It will be seen that there is a substantial increase in the normal department. The lower departments are almost as full as the rooms will accommodate and since these rooms or departments are used as experimental or model schools, the probabilities are that they will be not very greatly enlarged in the future. We think they are admirably conducted and very useful adjuncts in the work of the University. The teachers are skillful and successful.

It is believed that the teachers in all the departments of the University are doing the duties pertaining to their several positions in a faithful and profitable manner. It has been our purpose to employ none as teachers or servants in any capacity who are not in all respects moral and trustworthy, and none who are in any way dilatory in duty, we reckon ourselves fortunate in this part of our endeavor.

The number of graduates at our last commencements of June 13, 1889, and June 12, 1890, was nineteen, this bringing the number of graduates in the sixteen years to 162—seven of whom have died, and more than a hundred are still engaged in the

work of education, although there are so many enticements to draw enterprising young people from this profession. The greater share of these are in the higher and more responsible places of school work. These together with those who remained several terms and yet left us without graduation, and who are engaged in teaching, form a respectable corps of diligent laborers in the cause of education.

Not less than two thousand of such are at this time employed in this work, most of them in our own schools, though many are scattered from the Alleghanies to the Pacific coast, and several are in New England and New York.

All the arrangements and appliances for an excellent school, we believe, are in good working order. The museum has been increased as much as possible with the limited sum at our disposal. This is a great assistance to our work, prompting our students to the accurate study and careful preparation of objects of interest found in this section of the State. Our collection of minerals, woods, grasses, birds, and animals suggest how great are our own resources and how profitable the knowledge of these may be found to assist in developing all the advantages of our situation so that we may put to practical use all the rare materials which nature has given to us with such lavish bountifulness.

Our library has been increased comparatively little during these two years owing to the small appropriation of the last General Assembly for this purpose. We have been able to do little besides supplying the regular periodicals and buying a limited number of indispensable books for our reference library. Our library is, however, valuable and affords encouragement to our young people to cultivate a taste for better reading, and it enables them to consult many of the best authorities on the current scientific discussions. We hope that the necessity for a more liberal appropriation for our library will be recognized hereafter and we bespeak your kind recommendation in this behalf. The wisest economy would dictate such generous liberality toward all our schools as shall both instruct and stimulate all the youth of the state in useful knowledge and lead them to the attainment of the highest use of all their best power.

We do not urge these points because we fear that they will be forgotten by you, but because we are in a situation to see their great benefit, their necessity even, and because we trust through you these ideas may reach the people in an effective way and increase an already awakened interest among them in our public schools.

We append an estimate of the several sums in our opinion needed per annum to enable us to carry on the work of the University through the coming two years. We have made the most careful computations and are sure that a sum less than the total we have set down will certainly diminish its usefulness, in fact will not permit us to do for our section of the

State what the schools need and what, in our opinion, they have a just right to claim from their representatives in the General Assembly.

Our university building as its age increases demands larger outlays for necessary repairs. We are glad to report that the property of the State committed to our care and keeping is in excellent physical condition, and sound business methods demand that this state of things shall continue.

By reference to the figures herewith submitted and to our former reports it will be observed that the number of pupils has steadily and largely increased since we occupied the new building, with this increase, there must be expected an increase of expenditures. It will be found however by a careful comparison, that the cost of maintaining our school per pupil has decreased. The small increase in the appropriation asked for at the hands of the next General Assembly, is rendered necessary in the main, by the increased and increasing attendance.

ESTIMATE PER YEAR FOR 1891 AND 1892.
