Shaw reveals high-tech hopes for area

By Andrew Herrmann
Staff Writer

If robotics, electronics, microchips, supercomputers and bio-technology are the future, the future has arrived, said Chancellor Kenneth Shaw. And he said Southern Illinois could play host to this multi-million dollar industry in the years to come. Shaw, a member of the recently formed Governor's Commission on Science and High Technology, said that the "footloose" nature of the high technology business coupled with some characteristics of Southern Illinois could make the region the "center of excellence in the area of materials technology.

Speaking to a meeting of the Illinois Society of Professional Engineers' Egyptian chapter Tuesday, Shaw explained that "location decisions of high technology companies were often driven more by their perceptions of the location and the location decisions of other manufacturing companies." He said that factors which may discourage traditional manufacturer could result from locating in Southern Illinois, such as government support of major technology centers and the limited transportation, do weigh heavily in the high technology industry's choice of location.

Shaw said that high-tech firms choose particular locations for plant construction primarily because of the communities access to technical, skilled and professional labor.

"High technology companies apparently seek out communities noted for the excellence of their academic institutions, particularly in the sciences. Academic institutions are among the top five factors of high technology company location decisions," he said.

He said Southern Illinois' abundant supply of coal may also be a factor in enticing high-tech firms to the area.

"The burning of coal may, in the long run, be the least effective way to use this valuable resource. Its potential as a chemical feedstock to support the plastics and synthetic industries, its use as a substitute for depleted material and as an alternative in supplying material for the manufacture of metallics and other highly technical chemicals may be in the long run be where coal's future lies."
Reagan offers help to farmers while campaigning in Illinois

CHAPIN (AP) — President Reagan, campaigning across economically distressed sections of the Midwest, chose the occasion Wednesday to deliver some pre-election help to farmers.

At a 2,000-acre farm owned by the Illinois agriculture director, the president announced a reduction in federal loan rates for farmers and new credits to spur agricultural exports.

Even though the announcement came less than two weeks before the Nov. 2 election, White House officials insisted they were not politically motivated.

Reagan said Farmer Home Administration loan rates will be reduced to 11.5 percent, from 13.25 percent, and that the government will make $160 million available in credits — at zero interest — to promote agricultural exports.

The $160 million will be "allocated with $400 million in guaranteed credits already authorized at regular commercial rates," he said.

"With so much on the line in these difficult economic times," Reagan told the farmers, "I know you need more than just a pat on the back."

Reagan said he had heard "the ground will be empty" if it hasn't already.

Poles march in rioter's funeral

NOWA HUTA, Poland (AP) — Marching slowly to Chopin's funeral dirge under banners declaring "Solidarity Lives," thousands of angry and despondent Poles Wednesday buried a young activist killed by police catapulted out of a government tank on the independent union.

Hundreds of riot police backed by helmeted paramedics kept a tight grip on Nowa Huta to prevent new unrest as an estimated 10,000 mourners and at least 21 Roman Catholic priests left the funeral of 30-year-old Bogdan Wlosik.

"My son, oh my son," cried Wlosik's mother, as she threw herself twice onto her son's coffin. Her husband Josef and her daughter Natalia wept as the coffin was lowered slowly into the ground by friends.

"My son, sleep calmly in our Polish earth on which you were not permitted to live in peace," said a banner on one of about 60 wreaths placed amid flowers piled over six feet high on the son's grave.

Wlosik was killed by a policechik policeman during riots Oct. 15 sparked by the outlawing of Solidarity on Oct. 13.

SHAW from Page 1

Germany and others in the percentage of our dollars which go for research. This will catch up with us if it hasn't already.

"Six or seven years ago the United States had the microchip market cornered, and yet today the Japanese control 76 percent of the market..."

Shaw said that salaries for college engineering professors must be increased to meet industry standards, and that better equipment and more training in mathematics and sciences is needed.

Economics professor wins Nobel

CHICAGO (AP) — University of Chicago Professor George Stigler is known as "a giant" in his profession, and although the latest Nobel award winner has never advised a president, his theories are being embraced at the highest levels of power.

Virtually unknown outside economic circles, the 71-year-old Stigler on Wednesday was recognized for a lifetime of theoretical research when he was awarded the Nobel Memorial Prize in Economic Science.

Suspect traced to New York City

By THE ASSOCIATED PRESS

James W. Lewis, wanted for questioning in the Tylenol killings in Chicago, lived with his wife in a cheap Manhattan hotel for six weeks, including the period when seven people died from cyanide-poisoned capsules, authorities said Wednesday.

