Sliced budget nearly complete: Brandt

By Lenore Sobota
Daily Egyptian Staff Writer

Eight weeks into the fiscal year, the SIU budget is nearing completion.

Gov. Daniel Walker's "financial crisis" speech June 11 sent budget officials, scurrying back to the drawing board, but it was not until the governor used his reduction veto power one month later that the real work could begin.

The University has been operation with last year's figures since the fiscal year began. President Warren W. Brandt said, "because we knew before we started that we'd be close to that last year's budget. We're not really as far in the dark as it sounds."

SIU's $68 million budget for 1975-76 was 8.5 per cent larger than last year's budget before Walker cut $2.88 million, or 4.4 per cent, from the SIU-C appropriation.

Although the budget is "99.9 per cent complete," according to Brandt, detailed figures will not be ready in time for approval at the Sept. 11 meeting of the SIU Board of Trustees.

Brandt said a summary of the budget will be submitted to the board.

Brandt said part of the delay in completing the budget was being caused by the heavy work load placed on Budget Director Warren Bulfin and his office.

The same office is preparing next year's budget at the same time it's working on this year's cutbacks.

Brandt said: "They've been working days, nights and weekends."

George R. Mace, vice president for University relations and acting vice president for administration and campus treasurer, said: "We're taking a three-month process and trying to get it done in two weeks."

Some of the effects of the budget cuts are already being felt, although the final budget remains incomplete.

A promised salary hike of 9 per cent for faculty, staff and civil service employees was reduced to an average increase of 7 per cent. A tuition increase is being considered for spring semester to help offset the cutbacks.

GOP candidates rap Walker at fund raiser

By Pat Corcoran
Daily Egyptian Staff Writer

Area Republicans gathering for their annual Hambletonian Bay brunch heard U.S. Senator Charles Percy praise former President Richard Nixon and President Gerald Ford while gubernatorial candidates criticized the state's financial course.

Percy, a Illinois, spoke to about 200 area Republicans at the $4 a plate meal.

Gubernatorial candidates James Thompson, former U.S. District Attorney for Chicago, and Richard Cooper, Chicago businessman, told the audience Gov. Daniel Walker has mismanaged the state's finances.

Thompson is the regular Republican party favorite in the primary. Cooper, admittedly, is the underdog.

At the conference, Percy reaffirmed his support for Thompson.

David O'Neal, St. Clair County Sheriff, said Walker and Lt. Gov. Neil Hartigan have been "too busy" pursuing their own political ambitions to run the state. The only announced Republican candidate for lieutenant governor, O'Neal said he would be able to work "closely" with a Republican governor.

Percy added, "It would be nice to have a governor and lieutenant governor who spoke to one another for a change."

In a press conference following the brunch, Thompson admitted he was more familiar with handling judicial problems than financial ones. However, he added, he was conforming with State Comptroller George Lindberg on financial matters.

Lindberg, also present at the conference, noted Thompson was a "fast learner."

Cooper said he planned to cut state spending by "running the state like a business and making the state's social programs cost-effective."

Both Cooper and Thompson charged Walker has "padded" the state budget with political operatives who serve his re-election efforts rather than the people.

Critical of Thompson's lack of definite programs, Cooper said, "The time to make concrete policies is now, not after you are elected."

Thompson has said he is making no promises of programs in his campaign except to do his best as governor.

Cooper said he had requested an hour and a half with Nixon in San Clemente. He characterized the former president as "lucid, intelligent and charming" in discussing world affairs.

You don't think a Republican can win the presidency," Percy said. "You are an incumbent president in the convention."

Former governor Richard Ogilvie attended the meeting in his new role as chairman of Ford's Illinois re-election campaign. He said he expected the president to run well in Illinois.

Cooper, although not backed by the regular party, said he is willing "to make a fight of it" for the Republican nomination, considered for spring semester.

"I obviously care about the way the state is being handled or I wouldn't run.

It is going to take a lot of campaigning but I think I can get support.," Cooper said.

He is currently campaigning by doing a "day's work" in towns across the state. Cooper said he recently worked for a day in coal mines near Marion.

He worked to leave in place before you can get an understanding of its problems., Cooper said.

Pipe bursts, Neely Hall flooded

By Ron Morgan
Daily Egyptian Staff Writer

A break in a half-inch water pipe in Neely Hall Friday night sent water and steam pouring into the building's library and lobby, and left maintenance workers swabbing floors into the early morning hours.

Leslie R. Weber, night housing maintenance inspector at Neely, said the water and steam damaged books and carpeting in the library, carpeting in the west wing of the lobby and some supplies in the basement of Neely.

A hole had to be knocked in room 211 of Neely to discover the source of the leak. Weber said. One plumber said that head expansion of the pipes was one possible explanation for the break.

