Faculty cautioned on tuition increase

By John Stewart
Staff Writer

Questions still need to be answered about the distribution of last year's faculty salary increase before proceeding with a proposal to raise tuition 10 percent to fund additional salary increases, according to Zoul Spees, president of the American Association of University Professors.

A preliminary vote was taken Wednesday by the Budget Advisory Committee urging a 10 percent tuition increase for fall 1984, which would pay for half of a 10 percent faculty salary increase.

The other half would be paid through about $350,000 in cuts according to SIU-C budget director John Baker.

Spees said such a tuition increase might be detrimental to the mission of the University, which might price itself out of the reach of the average student.

"Who is it we're supposed to be serving here? SIU-C or Harvard," he said. SIU-C has a reputation for accessibility, and the necessity of tuition increases has to be explored thoroughly in light of past experience, he said.

Spees said the faculty didn't get the salary increases awarded last Sept. 1, because the greater increases were in the upper echelons of the administration.

Spees said the SIU-C administration has not come forward on the policies concerning merit pay, which is awarded for productivity and excellence of faculty members.

Spees said he is concerned that no "base year" is used to keep track of merit pay, which, left to accrue, would create a disparity between the salaries.

Governors propose plan to slash federal deficit

WASHINGTON (AP) — The nation's governors have a message for President Reagan that the Republican incumbent might not find to his liking: cuts in defense spending and increases in taxes are necessary to reduce huge federal deficits.

The governors planned to take that word directly to Reagan and other top administration officials at the White House Tuesday during the winter meeting of the National Governors' Association.

"We'll probably have some pretty good questions, too," Illinois Gov. James H. Thompson told Reagan in a toast at a black-tie White House dinner Sunday night.

A proposal to slash deficits by almost two-thirds by fiscal 1989 adopted by the executive committee Sunday will go before the governors Tuesday.

"We are very concerned about runaway deficits," said South Carolina Gov. Richard W. Riley.

"The deficits have to be dealt with," said Thompson. Thompson, chairman of the governors' group, voted for the proposal but said, "I don't read the criticism (of Reagan). It does not make me uncomfortable to support a budget policy which may be different from the president's even though he has taken a dip in the approval ratings.

Shiites take over airport as Marines finish pullout

By Farouk Nasser
Of the Associated Press

BEIRUT (AP) — U.S. Marines settled into new quarters on Navy ships off Beirut's coast Monday while rebel militiamen took over some of the Americans' vacated bunkers at the international airport.

Shortly after the Marines completed their pullout Sunday, the battle-scarred New Jersey-based ship shelled Syrian positions that fired at and missed a U.S. reconnaissance plane. Leaders of the Syrian-backed insurgents reportedly called the U.S. ambassador to protest the shelling.

Fighting between government forces and the rebels subsided Monday after day-long skirmishes in downtown Beirut Sunday. An American priest and a French soldier were among those killed.

About 1,000 Marines pulled out from fortified bunkers at the airport during a 12-hour operation that ended at midday Sunday, when the last amphibious personnel carrier splashed into the Mediterranean and headed for the 4th Fleet ships off the Beirut coast, where the troops will remain.

"Good for them, good for us, good for everybody," said Abu Mustafa, 36, one of the Shiite Muslim militiamen and breakaway army soldiers that quickly moved into the area left by the Marines.

Only 60 to 100 Marines remain in Beirut to guard the U.S. Embassy. Another 15 Marine advisors and staff members are stationed at the Lebanese army's headquarters.

An hour after the Marines left, the New Jersey-based ship splashed into the Mediterranean and headed south to pick up the rest of the Marines. The Marines flew to the U.S. reconnaissance jet.
Welfare below poverty level

By the Associated Press

The poor are getting poorer in Illinois suggests a recent government report, and the chance they will escape the trap of poverty is a near future look grim, state officials say.

Illinois' maximum welfare package for a family of four stipulates the level of poverty for the first time this year. Researchers tapped Ronald Burris in a recent analysis of the state's financial situation.

The top package of welfare benefits totals $9,452, while the estimated poverty level for a family of four is $10,020. Burris reported that welfare package includes the basic cash grant, medical assistance, food stamps, energy assistance and other aid.

Governor Thompson's decision to suspend the income tax increase means no money to raise the state's financial situation. Burris in a recent analysis of the state's financial situation.