A special squad of 10 FBI agents and New York police officers were searching the city in hopes the couple might still be there, FBI agent Kenneth Walton told reporters at a news conference. Walton said Mrs. Lewis may have a kidney ailment and agents were checking New York hospitals.

News Roundup

Economy grows only 0.8 percent

WASHINGTON (AP) — Still well short of recovery, the U.S. economy slowed to a meager 0.8 percent annual growth rate in the third quarter, the government reported Wednesday.

Commerce Secretary Malcolm Baldrige said little improvement is likely before next year.

The Commerce Department's report on inflation-adjusted gross national product — a measure of all goods and services produced during the summer — was the last major estimate of U.S. economic health before the Nov. 2 election.

Economics professor wins Nobel
William Kilquist, Democratic sheriff candidate, explains his work scheduling proposal while Republican candidate William Maurizio, his debate opponent, listens.

SHERIFF from Page 1

Kilquist said it wouldn’t be wise to bite the hand that feeds the department, but that he wouldn’t “lick bootstraps.” Kilquist said he planned to seek salary increases for deputies because deputies have tended to use Jackson County as training ground and then leave for higher-paying jobs. He said 230 employees have worked in the department in the past eight years.

Maurizio said he would likely take a deputy off patrol to handle internal affairs if the board went through with the proposal.

The two disagreed with the board’s proposal to eliminate an administrative assistant from the department. Both said it would take the sheriff away from crime-solving efforts.

Kilquist said it wouldn’t be wise to bite the hand that feeds the department, but that he wouldn’t “lick bootstraps.” Kilquist said he wanted improved relations, but not at the cost of distorted news.

The two candidates said a better public image of the public should be cooperating with the department “to stop crime before it starts.” Kilquist said he wanted a department residents could look up to, but afterward warned against relying solely on public support.
Thanks for all your help in C'dale Clean-Up Day

I would like to publicly thank the Goreville townspeople and many countless hours to the success of Carbonbale Clean-Up Day for dedication and effort. By working together, the community has made Carbonbale a more attractive place to live. It looks better, people can judge what our town is like, and the SIU community can see that their efforts are appreciated.

DE shouldn't judge people they know nothing about

To the DE Editorial Committee:

I am in awe of you for being so wise and authoritative. Not many people can judge the population of a town they know nothing about. Apparently you can.

Of the Goreville townspeople, you say that they are "children" who "haven't grown up yet." Are you a psychologist who has studied these people over a period of time? You say they "make a mockery of themselves ... their own gun ordinance. You must be civil law experts to make such a judgment.

DE is real and becomes a community that is real because of the efforts of the students. Goreville is passing a gun ordinance that you don't agree with. At least they're doing something to protect their fill. Besides being psychologists and lawyers, you still have time to go in colleges and work on the school paper. What other talents do you have?

Goreville is passing a gun ordinance that you don't agree with. With at least they're doing something to protect their fill. DE is real and becomes a community that is real because of the efforts of the students. Goreville is passing a gun ordinance that you don't agree with. At least they're doing something to protect their fill. Besides being psychologists and lawyers, you still have time to go in colleges and work on the school paper. What other talents do you have?

At a time when library Dean Emeritus Robert McEvoy, the Graduate Student Council and the Faculty Senate stand together on an issue so obvious that even the administration concedes key points, "Brady move, Jerry Cook and the Undergraduate Student Organization stand up and spit in the face of both unity and logic DE, Oct. 15."

As quoted in the DE, Cook raises some qualms he has with the GSC -- none of which have any substantive value. They are: The GSC distributed incomplete facts and they never contacted the administration i.e., they went off half-cocked.

Considering that new information surfaces daily through painstaking research by the GSC's Brady Committee, the DE said the Southern Illinoisan partly because the SIU-C administration refuses to release anything it might have regarding written documents, considering that if the committee waits until after the November election they will doubtless have little impact and considering that the facts in the GSC report are their condemnation of the purchase, the GSC did distribute and is still distributing "incomplete" information.