Weber said he discovered the break about 8 p.m. Friday when he noticed water flowing into the west wing of the Neely lobby. Water and steam were pouring through the library ceiling and out into the lobby, he said.

At about 9:20 p.m. plumbers temporarily turned off hot water to the first eight floors after locating the break in a piece of half-inch copper pipe.

Most of the water pipes in Neely were replaced over the summer, Weber said, but both Weber and the plumbers said they couldn't tell if the broken pipe was one of the new ones.

Maintenance crews were brought in from Trueblood and Grinnell dining halls to keep the hot water from flooding Neely's lobby while plumbers were being called, Weber said. For an hour and a half, student workers and housing personnel kept the water back from the main lobby, although water eventually flowed down the west stairwell and left part of the basement covered with nearly a half inch of water, said Bill Kinsey, custodian in charge of the Trueblood and Grinnell maintenance crews.

Clean up work lasted until 1 a.m. Saturday and was renewed later in the day, Weber said.

Weber said that the full extent of the damage will not be known for several days.

Hal Pike, senior in political science and student worker at Neely Hall, fights back a flood. The flooding occurred Friday night when a pipe burst on the first floor of Neely.
Record book sales cause long lines

By Linda Hennes
Daily Egyptian Staff Writer

A record number of students have swamped the University Book Store last week.

The largest number of sales made was a week ago when a record 7,000 students entered the store, according to Morris Monroe, assistant manager of the book store.

Some students waited in line for over an hour to buy the books and materials earlier the week. Monroe said several changes were made to cut down the time students spent in line.

The store operated 12 cash registers, eleven of which were open and one for buying back books. "We have 30 to 35 student workers and 10 full time employees on the job at any one time, even the help couldn't alleviate the problem. We just have to put up with it," Monroe said.

He attributes the long lines at the store to the closing of Memorial Rental and to the increased enrollment.

To speed up the check-out process, employees are walking through the lines to verify checks. At the beginning of the week, students stood in one line to have their checks verified and in another line to buy their materials. That system was too time consuming, Monroe said.

Students should have their student ID or driver's license and a paid fail statement to check out faster.

Sales slowed down at the end of the week but another increase is expected at the end of the week, Monroe said. The store staff plans to use the same procedures this week.

The store has 24 officers on duty at each exit to control shoplifting. There are also plainclothes officers stationed throughout the building. Monroe said that some instances of shoplifting have occurred.

New books will be refunded by the store until Sept. 8. If there are no marks in them, they can be returned for a refund.

The store has started a system to stop resale of stolen books. Persons who have found books in the store are asked to report it to the store. If they have put their name in the books, the employees will watch for it, he said.

Longshot bettors buy happiness for $2

By Debbie DaPre
Sports Writer

Yankee Bambino, 36-1 longshot to win the Hambletonian, surprised a lot of people Saturday. He covered the mile and a half in one-mile track in 1:59 at DuQuoin to win the first heat of the classic harness race.

Bambino was followed in the race by a horse that ran in a heat the week prior. The horse, who failed to make the field, held a $2-to-win ticket on the longshot. Those $2 tickets paid $75.40.

Bambino's win over the field contributed to the $10,000 in money bet on winning. The public makes the odds by the amount it bets on a particular horse. Only 16 per cent of the money bet on the horse is returned to the state in track and state commissions.

The money is returned to the bettors. The amount wagered on a particular horse is subtracted from the money wagered on all horses in a particular race. Odds are determined by taking an amount equal to the number of horses in the race and dividing that number into what is left in the pool. If the number comes out with odd cents, they are known as the "change." The change is put into the pool that pays off to the nearest dime.

More confusion arose prior to the running of the fourth and last heat, when bettors were misinformed about which numbers they should use to bet on their favorite horse. At the ticket windows, they were informed to use the horse's original entry number, but on the track horse's new post position.

That means that anyone who thought he was buying a ticket to win on No. 3, Bonefish, in the fourth heat, was really buying a ticket to win on Noble Roger, who left from the third post position.

Even though Bonefish didn't win a heat until the third time out, his odds remained relatively low. By the fourth and winning heat, a $2 ticket on Bonefish paid $3.80 at 3:8 odds.

Guydore Hall Brou Jr., well-known sportswriter and correspondent for the Chicago Tribune, continued to favor Bonefish to win the race, although he said he would stop betting on the horse after it finished a dual heat in the first heat.

Bettors at the track were local people, lined up at the $2-to-win windows, a few more experienced bettors were on hand to lay down thousands of dollars on their favorites.

