Recent trends indicate growth in area business

Pacific Sunwear coming to Mall

University Mall will be adding a Pacific Sunwear store to its list of new businesses, part of an apparent growth trend in Carbondale.

Mall Manager Debbie Tindall finalized an agreement with Pacific Sunwear on Friday. The store is scheduled to open by Jan. 1, 2002. The California-based store will be 3,800 square feet, located adjacent to The Buckle. Tindall described the store's stock as a cross between The Buckle and Gadzooks.

Construction will begin within one week.

The mall's business is picking up, according to Tindall, who said Pacific Sunwear's agreement is evidence that the demise effect promised with the Gap's placement is starting to take place.

"Truly what we said would happen is starting to happen," Tindall said.

The Gap's doors will be open sooner than expected. Construction is about one week ahead of schedule, putting the opening date at Nov. 15 instead of Nov. 21.

And negotiations for a new Kerasotes theater to be built in the mall are ongoing, Tindall said. All parties are working on it, but the company has not signed an agreement. She said there are "several details to be ironed out" before the deal progresses.

The holiday season will also bring about 15 temporary shops to the mall, which will be opening within three to four weeks, Tindall said. Other mall changes include remodeling for GNC and Mary's Botanica. Both will be larger and Mary's Botanica will expand its services to include facials and more spa-related services. It is unclear when those projects will be complete, but Tindall said they make Carbondale's future look brighter.

"Things are turning around in a positive way," Tindall said.

Carbondale will also be seeing two new restaurants, a Chili's and a Show Me's.

Jenny Pruitt, a general manager of Show Me's in Fairview Heights, said the Carbondale restaurant will be complete by Thanksgiving. The Hooters-style fast food includes wings, seafood, sandwiches and appetizers, complete with pink shorts and tank tops worn by waitresses. Pruitt said Carbondale, as a college town, is a good location to begin a franchise. The new restaurant will be located along Route 13 across from Sonic.

A Chili's Bar & Grill has been in the works for Carbondale for five years, but real estate delays have left the date and location questionable. The building will be about 4,300 square feet with about 300 seats and will employ 15 to 20 people.

BREATHE EASY: Mike McGough, a senior from Marissa, gets his lungs tested with the help of respiratory therapy student Rashheed Mwallif of Peoria. Respiratory therapy students assisted volunteers in lung function testing Tuesday in the Applied Sciences and Arts Building. See related story, page 6.

Jim Ryan coming to discuss terrorism, meet with city officials

Attorney General Jim Ryan is heeding the state's investigative authority with legislation aimed at keeping the home front safe from terrorism. He will be in Carbondale Thursday to familiarize the mayor and police chief with his plan.

Ryan's plan will build up the state's processing and investigating muscle, making it easier for Illinois law enforcement officials to attain search warrants and tougher penalties for terrorism-related incidents.

"We are all aware that the federal government is the primary player in this deadly battle, but state and local police agencies and prosecutors' offices can and should help," Ryan said in a statement.

Correction! A headline in Tuesday's paper should have read "Shots fired on North Wall Street". The DAILY EGYPTIAN regrets the error.
Learn, Lead, Care. Study Nursing at Loyola

In just 13 months, you can earn a Bachelor of Science degree in nursing at Loyola University Chicago’s distinguished Nelhi School of Nursing. If you already have your B.A. or B.S. degree and you’re in search of a meaningful career, consider our accelerated B.S.N. degree program that trains skilled professionals and develops “persons for others.” As an accelerated student, you also have the unique opportunity to take courses in the University’s School of Music or the School of Theology.

Anthrax at offsite White House facility

WASHINGTON — Officials announced Tuesday that an offsite mail site that handles mail for the White House tested positive for anthrax, but no anthrax has been found at the White House.

All employees at the facilities and at the White House are being tested for anthrax.

A two-site positive test Tuesday from a “sifter” — a machine that opens envelopes at the remote mail facility which is a military site several miles away from the White House.

Secretly stepped up after the Sept. 11 attack, which resulted in the discovery of the recent anthrax discoveries.

The contaminated piece of mail has not been located.

Anthrax causes two D.C. postal deaths

WASHINGTON — It was confirmed Tuesday that two postal workers who died this week had anthrax. The Trenton facility where they worked tested positive for the deadly bacteria.

Hundreds flee S. Africa attacks

JOHANNESBURG, South Africa — Hundreds of Johannesburg residents sought shelter in a Johannesburg police station Tuesday after their homes were attacked in a xenophobic attack.

South African residents of Soweto, just west of Johannesburg, allegedly attacked the foreigners, accusing them of crimes and taking scarce jobs. The attacks began Sunday, and 24 people have been arrested.

Israel rejects U.S. request

JERUSALEM — Israel has rejected a request from the United States for the withdrawal of Israeli troops from six towns in the West Bank.

Israeli Prime Minister Ariel Sharon reiterated a statement Tuesday saying the United States and Cabinet Minister Victor Zamir had “crossed a red line.”

IRA begins disarming

BELFAST, Northern Ireland — The Irish Republican Army has issued a statement saying it is starting to disarm.

