CLASS OF 1933
Elsie Catherine Felix is teaching a rural school in Wayne Coun- (Continued on page 3)
THE SOUTHERN ALUMNUS

Calling All Alumni

Armchair strategists, let’s pull up a couple of nail kegs, move the cracker barrel a wee bit closer, unplug a jug of cider and talk over the situation.

The situation?

The future of SOUTHERN, of course.

I read the other day about a till-shindig the students down at school pulled off. It seems they put some money into a fund, then got real sore at the plight of their institution and threatened to “carry the buckets to Springfield,” if necessary, to get the boys upstate to see their way.

One or two newspaper guys have accused our boys of pulling ‘circus tactics’ and have stated that the treasury of our fair state would not stand the strain of helping educate the youth of Southern Illinois. However, the majority of writers have said it’s a pretty fair idea to have our kids go out and work for what they believe the youth of Illinois should have—mainly—an education.

I’m just a Southern Illinois boy myself, but I believe in the old fashioned way of going out and working for what you think your community needs. I don’t know any new-fangled government formulas that are going to cure our economic and social ills in a couple of days. I don’t know what effect the law of supply and demand has on the marriage situation, but I’m for the kids down at school.

They tell me twice as many kids are going to classes in the same building—with not a one-added—that I did when I was down there twenty years ago. I say, let’s help ‘em out. Let’s go out and talk SOUTHERN.

There’s one thing a politician will listen to for sure—that’s a man or woman who can vote.

We can also send our $2.00 for a year’s membership to that “ex-students of SOUTHERN club” and then go find out where our dough went. Let’s put an investment in our school, then see that we get returns on our investment.

Why not throw $2.00 into the kitty? With 40,000 of us pitching in two bucks we can have an $80,000 business. (Say, that reads like Truman’s budget request.) But just think, all we have to do is send a measly two dollars to the school. Doc Alexander and the students will get it.

It’s about time we realized that Southern’s future depends on us. Let’s help those kids out. They’re rolling now—let’s roll with ‘em.

Ex-Studently yours,
Leo Brown, President
Alumni Association

Southern Alumni: Many of you have been reading of the “growing pains” that have been occurring at Southern. We realize that news is news to editors. We realize that much of the information that is pertinent to Southern and her alumni, students, and friends is to be omitted because of the lack of space in most newspapers.

There is one paper that carries all the pertinent information about Southern the year ‘round. At this crucial stage in Southern’s history, the EGYPTIAN is giving much space and time to see that the student body is fully informed about our chances of getting what we know Southern needs.

For $1.50 per year, a weekly subscription to the EGYPTIAN will be sent to all subscribers. If you want to know exactly where we stand on our requests for Southern Illinois University, send in your subscription today.

To really be informed on the legislative program, subscribe to the EGYPTIAN, Southern Illinois University, Carbondale, Illinois. Here is my $1.50 for a year’s subscription.

Alumni Meetings Held

Several Southern alumni chapters have held meetings during the fall and new officers chosen in most instances.

A luncheon meeting of the Massac County group was held at Metropolis Nov. 23 at the time of the county teachers institute. Eric Griffith, ’18, of Joppa was elected president; Mrs. Clarence Hurt (Jessie Atwell, ’22) of Metropolis, vice president; and Mrs. Marie Harris Hardin, ’48, of Grantsburg, secretary.

Another alumni meeting was held in connection with the Washington County teachers institute at Nashville on Oct. 21. The chairman of this group is Martin Schaeffer, ’30, of Hoyleton.

A new chapter was established in White County on Nov. 4 at a dinner meeting held in Carmi. The president of this group is Warren Greenlee, ’40, Carmi; vice president, Francis Welch, ’48, of Nokinsia City; secretary, Fern Lee, ’41, Enfield; and treasurer, Mrs. Hubert Sutton (Lorene Pool, ’35), of Carmi.

On Sept. 25, just before Southern played Wayne University in football, a new club was established in Detroit. Otis Winn, ’21, is chairman and Mrs. Hay Williams (Edward Boswell, ’17) is secretary. There is also an executive committee consisting of Vernon Hicks, ’38, Dr. R. C. Colyer, ’18, (both are from Detroit) and Clyde Dearring, ’26, of Pontiac.

President Delyte W. Morris attended all of these meetings and spoke concerning conditions at Southern, and Orville Alexander, Director of Alumni Services, was present and spoke briefly.

Southern from Pinckneyville: Tommy Gher, a Carbondale boy enrolled in the University of Chicago as a music major, working in Mt. Vernon, his home, and Bill Crum, Mt. Carmel resident, who has transferred to Eastern.

Education Building 889,920
Industrial Arts Building 3,263,431
Student Union Building 5,569,095
Field House and Southern Illinois Community Center 3,910,935
Special Education Building 3,094,738
Administration Building 1,676,325

TOTAL $36,955,170

A physical plant that is too small to serve the 3,000 students now enrolled, that is in a “disgraceful” state of dilapidation, that is even dangerous in some areas to the safety of students, makes it mandatory that a major operation in building take place at Southern Illinois University.

Southern is therefore asking for a major immediate building program, totaling $36,955,170. This need has been recognized by Southern’s governing board, which has approved the entire program without a single reduction.

Only seven permanent-type educational buildings, the newest classroom building being 20 years old, now serve the student body. This physical plant is smaller than that of any college or university in the country, and is even more inadequate when it is considered that the buildings now standing were constructed to house a small teachers college, while Southern is now expected to carry on a full university program.