A one man was seen cashing in $2,500 worth of $20-to-1ook tickets on Bonefish after that horse had won the third heat. There was also talk around the betting windows earlier this week of "the candy man," an out-of-state bettor who put large sums of money on winning horses. He was later questioned by the Illinois Bureau of Investigation (IBI) when his wins helped to force the track into a minus pool for the day. According to Rick Tall of the Chicago Tribune, nothing came of the IBI's talk with "the candy man," who promised to return Saturday with even more money.

News Roundup

Fighting in Timor confined to capital

JAKARTA, Indonesia (AP) — Sources in Indonesian Timor reported that fighting in Portuguese Timor is confined to Dili, the capital, but the situation outside the city is like "a smoldering fire" that could burst into flame at any moment, the official news agency Antara reported today.

Three coastal boats brought 210 refugees from Dili to Indonesian Timor, the western part of the island, on Sunday. Most were Chinese.

Downstate teachers remain on strike

AP — Teachers in three downstate school districts remained on strike Monday with no apparent prospect for an early settlement.

Union officials said that in addition, there were more than 40 school systems threatened by walkouts, including more than 100 public schools in Chicago.

A spokesman for the school strike was settled over the weekend when negotiators in Spring Valley agreed on a new contract, ending a five-day walkout.

Defense leader approves of Sinaí experts

WASHINGTON (AP) — Secretary of Defense James F. Schlesinger said today that placing American technicians between Arab and Israeli forces in the Middle East would be a "win-win situation" for both the U.S. and the region.

However, Schlesinger said assigning U.S. technicians is unlikely to involve the United States in military conflict because political pressures from both the Egyptians and Israelis to make sure the technicians remain safe "are substantial." He called the potential danger of placing Americans in the Sinaí desert "an acceptable risk."
Horsing around at the fair

Rock musician John Sebastian (upper left) listens to the group America, with whom he shared the concert billing Sunday, before going onstage himself. Victor and Virginia Semperate (upper right) study a racing form to try to pick a Hambletonian winner. A burlap rug makes for smooth sailing on the giant slide (center). The larger-than-life Honest Abe who startles some youngsters is actually Joe Satterfield, an SIU graduate, promoting the Crab Orchard and Egyptian Railroad. Rosefish lived up to the crowd's and rider Stanley Dancer's expectations Saturday to capture the Hambletonian title. (Staff photos by Bob Ringham and Carl Wagner)
Lawyer needed

Student asking for a refund on their optional $1 student health fee is getting a great deal of student service to themselves and the rest of the student body.

A count last week showed 1,500 to 2,000 students have asked for a refund. For each dollar refunded, the student body has lost much support for the program, which needs strong financial backing to make it work.

Only such backing can secure the services of a talented lawyer, who should be promised job security. If too many students take away their mere $1 per semester, SUU cannot guarantee a lawyer a position for a continued length of time.

Even if the university can sue the university, because the fees are handled through the Bursar's office. But if students get behind the lawyer personally, SUU may have to cut back on services. A continued level of services is necessary to make it for the complete independence of the University, enabling the lawyer to represent students in legal action against the University.

The student's lawyer will be able to clarify tenancy landlord relationships, handle city ordinance cases advise on small claims court cases and make referrals in cases he is not allowed to handle directly.

Student Government has taken great pains to set up the program. Committee chairs have thoughtfully and intelligently worked out guidelines with University Legal Counsel John Huffman and the Illinois State Bar Association regarding group and prepaid legal services.

General guidelines will be reviewed by the Board of Trustees at the Sept. 8 meeting. If too many students ask for their money back, it could affect the outcome of the Board's decision.

A dollar is a small price to pay for legal services and advises each student who comments don't know their rights and how to secure them.

Short shots

John Huffman, University legal counsel has a plan to end SUU's financial woes. Everyone can save 75 per cent salary and make them work twice as hard.

Love, honor and sign on the dotted line

By Arthur Hoppe

"I cannot live without you, darling!" cried young Fred Frisbee, falling to his knees before his beloved. Feeling the pressure, Miss Prang, clutched his hands to her bosom. "I'm the one, Miss Prang," said her attorney. "Thurston Throck, who was seated beside her on the couch. "I suggest we strike the phrase 'until death do you part'," he said, "and be each other's legal team.'"

Educators can stem child abuse

By Rita Roberts

As reports of parents who abuse their children continue to rise each year, experts are becoming clearer that "the stresses and strains of our society is suffering" is the cause.

Educators can help prevent this increase in child abuse by playing an even greater role than just reporting children who have been abused. They can provide a sound educational program which prepares potential parents to handle stress and recognize the physical and emotional needs of children.

Frustrations: poor quality of life, the increase in divorce, drug and alcoholism it if families as child abuse, but it is becoming evident that the economic condition of a family is such a child is more likely to be a greater problem this year. People who lose their jobs often suffer a loss of self-esteem and experience increased anger towards situations taken out on the child.