No public scandal warrants itself whole. I suppose Woodward and Bernstein should have waited for "all the information" before publishing what they already knew about Watergate. Should we wait until the rats at Brady die from eating all the mold before we decide?" In the week before the Brady Committee was formed, both President Sommit and Vice President Hatch, R-Utah, publicly stated that they would not alter their course regarding the purchase of Brady. The committee took them seriously and hence plotted another course. For 12 days, the committee researched the facts. Tried to put the question before gubernatorial candidate Adlai Stevenson. Gov. Thompson, state Sen. Kenneth Ruehle and state Rep. Bruce Richmond and others and try to get the media. After this process, armed with more facts and more public pressure, the committee decided then that they should not alter their course with Stevenson, others and try to get the media. After this process, armed with more facts and more public pressure, the committee decided then that they should not alter their course with Stevenson, others and try to get the media.

The one substantive issue that the USO raises in their resolution which was completely ignored in the DE article is the problem of study space. The Norris Building should not be purchased and no other alternatives for Morris Library are forthcoming. In the past two years and nine months study space will continue to be eliminated in the library to make room for more books.

I'm not a librarian, but I understand that a library's primary function is to provide materials for research, not study space. If this worst-case scenario should come to pass the Brady Committee assures that this is unlikely; students can still study anywhere that has chairs, tables, lights and quiet.

They can't study anything if they don't have books. Further, this extreme situation might finally force the administration to set up satellite study areas on campus, areas that like the library are not "24 hours." I suggest Mr. Cook stop apologizing publicly for the SIU-C administration and the Governor. They do a fine job of making room for more books. I'm not a librarian, but I understand that a library's primary function is to provide materials for research, not study space. Recreation Center fee should be paid only if a student is using the services," Kiener said.

A MAJORITY of the students interviewed were aware of some of the programs the student fees support. Four of the students did not know the programs, three did not know what the fees were. Five said they think the money is well spent. The remaining students said they had a "rough idea" of the programs.

The revenue bond fee now is $35.20 and replaces funds previously obtained from tuition payments and used to underwrite the funded debt and operations of the Student Center and University Housing.

A proposal to increase the bond fee by $6.60 per semester, making it $41.80, will be submitted to the Board of Trustees for the next five years. Three of the increases have been approved. Andrew Summers, 21, a senior in radio and television, said he wants the revenue bond fee eliminated. "It's too costly," Summers said, adding, "it's too much to ask the taxpayers to pay for it. "I would also slightly decrease the athletics fee and raise ticket prices because the people who appreciate athletics most should pay a slightly larger percentage for that privilege," he said.

Sherri Chisenhall, Jeff Todd, Jean-Marte Landel, Rob Wright, Lisa Tecklenburg, David Lisa, Philip Florio and Doris K. Harrah, the Evaluation Task Force, recommended the bond fee be eliminated. "It's a waste of our money," Schiipp said. "We should raise ticket prices because the people who appreciate athletics most should pay more."

The money that goes to the bond fee is best allocated to research, to library funds and to improving science laboratories," said Maniam, a junior in premedicine. Joyce Gallagher, 21, a senior in physical education, said, "I think the revenue bond fee in the last three years has been a waste of our money."

But Shawn Cornell, 19, a sophomore in specifications drawing, said the revenue bond fee is a necessary evil. "What would they do without it?" Cornell asked. "They'd have to get the money somehow," he said. Michelle McDonald, 21, a junior in engineering, said, "I guess we'd get rid of the medical fee. To me it's a rip-off." McDonald said that a list and explanation of fees should be published somewhere other than class schedule catalogues. Brad Davis, 20, said that he would prefer to eliminate all the fees. See FEES, Page 17.

Interviews of 96 students in an informal survey indicated that most did not know how much they pay in student fees. The survey also revealed that a majority of the students interviewed would prefer to see the revenue bond fee eliminated. The interviews were conducted by students in journalism classes taught by Madelon Schiipp.

Students in "Feature Writing" who participated were Ken Ross, Jackie Rodgers, Kelly Reed, Jack Wallace, Art Herron, Julie Friedrichsen, Beth Schiipp, Ellen Lee Sible and William Jackman.

Students in "Reporting and Writing" who participated were Sherry Chisenhall, Jeff Todd, Jean-Marte Landel, Rob Wright, Lisa Tecklenburg, Dave Lisa, Philip Florio and Doris K. Harrah.

Meeting Nov. 11.

The bond fee was established in 1979. It was stated at that time that an increase of $6.60 would be sought annually for the next five years. Three of the increases have been approved. Andrew Summers, 21, a senior in radio and television, said he wants the revenue bond fee eliminated. "It's too costly," Summers said, adding, "it's too much to ask the taxpayers to pay for it. "I would also slightly decrease the athletics fee and raise ticket prices because the people who appreciate athletics most should pay a slightly larger percentage for that privilege," he said.