The announcement came after the reunion of Sinn Fein party urged them to make the groundbreaking move and disarm. The statement said: "This unprecedented move is in the service peace process.”

Sinn Fein’s move is the IRA has not done enough to disarm, but militarists and republican parties say the group has cooperated with the international body on disarming.

JACKSON COUNTY

A semi-trailer and tractor overturned Tuesday at Route 1 and Towner Creek Road in Murphysboro, spilling about 24 tons of asphalt onto the north side of Towner Creek Road. Jackson County Sheriff’s deputies responded to the report, and an ambulance transported the driver, Paul Katsch, to St. Joseph’s Hospital in Murphysboro, where he was treated for head and abdominal injuries.

Traffic was detoured around the accident for four hours. No citations were issued.

Reader who spots an error in a news article should contact the Daily Egyptian Accuracy Desk at 536-3311, ext. 252.

The Daily Egyptian, the student-run newspaper of SIUC, is committed to being a trusted source of news, information, and public discourse, while helping students understand the issues affecting their lives.
**The DAILY EGYPTIAN remembers September 11th**

Shock, confusion, denial: the emotions that consumed Americans throughout the hours of September 11th and in the following days. Pain, compassion, patriotism: the emotions that now consume Americans and people around the globe as we struggle to put the pieces back together and heal the wounds caused by the attacks on our country.

In the six weeks since the attacks occurred, we have heard stories and seen pictures of the innocent people who lost their lives. The victims included passengers, flight attendants, police, rescue workers, and the World Trade Center and Pentagon employees. We have not seen or heard all of these victims, however, nor have we seen or heard all of the victims of all the attacks. Those people involved after the attacks, those who unsung heroes, have also done much to help those affected by the attacks.

The DAILY EGYPTIAN has chosen this day to remember the children by donating 20% of today's advertising revenue to the "September 11th Children's Foundation." This fund, set up by the Department of Special Education with a special donation of $250,000 from the Harold Children's Foundation, has been established to "promote the long-term emotional, mental, and physical health and well-being of the children who lost family members in the tragedy. The services provided to them will include, but are not limited to, trauma, bereavement, and counseling, ongoing mental health support, and tutoring."

Thank you for your help in supporting such a worthy cause.

Our Word

First Amendment rights vs. family friendly: a delicate balance

The Carbondale City Council decided last week that there was no need to change its ordinances regarding pornography. Pornography's always a sticky issue. Many people want a family-suitable environment for their children to grow up in, yet at the same time want their First Amendment rights protected.

This is where it is up to the city's public officials to make a proper balance. The Carbondale City Council has done just that. When Makanda resident Kara Dunkel presented the council her petition of more than 300 signatures, the council fairly reviewed her case and in turn, formed a sound solution: to enforce ordinances already in place that deals with adult-oriented activities.

The ordinances provide protection of both our children and our rights. Ordinances examining public indecency and adult entertainment establishments are enforced. There are no adult entertainment clubs in the immediate area or have there been any recent acts of public indecency. The city has taken these concerns seriously.

Another ordinance ensures that adult-oriented merchandise is kept out of view of children and businesses with adult material are not to be located near schools, parks, playgrounds and day-care centers. Currently, no Carbondale business has 50 percent or more of its merchandise devoted to adult materials. The city of Carbondale should be commended for protecting our children and families.

The concerns of Ms. Dunkel and others are important and their cause is admirable. The DAILY EGYPTIAN takes no position concerning the merits of pornography as entertainment or art, nor do we take any one side over the other. We understand that we do live in a free society where people can choose to view adult-oriented material. Those who view differently have the right in a free society to voice their opinion. Ultimately, the choice is left up to the individual as expressed in the principles of our constitution.

We support and encourage the effort by parents to shield their children from material they deem as inappropriate. Keep your children away from stores that sell adult products. Keep your children close to you in stores so they don’t wander into areas that they don’t need to be. This does not have to be a win-lose situation.

When children are involved, we should all try to find common ground. The debate concerning pornography as entertainment or public nuisance will not be solved by the City Council. We can continue to make our city safe, pleasant and free for every resident.

When did blacks become separatist or racist?

DEAR EDITOR:

This is the DAILY EDITION's opinion piece for this day. I strongly believe that this issue is very important and needs to be addressed. I have heard some people say that blacks are separatist or racist. This is not true, and I think it is important to clarify this belief.

In my opinion, blacks are not separatist or racist. I believe that blacks are just like any other group of people. They have their own culture, traditions, and beliefs. However, they also respect and value the cultures of other groups.

There are many blacks who are active in their communities and work hard to make a positive impact. For example, there are many blacks who are involved in community service and volunteer work. They work hard to help their communities and make a difference.

I believe that it is unfair to stereotype blacks as separatist or racist. This is a common misconception that needs to be addressed. I hope that this article helps to clarify this belief and promotes a more positive view of blacks.

Sincerely,

[Your Name]
Linguistics professor claims Provost used unethical conduct

Alexa Aguilar  
DAILY EGYPTIAN

A campus judicial review board is currently reviewing a grievance filed against SIUC's vice chancellor for academic affairs and provost, after Chancellor Walter Wendlter denied last month the board's request to form an independent panel to look at the charges.