In the same period, inflation measured by the Consumer Price Index rose 125 percent in the Chicago area, the state and across the nation. And in February 1983, unemployment in Illinois hit a two-year high of 13.2 percent.

Despite Coler's assertion that the state's $60 million that would be needed, to boost welfare benefits 5 percent, the Illinois AFDC group who plan to push the Legislature this spring for higher welfare grants.

One of those, the Illinois Campaign for Family Stability, argues that social service organizations have reported a sharp increase in the number of families asking for help in the last two years.

Betty Williams, an organizer of the group, said there is a "huge gap between what it costs to live and what public aid agencies are getting."

"Many families run out of food and money about 10 days before their next check arrives. With no place to go, they end up at the soup kitchens," she said.

The most recent increase in Illinois' standard of need, Illinois' standard of need, ranged up to $90 for a family of four.

California ranks second with $568, while Wisconsin closely follows with grants of $600 a month for a family of four. The lowest grant in the nation for a four-member family is $150 a month in Mississippi.

The gap between the average wage earned in the state and welfare grants is also widening, statistics show.

As the Associated Press

In January 1973, the average Illinois worker earned $73.55 a month, while the top welfare grant for a family of four in Illinois was $294.40 in 1983, an Illinois worker averaged $1,004.44 a month compared to $792.40 for a family of four.

The top grant in 1973 was 39 percent of the average worker's wage, but ten years later, it had fallen to 24 percent of average pay.

Illinois' income tax, which estimates how much money people need to live in the state at a minimal level, is the fourth highest in the country at $731 a month for a family of four, Coler said.

However, Illinois ranks 20th in the nation with top welfare grants of no a month for a family of four.

The people in the nation for a four-member family is $130 a month in Mississippi.

Iraqi hit tankers in Persian Gulf

NICOSIA, Cyprus (AP) - Iraqi warplanes on Monday attacked oil tankers anchored near Iraq's vital oil export terminal at the southern Iraqi port of Persian Gulf, Baghdad radio reported.

"Today is the first day of a blockade that we have decided to impose in this area, which we had already declared as a restricted military zone," said a broadcast Iraqi military communiqué.

Iraq did not say how much damage the attacks inflicted, and there was no immediate comment on the attacks from Iran.

In Washington, State Department spokeswoman Diane Kelly said the attacks hadn't been confirmed, but "we don't have any reason to doubt" them. U.S. officials said they didn't think Iraq would attack the oil terminal itself or other nations' ships.

Outlook grim for rescued girl

CHICAGO (AP) - An 11-year-old Indiana girl who was pulled from the Little Calumet River after being submerged 20 minutes suffered "significant lung and liver damage" and prospects for her recovery are grim, hospital officials said Monday.

Venus Sinclair, of Gary, Ind., was in a coma and in critical condition at the intensive care unit at Children's Memorial Hospital, said Gina Pryma, a hospital spokeswoman.

Squall blocks highway funding

WASHINGTON (AP) - A political standoff on Capitol Hill is blocking release of $600 million in federal money, leaving interstate highway projects on the verge of shutting down while state and local officials warn that the entire construction season may be lost.

Political squabbling over legislation to release the money, ranging in October, has escalated into a struggle of wills between House Speaker Thomas P. O'Neill Jr., D-Mass., and the Reagan administration, sources close to the dispute said.

Times Beach dioxin levels higher

By Ray Formanek Jr. The Associated Press

Tines Beach Mo. (AP) - Further study is expected to verify preliminary tests done in 1982 found levels of the toxic chemical dioxin in this abandoned town reaches substantially higher than previously reported, an EPA Chemist said.

An unpublished Environmental Protection Agency Arintout of 540 samples taken from roads, ditches, wells and homes in Times Beach listed dioxin levels as high as 1,300 parts per trillion. A study released last year showed levels as low as 2.6 parts per billion.

"More review of the testing is necessary," said EPA Chemist John Electrician.

It's not that number (1,300) to change unless there was something drastically wrong with the lab work."

Coler's report, listed in the printout contained dioxin concentration of 1,300, although several others were higher than previous results.

The Centers for Disease Control in Atlanta said the dioxin is hazardous to health in areas where there is likelihood of frequent human exposure.