Hidden playwright talents unfold

By Karen Rissler
Student Writer

The playwright was an SIU-C food and nutrition major. She had never read plays until she realized her flair for dialogue in a creative writing course required for her major.

Pam Billingsley’s flair won her play, “Quilt Pieces,” a position among such classics as Shakespeare’s “Twelfth Night,” Molier’s “Tartuffe” and Williams’ “Cat on a Hot Tin Roof” in this year’s McLeod Playhouse season.

Billingsley’s knack for dialogue is due partly to a journalism minor she acquired as an undergraduate. Billingsley said journalistic writing is based on dialogue, both as a source of information and as a writing technique to incorporate quotes.

But the knack is more than learned skill; it’s raw talent. Her quick progression as a playwright stands as evidence Billingsley, a graduate student working toward a master of fine arts degree, wrote her first play, “A Silver Lining,” in a required writing course. With her professor’s help, “A Silver Lining” won a competition and Billingsley won $500 and much encouragement.

The following semester she wrote “Hummaging” and last spring she completed “Quilt Pieces” in time for it to be considered and accepted for the McLeod season.

“Quilt Pieces” will run at 8 p.m. Thursday, Friday and Saturday and at 2 p.m. Sunday. The play has been submitted in the American College Theater Festival. In it the winner’s play will be performed at the John F. Kennedy Center for the Performing Arts in Washington, D.C., using the SIU-C cast and crew.

“Quilt Pieces” revolves around five generations of women in a Southern Illinois family as they join together to fashion a quilt.

Each scene portrays the designing of a single quilt block by one of the women. The quilt is “a m e up of very separate blocks” and each block represents an individual’s dreams and memories of the particular woman.

Billingsley’s play is an observation of people.” Each scene offers “little tasty tid-bits” of the characters, Billingsley said.

Billingsley compared “Quilt Pieces” to television, “Before I switch the channel.”

Today's puzzle

Puzzle answers are on Page 17.

**Thinking of going to Florida for Spring Break?**

**BEFORE YOU SIGN, ASK YOURSELF:**

**WHERE WILL I BE STAYING?**

SFC stays at the Plaza Hotel, the largest hotel located on the beach.

**WHY DO I NEED A SHUTTLE BUS?**

The Plaza Hotel is centrally located, right on the Strip, so no shuttle is necessary with SFC.

**WHAT WILL THE CONDITION OF THE BUSSES?**

SFC travels only with new motor coaches, no more than two years old. All busses are air-conditioned and have restroom facilities.

**HOW MANY PEOPLE WILL BE IN THE ROOMS?**

SFC uses guest occupancy rooms, all with air conditioning, color TV, and many with ocean views or kitchenettes.

**WHAT BENEFITS DOES THE HOTEL OFFER?**

The Plaza Hotel offers an Olympic-size heated swimming pool, restaurant, party deck, pool bar, a tennis court, two basketball courts, and four different drinking establishments—plus a long stretch of Atlantic beach.

**WHAT OTHER ACTIVITIES WILL BE AVAILABLE?**

Students staying with SFC will receive a poolside party, prizes at a belly-flop contest, discounts at local establishments, optional side trips to Walt Disney World, EPCOT, and SeaWorld.

**WHY SHOULD I TRAVEL WITH SFC?**

SFC has experience and stability in offering trips to S1U students. We provide full-time staff to make arrangements and be available to answer your questions. SPC deals with the largest college tour operator to Florida, and both SPC and tour staff will be available throughout your stay in Daytona.

YOU DO GET WHAT YOU PAY FOR—SAVE YOUR MONEY NOW AND WAIT TO SIGN UP WITH SPC FOR SPRING BREAK TRIPS.

Mathematics specialist to lecture in Germany

A mathematics education specialist from SIU-C will be spending three weeks during Oct. and Nov. studying and lecturing in West Germany. Jerry P. Becker, an associate professor in the department of curriculum, instruction, and media, has been invited to spend two weeks at Dortmund University in northern Germany. While at Dortmund, he will work with Professor Witlmann at the Institute for Research in Mathematics Education.

Wittmann is one of Europe's top experts in mathematical education, specializing in children's learning of mathematical concepts - the structure of how children acquire understanding of mathematics concepts.