Reported cases bear out experts' beliefs that there will be a rise in child abuse as the economic conditions worsen. In Detroit, Mich., 219 cases of child abuse were reported in the first two months of 1975, as compared with 160 cases in the same period in 1974. In Atlanta, Ga., the number of cases jumped from 127 in 1974 to 250 in January 1975.

Each year 700 children, most of them less than three years old, die as a result of physical injuries inflicted by their own parents, according to a UN report. It is also estimated that 10,000 children are severely beaten each year.

One solution to this problem has come from the Education Commission of the States (ECS) in the form of a 1974 proposal to state legislators encouraging the provision of curative and preventive approaches to child abuse rather than punitive ones. This article suggests educators can do much farther than a proposal to legislators. They can take an active part in the preventive process.

Along with the concern that children receive adequate knowledge of reading, English and simple arithmetic there should also be recognition that school egg elementary school children, as potential parents, need to have a strong self-image. Psychologists say persons who recognize their own worth generally the worth of others.

Teachers and school psychologists can provide learning experiences which help children recognize their importance. Of course, teachers themselves must believe that each child is of value.

Another part in the learning experience of potential parents (which includes almost every child in school) is to know how to produce physically and emotionally healthy children. The art of parenting should be recognized as an important factor in the educational process.

Child development classes at the senior high school level should be as basic as "English Composition."

Educators are right by saying that the punitive measure of putting parent-child-abusers in jail does not solve the problem. They are also right in being concerned about the urgency of the problem. Now they must take steps to eliminate the increase in child abuse by attacking the causes.

And may I congratulate both parties on their modern, sociological-approved decision to draw up a detailed contract beforehand so they will know exactly what to expect from their marriage?

"Precisely," said Throck. "And we accept the entire Health & Welfare Service, including the requirements to replace the tops on aspirin bottles, the murrinitures of four 'Poor dears' daily if the temperature is elevated and the prohibition of accusations of malingerings or discussions of insomnia.

As to the subsection on Sex, however, Miss Prang demands five peculiar challenges per week.

"Without any show of cause?" asked Frick, frowning. "Let's compromise on three. In addition, we are asking a limitation of no more than three family gatherings in a year or two blankets on the bed, the procreative of the first section of the newspaper at breakfast and severe penalties for placing a spoon in the fork section of the silverware drawer or inquiring, 'Did you lock the door?' after both parties are in bed."

"That's agreeable," said Throck, "as long as Miss Prang receives exclusive right to the left side of the bed, is protected against economy lay-offs by pension, and is allowed three expensive mistakes, annually including automotive damage not to exceed $1,000."

"In return," said Frick, "she must pledge to abstain from running the water when her spouse is taking a shower, to wear his Christmas present at least once, never to mention 'mental institutions' in front of his Uncle Edgar, and to observe the clause stating, 'The spouse who selects the television program is responsible for its contents."

"As this is a modern marriage," said Throck. "I assume your client agrees to do half the housework and half the diaper changing, the 7 a.m. feeding and the bearing of the children."

"The bearing of children is non-negotiable," shouted Frick. "And furthermore, these outrageous demands."

That was six months ago. The case is now pending in The Appellate Division of The U.S. Circuit Court of New York. But the young couple are happy.

They are more convinced than ever that the modern Marriage Contract clearly shows both parties what to expect. They have therefore decided to remain single.

States wary of offshore oil leasing

By Stan Benjamin
Associated Press Writer

Oil companies and the Ford administration claim that new and massive drilling on the ocean floor may be just the ticket to reduce America's dependence on imports. So why not take that plunge?

According to a burgeoning number of environmentalists and coastal state leaders, there are reasons for alarm. Even few deny at least the possibility of an energy bonanza beneath offshore waters. Many fear that any rush to capture it would trigger an environmental—and possibly economic—backwash of disastrous proportions.

"What's an oil company care about Cape May County?" asks New Jersey Gov. Brendan T. Byrne. "Once they've got a lease and they've got oil out there, what do they care about the environment?"

Massachusetts Gov. Michael S. Dukakis agrees. "I don't think any beds really trusts them," he said of the petroleum industry.

Right or wrong, such suspicions are aimed at both Big Oil and the Interoce, which were heard repeatedly in interviews with local leaders, environmentalists and others as the department hurried to lease huge underwater beds never before drilled.

The 17 offshore basins which may hold oil and natural gas cover some 186 million underwater acres. more than the total area of Rhode Island. Delaware, Connecticut, Hawaii, New Jersey, Massachusetts, New Hampshire, Vermont, Maryland, West Virginia, South Carolina, Maine, Indiana, Kentucky and Ohio. Their undiscovered oil and gas may equal the nation's entire 116 years of past production, worth perhaps $2 trillion at current prices—and it's public property. Every taxpayer has a stake in it.