In order to operate at all, Southern has been forced to dis-

(Continued on page sixteen)
Why *Southern* Needs to Complete The Training School

**Sixth graders must use same industrial education laboratories as college students.**

Rising costs made it impossible to complete the training school with the amount appropriated by the last General Assembly. In order to award contracts at all it was necessary to eliminate all equipment (in fact $90,000 intended for equipment was eliminated by the appropriations bill, the current amount requisitioned because of rising costs).

A modern training school is incomplete without well-equipped industrial arts shops. At present University High School shares the small, crowded quarters of the University industrial education department. Graduates trained to become industrial arts teachers lack the experience of doing their practice teaching in shops comparable to those in the better high schools of the area.

The swimming pool is not a luxury, but a necessity, both for life-saving instruction as well as for training future teachers in the use of water therapy for certain types of handicapped children.

Much progress has been made in the construction of the new training school, but without equipment the building will be of no use to the University. There are two alternatives: to let the structure stand unfinished and unused or to get the funds and do the job right.

In the past Southern has often received a "cut" in the funds necessary to do a good job on a building; thus skimping was permitted—one reason why several of the permanent buildings are inadequate now. No skimping should be allowed on the new training school. It must be fully-equipped and adequate in every way if it is to bring Southern up to standards elsewhere in the State.

In order to fulfill the State requirements, all students desiring a teacher's certificate and a degree in education must first become acquainted with actual classroom procedure by serving as practice-teachers. Southern is now faced with the problem of having more practice teachers than there are places for them in the Allyn training school. It is now necessary to send Southern student teachers to off-campus public schools to do practice teaching. Some of these affiliated schools are 60 miles from Carbondale. Such instruction is expensive and time-consuming.

---

Why *Southern* Needs to Complete The Power Plant

"Don't start anything that you can't finish," is an adage almost as old as the ages. Especially does this adage fit the power plant at Southern.

Southern's new power plant is well underway and should be ready for use some time next fall. However, the service shops building which was to be a part of the power plant project was marked off because of the lack of money to construct.

The University is now greatly handicapped by not having space for large purchase of supplies. Frequently, teaching suffers because materials and supplies ordered on a particular requisition have not arrived by the time they are needed. Laboratories have had to do without chemicals, experimental animals do without food; offices have had to restrict necessary operations because of the shortage of envelopes. Toward the end of each quarter, departments always "run out" of some essential items, yet cannot increase the amount requisitioned because of lack of storage space.

Even special requisitions require several weeks, and such delays are a serious handicap in either teaching or non-teaching operations.

When the winter term glass window was broken in the Art Annex. Although a requisition was sent in for the glass at the

(Continued on Page 3)

Only three-tenths of 1 square foot of social or recreational space per student is available at Southern. The present national average is 4 square feet per student, the recommended average is 6 square feet per student. Southern needs a Student Union Building, and needs it now.

---

Storage space so critical Physical Plant stores valuable supplies in unfinished basements.
Why Southern Needs A New Library

Wheeler Library has been condemned, and on recommendation of the State Architect 75 per cent of its weight load is being removed to other quarters as a safety measure.

Many of the volumes have been removed and are stored in the basement of the Old Science building, the basement of Anthony Hall and in an old barracks building. The 10,000 volumes stored in the Old Science basement are inaccessible for student use and are molding. Daily calls are made for the books, but they cannot be processed through the library since the books are so scattered.

Only relatively current issues of periodicals are now accessible; the others are stored in a basement room of the library that is too crowded for reasonably efficient use.

Material such as government bulletins, maps, newspapers and pamphlets is practically useless because it has been stored in basements and similar out-of-the-way places where it cannot be readily located or obtained.

There can be only one answer to a condemned library, a new permanent adequate library building, which should be designed to accommodate the present student body and the expected student body in the next 25 or 50 years.

Barracks, former paint shop, cleared to take 11,000 books from condemned library.

Laundry room in basement of dormitory where 25,000 books are being installed.

Library basement, former workroom, now jammed with 10,000 books from attic and second floor.

Ten thousand books, inaccessible for students, dumped in basement of Old Science Building.
Why *Southern* Needs A Commerce Building

Southern is vitally in need of a large classroom building that is adaptable to use by non-laboratory, non-specialized students. Old Main is the principal classroom building, and 78 per cent of the non-laboratory classes are held there.

It is doubtful that the 63-year-old structure can last much longer as a safe classroom building. Thousands have already been spent on repairs, but now the roof has been condemned.

Furthermore, Old Main no longer meets the accepted standards for modern classroom buildings. Lighting is uneven in nearly every room because of the cracks around the windows and the extremely high ceilings. Students wear their coats in classes in the northwest rooms because of the cold. Natural lighting in the rooms is bad because the windows are not spaced properly to provide good lighting.

The outside steps leading up to the main floor have long been a danger, especially in cold, icy weather. The steps on the inside of the building are no less of a problem and like many of the classroom floors are in danger of collapsing.

Many of the rooms have been partitioned in order to make office space. To keep from shutting off all light, the partitions have not been built up to the ceiling, thereby leaving sizeable spaces which allows noise to be transferred from the office to the classroom or vice versa.

The proposed new commerce building would provide non-specialized classrooms to accommodate 2,000 students. While eventually it would probably be used entirely by business administration and allied departments, it would for the time being provide classrooms that could be used by many departments.

Why *Southern* Needs Farm Buildings

Imagine learning how to farm without having a farm. That is what the agriculture students at Southern will be forced to do unless the funds are provided to buy land, construct farm buildings and buy more stock.

Southern's present 320-acre University Farm is in the path of new construction. The present farm buildings are located on the site of the new power plant which is already going up. This means that the old farm buildings must be moved or new ones must be constructed.

None of the present farm buildings are modern and all are fifty years old, which eliminates the practicality of moving them. The expense incurred in moving and rehabilitating the old structures would be as high as that involved.