He will also attend a conference on changes in the teaching of elementary education mathematics skills Nov. 1-6 at Oberwolfach, Germany. He will present a talk on "Problem Solving in Mathematics Using PASCAL With the Apple Computer." He will also lecture on teaching geometry at the secondary school level.

Ghost stories on tap Sunday

Ghosts and goblins will be the order of the day when SIU-C sponsors a Halloween Story Hour Sunday.

Storytellers from Story Enterprises, a speech communication student group, will entertain youngsters during two sessions.

One, beginning at 2 p.m., is for children 5 to 7 years of age. The other, beginning at 3 p.m., is for children 8 to 12 years of age. Both sessions are free and open to the public. They will be held in the Museum Auditorium in Furer Hall.

Parents interested in attending are welcome to accompany their children.

International awareness, peace are goals of U.N. campus group

By Michele Inamas Staff Writer

The United States is in an enviable position to serve as the guardian of peace, justice and equitable distribution of the world's goods and resources, Grayson Gile, chairman of the executive committee of the United Nations Simulation Association of the United States, said.

The United Nations Simulation Association is a student organization on campus which works in close alliance with United Nations Association of the United States of America, UNSA-USA, which is composed of professors, educators, and individuals interested in international affairs.

UNSA will hold a model United Nations simulation tentatively in April on campus. Gile said, and a meeting to help organize the simulation will be held at 7 p.m. Thursday in the Student Center Thirteenth Room. "The U.S. cannot afford the pessimistic attitude concerning the world's population and yet are responsible for 25 percent of the world's gross output and consume 40 percent of the world's natural nonrenewable resources," Gile, a political science major, said.

"Most people in the Third World only want the same opportunities for themselves and their families, the same freedom that many of our forefathers had fought for in the American Revolution," Gile said. "It is my personal opinion that Soviet expansionism could be halted if we would only recognize these inalienable rights."

And in order to recognize these rights, understanding international relations must be promoted.

Presently in the United States, we're counting Soviet expansionism with nuclear armament or expenditures would be more effective if we use this money in promoting international understanding, development and education," Gile said.

UNSA provides an environment where international understanding is promoted. International problems are examined and peaceful settlement is encouraged, according to the organization's constitution presented.

The United Nations simulation "provides a framework where international understanding is promoted and peaceful recourse in conflict resolutions is sought," Gile said.

Gile said that the main goal of the three-day simulation is not to encourage debate and conflict but to encourage and promote international understanding. The simulation is an actual model of the United Nations General Assembly, Gile said. It is made up of four committees:

- The political and security committee, dealing with nuclear disarmament;
- The legal committee, dealing with fundamental human rights, Poland and El Salvador;
- The economic and social committee, which will deal with global negotiations between north and south, problems of trade and aid to these countries, and world hunger;
- Resolutions are being tentatively drawn up by the political affairs committee and the executive committee of UNSA.

Resolution topics include the establishment of a Palestinian homeland and recognition of Palestinian sovereignty, and medical and agricultural development in Third World countries. Gile said. At the simulation, these resolutions will be presented in the General Assembly and will be voted on. About 370 people are expected to participate in the simulation, according to the organization's constitution presented.

STC alumni group to meet

The first annual meeting of the School of Technical Careers Alumni Constituent Society will be held during Homecoming at STC's main campus building. The meeting will begin at 9 a.m. Saturday in Room 214.

Tours of the building will be held during an open house at 9 a.m. The tours will start from the ground floor dental hygiene reception area.

The newly formed alumni group comprises graduates of STC and its forerunner, the Vocational Technical Institute. Three board positions will be filled at the meeting. All STC and VTI alumni who are members of the SIUC Alumni Association are eligible to hold office and vote for board position.

Information about the society is available from Catherine Barnfield-Howell at STC.

GROUP from Page 12

He said, and the simulation should have representatives from about 75 individual nations. In addition, one ambassador and three delegations will be assigned to each member country.

"This will be based upon actual experience and quite honestly, their nation of origin," Gile said. "We're looking for ISNA members now. We're taking membership.

"In the process of representing the country, the students have been assigned to, they are encouraged to work very closely with the indigenous representatives of the country, faculty and resource personnel," Gile said.

"For 17 years, the organization consecutively had a model U.N. simulation," Gile said. "But during the late 1970's, an ethnocentric isolationist attitude came about concerning international affairs."

He said, "Americans began to ask why they should care what happens in the world.

"It's something we find prevalent today. Americans are increasingly becoming aware of the effects of the Soviet Union in the international area," he said.