Shell Oil Corp. estimates that tapping offshore petroleum can limit imports to 26 per cent of U.S. oil consumption, without it, imports would be 50 cent within 15 years. Current imports total about 26 cent of U.S. consumption.

But offshore production also threatens to bring oil spills and industrial blight, and many coastal states are demanding more information, more control, more money, more time to prepare.

The Interior Department, on the other hand, is not waiting to sort out these demands. The department wants to auction 1.6 million acres in new areas off southern California this October. California is suing.

Interior also plans to auction 1.8 million acres in the unexplored Gulf of Alaska this December. Gov. Jay Hammond is pressing Congress to block the sale.

The first East Coast leasing, off Middle Atlantic states, was tentatively scheduled at 2.6 million acres for May 1976. Two counties and five towns on Long Island, N.Y., have sued to prevent it.

The Interior Department also plans to auction 1.3 million acres in the Gulf of Mexico in 1976-77, according to the Environmental Protection Agency.

Only two coastal areas—the Southeast, due for an undetermined amount of leasing in October 1976, and the Gulf of Mexico, accustomed to offshore production since 1944—are at all satisfied. They think the companies and let them go to work and start drilling," urged South Carolina's Gov. John B. Edwards.

"I think they can be profit-oriented and people-oriented at all the same time" Interior also plans to auction 1.3 million acres in the Gulf of Mexico in 1976-77, according to the Environmental Protection Agency.

While few in the Southeast were totally pleased, some key defense officials are known to believe that the stockpile is adequate by improved U.S. missile systems and new souped-up missiles. Defense officials also say they have been working on a new weapon for years and have not needed the new weapon yet.

Meanwhile, there is a move to consolidate nuclear warheads in Europe in an effort to reduce costs by reducing the number of men required to guard and maintain them.

The Pentagon is keeping under strict secrecy a plan to cut in half the number of U.S. nuclear air-launched missiles in West Germany. The plan soon will be tabbed for phase-out, and the U.S. government will be asked to reduce the number of nuclear warheads in West Germany by half. EWi.

Vans equipped for seduction provide bedrooms on wheels

By Paul Salzberg
Daily Egyptian Staff Writer

Customized vans have emerged within the past few years as one of the most popular vehicles for transportation, housing and recreation, say local automobile dealers.

Some students, however, laud the van convenience as a mobile motel room.

Omar Periu, a junior transfer student, says he spent $2,300 for his van, which is decorated floor-to-ceiling with three-inch padded red shag carpeting, tinted bubble windows, swivel bucket seats and a custom exterior paint job.

"The whole thing is a bed," Periu says. "When I go to visit my girlfriend up north we sleep in the van every night. It saves a lot of money.

Periu adds that when the van gets stopped by dressbides in Chicago, he and his friends merrily pass the time by "just sitting there, and drinking and partying for 20 minutes" inside the vehicle.

His van used to sport a waterbed, but Periu says he recently removed it.

Another van owner who asked to remain anonymous because "I've been going with the same girl for over a year and she'd kill me if she found out anything," describes his van as "great for attracting and seducing the opposite sex.

His van also features custom windows, plush shag carpeting, bucket seats and a stereo.

Custom vans appeal exclusively to the 'younger generation,' says Bob Smith, salesman for Vic Koenig Chevrolet, 1400 E. Main St.

John Arnold, Vic Koenig sales manager, says "young people associate them with living free and easy." They use them on dates, he says.

Arnold notes that customized vans can be equipped with everything from shag rugs, ultra-violet lights, stereo systems and refrigerators to mural paint jobs, which can cost $600 alone.

"All these extras can cost a van owner $2,000 easily," he says. But despite prohibitive costs, two of the last three vans Arnold sold were customized, he adds.

Vans are selling faster than he can get them. Arnold says people weren't buying them a year ago because of the automobile industry recession, he says.

Now that vans are becoming popular, it will take a while for manufacturers to step up production to meet the demand, Arnold says.

America pumps out lukewarm performance

By Kim MacQueen

Student Writer

A crowd of four thousand flocked to the grandstand for the featured event of SU Day at the Du Quoin State Fair Sunday—a concert by the folk-rock group America.

Although billed by concert promoters as the hottest new group in rock, the band failed to live up to that promise, resulting in a performance that was lukewarm at best.

America, comprised of Dewey Bunnell, Gerry Beckley and Dan Peek, had arrived earlier Sunday from Chicago where their outdoor concert had been rained out. The makeup concert was rescheduled for Sunday night.

Folk-rock artists (from left) Gerry Beckley, David Dickey, Willie Leacock, Dan Peek and Dewey Bunnell comprise the group.