Why Southern Needs A Health Unit

If an epidemic should break out at Southern Illinois University, the Health Service might well become more of a menace than an aid.

At the present time it is impossible to treat patients in privacy. All students who need medical attention must wait in the hall or in one of the two treatment rooms while other students are receiving treatment—thus exposing everyone to any communicable disease that one student might have.

"Just a few days ago, a girl came into the Health Service who had a temperature, and I advised her to lie down on the cot in the office," Dr. Marie A. Henrichs, University physician, related in a recent report to the President. "A second student came in whose temperature was higher, so the first girl had to get up and give the second girl the cot, which is the only one in the office."

Since Southern has no infirmary, students who are too ill to go home must remain in their rooming houses where the landlady must turn her home into a virtual hospital and must act as a general nurse. Houses may be quarantined and 20 students lose valuable class time because one student is ill. Health Service records show that in a student body of this size, there are usually two or three cases of communicable diseases on the campus. The urgency for an infirmary with a few isolated beds is indeed imperative to safeguard the health of the student body.

The Health Service now occupies two rooms in an old, run-down wooden residence with inferior plumbing and heating facilities. The restroom facilities for students consist of a single small room measuring 6 feet by 3 feet, with no ventilation, and opening directly into the hall which serves as a waiting room.

A reconditioned furnace, literally held together with tape, furnishes the only heat for the building. On more than one occasion fire has broken out because the furnace pipes are too close to the flooring. Excessive smoking by the furnace covers the place daily with a coat of soot.

The remainder of the building is taken up with offices and classrooms. Since the two treatment rooms are not sound-proof, auditory tests, heart counts and other phases of physical examination are almost impossible because of the incessant noise of the large classes in the rooms overhead and the shuffling in the halls while classes are passing.

Both men and women are treated in the same room and often it becomes an embarrassment to both student and the doctor, since there is no privacy even for very personal matters. This greatly hampers effective examination. Small cubicals designed for individual consultations are necessary before doctors and nurses can protect the health of Southern's students.

Treatment oftines must wait for results of basal metabolism tests, blood tests, electro-cardiograms or X-rays—all services which Southern can not NOW provide. All tests of this nature must be sent to the city hospital at a great expense to the University and incurring an undesirable wait for the patient who may need urgent attention. Such laboratory apparatus should be on hand to facilitate the apprehension of disease and injury. Southern's football players suffered most from this inadequacy this year, since nearly every member of the first squad found it necessary to have at least one X-ray because of an injury.

Further inadequacies of the Health Service are found in the inaccessibility of the permanent records which are now molding in the basement because of the lack of filing space for them elsewhere. Current records of students now in school are kept in the hallway which only tends to increase the fire hazard of the building. Help SIU Help Southern Illinois.
Why Southern Needs A Life Science Building

The Old Science Building has grown too old and inadequate to meet the needs of the growing life science departments.

A building that was constructed in 1896 to accommodate the biology and zoology departments has ceased to serve the requirements of these two departments and certainly is incapable of serving the additional departments of microbiology and physiology.

The new department of microbiology is in dire circumstances, trying to operate in a building that was not constructed for research work. It would be too expensive and impractical to construct sterile transfer rooms—rooms in which the air is filtered—and temperature control rooms in an old building which is not rigid enough to withstand added weight. Besides, there is no space for these additional rooms.

The old building has long been a fire hazard; now that it houses thousands of dollars of irreplacable research equipment, fire would be a great calamity not only to this University, but to the world. Dr. Carl C. Lindengren, chairman of the department of microbiology, has developed yeast cultures with which he alone supplies the rest of the world. Destruction of this man's original works would indeed be a great loss to humanity.

The physiology department, which should be able to use the experimental laboratories of the proposed Life-Science Building, is now compelled to hold theory classes in the old frame house which houses the Health Service. It has no laboratory.

The zoology and botany departments are also forced to share the building with University high school gym classes and the Registrar's Office.

The zoology department has only one lecture room and the botany department two. This spring the zoology department is faced with the problem of finding another classroom. It has been sharing one room with the botany department, but that room has been made into an office for seven botany faculty members, who formerly occupied a supply-stack ed storage room, which had no outside ventilation. Two of the zoology faculty members who still do not have an office must leave their records in the classroom or try to transport them home each day.

All students are required to take at least one course in botany or zoology, but it is impossible to crowd all these students into the limited laboratories. Even if this could be done, it would not solve the problem for those students who need advanced courses for a major or minor or for those who wish to complete work for premedical, pre-dental or pre-professional training. Graduate students are not provided for.

Moreover, Southern has been asked by the State Department of Registration and Education, Division of the Licensing of Nurses, to develop a nurses education program to help meet the critical need for nurses in Southern Illinois. This program cannot be carried out in present facilities.

In order to give the necessary courses to maintain the departments, more research space must be made available. No advanced research can be carried on now because there is no place for it. All the laboratories are used by so many classes that it is impossible.

(Continued on Page 9)
Why Southern Needs Dormitories

Anthony Hall, Southern's only dormitory, was constructed in 1913 to house 72 girls. That year fewer than 500 students were enrolled in college and the last two years of high school. With the present swollen enrollment of more than 3,000 university students, of which more than one-third are women, Anthony Hall's accommodations have been stretched to meet the needs of 120 girls. Of course, that has meant placing as many as four girls in rooms constructed to house only two.

Freshman, who find it so necessary to get the right start, are occupying these rooms. This does not make for good scholarship. According to reports of fall term's grades, girls staying in rooms occupied by three or more students tended to make lower grades than did the girls living in the single or double rooms at the dormitory.