The board will review the grievance in November, Roland Person, chair of the Judicial Review Board, said that though Wendlter denied the JRB's request, there is still validity to the charge.

Linguistics professor Joan Friedenberg filed the unethical conduct charge against Provost Margaret Winters claiming Winters lied to her about a visiting psychologist's purpose.

Robinson was identified as a "consultor" named in internal memos sent by Winters and Linguistics Chair Glenn Gilbert. Friedenberg filed a lawsuit against Robinson for breach of confidentiality. In her response to the lawsuit, Robinson said she was brought to SIUC as a "management consultant" and her sole purpose was to provide a report to the University.

Friedenberg filed an internal grievance against Winters for "dishonesty," saying that Winters misled the linguistics faculty as to Robinson's true purpose.

The judicial review board then forwarded the grievance to the chancellor because it believed "that the problems and organizational issues alleged or identified in the Linguistics Department are of such duration and complexity that they are beyond the purview and ability of the JRB to resolve."

Wendlter denied the request, and in a memo to Roland Person, chair of the Judicial Review Board, he said the request was "ill-advised and not in the best interest of the SIUC community."

He added that Winters "made a good faith effort to assist a department with organizational and management issues ... and Wendiier's lawsuit against Robinson is still pending."

Campus breathes on respiratory students

Students promote their profession during National Respiratory Awareness Week

Mike Pettit  
DAILY EGYPTIAN

"Breathe in, breathe out. Breathe in, breathe out."

This may seem like a simple procedure, but SIUC respiratory students want to recognize those who help make it happen when a problem occurs.

Respiratory therapists are standing out and expanding their careers, with lots of opportunities to work extensively in cystic fibrosis patient care, said Darrell Bryant, manager of the respiratory care department at Carbondale Memorial.

"It's a symbolic week for everyone to reflect on their health, the last one regarding smoking," Bryant said.

"People don't think of the medical professionals as nurses when they test patients," Pearson said. "They're mistaken for nurses when they test patients, but respiratory therapists make an effort to promote their future profession and breathing capacity, finding possible obstructions between certain breathing problems, like asthma and bronchitis." Pearson said.

The testing only lasted a few minutes while patients took a deep breath to blow through a tube and have their air flow measured electronically.

"The accuracy is unquestionable," Pearson said.

When the testing showed a deficiency in breathing capacity, or some other problem of the lungs, the student therapists asked the patients a number of questions relating to their health, the last one regarding smoking.

"They're just trying to help," Pearson said, noting that smoke obstructs the lungs.

"It's not in the best interest of the SJUC to resolve," Pearson said.

Respiratory therapy education at SIUC comes in an associate's degree package, with an internship opportunity in the final semester of the program.

Minnie Minor, a junior in respiratory therapy from Chicago, is one of only 15 students in the program, but she's getting the necessary experience.

Minor is doing her clinical study at the Memorial Hospital of Carbondale in respiratory therapy, which entails shadowing a therapist and giving patients breathing treatments.

"This week, respiratory staff at the hospital has been recognized through lunches and in-services conducted by employees," said Darrell Bryant, manager of the respiratory care department at Carbondale Memorial.

"It's a symbolic week for everyone to reflect on what we do," Bryant said.

Local artists make their debut

JANE HUI
DAILY EGYPTIAN

Artistic expressions from the cast and crew merge in Carbondale Tuesday.

Final preparations for Arts in Celebration will wrap up in time for six visiting artists to showcase their art to the public from Oct. 30 to Nov. 17 at the Associated Artists Gallery, 715 S. University Ave.

According to the gallery's charter members, Sadako Clarke and Lois Lembcke, this event has launched the careers of local artists.

"This inspired a lot of clones," said Lembcke.

Arts in Celebration, which takes place every two years, is just one event that occurs almost as a result of Associated Artists Gallery. Promoting art throughout the community is what the gallery was founded upon, according to Clarke, a charter member since 1983.

Traditional Japanese artwork from Sumiko Habara, Clarke's sister, will be highlighted at the gallery. Habara's form of art is called "chigirie," which requires rice paper, natural dyes and patience.

Chigirie is a long and intricate process that involves the making of rice paper, dying it and tracing an image. Colors are extracted from natural resources such as wood shims and separate sheets of rice paper are torn and pasted. Even the paste used to glue the pieces is made from wheat flour.

Seasoned artists often combine the glue to prevent the rice paper from turning yellow. Habara's paper art has received international acclaim from Canada, Australia, Japan, United States and Korea.

"She started [chigirie] as a hobby while teaching school, then when she retired she learned from other teachers," Clarke said.

However, Clarke said other artists who reside in Maryland, Japan, will not attend for health reasons and airline safety concerns.

A consummate artist in her own right, Clarke specializes in sumi painting, Japan's traditional art of brush and ink. Some of her paintings have been printed in cards and postcards.

Lembcke, a ceramist whose tea pots are among the gallery's display, is hopeful to see an interest in art among the younger generation.

"I've been here a number of years supporting this gallery for young artists," Lembcke said.