Although its effects on humans is unknown, the chemical has been shown to cause cancer, liver and kidney damage, and other maladies in lab animals.

"I'm sure that if there's 1,200 parts per billion down there, health problems are sure to turn up," Times Beach Mayor Marilyn Leisten. "It was e ven concerned about 50 parts per billion down there."

The Mad Dog has come up with a "Pop Quiz" We dare you to come up and try to figure it out! And if you're lucky enough to give us the Artist and Title of all 20 songs from the "brief" clues we give you. Then we'll send you to Daytona Beach, FL. DON'T MISS MAD DOG'S BIRTHDAY PARTY TONIGHT!
Professor, EPA disagree on dangers of EDB in leaded gas

By Dave Sallens Staff Writer

Although the Environmental Protection Agency has banned the use of ethylene dichloride as a pesticide because it caused cancer in laboratory animals, the agency has not banned the use of EDB as an additive in leaded gasoline.

An energy expert at SIUC said this may be a mistake because 90 percent of EDB used in the United States goes into leaded gasoline.

"Every time we pump our own gas, we breathe fumes that contain EDB," he said. Richard R. Archer, an assistant professor of design, "And just think about how many times you've washed your hands in gasoline."

Archer, who served on President Carter's alcohol fuels commision, said lead has been used in gasoline to help prevent engine knocking. EDB was added at the same time to keep lead from sticking to the walls of combustion chambers.

But the EPA does not share Archer's concern about the use of EDB in leaded gasoline.

"Always keep in mind that people pumping their own gas are not exposed to EDB fumes because they probably stand three or four feet away from their gas tanks, and air also mixes with the fumes to dilute them," Weissman said.

Weissman said the amount of leaded gasoline being sold each year has declined, and limits on the amount of leaded gasoline have also increased.

Archer believes that the number of children who have been exposed to EDB in leaded gasoline is a major health problem. "Even though about 47 million pounds of EDB are put into leaded gasoline each year, most of the EDB is consumed in the combustion process, so what comes out of the tailpipe is about 200,000 pounds of exposure," he said.

Mark Randel, press officer with the Illinois Department of Agriculture, said there is limited data available to indicate that EDB in leaded gasoline is a health hazard.

"As far as the EPA is concerned, there is nothing to indicate that there is a health problem," he said.

Randel said that people pumping their own gas are not exposed to EDB fumes because they probably stand three or four feet away from their gas tanks, and air also mixes with the fumes to dilute them.

"Weissman said the amount of leaded gasoline being sold each year is also rapidly declining, and limits on the amount of leaded gasoline have also increased.

"Archer believes that the number of children who have been exposed to EDB in leaded gasoline is a major health problem.

Others have expressed concern about the use of EDB in leaded gasoline.

William Munson, superintendent of highways for Jackson County, said many county highways were impassable. Route 13-127 was closed near Vergennes north of Murphysboro with drifts up to six feet.

"There are 156 miles of county highway we've got to clear, and by the time we get one road clear, the snow has drifted back over another one. All we can do is work around the clock," Munson said.

The Carbondale City Council meeting Monday night was rescheduled for 7 p.m. Tuesday. Carol Johnson, director of the Carbondale Senior Citizens Center, 406 N. Springer, said volunteers would be asked to shovel sidewalks for seniors.

"It is necessary," Johnson said. "We have a lot of people who can't do this and we have some people who can.

University Teachers and the AAUP have begun preparations for collective bargaining to SIUC.

Spees said a faculty bargaining agent would provide the faculty a clear voice to express their feelings to the administration in lieu of the governance structure, which includes the Graduate Council and the Faculty Senate.

"We have the ability and the technology to turn this EDB disaster completely around to our advantage," he said. "The question is, will we do it?"

SNOW from Page 1

"We are very concerned about the chemical defects," said South Carolina Gov. Richard W. Riley.

"It's the governors' concern about the deficits cut across party lines, although there were partisan splits over just how to deal with the flow of Federal tax that is expected to continue around $300 billion a year for several years."

The proposal adopted Sunday would slash the federal deficit by $188 billion in 1989.

Snow doubt about it; cheers, jeers abound

SOME PEOPLE love it, others curse it, but there are few who can ignore the white stuff that mysteriously appeared in the area this week. During the past couple of days, "snow" has become one of the most talked about topics preceded by other four-letter expressions. And the blustering blizzard has given people plenty of reasons to get out of the house.

