

He was an 8-year-old boy with the mind of a baby and no speech. He could make one sign — he would push his thumbs and index fingers together and peep out at the tiny spaces between his fingers — he would simulate a keyhole.

Casseworkers at the Illinois Department of Children and Family Services were the first people to show hope for Vincie’s future and they worked to find others. They sent to Michael Reese Hospital’s Social Institute for Communicative Disorders and they encountered a veteran foster mother named Dorothy Sims to take him home.

The Red Cross Bloodmobile will be in the Student Center on July 1 and 2. Blood donations by all students, employees, retirees and their dependents in any hospital which receives its blood supply from the Red Cross, or accepts direct shipment from the nearest Red Cross Center.

Campus Briefs

A free motorcycle riding course will be offered through the University Safety Center July 1-12. The class will meet from 5:30 p.m. to 8 p.m. on Tuesdays and Thursdays and from 10 a.m. to 1 p.m. on Wednesdays.

The Academic Standards Committee, College of Human Environmental Sciences, has approved the following scholarships for the fall semester. Summer grant: 2,500, B. Wexler, inasmuch as she was named best buddy.

In the words of the committee, “He can have a normal life, get married, have a family, just like the rest of us.”

Blood drive set for July 1, 2 at Student Center

The Red Cross Bloodmobile will be parked in the Student Center on July 1 and 2. Blood donations by all students, employees, retirees and their dependents in any hospital which receives its blood supply from the Red Cross, or accepts direct shipment from the nearest Red Cross Center.

He’d hide keys and run into a room tearing all the locks from windows, doors and desks. Each night at bedtime he’d disappear and the home would find him sleeping in the closet.

“He drove me crazy with that sort of thing,” said Sim. “I took all the doors off, but he’d go in there anyway. Probably felt safer.”

Sims, then 32, already was caring for six other state wards. With the help of her own three grown children and their families, she specializes in handicapped youngsters — the multiple handicapped, the mentally retarded, emotionally disturbed, epileptic, severely asthmatic.

“He’d tear things up, sure. But you know, he was as good at fixing as he was at tearing,” Sims said. “Whatever he’d break, I’d get my tools and make repair. Looked to me like he was a smart little boy. He didn’t act like my retarded children.

She wanted to get him into a school.

“So I went to Bell and read my phonics riot act,” she said. She stamped her foot, shook her fist and threatened to sue unless they took Vincie at Bell. Sims’ request was answered by Alexander Graham Bell in 1913 and since then has become known for its programs for handicapped children.

“I was so afraid they wouldn’t take him,” Sims said. “When they said they would, I knew Vincie had a chance.”

Although Vincie was an unusual case for teachers at Bell, they started right in treating him as if he were a normal 6-month-old deaf child. They took him for walks, pointed out things out, played on the swings.

“I’d get him out, played on the shadows and cringe whenever anyone new came near him,” said Doris Plum, instructor. When he started to draw, it was only trees — “he was very uncommunicative, much more interested in inanimate objects than people,” said Reene Lumpkin, instructor.

Vincie was at the school for six years. Teachers showed him how to communicate through sign language. They got him jobs in the lunchroom and delivering mail in the building. They and Sims worked to temper his wildness through discipline.

He learned to use a camera — first photographing only trees and finally getting around to people. Eventually he made a friend in a little boy named Jeffery.

This last graduation day at Bell, Vincie was among the class of 9th graders who received diplomas. Lumpkin said he will go next year into a more academic, more vocational school class for deaf children “and eventually will be able to find work for himself.”

“He can have a normal life, get married, have a family, just like the rest of us.”

Meanwhile, Sims has come back to Bell with another child from among her current brood of eight. Her little boy named Jeffrey, with a story of his own still unfolding.

Don’t Let Advertising Mislead You on Arthritis

BY Dr. Roy S. White

There is much concern in the press these days as well as a good deal of right indulgence by doctors and patients alike, regarding so-called "CURES" for arthritis.

Dr. White is a known to do arthritis out of fortunes.

However, the warnings about arthritis are logical should not commit a person to letting arthritis take over his body as he stands idle by.

I’m concerned about people ignoring the early signs of arthritis because they are afraid their concern is little more than futility.

What are the early signs? Let me give you a few simple, easily, to watch for:

If you find that slight blurs to your fingers or legs or elbows cause them to stiffen up slightly when you make a mild pain or a milder signal.