Lembcke taught high school art after graduating from the Art Institute of Chicago with a degree in art education in 1951. After discovering her passion for ceramics, she enrolled at SIUC in the 1980s.

Lembcke and Clarke both believe that art education plays a vital role in the community.

"I enjoy teaching high school and making the transition to a professional ceramist," Lembcke said. "I still seek knowledge and input from those around me."

"I don't think people ever quit learning," Clarke said. "I learn from people around me."

United We Stand

Sadao Clarke, a Sumi painter, hangs one of her pieces at the Associated Art Gallery on S. University Ave. in Carbondale. The artwork will be showing Oct. 30 through Nov. 17 with an opening reception on Nov. 2 from 6-8 p.m.
Severe storms strike area

No serious damage or injuries reported

MARK LAMBDRO

Some students and faculty across campus for over Tuesday afternoon, when the University Emergency Services sent out the call tovoid winds.

The call was placed when a severe thunderstorm warning was issued for Jackson County and several other surrounding counties, by the National Weather Service in Paducah, Ky.

A list of severe storms rolled through the area and struck points north of Carbondale, The Illinois State Police in Du Quoin did not have any reports of damage in the area affected by the warnings. Warnings were also issued for Franklin, Perry and Williamson counties in Southern Illinois.

A warning is issued by the Weather Service when a thunderstorm with winds in excess of 57 miles per hour or hail three-quarters of an inch in diameter or larger is eminent.

The Illinois State Police in Du Quoin did not seek shelter. University Emergency Services sent out the warning for Monday afternoon, when the Franklin, Perry and Williamson counties in Southern Illinois were threatened.

A severe thunderstorm warning was issued for Jackson County and several other surrounding counties, by the National Weather Service in Paducah, Ky.

A stormy, wet Tuesday was caused by a strong cold front that is advancing through the Midwest. The Storm Prediction Center in Norman, Okla., issued a severe thunderstorm watch for parts of Southern Illinois Tuesday, in advance of the strong front.

The prediction center's job is to monitor weather across the United States and give advanced warning of possible severe weather outbreaks.

The center also posts outlooks for the next day that give the probability for severe weather. On Tuesday, Southern Illinois was in a slight risk area. A slight risk means that severe weather is a possibility but not likely.

The center also plots areas of moderate and high risk.

The same atmospheric conditions that were present Tuesday will be present today, according to the Prediction Center. Tuesday night the center had Southern Illinois in a slight to moderate risk of severe weather outlook for today.

Pennsylvania man sends e-mail of peace, gets reply from Saddam

Iraqi president sends personal condolences

Christopher J. Love software engineer, Asha, Pa.

"Who can be absolutely sure? It's an e-mail. Whoever wrote it put emotions into it. It wasn't a canned letter. Whoever wrote it was trying to be sincere."

He said he connected the Iraqi News Agency, which he found by using an Internet search engine, at the end of September to find out whether it would forward his e-mail. He said it would, and a few days later he saw what he dubbed his "piece of prose.

"I said I was very upset, grief-stricken from what (had) happened on Sept. 11," recalled Love. "I said maybe it was an opportunity for Iraq and the United States to settle their differences.

Love, a married father of two teenagers, wrote Hussein a heartfelt letter:

"How much would it mean to this world right now if you were to put aside your differences and side with the world, not just the U.S., and proclaim peace, gets reply from Saddam

Christopher J. Love software engineer, Asha, Pa.

Martial arts: a primer on kung fu, karate, and more

ERIN CHAN
KINGSTON RUGGER NEWSPAPERS

(KRT) - You know the Karate Kid can kick. So can Jackie Chan. And you can, too, if you know where to start.

More than 400 different styles of martial arts systems exist, according to Philip Lewis, director of the United States Martial Arts Association. That makes it as easy to distinguish karate from jujitsu as it is to distinguish bricks with a split kick. (For the record, 'karate' is a Japanese term for empty hand, while 'jujitsu' is a Japanese term for a gentle way.)

Yet there are many reasons why more than 25 million Americans find martial arts enticing. Some styles emphasize self-defense, while others focus on health. There's stress relief. For one. And increased flexibility through art. Some styles of martial art. There's stress from Asia, and not all emphasize kicking and punching.

Arias like judo are characterized by grappling and throwing techniques. Other styles, such as karate, contain yet distinct. Unique enough that Eric Ohlenkamp, a sixth-degree black belt and professor at the University of Illinois, can participate in some type of martial art. His stress relief. For one. And increased flexibility through art. Some styles of martial art. There's stress from Asia, and not all emphasize kicking and punching.

Karate

History. In the 1600s, the Japanese traveled south and encountered the Chinese and their martial arts. The Chinese term describing this practice of martial art is 'kung fu'.

Unlike karate and its more westernized version, such as karate, kung fu emphasizes strength, speed, and power. The eliciting techniques developed for kicks, but also for punches. While karate places more emphasis on kicks, kung fu places more emphasis on punches.

"The Karate Kid" is a classic example of the importance of martial arts in modern society. The film, released in 1984, follows a young boy who uses his newfound martial arts skills to protect himself and his family. The film's success helped to bring martial arts to mainstream America.