The blowing snow made driving hazardous — fender benders were common in Carbondale, and at least one traffic fatality in the area was attributed to the inclines caused by the此处为缺失内容，无法继续阅读。

WTH SCHOOLS closed and automobiles buried, many families crowded their stalls out of the city once more and took advantage of the winter holiday. Others curled up with a book.

Neighbors introduced themselves to their neighbors while they put their shoulders against bumpers and stranded motorists warmed themselves in the homes of strangers. In addition to fostering an increased sense of hospitality and cooperation, the blizzard also reminds us of our fragility as a society that does not have control over or, even, in times like these, completely adapt to it.

It is a frustrating, humbling experience to be "cooped" by Mother Nature. But unless more careful planning and executing will stop the snow from falling, get the car up the slippery driveway or make the soggy steps to the front door.

The best thing to do is relax, keep warm — and enjoy the scenery. After all, the first day of spring is only three weeks away.

Letters

UNESCO worked well in Nepal

Concerning your article on the withdrawal of the United States Educational, Scientific and Cultural Organization (UNESCO) over certain issues that a positive example should be shown, that such an action is not wise, and that UNESCO is not the cause.

Railroad project critic lacked insight

The letter of Camille F. Chauvin is still an example of how the railroad project lacks insight. It seems that other points of view should be examined. As a lifelong resident of this area the trains have become more than a little aggravating. At times, important meetings, etc. In effect, and important matters can be delayed or missed because of the trains. In your abusive attack on the city and the railroad you have closed your eyes and your mind to other viewpoints. Had you lived here more than a few years you would have been able to adequately evaluate the current situation. The problems you mentioned are merely "white ifs." It is obvious that the city and the railroad have examined these possibilities prior to undertaking such a task, in order to minimize inherent problems.

Given your position, why should you condemn something helpful to others just because you think it is not the right way to do it? The trains are a part of the area's history and if you are not satisfied, you should move to another place.

Lack of romance, creativity binds scientific achievement

WHEN looking at the major news events of the last six months one can find it easy to conclude "we are hanging on the edge of a quite a few cliffs." But unless any one of which could send our world hurtling into a man-made version of the Big Bang.

We have the physical means to easily obliterate life on earth, yet we lack wisdom concerning the control of such means. Feuding nations continue to plan the use of nuclear weapons and threaten each other with nuclear even though the effects of such a war would be devastating. If we have the ability to perfect such a technology, then why are we unable to develop the wisdom to control it?

A DICHTOMY has developed in our society's method of classifying knowledge — a rift between the arts, on one side, and science, on the other. Educators approach the two areas as being fundamentally different, our national government stresses funding for industry and the development of new military technology, and young people are given the impression that the arts are dull and frivolous, practiced only by long-haired dreamers.

Mankind has seemingly ignored the example of men like Leonardo da Vinci and Ben Franklin — men who were scientists and inventors, yet also engaged in creative artistic thought. Creativity was die key to their success. Today's scientists no longer create; they merely search for new ways to use what already exists — they discover.

The ALCHEMIST, the great fantasy novel in science, the adventurers searching for lost civilizations have been replaced by the white-coated laboratory scientists carefully splitting atoms and finding the genetic patterns of life in the lowest mammalian neighbors. The results that these cold, calculating, flesh-and-blood computers obtain may be more accurate and last time to achieve, but their price is terrible — every feeling, every emotion is carefully filed away, out of sight.

Now that science is practical, all the romance has been taken out of it. Those romantics (too few and far between) with the unbounded curiosity and sense of adventure, which is to be important as a scientist and thinker, have a responsibility to turn the arts to find the freedom needed to be a romantic.

SCIENTISTS are no longer permitted to take flights of fancy or pursue an intriguing sites — such actions might not be realistic. With their freedom shackled, scientists are unable to look at the effects that their discoveries will have on society. Instead, they continue to search for more spectacular finds with which to impress their colleagues, obliviously ignoring the long-term effects of their actions.

It's time scientists were given a sense of ac- tivity beyond their actions. The last thing we need is more state of the art toys for the armed forces to play with.