In fact, a more general survey shows that all students living in rooms which are occupied by three or more students tend to make lower grade averages than those students staying in rooms which house only two students.

More than 300 Southern students live in rooms shared by three or more.

Lack of bath facilities is the worst feature of our housing conditions, according to Mrs. Mabel Pulliam, University housing director. According to recommended standards, the maximum number of persons sharing the same bath should not exceed eight. In many instances 20 Southern students share the same bath facilities. Certainly such conditions do not make for good health.

One-fifth of Southern's students now commute from nearby towns or in some cases from towns as far as 45 to 86 miles away. These are daytime students. Surely spending so much time in travel does not make effective college students, either scholastically or socially. These students who commute must give up all campus social life. They are also forced to give up valuable time in the library.

Adequate housing on the campus would eliminate the long drive to and from school and leave two to four hours each day free for study and for participation in University activities, which are necessary to develop the proper attitudes in the college student.

Student personnel authorities recommend that one-third to one-half of a student body should be housed in dormitories. At Southern, only one student out of 25 can stay in a dormitory. Even the proposed construction of the two new dormitories will not bring Southern up to the desired standard. Only an additional 400 students will find residence in the new dormitories, making a total of approximately 500 or one-sixth of the student body provided for by campus accommodations. It is readily apparent that Southern will still fall far below the desired standard, and everything possible must be done to eliminate these wide discrepancies.

Must Southern's students be denied the advantages of group cooperation, regular living habits, adequate study facilities and ready access to the library which can be provided by the dormitories?

Examples of typical houses accommodating students are those bordering the University campus, which have been acquired by the University in recent years. Most of these residences have served as boarding or rooming houses for many years. Because owners have been aware for many years that the properties would some day be purchased by the University, little (Continued on Page 9)
Southern Illinois Boys and Girls Demand Equal Education, Committee Says

Five times as many boys and girls go to college in Northern Illinois as in Southern Illinois, according to a Southern Illinois faculty-student legislative committee.

Moreover, the Southern Illinois college students have fewer faculty members to teach them—again, on the basis of each 100,000 population—than do the Northern Illinois students.

The University committee points to the above graph as "another example of the wide deficit in higher education that Southern Illinois has been putting up with all through the years."

The chart, based on a U. S. Office of Education report, shows that in 1939-40 only 205 boys and girls out of 100,000 population or 1,000 per 100,000 population in Southern Illinois, while Northern Illinois colleges and universities had 90 faculty members per 100,000 population.

In other words, Southern Illinois had 1/5 as many students per 100,000 population as did Northern Illinois and that with less than 1/6 the faculty per 100,000 population, to teach these students.

That same year, the University committee adds, operating expense deficits at colleges and universities of Northern Illinois amounted to $164,000 per 100,000 population, compared to $54,000 per 100,000 population, in Southern Illinois, a deficit of $110,000.

"If adequate funds for higher education had been available for Southern Illinois, an additional 700 boys and girls out of every 100,000 population could have attended college in 1939-40.

To put it another way, if adequate educational facilities had been available in Southern Illinois, 1,000 students out of every 100,000 population—instead of 205—could have attended college. Student enrollment at Southern Illinois University could have been doubled to about 2,000 instead of 2,000."

These long-standing deficits in Southern Illinois must be corrected," declares Dr. Orville Alexander, chairman of the University committee.

That's why we are asking the legislature to approve a $362,000 operating budget and a $36,955,170 building fund for Southern Illinois University for 1949-51.

The following table shows comparison on the basis of each 100,000 population:

<table>
<thead>
<tr>
<th>College and University</th>
<th>Enrollments, 1939-40</th>
<th>3,009 students.</th>
</tr>
</thead>
<tbody>
<tr>
<td>North South</td>
<td>South's</td>
<td>South's</td>
</tr>
<tr>
<td>31 counties</td>
<td>71 counties</td>
<td>Deficit</td>
</tr>
</tbody>
</table>

Table for comparison of college-trained men 25 years of age and older in Northern Illinois and in Southern Illinois shows a critical shortage for this area. But do cost of living and tax burden in Southern Illinois play a role in college enrollments and university college and university libraries.

In 1939-40, the schools of Northern Illinois had funds to expand for operations totaling $416,000 for every 100,000 population in the 31 counties of Northern Illinois. That same year, Southern Illinois benefited from only $54,000 per 100,000 population in Southern Illinois higher educational operations this year are being carried on in condemned or temporary structures, and next year its activities will be housed in such sub-standard quarters.

The group points to the above graph based on figures published by the U. S. Office of Education, which shows an enormous deficit in the amount of money expended for operating purposes and for buildings in Southern Illinois and in Northern Illinois higher educational operations this year is being carried on in condemned or temporary structures, and next year its activities will be housed in such sub-standard quarters.

While Southern Illinois cannot offer the physical plant than many high schools possess, (two classrooms, kitchens, and workrooms, for instance), Southern Illinois must be correctible, the committee points out.

No more student enrollment has been a steady upward one, following about 14 per cent each year, the committee points out.

"It is to help overcome these long-standing deficits that Southern Illinois University is asking the legislature for a $362,000 operating budget and $36,955,170 for new buildings."

"It is to be borne in mind that the provisions of residence halls is as important and as essential a part of the purpose of the University for the University of Illinois is a provision for libraries, laboratories, residence halls, and classrooms. The chief purpose of University residence halls is not one of housing but of educational and educational influences. The cost of residence halls, whether not from general funds of the university or from gifts or endowment, is a cost of educational expenditure for essential, necessary educational equipment, and not primarily as an investment."