Gile believes that after the October crisis, the U.S. citizens look to the United Nations as a tool to discredit the United States. Americans feel that the United Nations is nothing but a propaganda machine. I N people have the freedom to stand up and talk and a lot of times Americans don't like to hear what they have to say," Gile said.

"Many times there is a lot of truth in the observations by the members of the Third World concerning American conduct in international countries." he said.

"The interests of multi-national corporations are over the welfare of indigenous population in the Third World countries."

Gile said the last United Nations simulation at the University was spring, 1981.

"Mike Whitten, currently a lawyer, took it upon himself to reactivate the organization," Gile said. "We are in the process of organizing now. We are reactivating the organization.

"The student derives from the simulation values that are directly proportional to the input," Gile said. "You get out of it what you put into it."

BOSTON (AP) — People who smoke cigarettes are more likely than non-smokers to catch the flu, leading to more sick days or increased health costs, according to a study.

The study, conducted on Israeli soldiers, found that the "smoking is a major determinant of morbidity and deaths in epidemic influenza and may contribute substantially to incapacity in outbreaks in populations that smoke heavily."

The research, directed by Dr. Jeremy D. Kark of Hebrew University-Hadassah School of Public Health and Community Medicine in Jerusalem, was published in Thursday's New England Journal of Medicine.

In a separate study in the journal, Boston doctors found that smoking women produce less estrogen. This discovery may explain why smokers go through menopause earlier and seem to be less likely to get breast cancer.

The influenza research was conducted on 216 healthy young military men who were exposed to a new strain of flu in the winter of 1978. Of the 16 smokers, 69 percent caught the flu, compared with 20 percent of the non-smokers.

The study’s flu was also more severe. Half of the smokers who got sick lost work days or required bed rest, compared with 30 percent of the non-smokers.

Moreover, the number of cigarettes smoked seemed to have an effect, with fewer smokers among the non-smokers.

"Considering the enormous annual burden of influenza, we anticipated this," the researchers wrote. "The costs paid in terms of work days lost is often larger than economic considerations alone should stimulate anti-smoking intervention policies in large industrial and service organizations."

The doctors said that the link between smoking and flu might be even stronger than what they measured, since breathing other people's cigarette smoke may have increased the flu rate among the non-smokers.

The study of the relationship between smoking and the female sex hormone estrogen was directed by Dr. Brian MacMahon of the Harvard School of Public Health.

His team discovered that smoking women have one-third less estrogen than usual during one phase of their menstrual cycle. The doctors said this may explain earlier research that found that smoking women go through menopause earlier than non-smokers.

"The most intriguing question raised by these data is whether reduced estrogen levels in smokers are responsible for a possible reduced risk of breast cancer," they wrote.

Los Angeles (AP) — John L. De Lorean, who said two days ago that he had found the cash to save his failing auto company, was arrested Tuesday for wire fraud for a second time in handling the sale of a $20 million cocaine deal.

The 57-year-old former General Motors executive, who had vowed to show up in court later this week, was led to court by FBI agents.

De Lorean, described as a Hitman associate, was accused of conspiring to distribute cocaine and possession of 52 percent in moderate smokers and 57 percent in heavy smokers.

"Considering the enormous annual burden of influenza," they wrote, "particularly during epidemic years, the implications for prevention are striking. The large number of work days lost is often larger than economic considerations alone should stimulate anti-smoking intervention policies in large industrial and service organizations."

Passing game unable to stay aloft
By Dan Devine
Staff Writer

Anybody who watched the Saluki offense fly through the air with the greatest of ease against Drake and Alcorn State would be shocked by the team's current predicament.

The Saluki air game has been ground down lately, plagued by a host of nagging offensive ills. Erratic blocking, fumbles, missed assignments and penalties, to name but a few, have combined to drag down the passing game, which, in the absence of a running game, has been the Salukis' offense.

In the last three weeks, the offense has scored only two touchdowns, and has wasted its time on a endless success on short, directionless drives that have ended everywhere but the endzone.

Inconsistency, said Coach Roy Dempsey, is the root of the problem.

"It's not a disaster," he said. "We just have to put it together."

The Salukis are now 3-4, after starting the year with three quick victories. A 22-3 loss to Tulsa probably knocked SIC out of the Missouri Valley Conference race.

"That last one hurt more than anything," said quarterback Rick Johnson, whose recent slump has been a part of the offensive slide.