We should put some of our top minds to work on a way to use geothermal energy to heat our cities, a better way to harvest the bounty of the sources of their fuel, a way to clean up the world's pollution — things which need to be done, things which our scientists claim are impossible or cost too much.

WE HAVE to face one fact — scientists and machine-like thinking will never re-place the good old fable, in-flight marvelous human imagination.

SCHEDULE POLICY — The schedule for Campus Briefs is updated daily and may change before publication. The briefs should be typed or handwritten, and must include time, date, place and sponsor of the event and the name and office number of the person submitting the item. Items should be delivered or mailed to the Daily Egyptian newspaper, Communications Building, Room 112, not later than 5 p.m. on the day before publication. The briefs will be published once and only as space allows.

A WORKSHOP on test anxiety and methods to cope constructively with tests, including relaxation, test preparation and test-taking techniques, will meet from 3 p.m. to 4 p.m. Tuesday in Woody Hall B142.

This is the final week for seniors and graduates to have portraits taken for the 1983-84 Obitnik 3rd Yearbook. Siting fee is $2.

THE SOUTHERN Outdoor Adventure Recreation Program at Touch of Nature Environmental Center will present an informational slide show at a meeting on spring break trips at 7 p.m. Tuesday at Rehn Hall Room 100. The trips are to the Grand Canyon and Buffalo River and are open to all SIU-C students. Persons who are interested can call Joe Siteman at 529-4161 for more information.

PI SIGMA PHIILON, professional marketing and sales fraternity, will meet and conduct informal for pre-7 p.m. at 7 p.m. Tuesday in Lawson 221.

THE SOCIETY for the Advancement of Management will host the pre-recruitment meeting for Foyle's department store at 7 p.m. Tuesday in Davis Auditorium.

STUDENTS WITH Hart will sponsor a "New Hampshire Waitstaff" trip from 5:30 p.m. to 12 midnight Tuesday at the Interfaith Center, 915 S. Illinois Ave.

MID-AMERICA Peace Project will meet at 7 p.m. Tuesday in the Missional Room of the Student Center.

KEVIN SCHULTZ, graduate student in forestry, will present a seminar on analyzing the impact of noise on forest preserve recreationist at noon Tuesday in Room 209 of the Agriculture Building.

BREAD FOR the World, a Christian lobbyist group for hunger concern, will conduct its new members meeting at 7 p.m. Tuesday in the library of the Newman Center, 715 S. Washington St.

Required computer skills course urged

By Phil Milano
Staff Writer

A computer literacy course would become a requirement for SIU-C students if Leo Min, director of computing affairs, has his way.

Min said students entering the work force without computer experience will have to catch up.

"Our society is in a transitional phase from an industrial to an informational society. Just as the engine was the major tool of the industrial society, the computer is the major tool of the informational society," Min said. "I don't see any field or discipline in which computer skills won't be needed."

According to Min, a required course would not necessarily be a computer science course, but one designed to give students a better understanding of computers and how they can be used.

"The course would also offer hands-on computer experience with instructions in a simple programming language such as BASIC (Beginners All-purpose Symbolic Instruction Code)," Min said.

Min said President Albert Simit and John Guyon, vice president for academic affairs, have expressed interest in a computer literacy course, and that they would like to have a "microcomputer lab available for 10 sections next fall."

If the research proves that microcomputers help students write more effectively, then students should be using microcomputers in class, he said.

"Somait and Guyon are quite in favor of what we've shown and I am suggesting particularly of the research to test the idea, which would require a microcomputer lab," Min said.

Steve Appleby, director of computing affairs, said the University needs computer literacy skills in high school.

Appleby would like to have a microcomputer lab available for 10 GSD 101 sections next fall. The writing skills of those 10 sections would then be compared to 10 sections not using the lab.

If the research proves that microcomputers help students write more effectively, then students should be using microcomputers in class, he said.

Appleby said, "Just as the industrial to an informational society, just as the experience will be necessary in our society, the computer is needed." He added that computer skills are necessary for people to manage their professional and personal lives.

"The University needs to provide a microcomputer lab for students," he said.

Appleby, director of general studies in English, and Steve Bernhardt, assistant professor of English, are suggesting a microcomputer support lab for GSD 101 (freshman composition).

A word processor or microcomputer is beneficial during the revision stage of composition because they can find errors and point them out to the student.

Appleby said the student, however, still must decide how to correct the mistakes.