Smoke Signal Studio refines its sound

By Keith Toshner

Daily Egyptian Staff Writer

The Smoke Signal Sound Studio in Makanda is the same size as the small Post Office is it is next to. Like every other building in town, the studio appears to have grown out of the hills.

From the outside, the studio is unimpressive. But it is quite pleasant inside. The setting is comfortable, the friendly atmosphere, quite different from the often seen pictures of cold, metallic recording studios.

The studio was started by John Brown and Larry Pierinn in Carbondale in early 1972. The move to Makanda was made in fall, 1973. Currently, Brown and Pierinn, sound engineer and Chris McCullum, manager, make up the nucleus of the studio staff.

"It gets tougher every day to run the studio," Pierinn commented. "But the sound we produce is impressive, so it all pays off.

The studio recently received new studio speakers, a Dobro T-Bone noise reduction unit which reduces high hissing sounds on tape and just received a 12-track recording control console.

Apparently this is just what the studio needed because according to Pierinn, "We're pretty close to the sound we want. The situation here is better than we've had it for a long time.

Brown is pleased by the sound Smoke Signal is producing. "We produce high quality tapes really cheap. That way groups from the area can get really good tapes," he said.

Brown raises the price of the studio from $33 an hour and mixing rates are $22.50 an hour.

In recent months, Woodrose, Dixie Dandies, Full Moon Consort and T Hart Dan have been recording at Smoke Signal.

T Hart is definitely pleased with the sound he's been getting. "The sound is real clear. I like this studio's flexibility," he said.

Hart is finishing a single this week called "I Want to Get Close to You" which should be on sale soon. "It's the first recording done with the new Dolby system and he said. "It puts a lot of edge on the instruments.

Recording and promoting area talent is the main concern of the Smoke Signal people right now. The area includes Southern Illinois and the St. Louis vicinity. In which we could take all the good talent in the area and record and produce them. Brown said, "I'd like to see them all get nowhere.

The crew has also recognized the need to help the local musicians who don't have their own hands and has used them as studio musicians. "Studio musicians are the finest talent around," McCullum said. "They're all really flexible.

For the future, Brown said, "I hope to see a musical industry downtown here and see more musicians move in. And I want to get the record companies interested in what we're doing. I'd like to expand the recording to a 16 or 24-track, and by that time more into a new building. We want to stay on about half the songs. Drummer Willie Leacock and bassist David Dickey completed the band.

The audience's interest level matched the band's, which is usually the case. When America was listless, the audience acted accordingly and responded to familiar tunes with mild rounds of applause. The group occasionally seemed to be enjoying themselves, and the audience reaction corresponded.

The audience was roused to a standing ovation following the final song, "Sister Golden Hair." America returned for two encores, performing "Horse With No Name," and "Sandman." Beckley and Peek played electric guitars and overpowered Burnell's acoustic.

Overall, the concert was lacking. Where Sebastian was able to enthrall the crowd to one level, America was either unwilling or unable to further inspire them. Four thousand people attended was, "a good sized crowd for the grandstand," according to one official.

Each paid $5 per seat to watch the concert which lasted 90 minutes.
Middle-aged businessmen find meaning in ministry

By BARBARA BROWN
New Haven Register

NEW HAVEN (AP) — Tom Taylor, 44, was in his 10th year with IBM making $40,000 a year when he says he asked himself: "Why am I working so hard to make all this money?"

This life isn't working."

Ken Landall, 34, was vice president of a savings bank, owned a nice home and earned a good salary, when he says he found himself asking: "Is this all there is?"

John Buck, 34, was in his fourth year as a marketing manager with General Foods when he says it occurred to him that he did not love money and profit for their own sake.

Today all three are students at Yale Divinity School, completing, their studies for ordination as ministers. They represent a special breed of seminarian that is older, wiser and more realistic about the world in which religion exists.

I'm hoping that my dual perspectives will benefit me in a parsh," said Landall, a second-year student.

When people ask him about his call, he replies: "I was a bolt out of the blue - a flash, but a persistent one - that kept wearing away at me and finally made me realize that there's really something here, whether it's within me or outside me.

He said that during his 10th year with City Savings Bank of Pittsfield, Mass., he and his wife, Claudia, realized they were in a rut.

"Neither of us felt comfortable in the role of bank executive and wife, having to join the country club and all that implies," he said.

Their experiences with the Connecticut Church were supplying far more satisfaction at that point," he recalled. Mrs. Landall was Sunday School superintendent, Landall worked with the youth group and both sang in the choir.

Landall's life has undergone some radical reversals as a result of his 1972 application to the seminary. His wife has come to work with Connecticut Savings Bank and assumed the boardwoman's role. He, on the other hand, has taken over many household duties, including the care of the couple's two children.