Karate

History. Modern karate developed in the 1950s out of meetings encouraged by the South Korean government, which sought to unify the nation's various kowans, or martial arts schools. The country's liberation from Japan 10 years earlier spawned a resurgence of interest in karate, which Japan had suppressed during their 36-year occupation.

Techniques. Most kicks use the ball, instep, and outer edges of the foot. Front kicks, side kicks, and roundhouse kicks are performed by running and leaping into the air, using specified kicking techniques. These kicks, as well as punches, are used to demonstrate skill, speed and power. The techniques of kung fu place little emphasis on kicks. But there's a brief look at the most popular ones.

Kung fu

History. Modern kung fu emerged in 1955 out of meetings encouraged by the South Korean government, which sought to unify the nation's various kowans, or martial arts schools. Scientific journal details how anthrax gets into human cells and kills them

ROBERT S. BOYD
CHICAGO TIMES

CHICAGO (KRT) -- Should you be caught in a train car or shopping mall when a terrorist unleashes a biological or chemical weapon, a gas mask could indeed save your life. But, it's assuming you carry a high-quality mask everywhere you go and have on a mask before an attack that, in all likelihood, would come without warning. It's assuming you've been trained to wear the mask correctly; that it fits perfectly and has the right filters to screen out the agent being used.

In short, experts say, a mask could work, but chances are it won't. The same goes for protective suits, air and water filters and other devices people are buying in an attempt to protect themselves from possible biochemical attacks.

Public safety officials don't recommend that anyone buy any gadget but lots of people aren't listening. Chicago's Army-Navy Surplus, like many stores around the county, has been busy in the past few weeks. The line of protective clothing, anti-chemical clothing and gas masks since Sept. 11, manager Robert Finstein said.

"People come in and say, 'We don't guarantee anything,'" Finstein said. "None of us ever used a gas mask, never had any experience with them. The gas mask is only as good as the filter you have and the filter you will have.

Filters are the key to gas masks, biohazard suit and air and water filters. They use physical barriers such as paper to separate particles as small as microbes or viruses, and absorbents such as carbon to trap chemicals.

The problem is, no single filter works perfectly for every agent. Gas tank manufacturers MSA, which equips police, fire and military agencies, makes a variety of filters for the many, many agents.

Good gas masks cost $130 and up, and generally aren't available at the local drugstore. But a mask they don't store: Any gaps between the face and mask will allow contaminated air to get through. Professionals who work in the military and in large gas companies go one step further and carry their own oxygen.

I would be lying if I didn't say I think I would be prepared now if I was John Skaryak of Scott Health and Safety, which makes masks for firefighters.

He said a mask alone won't suffice for agents such as nerve gas, which is absorbed through the skin. To be fully secure, one would also need a protective suit. Some are made of carbon-fiber fabric, and the most sophisticated are completely sealed, with battery-powered ventilation and breathing systems.

Of course, masks and biohazard suits work only when they're worn, and therein lies the trouble for the average person.

"With bioterrorism, you can go a few days before you know you're affected," said Dr. John Lumpke, director of the Illinois Department of Public Health. "By the time you put on the mask it would be too late, unless you want to spend your whole life in a gas mask, which we don't recommend."

Air filters are a passive form of protection, but they're even more problematic. Though some are designed to screen out bacteria, they require a strong air current - much stronger than the average heating and air-conditioning system generates - to trap the microbes.

Jodanka Jarcevic, an environmental safety consultant, said the best air filters are used in biological laboratories that work with contaminated air. That makes sense. Even the most sophisticated, air filters make you constantly aware that you're breathing high levels of chemicals.

Hospitals work with negative air pressure, with air locks and negative pressure systems to keep air flow out. And even then, science work in sealed biohazard rooms.

"These conditions can't be replicated in a home or office," Jarcevic said. "When you open doors and windows and cracks allow air to seep inside."

"I can't imagine how you'd design a high-rise building to be equivalent to a biological debris facility," she said. Sears Tower officials are looking at ways to protect the skyscraper from chemical and biological attack, but a spokesman said discussions concern securing the ventilation system, not installing new filters.

Water filters also are drawing some concern, though authorities say the complexities of containing drinking water make such an attack unlikely. Harmful agents would need to be diluted in large volumes, and municipal filtration systems remove contaminants and kill the bugs that can hurt people.

If something were to get through, some consumer water filters can screen out microbes that live in stream or lake. However, filter companies don't claim that their products can remove everything.

Experts say people should prepare for a biochemical attack the same way they would for any catastrophe. Keep a well-stocked bottle of boiled water and canned food on hand, get a battery-powered radio and flashlight and be sure to have sleeping bags and other necessities.