For instance, if a father is playing catch with his son and the ball "bumps" his thighs and the digits stiffness and hurts.

If you find that you have a potential arthritis problem, ask your doctor what can be done for it. Your doctor can well save you a lifetime of organizing regret.

If you feel you have a potential arthritis problem, ask your doctor what can be done for it. Your doctor can well save you a lifetime of organizing regret.

If you feel you have a potential arthritis problem, ask your doctor what can be done for it. Your doctor can well save you a lifetime of organizing regret.

Students getting aid up by half; economy, new legislation cited

By Andrew Zinner
Staff Writer

The number of students receiving financial aid at SIU-C jumped 33 percent and financial aid awards increased $37 million between July 1, 1978, and March 31, 1979, said Joe Camille, director of student work and financial aid.

The nation's economy, swinging from inflation to the current recession, is providing a contributing factor in the increased use of financial aid, Camille said. Also, SIU-C has enabled more students to become eligible for the Illinois Guaranteed Loan Program which was tapped for about $4 million more during fiscal year 1980 at SIU-C.

"All a student needs to do now to get a guaranteed loan is to apply," Camille explained. "There is no need to hold out, so middle-income families with money tied up in mortgages can still send their kids to school."

He said that the number of students identified as guaranteed loans almost doubled between fiscal year 1979 and fiscal year 1980. Camille attributed the increase to the annual $7.5 percent interest rate of the loans.

About $9 million was allotted for loans in fiscal year 1980, compared to $5.1 million in fiscal year 1979. Camille said.

Basic Education Opportunity Grants made an additional $3.5 million in fiscal year 1979 and $4.4 million in fiscal year 1980. Camille said the increase was partly needed by the larger number of students eligible. The eligible number of students increased from about 4,000 to about 6,000.

He said that the number of students receiving money from the Illinois State Scholarship Commission remained about the same, probably because of the increased popularity of the BEOG program.

Inflation under 1 percent in May; gas prices decline

WASHINGTON (AP) — A moderation in food costs and the first decline in gasoline prices in almost three years has cut consumer prices to a 0.9-percent increase in May, the lowest in more than 24 hours of work a week for public aid patients in 1978.

Bakalis charged that Han sought payment from the state for more than 24 hours of work per day on 31 occasions--including one day for 34.75 hours--between Oct. 1, 1978, and March 31, 1977.

Birth control discouraged in Mongolia

SIZIWANG, Inner Mongolia (AP) — Batu, a 37-year-old Communist Party comrade and pure Mongolian from Ulaanbaatar, is the father of 10 children. His wife's health is poor and they want another child.

But because of strict Communist Party policy on minorities, they are not allowed to use contraceptives, obtain abortions or have more than one child, all without permission from county officials. That asked and permission was denied. So Batu and his wife do in China to get what they want: He went through "the back door" and obtained contraceptives from a friend in a hospital.

Still, Batu maintains the anti-birth control policy for minorities is "a good thing because it is necessary to build up our population.

The birth control question is one example of China's different treatment of minorities and of the majority Han Chinese throughout the nation of about 1 billion people.

China is enforcing a Draconian birth control policy throughout the country, realizing that its burgeoning population is dragging down its economic achievements.

The government demands that the Han Chinese produce only one child while minorities bear two per couple, but minorities are exempt from this birth control requirement because they number only about 40 million. The minorities live in strategic border areas, resource-rich and people-poor, and China regards development of these areas as vital to economic development and national security.

Furthermore, many minorities have a tradition of large families and concessions to custom are considered one way to win their political allegiance.

Mongolian women can bear all the children they want. Indeed, Batu's case shows they virtually are ordered to make babies.

A herdsman's wife, Saran Chigica, 29, of the Bai in Hu Shao Brigade on the grasslands, echoed Batu's experience. She has three children and doesn't want any more.

"I am thinking of sterilization," she said, "but I have to get permission from the country first."

For that, she must go to Siziwang, the county seat, about 100 miles from her home. That journey would be as far as some herdsmen travel in a lifetime. Her family likely will increase in number.

For the majority Chinese, marriage is not permitted until couples are in their mid-to late 20s. Marriage certificates carry birth control pledges. One child is hailed as best and families are considered one child receive financial and material rewards. Women are forced sterilization after their first child often receive money.