I've become an ardent woman liberationist," he said. I wish that all men, at some time in their lives, could switch roles with their wives and see what it's like on the other side.

Tom Taylor, after 15 years with IBM, was in admirable financial shape. At the time of his resignation in 1972, he was a program manager whose responsibilities for contracts represented a quarter of his division's business put him in the big business.

"I felt I was in a position of moving up that corporate-executive ladder," he said. "I think I'm too young to make that move, and what was involved in climbing it.

Taylor's three oldest girls were out of school and on their own, but youngest child, a son, was just approaching high school and it seemed like a good time to make the move," he said.

"No money put away, no savings." Taylor now goes to school full time and works part-time at United Illuminating.

"He's so excited about life, about what we've done and what we're doing. The family has changed. We're a group now, people who can talk to each other.

Both Taylor and Landall are heading for the parish ministry. One step ahead of them is John Rick, who was ordained May 3 into the Episcopal priesthood at Christ Church in New Haven and will begin looking for a parish placement.

Rick is ahead of the others because he left business sooner. In marketing management at General Foods for four years, he eventually opted for the ministry because he felt business is the purpose of profit-making. "And I couldn't come to like money or profit for their own sake or even as standards of measurement."

In 1971 he resigned and came to Yale Divinity School.

Grade school produces hand-made history book

NOVATO, Calif. (AP) — Ruth Lescohier is a school teacher who became a publisher because she asked a question of her students. It was: "How did they come to name Throckmorton Avenue in Mill Valley?"

The students' efforts and research resulted in a book containing 28 pages, hand lettered and put together by Mrs. Lescohier, in the tradition dating back to the Middle Ages monasteries. It is called The Search for Samuel Throckmorton, a New Jersey native, became a land and properties specialist in San Francisco during the Gold Rush. After a few years, the history book discloses, he took over the staggering fortunes of Capt. William Richardson, one of Marin's early day "dons," who was unable to cope with the onslaught of progress and was in danger of losing his vast Southern Marin holdings.

Research showed that the way Throckmorton handled the estate led to two years of litigation between the Richardson heirs and Throckmorton. Mrs. Lescohier says he enjoyed a limelight block to make the larger map that illustrates Throckmorton's holdings.

The book tells the history of a man who gave Southern Marin County such place names as Homestead Valley and the forts on the Marin Headlands.

The uncompromising ones.

The calculations you face require no less.

Today, even so-called "non technical" courses (tech, see, this ad, to name 31) require a variety of technical calculations—complicated calculations that become a whole lot easier when you have a powerful pocket calculator.

Not surprisingly, there are quite a few such calculators around, but ours stand apart, and ahead. We started it all when we redefined the world's first scientific pocket calculator back in 1962, and we've shown the way ever since.

The calculators you see here are our newest, the first of our understanding. Both offer you technology you probably won't find in competitive calculators for some time to come, if ever.

Our HP-21 performs all arithmetic, log and trig calculations, including rectangular/polar conversions and common antilog evaluations.

It's display is fully formatted, so you can choose between fixed decimal and scientific notation.

Our HP-25 does all that—and much, much more. It’s programmable, which means it can solve automatically the countless repetitive problems every science and engineering student faces.

With an HP-25, you enter the keystrokes necessary to solve the problem only once. Thereafter, you just enter the variables and press the Run/Stop key for an almost instant answer accurate to 10 digits.

Both the HP-21 and HP-25 are almost certainly on display at your bookstore. If not, call us, toll-free, at 800-538-7922 (in Calif. 800-662-9862) for the name of an HP dealer near you.

Indian jewelry expert exposes Japanese-made imitations

By VIVIAN BROWN
AP Newswires Writer

Many people "are being ripped off" by the Indian jewelry craze, says Diane Schulz. "Few people know what it is all about and it makes it easier to be cheated."

The jewelry is now being made in Japan, Mexico and even in factories in our own Southwest, she insists.

Mrs. Schulz, who shows her jewelry collection at antiques shows, has been involved with Indian jewelry since early girlhood. Her father, William Kruman, a trader in the Southwest for the last 28 years, has taken her with him on buying trips.

"In some instances the intent is not to cheat people," she says of people who sell the jewelry. "They usually don't know enough about the jewelry to ask the right questions."

She specializes in Zuni jewelry because she considers it the best investment. The Zuns are a small tribe and the art is really dying — younger people don't want to do the hardwork it requires because it is too time-consuming. In addition, Zuni designs require great expertise. And there is much less Zuni work available.

There are "some out-of-this-world Navajo artisans, but much Navajo is copied," she claims. "Zuni is more difficult to copy and would need to be experienced." A Harvard business school graduate, for seven years Mrs. Schulz has been a Certified Public Accountant and manager with Coopers and Lybrand, an international public accounting firm. She exhibits at the National Arts and Antiques Festival in New York and has a small exhibit at the Montclair Art Museum in New Jersey.