"Anytime there is that is probably a waste of money, they say."
I from the eastern United States. Abt professor in the college of physical State; was attributed to Jack Horner embryo in a dinosaur egg that was discovered back in 1976. Originally, the first dinosaur embryo discovered in the United States was attributed to Jack Horner in 1979, said Dale Russell, a visiting professor in the college of physical and mathematical sciences and Lamb's adviser. "What's new about this one is that it's the first dinosaur embryo from the eastern United States. A lot of the well-known, well-publicized embryos are from Montana and Southern Alberta," said Lamb. "These high school students in Selena, Ala., first discovered the dinosaur egg, which is thought to be 71 million years old. They were on a 30-mile bike ride near the rocky gorge where the egg was simply sitting on a rock pedestal, already exposed. One of the students decided to take it to a paleontologist at Auburn University. "The egg wasn't taken seriously," said Lamb. "There wasn't a lot out in the literature at that time about dinosaur eggs." However, the paleontologist did try to X-ray the egg to see if he could determine its contents. Unfortunately, the image turned out to be nothing but a blank. And as a result, the egg sat in a drawer in a museum until Lamb requested it for his research. Lamb wanted to study the microstructure of the eggshell, as this often reveals some clue as to the dinosaur's species. He used a fine-tipped probe and found an area where he could see the egg's contents ring clearly. Immediately upon placing the egg under the microscope, he found bone structures. Intrigued, Lamb decided he had to have a CAT scan done on the egg. Meanwhile, Lamb has been staying in contact with one of the students who had found the egg in 1976. Now an immunologist at the Children's Hospital in Birmingham, the student offered to let Lamb use the CAT scanner at the hospital if he was willing to make the trip. Lamb and the egg made a 30-mile bike ride back to Alabama where the mystery first began. After about 50 hours visible; if you look at the CAT scan, there's a lot that hasn't yet to say," said Lamb. "The implications of having the dinosaur embryo are far-reaching. Lamb explained that the embryo would, in essence, be the most complete dinosaur skeleton in the United States. "Dinosaur skulls come apart when they die," Lamb said. "Because this embryo was contained within that egg, decomposition very quickly took place in that egg so that the bacteria very quickly died. As a result, the egg is well-preserved that Lamb and other scientists are able to easily analyze the organic contents of the egg. "You can actually say something about the mother's diet from the egg itself," said Lamb. The location of the egg also says something interesting about dinosaur behavior, Lamb added. "It had to be in a very near-shore area, otherwise it would have become saturated and gone to the bottom." New formation has been used in paleontology before, but that has been the greatest extent of egg research in the field. Lamb hopes that this discovery will point the field of paleontology in a new direction. "It's neat that we're finally getting to the point in paleontology that we're asking questions that require using these new techniques," he said. "I think that we're really in the next 10 years, going to see more technology being used." Russell shared Lamb's enthusiasm for the future of paleontology and NCSU's role in that future. "It's [Lamb's] research that's going to get us into the 21st century work going on here and that we have a credible program of dinosaur research," he said. Already, Russell said, "We have a small group of excellent graduate students who are already doing work in the area." After Lamb finishes his research on the egg, it will be placed on display at the N.C. Museum of Natural Sciences before being returned to the Auburn University Natural History Learning Center.
Advice for vegetarians’ battle with ‘thunderstorms’

ALINE McKINLEY

The Dallas Morning News

DALLAS (KRL) — When I was in college, I worked in a laboratory with a vegetarian graduate student.

As lunch, he was quietly enjoying his meal, a co-worker often would wave a ham burger across his face, saying, “Mom, are you sure you don’t want some?”

I would just say, “No, thank you,” and go on eating.

After a while, this co-worker finally exploded: “Why don’t you ever get mad at me? I’m just sitting here eating. Vegetarians that author Carol J. Adams has "Mmmmm, meat!"

I answered every question, I was very nice. I took every opportunity to talk to people why this was a great idea, getting people didn’t get it, and I encountered that’s was "I get it! Let’s eat and enjoy my meal."

Finally, she decided that her mere presence in the lab was making some people uncomfortable because it forced them to confront their own eating habits. They were "worse than a part of them know’s you’re right. I see things. It’s "If I’m really hungry, I’m going to eat whatever I want."

She never saw him coming. She was going to wait until all sorts of silly vegetarians can meet and negotiate soft answers from the police, but the attacker has yet to be caught.

"We’re always encouraged when people offer to help or to solve a crime," said Glenn Johnson, public information officer for the Pullman Police Department in the Sept. 26 issue of the Daily Evergreen.

"In this case, we have a few tips from people who have come down to the station and we appreciate that," said Johnson.

The most recent tip was filed on Oct. 12, and the police and the victim remained hopeful that the suspect will be found.

COACHES
Continued from page 20

pumpkin, which has to be squeezed around pro-
gressing SIU daily practices as well as increas-
ing concerns such as receiving and dealing with acade-
mic, travel and public relations requests.

Coaches typically begin putting in the office at about 8 or 9 in the morning, and the stuff starts popping in. By 10:30 after the meeting, it's more filmwork and individual meetings with players.

Each coach is responsible for the particular aspects of the game that he coaches while the head coaches are responsible for the overall coaching of the unit. A strong point is that the coaches are very well-organized.

"A lot of it is just diagram," Said. "How much do you want to watch something over and over and over again to find a weakness or how they're going to run a certain route?"

After the coaches practice on the way, the staff meets in the evening. It's time for more film.