"One-half the campus points to the above graph, based on figures published by the U. S. Office of Education, which shows an enormous deficit in the amount of money expended for operating purposes and for buildings in Southern Illinois and in Northern Illinois higher educational operations this year is being carried on in condemned or temporary structures, and next year its activities will be housed in such sub-standard quarters.

Why Southern Needs An Education Building

With the demand for teachers so acute, it is imperative that Southern continue to emphasize teacher-education as one of its major programs.

Today, Southern’s College of Education is scattered over the entire campus, with classrooms and offices in almost every building. There are fifteen instructors in seven different offices in four different buildings, with no office large enough to hold a staff meeting of the whole group. Education classes are held in still more buildings with many classes having to meet in one building on Monday and in another on the next day.

Most of the offices are sections of classrooms shut off by partitions reaching only part of the way to the ceiling. Often, the only entrance to the office is through the classroom. This causes constant distraction to the class in session.

The education department has no seminar rooms for graduate students, no rooms large enough to hold meetings of high school principals or similar groups who are invited to the campus, and, worst of all, no storage space. Demonstration material must be carried from one building to another. Remedial reading equipment is in the basement of a condemned library. The University has only one projection room, which is used by all departments.

In order to take care of the development of the department, it is urgent that an Education Building be constructed adjacent to the training school where student teachers will practice.

Such a building would provide opportunity, now entirely lacking, for teachers from the area to visit and observe Southern’s methods. It would provide facilities for teacher-education which cannot not be undertaken or which can be offered on only a limited scale.

Why Southern Needs a Special Education Building

The obligation of the State to provide special facilities for the education of exceptional children, and for the training of teachers to attend these exceptional children, is becoming increasingly recognized. Southern now offers little or no preparation for this field. The Child Guidance Clinic, initiated in April, 1936, is attempting to furnish opportunities for pre-service and in-service teachers to increase their understandings of normal and atypical children.

(Continued on page fourteen)
Why Southern Needs

In the original planning of Parkinson Laboratory, the industrial education department was to occupy the entire first floor, but the space has been gradually encroached upon by the bookstore, the University post office, a film projection room, an education office and duplicating service, leaving only three rooms for the industrial education department.

This has left the industrial education department with no lecture or planning room, no storage room or finishing room. There is only one machine shop, one woodworking shop, a drawing room and a small office constructed in a corner of the machine shop.

There is no space available for additional equipment needed to give satisfactory machine shop training and bring the size of the classes up to effective proportions in both beginning and advanced work. This is the most noticeable limitation in the department. At present, Southern has facilities for handling only twelve students at a time in the machine shop, while the standard number of students who may be handled efficiently in such classes is between twenty and twenty-four. This means only one half return for teacher, material, and equipment involved.

The shops are so small that lectures and tests are given to students taking notes or writing exams while standing at machines, because no space is available for chairs or stools.

Because of lack of laboratory facilities, it is necessary to offer woodworking one term and metal working the next, setting up new equipment each quarter for the subject taught. Since no desirable arrangement can be made whereby one set of equipment can be moved in one quarter and put out the next, the unused equipment is left standing in one section of the room, taking up needed space.

Several Southern Illinois high schools, not to mention the other colleges under the Teachers College Board, have far more room and better facilities for training industrial education students. Yet many of Southern's graduates are expected to go into these other schools and teach in fields which can not even be offered at Southern because of the lack of space and equipment.

Last summer Dr. W. C. Bicknell, chairman of the industrial education department, was asked to supply the State Employment Service with individuals desiring employment in industry. Dr. Bicknell believes this is a major lead to permanent employment of Southern's technically trained students. However, he is forced to admit that many high schools are better equipped to do the job than Southern is.

Must Southern be forced to admit failure because of lack of space and facilities to compete with high schools to say nothing of colleges and universities? The demand is here for industrial education at Southern. On registration day industrial education classes are closed within two hours after registration begins.

Dr. Bicknell says, "I believe a conservative estimate would be that we have had to turn down at least 25 per cent of the students who have wanted industrial education work in the last two years. "Even though our classes are scheduled from 8 a.m. to 10:30 p.m., we are unable to take care of more than 259 who are now enrolled per quarter."

"I might add that a majority of these students are on the senior college level, and that this figure does not include any pre-engineers or other students electing industrial courses."

Only three-tenths of 1 square foot of social or recreational space per student is available at Southern. The present national average is 4 square feet per student, the recommended average is 6 square feet per student. Southern needs a Student Union Building, and needs it now.

Do your part. Help Southern get operating funds and buildings.

Woodwork laboratory, shared by University and training school students.

Crowded drafting room where all drafting classes are taught.

WHY SOUTHERN NEEDS (Continued from Page 8 & 9)
could afford to go elsewhere. They go to Southern, or they don't go to college at all.

2. Physical Plant Valuations, June 30, 1947, at the six-state-supported colleges and universities of Illinois, compared with fall-term, 1948, enrollments:

- Western Illinois State College
- Eastern Illinois State College
- Northern Illinois State Teachers College
- Illinois State Normal University
- SOUTHERN ILLINOIS UNIVERSITY
- University of Illinois

If you want Southern to "catch up," if you want Southern to have buildings it must have to raise its sub-standard physical plant to par, let the Budgetary Commission, the Governor, and the General Assembly know how you feel.

Southern—and the other four schools under the State Teachers College Board—secured a rehearing on operating budgets. Soon the Budgetary Commission will call a hearing on building requests. ACT NOW.

Southern Illinois University Legislative Committee
Dr. Orville Alexander, Chairman

Dr. Leo J. Brown, President

Page Eleven
A University is expected to meet the cultural needs of the area it serves, but Southern lags badly in this respect in not having a place where eight of nine thousand people could gather for a community meeting.