Johnson had a horrendous day at Southwest Louisiana in the fifth game of the year when the Saluki troubles began. He played as well as could be expected against powerful Florida State, and then struggled against Tulsa last week.

Inconsistent pass blocking hasn't helped, and the Salukis haven't had a running game to fall back on. But Johnson doesn't deny that he hasn't been the same quarterback as he was a month ago.

"I'm disappointed," he said. "It's not too late. I can still come back."

The Southwest Louisiana game was the low point of the year for Johnson. The Saluki passing attack had sizzled apart in two previous opponents. But against the Ragin Cajuns it all came to an end.

"I started thinking the passing game was invincible," said Johnson. "I took it for granted instead of going out and concentrating. That's why I got stung against Southwest Louisiana."

The Saluki losing streak has shattered a lot of preseason goals, but Johnson sees no way out but to persever.

"We can end up 7-4," he said. "We were 7-4 last year and everyone considered it a good year.

"We just can't quit," he said. "We seniors, we're not going to let these guys give up. We've got a good attitude."

Johnson is nursing a minor shoulder separation on his left arm this week, and hasn't practiced yet this week. Dempsey calls him probable for Saturday's home game against Indiana State.

After four games, Johnson had thrown for more than 1000 yards and had eight touchdown passes and only four interceptions. In the three games since, he has thrown for only 354 yards, while throwing seven interceptions and no touchdown passes.

Johnson had a horrendous day at Southwest Louisiana in the fifth game of the year when the Saluki troubles began. He played as well as could be expected against powerful Florida State, and then struggled against Tulsa last week.

Inconsistent pass blocking hasn't helped, and the Salukis haven't had a running game to fall back on, but Johnson doesn't deny that he hasn't been the same quarterback as he was a month ago.

"I'm disappointed," he said. "It's not too late. I can still come back."

The Southwest Louisiana game was the low point of the year for Johnson. The Saluki passing attack had sizzled apart in two previous opponents. But against the Ragin Cajuns it all came to an end.

"I started thinking the passing game was invincible," said Johnson. "I took it for granted instead of going out and concentrating. That's why I got stung against Southwest Louisiana."

The Saluki losing streak has shattered a lot of preseason goals, but Johnson sees no way out but to persevere.

"We can end up 7-4," he said. "We were 7-4 last year and everyone considered it a good year.

"We just can't quit," he said. "We seniors, we're not going to let these guys give up. We've got a good attitude."

Johnson is nursing a minor shoulder separation on his left arm this week, and hasn't practiced yet this week. Dempsey calls him probable for Saturday's home game against Indiana State.

After four games, Johnson had thrown for more than 1000 yards and had eight touchdown passes and only four interceptions. In the three games since, he has thrown for only 354 yards, while throwing seven interceptions and no touchdown passes.
Hart returns to accept award
Jim Hart, former Saluki football star and now a quarterback with the St. Louis Cardinals, will accept an Alumni Achievement Award during Homecoming festivities Saturday.
Hart still holds 13 of the 15 passing records he set during his 1963-1965 Saluki playing days, including career, season and game records in attempts, completions, passing yardage and most touchdowns.

Volleyball team enters top twenty
The volleyball team moved into the national Top Twenty Wednesday as it was ranked 19th in the NCAA college poll. On Friday, the 16-8 Salukis will meet Texas A&M, which moved into a tie for 15th after being 18th last week. On Saturday, the Salukis meet Texas, which dropped from 16th to 20th.
This is the first time the Salukis have been ranked in the Top Twenty this season.

Swimmer receives national award
Roger Von Jouranne, a four-year swimming star for the Salukis, has been named to the 20-member United States Swimming coaches team. The swimmers are picked on the basis of performances this year at the U.S. Short Course Championships, held in April at Gainesville, Fla., the World Championship Trials in July at Mission Veijo, Calif., and the U.S. Long Course Championships in Indianapolis in August.
Von Jouranne, a graduate student in thermal and environmental engineering, was chosen for his performance in the 310 Individual Medley.

Homecoming game to be televised
A delayed telecast of SIU's Homecoming game Saturday against Indiana State will begin a series of eight Saluki sports events to be televised this year. The game will be seen at 10-30 p.m. Saturday on WLSL-TV (Channel 3 in Harrisburg), and on several St. Louis cable television channels, according to the Phoenix VI Corp. of St. Louis.
Former Saluki punter Tom Striegel will be a member of the announcing team.
NFL speedster anything but idle

Staff Writer

As the NFL player strike rolls past its one-month anniversary, over 1,000 professional athletes find themselves still unemployed and still with little hope of resolving the issues that have kept management and the NFL Players Association miles apart in arid negotiations.