When we get done with practice Tuesday, everybody just goes some distance or a sand-
wich or whatever we have in the box and we watch all of practice on video and just go right on, like we do on a game," Kill said.

The process is similar on Wednesday, but by late in the week, the breakdown purely finally slows. Practices are less grueling on Thursdays and Fridays, as the focus shifts toward the players becoming mentally tighter. Friday, video quizzes are given to players.

"Each coach will have a question of what their preferred assignment," Kill said. "Also to tell who's doing the good coaching, and who's not because, if they're doing a good job the kids will just lose the coaches do.

Thursday nights and Fridays - evenings are time for game nights. We catch the early games and other the 'regarded aspects of their lives before the staff attends to some kids on Friday afternoons.

But there are occasions when the hard work and stress are needed, complete with the scripting done of plays for the coaches to watch. The most popular was "I always say the guy in the barn by Thursday," Kill said. "We can't do anything else."

The reality behind all the emotion is that ultimately, the quality of the players almost always decides the outcome of the game. The SIU coaching staff works on game planning first and foremost in their 49-27 defeat.

"Most of the time, to be honest, it really does come down to the players," Kill said. "The team that has the best most the time of going to win the game will win."

Still, the coaches don't believe that the 15-hour days they demand endure for five.

"You're going to get that important is understanding your personnel and putting them in the best posi-
tion to be successful," L Iconsavage said. "'That's why teams don't just run the same offenses and defenses and see what everyone likes better.'"

And even when a team is physically over-
manned — has been the case with SIU several times this season — Said said good coaching can make it difficult.

"There's always a way," Said. "I don't real-
ly sit in the box and say that anytime at any deficit in terms of being bigger or faster. To me, you can still get things done very effectively if you're going to be in the right spot, you know what you're doing and you go at it. That's what coaching all is about." When Saturday finally rolls around, the coaches do the best general preparation for the upcoming film. Whatever the case, the coaches incorporate contingency plans.

"If we're expecting to go to an eight-man front on Saturday but all the suddenly they jump in a 4-3, we've got our 4-3 plan incorporated in our game-

"Plans," Kill said. "Whether they're doing or whatever we get in the icebox and come down to the players and you've got a plan. That's what coaching is all about."

The result cruelly behind all the exertion is that coaches are going to run a crummy route."
KICK-OFF TIME!

Carbondale has many popular spots to watch sports on ‘the tube’

CLINT HARTING
DAILY EDITION

Fans hungering for some football are unlikely to come away from Carbondale disappointed. A favorite team, group of friends and a tasty beverage are all that is needed to make the perfect football watching atmosphere.

Carbondale offers several places to partake in the Sunday ritual of consuming football, whatever that may be to each person. So grab your favorites NFL player’s jersey and your playbook as the football experience in Carbondale is explored.

Mugsy McGuire’s, 1630 W. Main St.

It is Sunday, Oct. 14 and the Chicago Bears are beating the Arizona Cardinals. A rumbling can be heard right outside of Mugsy McGuire’s as Bears quarterback Jim Miller completes a short pass.

Walking into Mugsy McGuire’s on a Sunday afternoon during football season is much like standing inside a bear exhibit at the zoo covered in hay. But patrons donned in Bears jerseys surround you. If you don’t remember the woods to the Super Bowl shuffle, you better be a good lip syncher.

Mugsy’s provides two big screen TVs at opposite ends with one of them surely showing “Da Bears.” Mugsy’s also utilizes 10 other TVs to showcase every game. The 25-cent appetizers on Sunday make for an appealing addition.

Looking around, you will find Bears fans of a wide variety. From the novice fan wearing a faded Jim Harbaugh imitation jersey to the seasoned pro sporting a crisp new Brian Urlacher game day uniform top.

You can spot the many Bears fans right away like Jeff Babington, an undeclared junior from Crystal Lake. Babington wears a scraggly look on his face at all times, either because he knows the Bears so well or because he is gambling in what he and a group of his friends call “Professionals Day.”

“Our team, our professional, can make it to work or school Monday after coming here,” Babington said.

Babington has had quite the tradition of coming to Mugsy’s to watch football.

“You have the quantity of football, the atmosphere and the space,” Babington said. “And the beer specials always help.”

While the Bears fans flock to Mugsy’s, an occasional Green Bay Packers or Detroit Lions fan may slip in.

You must be pretty bold to walk into a bar filled with Bears, but as Mugsy’s sense of the Bears’ biggest rival’s — the Packers, Lions and Minnesota Vikings — all have fan representatives on any given Sunday.

Jessica O’Connor, a junior in history and a closet Lions fan, sits among Bears fans at the Bears lunch. O’Connor doesn’t mind any tension because she loves the football atmosphere at Mugsy’s.

“It’s not smoky and there is good food,” O’Connor said. “The overall atmosphere is a 10.”

O’Connor sits close to Alicia Moss, a junior in accounting and a proud Vikings fan. Although Moss would prefer to see Vikings receiver Randy Moss blow by a Bear defender, she still refuses constant watching the Bears drive on the Cardinals.

“Die-hard Bears fan Leo Casey, a junior in marketing and a staple at Mugsy’s on Sunday, is known on the notion that Packzers, Lions and Vikings fans mix right together to watch football.