Southern has no place where all 3,000 students can assemble under one roof. Shryock Auditorium, which seats approximately 1,750, must turn away half of the student body along with friends from the area when large University functions, such as Commencement, Homecoming and all school convocations, are held. Some sixty district and state meetings are now held on the campus each year, but several times this number of local, state and even national groups could be scheduled if facilities were available. Southern Illinois people could be saved traveling expense to Chicago and other up-state points, if occasionally each statewide organization could hold meetings in Southern Illinois, while at the same time these cooperative activities would bring the University into closed contact with various groups and create good will.

Not only would the Community Center be a boon to the area as a mass meeting place, but it would give the University fans along with all the University students a chance to see the Maroon basketball team in action. Although the Maroons have been conference champions for three years and won the Kansas City Tournament in 1946, many schools are reluctant to play on Southern's home courts because of the limited seating capacity of the gymnasium.

The seating capacity is 1,700; only a little more than half the student body can be accommodated, and few alumni and other non-student fans ever get to see the team in action.

A field house would meet the needs for a large auditorium to serve the campus and the people of the area. It would provide adequate facilities for men's physical education and for both intramural and varsity athletics, with adequate space for spectators to enjoy these sports.

Southern Needs Your Help.

A College That Needs Help

The President of an American college noted the other day that his school is conducting about half its operations in "condemned and temporary structures." Half the faculty is paid less than the school's standards prescribe. All the faculty is overloaded with work and cramped severely in both office and classroom space.

Some small school in a backward Southern state? On the contrary. The school is Southern Illinois University at Carbondale, part of the government in one of the nation's wealthiest states. The college isn't so small either, for it currently is straining at the seams with 3,100 students.

A committee of Southern Illinois citizens describe the school's difficulties with a rougher tongue than President D. W. Morris uses. Says this group: "A continuation of providing higher education under the present conditions (some of which border on squalor) of inadequate classroom space, inadequate housing and other situations dangerous to the safety of life and limb cannot be countenanced by the people of this area."

This committee has appealed to the state budgetary commission to approve in full the university's request for an $8,000,000 operating budget for the next two years. This sum would not even begin to provide any expansion of the Carbondale college, but it would bring the school within reach of the normal decency of higher education.

It is to be hoped that the new state administration will give Southern Illinois University the help it needs and deserves. This college serves students from families of limited resources. Many students commute to the campus from farm or coal-mine-family homes in surrounding communities. For most of them, SIU represents the only possible opportunity for college training. If equality of educational opportunity is to be upheld in Illinois, the plight of such a school should make a profound impression upon Springfield's law-makers.—Chicago Sun-Times, 1-13-49.
**Why Southern Needs A Student Union Building**

Southern has never had a "living room" where alumni, distinguished guests or even the students could go for social relaxation.

The only student lounge on the campus was taken over more than a year ago by the Biological Research Laboratory. Two small rooms in one of the houses on Thompson Street and the Allyn Training School now serve this purpose. The university high school and the Allyn Training School now have exclusive use of the Old Science gym; the Little Theatre is now part of the music department, so the students have no place to hold dances, even small organization dances.

Students have no student life center where they may congregate for recreation and for participation in student activities. Southern has been dubbed a "suit-case university" by the students who must go home every weekend if they are to find recreation.

The only place where students may relax between classes is the Canteen, an old, dingy, unsightly place to hold dances. The only student lounge on the campus is the Canteen, student "sunny joint," is only spot for between-class relaxation.

The Canteen, an old, dingy, unsightly place to hold dances, even small organization dances. Besides, it falls in line with the "suit-case routine" and closes over weekends too.

One of the major obligations of a university is to provide social experiences of a desirable type, to accustom students to living and working and playing in gracious surroundings.

A Student Union Building would afford a gathering place where the social and cultural values that are so essential a part of a university education, might be provided.

At present, student publications—The Egyptian, newspaper and The Obelisk, yearbook—are housed in dark, airless basement rooms of the Brown Building. A Union Building could provide editorial rooms that would be comfortable and attractive places for student journalists to practice their future profession.

It would provide, too, a center to which alumni might come for bigger and better reunions. Alumni would have a far better chance to renew old acquaintances at Southern if they could always be assured of a meeting place in a reserved section of the new Student Union Building.

---

**If I Hadn't Seen It I Wouldn't Have Believed It!**

Last Friday afternoon, along with several other Southern Illinois editors, I made an inspection tour of Southern Illinois University at Carbondale. I had read and heard that Southern was desperately in need of greatly increased funds for operating costs and maintenance as well as huge appropriations for new buildings. Frankly, I thought these reports were exaggerated—realized that there was a need but was skeptical about the situation being a desperate one.

Friday I say Southern. The situation is desperate. There has been no exaggeration. If every member of the General Assembly could see Southern as I saw it last week I'm sure that the first appropriation bill to be passed would be the one giving the University everything they are asking for if it if not more.

I saw students in art classes in buildings which were badly in need of repair outside as well as inside. The University is forced to use old store buildings and residences to be able to accommodate the students. In one of these buildings a section of the floor was unsafe for walking. The ceiling was battered and torn where partitions had been removed. The students were working with antiquated equipment. It was a situation which would not be tolerated in the poorest school district in the state.

Don't get me wrong—there are some good buildings at Southern but they are woefully inadequate to take care of the more than 5,000 students and the only modern classroom building was built in 1928. To get additional room students are carrying on varied activities in basements of the better buildings. In some cases there are no windows in the basement rooms, poor lighting, poor ventilation and poor heating. All of them feature a maze of pipes near the ceiling which make it impossible to walk without bending over to avoid head-on collisions with heat and water pipes. Much of this basement space is not even fit for storage—but now it is in use for scientific experiments and a variety of educational activities.