One of those athletes is a fleet-footed, 6-4, 175-pound, former SUU wide receiver named Kevin House. House was becoming one of the most formidable wide receivers in the NFL before the strike took effect. Now his action is confined to "renegade" 11-on-11 games, and wandering around the Tampa Bay player representative's offices with the rest of his teammates, waiting for daily conferences with Buccaneers player representative Leon Seimoff.

Like other NFL clubs, the Bucs, who finished with a 7-9 record last year in the NFC Central Division, are keeping in shape through organized exercises, waiting to be called up from the inactive ranks.

"We have control workouts," said House. "We get together every other day." The renegade season that the NFLPA has put together involves "all-star" teams from each of the league's six divisions competing against each other in front of one of the division's team's home crowd. Players, however, are not necessarily confined to representing the division that they compete in. House, for instance, labored for the NFC East All Stars in the first of these exhibition games last Sunday in JFK Stadium in Washington, D.C. If the Washington crowd was any indication of the NFL's fan support after a month of negotiating stalemates, then the NFL is in serious trouble. House, however, doesn't believe the few thousand scattered fans that attended the first game will be indicative of the fan support the teams will receive once the strike is resolved.

"They'll bounce right back," said Tampa Bay's 1980 Rookie of the Year. "I played in the game and I thought it was a very good game. They sold 12,000 tickets, but I don't think 12,000 showed up. This weekend we're supposed to play in Canada, and I think the Canadians will turn out.

"I'll bounce right back," said House. "We have a full schedule of 20 games planned." With federal mediator Sam Kagel scheduled to call for a two-three day cooling-off period, the NFL, as this weekend will have last five full weekends of play. The primary standstill involves the owner's offering of a five-year, $1 billion dollar contract, based on TV revenues, which would be paid to the players on a longevity-in-the-league basis.

The players have asked for the same figure in a four-year package, based on seniority. The owners' proposals, by Jack Donlan, the management council's executive director, have repeatedly rejected the union's demand for the wage scale payoffs.

House, however, feels that other issues are at stake.

"The issues are non-economic," he said. "Medical rights and benefits are the kind of things being discussed." Strike talks had been circulating around the league ever since it became apparent that the union's collective bargaining agreement, which expired on July 15, would not be renewed by the owner's House, like the rest of his NFL counterparts, knew the inevitable strike was just over the horizon as the teams entered training camps this summer.

"I figured it was coming," House said. "I'm surprised it's got this far, though. When pre-season opened I could see it coming. It was very evident package, to be distributed pro-rated." House is the inevitable approach of the strike, NFL players adopted the slogan of Polish patriots suffering under a martial law regime. "Solidarity became their motto and perhaps they point the players began shaking hands with members of the opposite team before the games began. This unprecedented approach united owners, but served to strengthen the mood of the players. When the strike was called Sept. 21, union solidarity seemed impeccable broken only by a few outspoken critics of the movement, most notably veteran Denver quarterback Craig Morton. With the season now dragging into its first full month, House does not feel that player solidarity has diminished in the slightest.

"I think solidarity is increasing," he said. "You take a Morton from every team and that makes 28 players. We've still got 1,500 players remaining solid." Though House's last season at SUU was in 1972, his performances on the field most particularly as quarterback for the "Chupiwich" Williams primary connection, ensured the name would survive in the Saluki record books long after his graduation House.

Kevin House.

The men's tennis team, missing a good part of its line-up, dropped a 4-3 match to the University of Evansville Wednesday at the Arena Courts. Per Wadmark, who has been playing well at No. 1 singles, is suffering from the flu and was unable to play. David Filer was unavailable to play at an afternoon class. Gabriel Cach, who injured his knee during practice this week, played at singles, but did not play at doubles.

"We played tough, but we were badly discouraged," said Saluki coach LeFevere.

Scott Kreuger remains a consistent winner for the Saluki Kreuger, who picked up the only singles victory last weekend won his match at No. 4 singles over attorney Jeffrey Toll, 6-3, 6-0. Other winners at singles were Rolando Oligano at No. 3 singles over Mike Hall, 6-1, 6-0, and Scott Kreuger at No. 1 singles, 6-0, 6-0.