Those who have more than two children often are scorned, criticized and denied work promotions and larger living quarters.

Abortions and sterilization are regarded as routine in many places. Although officially denied, forced sterilization and abortions reportedly are becoming more frequent.

No limits are imposed on Mongols regarding age for marriage, and intermarriage between Hans and Mongols is encouraged. When such marriages occur, local wedding customs are observed. In Mongolian tradition, the couple moves to the home of the wife's family.

The Inner Mongolia Autonomous Region today has about 2 million Mongols and 1.6 million people of other minority nationalities. It is dominated, however, by about 18.5 million Han Chinese who have been assigned to the region to develop the rugged land.

Special treatment of Mongols sometimes causes friction with the Han Chinese.

Three Han workers from the Wanta commune, 50 miles away, were assigned to shovel sand at the Bai in Hu Shao Brigade. Leaning heavily on their shovels, they complained bitterly.

Gwok Ying, 38, father of three, said, "It isn't fair that Mongolians can have all the children they want. If we have more than two, we lose a personal registration."

Personal registration is a certificate of existence in China. Without it, a person can't get food coupons. Therefore the extra child who has no registration puts an increased economic burden on the rest of the family.

"Besides that," said Gwok, "some of our women are forced to be sterilized."

Chin Yu, 29, father of two, nodded and took a swipe at the Mongols: "They used to be pretty stupid," he said, "but now they are much smarter."

Specialists called to O'Hare air jam

CHICAGO (AP) — A group of computer specialists dispatched to O'Hare International Airport during its Disabled Traffic-Monitoring computer was laid up Tuesday so they could work around the clock, a Federal Aviation Administration spokesman said.

Marylee Kutz said the 12 specialists from the FAA's experimental center in Atlantic City, N.J., still don't know what is wrong with the computer, which froze Friday morning. She said they could not verify previous projections that the system would be back in use by Wednesday or Thursday.

"It's just a guess—it could be two minutes from now," she said. "Often fixing these things takes very little time—it's the finding it."

She said specialists are trying to "simulate what happened" in the malfunction through use of a special testing device brought in late Monday by MITRE Corp. of Princeton, N.J.

Peter Salmon, deputy chief of the FAA, said a change of minutes will be added to flight time during afternoon rush hours, because controllers "have to go slower" and because of the airport's three runways is closed for construction work. But FAA officials say no serious delays have been caused by the computer breakdown.

The computer aide controllers by identifying each airplane flight number, altitude and speed and next to each blip on a radar screen. When the malfunction occurred, all the data stayed on the scope and stopped, while the radar situations of the planes kept changing, control tower Deputy Chief Peter Salmon said.

Salmon said no safety-related problems have resulted from the breakdown. He said controllers "must talk a little bit more, rely on the miles into a little bit more" and write down necessary data. "Adding this extra work load, you just go slower," he said.
Lee ties for 3rd, joins Olympic team

By Paul Reil
Staff Writer

Before Monday night's final heat of the 440-yard intermediate hurdles at the U.S. Olympic Trials, SIU's Dave David Lee was confident of his chances in his first meeting with the American water ski record holder Edwin Moses.

After all, Lee had claimed 1980 hurdles championships at several major national meets, including the Kansas and Drake relays, the NCAA Championships and the Athletics Congress outdoor meet. He had lost to Moses in the entire outdoor season—to Indiana University's Nate Lundy, in fact, that lost several times over.

Just when everything seemed to be going his way, another hurdle. In addition to the 10 already on the rain-dampened University of Oregon track, was placed in front of him.

"By drawing lane one, David got the worst possible lane assignment," said Saluki track coach Lew Hartzig. "The severity of the track's curve on the inside lane is something that you have to battle all the time. It takes about five yards away from a runner, and adds at least a second to your time."

"But David didn't seem that worried about the whole thing," Hartzig continued. "He just told me, 'Philly, I'm going to have to go out and do the job now.'"

And do the job was exactly what Lee did. Despite the unfavorable lane assignment, the 6-3, 175-pound senior came on strong to finish in a tie for third with former California Polytechnic State-San Luis Obispo hurdler Bart Williams, in 49.34 seconds.

As expected, Moses won the race, setting a new Trials record and registering the world's fastest 400-time, of 47.33. James Walker, former two-time NCAA champ from Auburn, finished 10th, five years behind Moses, claiming second. 49.04.