The library has been condemned as unsafe and 75 per cent of its bookload of 103,000 books are being removed. Twenty-five thousand books are being crowded into the basement of the girls' dormitory and this dormitory is housing almost twice as many students as it was designed to accommodate. Other books are stored in the library basement, the basements of other buildings and in an old barracks building. The original library building was built for a student body of less than 10 per cent of the present enrollment at Southern. Before the building was condemned even the unfinished and unheated attic was pressed into use in an effort to give the students the opportunity of using the library facilities. A stairway which resembles a ladder leads to this attic and lighting was so poor that flashlights were required to find wanted books.

Southern's band members must be athletes to be able to get into band rooms. By bending double and walking under a huge air duct it is possible to get into the room. How they get their instruments in and out of that room will always remain a mystery to me. The only lounge facilities for men on the whole campus are a couple of small rooms in an old house which also contains a veterans office and housing office.

I hope that many of you will have the opportunity to visit Southern and see for yourself the great needs of the University. If this is not possible talk to the students who have a first hand knowledge of the situation. Then if you believe that Southern Illinois students should have equal opportunities for higher education write to the members of the General Assembly, members of the Budgetary Commission and the Governor urging approval of the budget requests of your own Southern Illinois University—Metropolis News, 1-20-49.
Why Southern Needs An Administration Building

Corporations, in order to become more efficient, concentrate management in one headquarters. Southern is rapidly approaching the corporation stage with faculty administrators, business administrators, chief executive, and allied services. From the standpoint of efficiency in establishing policy and operation, a modern administration building to house the various administrative offices of this growing university is highly desirable.

From the standpoint of developing an attractive campus that will be a source of pride to all of Southern Illinois, it is a necessity.

The development of Southern from a college into a university has necessitated the enlargement of its administrative framework. These new administrative offices and service agencies are severely handicapped in their operations by crowded quarters, inconveniently designed and located. Some of them operate in former residences and barracks buildings remote from other administrative units.

One of the worst examples of housing is the leaky barracks building in which the College deans are located. The water-stained, cracked walls and the rough unfinished floors are a disgrace to any university. The inconvenience of being remote from the other administrative offices and from the students themselves is more unsatisfactory than the structure itself.

Students object to the “running around” it takes to get an assignment card of a drop-slip signed, or to have a conference with the dean. Time is wasted by the students and the administrators in the constant “running around” it takes to get anything accomplished.

Processes could be speeded up and a far more efficient system developed by construction of a general administration building for all administrative people.

Southern’s “administration building,” a barracks housing three academic deans, Graduate School director, and student teaching director.

S. I. U. Asks For $8 Million Fund-The Money Needed To Maintain High Standard

Southern Illinois University at Carbondale is asking the legislature for eight million dollars for an operating budget for 1949-51.

It should be granted.

If Southern Illinois were on an educational “parity” with Northern Illinois on the basis of population alone, the appropriation should be $12.4 million.

On the basis of the 1947-49 appropriation, which was $4.4 million for Southern Illinois, it was one-seventeenth of that received by the northern part of the state. Yet, the population ratio is one to seven.

Other good reasons for granting the appropriation include the fact that enrollment at Southern is at an all-time peak of 3,009 students. New students must be assured of adequate instruction, and new faculty members must be added. The faculty is overloaded.

Faculty salaries must be raised. A new salary schedule has been authorized, but funds must be appropriated to put it into effect.

The ceiling for a full professor at Southern is $5,950; the ceiling at the University of Minnesota is $13,000; the University of Illinois has no ceiling set by law.

Southern Illinois University is OUR University down here in "Egypt." We residents of the area should see that it gets proper recognition and state assistance.

We can do this by making our wishes known to the Budgeery Commission, to Gov. Adlai Stevenson and to members of the General Assembly—Red Bud Pilgrim, 1-7-49.
Southern Illinois “Underprivileged,”
Says S. I. U. Committee
If you live in Southern Illinois, your chances of going to college are far slimmer than if you live in Northern Illinois, declared the Southern Illinois University faculty-student legislative committee which is gathering facts to support the University’s request for increased operating funds and for a substantial building program in 1949-51.

In fact, Southern Illinois has nearly a 50 per cent deficit among every 100,000 people compared with Northern Illinois, in the number of men who have attended college for even one year.

The committee cites the above graph, based on a U. S. Office of Education report for 1940, which shows that out of every 100,000 people who live in the 71 counties of Northern Illinois, 11,403 men 25 years of age and older have had at least one year of college work.

In the 31 counties of Southern Illinois, only 6,412 men 25 years of age and older have ever attended college.

The reason is clear, according to the faculty-student committee. Educational facilities in Southern Illinois have been lacking, and the people of Southern Illinois, by and large, cannot afford to send their children up-state to be educated.

Expenditures for higher education in Southern Illinois for the same year represented in the above graph, 1939-40, were only a fraction of those expended by the 35 accredited colleges and universities in Northern Illinois.

In that year, only $54,000 was expended for each 100,000 population in Southern Illinois, compared to $416,000 expended per 100,000 population in Northern Illinois.

Southern Illinois University is not only the only state-supported college or university serving the 31 Southern Illinois counties, but it is the only fully accredited four-year college or university of any kind serving the region, the committee points out.

"If Southern Illinois is to get out of its "underprivileged class," there must be adequate state support for Southern Illinois University," Dr. Orville Alexander, chairman of the committee, declares.

"Southern is asking for $7,961,533 operating budget and a $36,955,170 building program.