But nevertheless, Casey relishes the opportunity Mugsy’s provides with its 12 TVs to showcase all NFL games.

“I get to watch the Packers lose over there,” said Casey as he points to a TV. “And I get to watch the Bears win here on this TV.”

Mugsy’s has plenty of room and often draws nice size crowds, but if you are looking for a more intimate atmosphere, you may want to try Sidetracks.

Sidetracks

At Sidetracks, some patrons refer to a highrise section as the loft. The view for a football game is not the best, but nevertheless hard-core Bears fans staked claim to the area on Oct. 21.

Adam Brzezinski, a junior in history, is a seasoned fan of Sidetracks for football and for the food.

“I’m a kid, and I like to eat the burgers here and the wings are hot as well,” Brzezinski said.

Jeff Thomlinson (front left), a sophomore in finance from Western Springs and Mike Watkins (front right), a sophomore in history from Arlington Heights cheer for the Bears on Sunday afternoon at Sidetracks in Carbondale.

While the Bears fans flock to Mugsy’s, an occasional Green Bay Packers or Detroit Lions fan may slip in.

One must be pretty bold to walk into a bar filled with Bears, but Mugsy’s sense of the Bears’ biggest rival’s — the Packers, Lions and Minnesota Vikings — all have fan representatives on any given Sunday.

Coaches put in early mornings, late nights to give Salukis their best shot

JAY SCHWARZ
\- Daily Egyptian

Time for sleep is fleeting and those trips to the grocery store or post office are rare diversions from a task that's always there.

In the meantime, the SIU football coaching staff is scrutinizing, philosophizing and preparing—whatever it takes to meet the challenge, which is to somehow outfox whatever coaching staff across the country is gearing up to beat them.

For the Saluki coaches, the weekly process of assembling a gameplan to defeat the opponent has only resulted in one win in six games. But anyone who thinks SIU's struggles diminish the enigma or devalue the coaching staff brings to work every day doesn't understand a coach's mindset.

"You can't put in the hours that we do and get paid what we do and not love the whole process," said SIU offensive coordinator Matt Limegrover.

It's a process that began the Saturday night after a game, when the coaching staff often converges informally. But the work on next week's game begins in earnest on Sundays.

First your SIU head coach Jerry Kill doesn't require his assistants to arrive at the football office until 1 p.m., in case they want to attend church. Then it's time to end up the sleeves.

The coaches spend the next five hours analyzing film of the Saluki game from the day before, grading the players from various positions before meeting as a staff at 5 p.m. to discuss what they've learned. After that meeting, coaches begin breaking down game film of the opposing team in specific game situations, who their opponents are, fatigued and tired, Kill said. "So we're drawing the line. Then, it's time to resume preparation of a scouting report, which Kill described as "about 10-15 pages thick" about "about 300 players, who their opponents are at various positions and a wealth of other data.The report is finalized by Tuesday morning.

Then, it's time to resume preparation of a..."

**SUI men's tennis returns from regionals**

Team Finishes fell season with decent performance

TODD MERCHANT

The SIU men's tennis team went into the ITA Midwest Regionals ready to take on Wichita, Kans., by storm, but they were only able to provide a few "wows of delight" as they failed to advance to the national tournament.

SIU seniors Peter Bong, Richard Booth and Julian Angel Botero, all freshmen, each won at least one match at the tournament, which was the team's last of the fall season.

Bong, the only Saluki who didn't have to go through a qualifier round, lost his first match to Wichita State's Mark Szelewski 6-1, 6-3. He came back in the consolation round and won two matches before finally being eliminated.

Bong defeated Ford Hauck of Southwest Missouri State 8-5 and Brian Keeper of Colorado 9-7 before being knocked out of the tournament by Tulah Shi Shadhal 8-3.

Bong said the competition was tough, noting the amount of nationally ranked teams and individuals.

"I didn't play as well as I could," Bong said. "I think I did OK, since it was my first time there.

Booth and Botero, both" of whom had to work their way through the qualifiers, were unable to advance to the main draw.

Booth won his opening match over Marjani Panis of Bradley 6-1, 6-4. He then lost his next match 6-3, 6-3 to Tulah Shi on Sunday, ending his run in the tournament.

Booth said he thought he played well and could have won his last match.

"I think I was a senior and had a lot more experience, but I still thought I could have won," Booth said. "I'm still improving.

Botero lost his qualifying match 6-1, 6-2 to Tobias Kudelski of the nationally ranked University of Oklahoma.

In the consolation rounds, Botero had to face two players from the highly regarded University of Colorado. Botero was ousting in his first consolation match 5-1, but stormed back and eventually pulled out a victory 6-1, 6-2.

"The first match I was really tired and didn't play very well," Botero said. "But the second match I played really well.

The tables were turned in his next match. Botero started out strong, jumping out to an early 7-3 lead, but ended up losing 7-6 in being eliminated from the tournament.

"I don't know what happened," Botero said. "I should have won, but I lost my concentration or something.

Richard Booth also teamed up for the doubles competition, but lost their only match 8-6 to..."