As a result, Moses, Walker, Lee and Williams will represent the nation's 400-IM hurdlers on an upcoming European tour and in any alternatives to the boycotted Moscow Olympics.

"I believe this was the greatest race David has ever run," Hartzig said shortly after Monday's finals. "He was second to last on the starting line, and going into the final turn he was about seven yards behind Moses, Walker, James King, Lundy and Williams.

"That's when David's speed and determination took over."

The 39-year-old SIU coach said, "He passed King and Lundy, and caught Williams at the wire." King finished fifth, 49.69, while Lundy fell over the second-to-last hurdle, and did not finish the race.

As complimentary as Hartzig was on Lee's performance, he was equally impressed with fellow way Moses handled himself.

"There is no doubt in my mind that Edwin Moses is the premiere hurdler in the world right now," Hartzig said. "He runs with such confidence and maturity, that you could have run almost the perfect race to beat him."

Andy Roberts, who was an All-American under Hartzig's SIU in 1978, advanced as Tuesday evening's Illinois high hurdle semifinals with a time of 14.12 seconds. Former Saluki pole-vaulter Gary Hunter began preliminary competition Tuesday. Hunter and Roberts are two of eight former Salukis competing at the Trials.

Casebeer peddles to victory in Illinois Time Trials

By Mark Pitch
Sports Editor

Most bicycle enthusiasts would be content traveling 110 miles in a few days, but SIU's Cycle Team member Dan Casebeer doesn't have a few days to spare, so he travels the distance in a little over four hours.

Casebeer placed second in the Illinois Time Trials 110-mile race June 14, in a time of four hours 30 minutes and 20 seconds. At the same event, Casebeer placed first in the 25-mile time trial, breaking his old Illinois state record with a time of 53.40.

Casebeer is the first person in Illinois to finish first and second in the two events. The Carbondale native said the two days of racing is mentally and physically grueling.

"Usually after I finish a road race I'm physically wasted," he said. "It takes a couple of days for me to wind down, but I can't think about the event I had because I had to race the next day."

"The time trials are really brutal because it's all out for almost an hour and when you're done, the legs really feel it. We're really flying during a short race like 50 miles."

Casebeer didn't have much time to savor his victory in the time trials because he competed in the Illinois State Championships this past weekend, finishing sixth in the one kilometer race and winning the points race and 4,000-meter pursuit.

Casebeer said it was only the third time he had raced in the pursuit event. The race is between two riders starting at opposite ends of the track and the riders use one another as pacing points and try to catch and pass one another. He said, "The idea of catching the other person is an incentive to the race." Casebeer said "You feel a lot stronger when you have to catch someone."

Casebeer's success in the Illinois Championships is within striking distance of the state record in the pursuit which is 1 hour 1 minute 22 seconds and considering I don't really practice that event."

In the Illinois Championships, Casebeer, who recently missed making the Olympic Team, beat out two other Cycle Team members in their specialty events.

"I have a pretty good beating guys at their own events, especially guys who are on the Olympic team," he said. "One of the guys was Gus Penhagen who is a national champion."

Casebeer is sponsored by the Phoenix Cycle shop in Carbondale, which helps supply his bicycles and equipment. Casebeer's bikes run into the national-$2,000-$3,000 bike for each different kind of race.

"For the road races, I use a heavy bike. Around 20 pounds because I travel on gravel and other rough roads," Casebeer said. "Then for track racing I use a 18-pounder which has silk tires because the track is banked and made of wood."

"Everything has to do with weight and speed," he said. "Everything has to be made as light as possible, but the material must be strong too."

Cards keep Boyer on hand
to work on team development

ST. LOUIS (AP) Ken Boyer, a career member of the Cardinals, will remain with that National League team.

August A. Busch Jr., team president, announced Tuesday that Boyer, a member of the Cards, has accepted an offer to be on special assignment with General Manager John Claihorne.

"We are delighted that Kenney has chosen to stay with the club," Busch said. "He wants to keep Kenney in a Cardinal uniform for a long time."

John Claihorne said he was "very happy" about Boyer's decision.

"There's a thousand ways that Ken can help us."

The DuQuoin State Fairgrounds again will be the site of the National Water Ski Association's Water Ski Tournament this August as the American Water Ski Association and the Little Egypt Ski Club will sponsor the event.