Appleby would like to have a microcomputer lab available for 10 GSD 101 sections next fall. The writing skills of those 10 sections would then be compared to 10 sections not using the lab.

If the research proves that microcomputers help students write more effectively, they should be using microcomputers in class, he said.

"Access to computers, the ability to understand what they can do and losing one's fear of them is important," Appleby said.

Appleby said 10 universities in the United States require undergraduates to own or have access to a microcomputer. Most of these are high technology universities, he said, and the number of schools adding the requirement is increasing.

"I have a fear of adding more requirements. The ability to use computers is not something that everyone has to have," he said. "Access to computers, the ability to understand what they can do and losing one's fear of them is important."

Appleby said that in universities in the United States require undergraduates to own or have access to a microcomputer. Most of these are high technology universities, he said, and the number of schools adding the requirement is increasing.

They thought he couldn't do the job. That's why they chose him.

Calipre to hold auditions for play

Auditions for the Calipre Stage production of "The Gift" have been rescheduled for 4 p.m. to 6 p.m. Thursday and Friday.

The auditions will be held at Calipre Stage on the second floor of the Communications building.

Two men and two women are needed for the production, a prose memoir by Biffa Dollittle, which takes place during the bombing of London in World War II.

No prepared readings are necessary for the audition.

Forward Petra Jackson gets set to shoot during Sunday. The Salukis’ next game is against SIU-C's 85-29 rout of Loyola at Davies Gym Eastern Illinois at home Saturday.

GATEWAY from Page 12

days after the regular season ends.

Baumgarten declined to analyze a possible Saluki-Bulldog shifting for the championship. Scott said a home-court advantage in such a matchup would be “tremendous.”

SIU-C beat Drake 85-49 in Carbondale early in the season, but was later upset 77-53 at Des Moines, Iowa. Redbird Coach Fischer said a potential rematch would boil down to SIU-C’s defensive quickness versus the shooting of Drake. She said rebounding could spell the difference.

Netters show improvement at flighted tourney, Auld says

By Jim Leda

North Editor

After competing in the Eastern Kentucky Invitational last weekend, Saluki women’s tennis Coach Judy Auld said her squad has improved 100 percent over the last two weeks.

Auld watched Heidi Eastman and Savvy Pat Kramer win their consolation brackets in singles action during the eight-team flighted tournament, while Maureen Harney lost to Kramer in the consolation finals.

“Considering how badly we played two weeks ago, we played well,” Auld said.

“Two weeks ago, Auld’s Salukis opened their season with a 9-0 loss to SIU-Edwardsville, and did not win a set.

“We lost a lot of first-round matches,” Auld said, “but the courts that we played the tournament on took our players a little bit of time to get used to. I’m not making any excuses; it happened to many of the players.”

No team scores were kept in the invitational. The singles players were divided into three flights while the doubles teams were put into one bracket.

SIU-C No. 1 Alessandra Molinari and No. 2 Eastman were in flight A, No. 3 Kramer and No. 4 Harney were in flight B, and No. 5 Amanda Allen and No. 6 Kathy Harney were in flight C.

The Salukis’ doubles teams were not “consistent,” Auld said, and among the pairs, SIU-C could claim only one victory in six matches.

Molinari and Eastman, after losing their opening match, won in three sets over Louisville’s Renee Warren and Laurabeth Schulte 6-7, 7-6, 6-3. They then lost to Maureen Drugg and Lori Burdell of West Virginia 6-4, 6-7, 6-4.

Eastman, 3-2, lost her first-round match in straight sets. She rebounded in the consolation, although she was tested in nearly every set.

Eastman won 7-5, 7-6 over Louisville’s Laura Ramser and 7-4, 7-6 over Anna Van Walleghem of Miami of Ohio before winning the consolation bracket with a 3-6, 7-6, 6-3 victory over Eastern Kentucky’s Claudia Parras. “I really was pushed to the limits (against Parras),” Auld said. “Heidi was very aggressive. She had good ground strokes. I was very pleased with her play.”

Molinari, 1-2, made a comeback in her opening match against Louisville’s Brenda Blank. Molinari was down 1-5 in the second set after losing the first set 6-1. She faced match point five times before winning the set 7-4, and then won the third set 6-4.