"The appropriations are essential if we are going to wipe out that long-standing deficit in Southern Illinois higher education."

SPECIAL EDUCATION BUILDING
(Continued from page ten)

The Clinic has accomplished a great deal with the handicap of inadequate facilities and space. They have one small office, 10 feet by 20 feet, which contains filing cabinets, desks, bookcases, supplies and a minimum working space for four people. The Clinic has one other room which is used for testing, for conferences, and for storage of testing instruments.

Since there is no private waiting room, parents and school executives who accompany the children are forced to sit or walk around in the halls all day while waiting to be interviewed.

At times the Clinic has been forced to send people to the basement of the Library in order to have sufficient privacy for a conference. Even slight distractions may often make an entire test invalid.

At present, speech correction work for students must be conducted in the speech office, which is shared by five faculty members and a secretary. Southern has a good speech correctionist, but without private facilities his work cannot be very effective.

A special education building is required to provide the unusual facilities for the guidance clinic and for the education of special children. Facilities are needed for clinical therapy to rehabilitate children who are handicapped by sense organs, speech or neuromuscular coordination problems. The need for such a building is particularly acute in Southern Illinois where medical and hospital care is not easily available.

President Tells
Faculty of Needs
For Legislation
Southern Illinois University is "in the cellar" as far as per capita state support of higher education in Illinois is concerned, Dr. D. W. Morris, president, told the 250-member faculty Jan. 6.

President Morris discussed the University’s over-all legislative program, including requests for a $7,961,533 operating budget and a $36,955,170 building program, and the creation of a separate governing board for this institution.

He pointed out that practically all of the increase Southern is requesting is necessary "simply to equalize" Southern’s operations with those of other schools.

"I do not mean in any way to minimize the needs of the other state colleges or of the University of Illinois," Dr. Morris emphasized. "They need the funds they are asking to maintain their present programs.

"But Southern has a lot of ‘catching up’ to do, and we have the special situation of developing a university which the other schools do not have."

He cited the fact that during the next biennium, Southern will be conducting approximately one-half of its operations in "condemned and temporary structures, which are expensive as well as inconvenient to operate."

"The only alternative is not to use these condemned or temporary buildings, which means drastically limiting student enrollment," he declared.

He estimated it would require about a half million dollars from the operating budget to rehabilitate the score of former residences which the University will occupy during the next two years, and make them usable even temporarily for emergency educational purposes.

"Approximately one-half of our present faculty is paid less than the present salary schedule calls for," he said. "To bring these salaries up to the salary minimum and to provide for normal increments will require another million dollars."

"Our faculty is greatly overloaded, and to bring our student-teacher ratio in line with that of the other state-supported colleges and University of Illinois will require another $700,000.

"These costs, together with other necessary expenditures to bring us to parity with the remainder of the state’s higher educational institutions, will require a total of around $3,200,000 in additional funds. That’s just to establish parity—not to expand.

Library Facilities Lacking In Southern Illinois, Declares S. I. U. Legislative Committee

The heart of any college or university is its library, but Southern Illinois is under-privileged in higher educational library facilities as well as in other phases of operations, a Southern Illinois University faculty-student legislative committee points out.

The above chart based on data from the American Council on Education, shows that in Northern Illinois, in 1940, there were 60,900 volumes available in accredited college and university libraries for every 100,000 population. That same year, in Southern Illinois, there were only 4,400 volumes available for every 100,000 population, or a deficit of 56,500 volumes.

"This is just one more instance of the sub-standard educational support that has been given to Southern Illinois," asserts Dr. Orville Alexander, chairman of the committee.

Fewer students go to college in Southern Illinois, there is less money for buildings, there are fewer faculty members.

"Southern Illinois must be brought up to par in higher education. That is why it is imperative that the $7,961,533 operating budget and the $36,955,170 building fund requested for Southern Illinois University for 1949-51 must be granted by the General Assembly."

Southern Has Less Than Half Space Per Student Needed

(See Chart on Page 1)

The above chart shows the way space per student has been falling at Southern Illinois University since 1920. Prepared by a faculty-student legislative committee, to demonstrate the school's critical need for new buildings, this chart shows that not since the early 1930's has there been enough space per student available in Southern's physical plant.

This year, Southern's physical plant provides only 62 square feet per student, compared to 155 square feet recommended as a minimum requirement by the President's Commission on Higher Education.

Other data compiled by the University committee show that the current national average at colleges all over the country—crowded as they are by the post-war influx of students—is 126 square feet per student, compared to Southern's 62.

The committee also cites that the present average for all colleges and universities in the State of Illinois is 149 square feet per student, compared to Southern's 62.

"The above chart shows clearly that the present space shortage at Southern is not a new one, caused by the post-war boom in student enrollment," Dr. Orville Alexander, chairman of the legislative committee, points out.

"A shortage has existed since the early 1930's, and the gap between the size of the student body and the amount of space available per student is widening all the time."

"Moreover, the chart shows that Southern's growth in student enrollment has been a steady one, and that the present enrollment of 5,060 students is not an inflated student population that may be expected to disappear once the rush of veterans is over.

"The plain truth is that Southern's student body is continuing at its regular rate of growth, but we have not had buildings constructed to keep up with the rate of growth. Southern has not built a classroom building since 1928."

"We must have not one or two buildings, but a major building program to 'catch up' with the student body we now have."

"That is why we are asking the General Assembly to appropriate $36,955,170 for 1949-51 to build the buildings we need right now."

At Southern, only 9 square feet per student is provided in dormitory or residential space; the national average is 67 square feet, the Illinois average is 62 square feet. Southern needs dormitories, and needs them badly—NOW.