Kissy Hiske of Wake Forest ousted Molinari from the singles bracket 6-4, 6-4, 6-4, but Auld said she was pleased with how well Molinari performed in her “tough matches.”

Kramer and Maureen Harney ruled the flight A consolation bracket after both lost first-round matches. Kramer fell in three sets in her opening match, but Leat Wake Forest’s Carrie Short in straight sets.

After claiming a win by default, Kramer bested Maureen Harney in straight sets 6-3, 6-3.

Maureen Harney had a little tougher route to the finals. After losing in straight sets in her opening match, she beat Burdell 6-4, 6-4. She took her three sets to beat Louisville’s Delores Giroux 6-3, 6-4, 6-0, before losing to Kramer.

Allen won one of three matches in flight C action, but Auld said that her game and timing are “starting to come back.”

After suffering a muscle strain in her back, Allen has had only three weeks of practice. However, Auld said she is pleased with Allen’s play so far. “She needs a little bit more competition to get her back mentally,” Auld said.

Kathy Harney won her first-round match in flight C play in straight sets 7-5, 6-1 over Illinois State’s Beth Erwin. She was bounced from action, however, in her next match, 6-4, 2-6 by Jill Joslin of Miami of Ohio.

The Stray Dogs, a team consisting primarily of former SIUC volleyball players, used their experience to go 15-4 and win a St. Louis tournament Saturday in the United States Volleyball Association open season.  

SIUC volleyball team didn't fare as well, finishing 4-4. They swept Jefferson College, split against Missouri and Central Missouri, and were swept by the Memphis Jazz. The Stray Dogs swept two games each from six opponents -Tunnevers, Western Illinois 1, St. Louis, East Central Junior College, Missouri, in the

JOHNSON from Page 12

prepared," he said. "At the mini-camp, I found I was so advanced over the other quarterbacks as far as knowing the system. I found out that I learned things I didn't even know I learned. And it's all because of Dempsey."  

Johnson is listed ahead of freshman St. Louis Cardinal reserve Mike Lloyd on the depth chart, but well behind Williams, who is earning a reported $600,000 a year. "I don't expect to play," Johnson said. "Only if Doug goes down. If he has a bad game they'll leave him in because they have so much money invested in him."  

Johnson said he is pleased with his backup status, at least for now. "Doug has to be playing, but if I can compete for this job, I'll ask for traded. But don't count on that this year," Johnson said. He signed two one-year contracts, with the option to renegotiate after this season. "I have no plans to leave," he said. "I'd like to stay here, to finish my career with one team."  

The ex-Salukis said he misses his friends in Carbondale, especially his girlfriend. "She's coming down here over spring break," he said.

The man who played for the Stray Dogs and is an assistant volleyball coach at SIUC, said she was surprised that they won the tournament. Locke said she thought the Salukis' volleyball team performed well. They all performed well considering middle hitter Pat Nicolson was out with a broken bone in her middle finger, she said. "We put Lisa Sanders in her place and she did a fine job considering she didn't have much experience at that position. Jill Braker also did a nice job of setting because she is normally a defensive player."  

Locke said the Salukis compete in the spring to work on their individual talents, which will help them for the fall season. "Our main focus in the open season is for the players to develop their individuals games and there is something to shoot for because of the national championship," she said.  

SIUC and the Stray Dogs will return to St. Louis for another tournament Saturday.
Men caught in guard dilemma

By Daryl Van Schouwen
Staff Writer

Since Yale Buffer's SIU-C's second round NCAA appearance, he has probably been ready to play in Thursday's regular season finale against Ball State. He announced he'll probably start against the Cardinals. "I feel right now and I was able to practice with the team. They're playing good together," he said.

Jeff Bufford took shooting practice with the team at Tulsa, but didn't dress for the game. "I'm still working on it. I'm still straight ahead, but he's having a little bit of difficulty with his movement," Van Winkle said. He's thinking about using Bufford for periods in which he might need another guard with the team's leading scorer, Mike Clatterbuck, being in the losing cause.

The play of the pair will give SIU-C's defensive backcourt a pleasurable problem when Bufford is back. "If they're both healthy, we probably ready be ready to play in Thursday's regular season finale against Ball State. He announced he'll probably start against the Cardinals. "I feel right now and I was able to practice with the team. They're playing good together," he said.