"Many people think only old pieces are good, but you may pay the same price for a good new piece and it will be equally good in terms of investment," she explains.

One style of jewelry that has taken hold in New York, she contends, is silver that looks like aluminum foil with turquoise or coral crushed and set inside the silver. "Years ago one Indian family made this jewelry in excellent heavy silver, but now it looks like foil and most of it is not made by Indians," she says.

Indian jewelry expert exposes Japanese-made imitations

A person buying Indian jewelry should go to a reputable store and ask whether the turquoise is natural or treated — much of it is being treated by various processes — what kind of turquoise it is and what grade it is. He should obtain a guarantee in writing, especially if the piece is expensive. Turquoise should be dark with good matrix, she says, but "you must almost be expert to tell." People are not demanding enough information so shops are not bothering to educate sales people, she adds.

At an auction a Zuni fire dancer bracelet, a mother of pearl disk with a dancer inlaid, was marked down from $260 to $356, but the price was identical to one she had observed in a good retail store. It is often difficult to ascertain the retail value of a one-of-a-kind piece.

This turquoise ceremonial bracelet, fetish necklace and eagle dancer on bolo tie are authentic Indian designs made by Zuni artisans.
Haifa demonstrates Arab-Jewish peace

By DAVID LANCHESTER

HAIIFA, Israel (AP) — Israelis call Haifa the San Francisco of the Middle East because of its hillside view of the sea, but the city is significant for more than scenery — it is a 27-year experiment in coexistence between Jews and Arabs.

"We are building Arab-Jewish peace," contends Haifa's Jewish mayor, Joseph Almoqz. "Not a formal, Henry Kissinger-style agreement, just living together.

"Day in and day out, thousands of Arabs work in the city. They live here. They have their own businesses, their own shops, their own garages," says the mayor.

The Mediterranean seaport boasts mixed kindergartens, mixed schools, mixed clubs and even a few mixed marriages, and Almoqz says "there is a tradition of friendship."

An outsider may suspect that beneath the surface of smiles and handshakes, many of Haifa's younger Moslems might fight Israel if they got the chance, but leaders of the Arab community maintain the friendship is genuine.

"Excuse me, but I must go on guard duty," says one prominent Haifa Arab — the uncle of Jordan's Premier Zaid Rifai — breaking off a conversation to collect his gun and help patrol a Jewish neighborhood against Arab terrorists.

Like many Arabs in the city, he is a member of the Civil Defense Corps. The 25,000 Arabs in Haifa — like the city's 215,000 Jews — are Israeli citizens. They have been mixing since 1948 when Haifa fell under Israeli rule. Time has mellowed the enmity, and the city's modern "Qadi," or judge and religious leader, says "We are loyal citizens of the state of Israel."

"We lost the battle of Haifa in the 1948 war, the whole Arab population tried to leave, and the great majority succeeded," says Salim Joubran, a Christian Arab who got left behind because the boat to Beirut was full, and who now works in Israel's trade union federation. Mayor Almoqz says 60,000 Arabs quit Haifa in two days during the first Mideast war.

Most of those who stayed have prospered, says Joubran. Some of the city's Arab and Jewish leaders were pleading for coexistence even while the fighting was going on, and they have been working at it ever since.

Woman lawyer forfeits high salary to help minorities as state planner

SANTA FE, N.M. (AP) — Grace Olivarez's decision to leave the security of tenured law professor and her job as director of a social research institute to become state planning officer, at an $8,000 cut in pay, brought back some painful memories of the day she dropped out of high school.

Her Spanish-speaking parents had separated and Grace accompanied her mother and the other children to Phoenix from the small town that had been their home. They were poor.

The high school was a rich, new campus that overwhelmed her the first day.

"I was 15; I was tall, skinny, had a bad case of acne and buck teeth. I was fresh out of the hills. And I couldn't cope with it," she said.

So she went to work to help support her broken family, taking a few business courses along the way. But despite her own rise to prominence, Mrs. Olivarez still admires, "It doesn't pay to leave school. I don't care how you slice it."

In 1952, thrown out of work in a recession, she took a job with a Spanish-language radio station and became the first woman disc jockey in Phoenix.

Her occasional comments on social issues drew surprising response from the American community. Complaints of profanity or ordinariness of the words began to fill her daily mail.

"That's when I became interested in services to the needy. I became a crusader. I guess you'd call it," she recalled.

In her 10 years of broadcasting she gathered the evidence to prove that discrimination existed in Phoenix, she said.

She testified before the U.S. Commission on Civil Rights in a Phoenix hearing in 1962.

It began her friendship with the Rev. Theodore M. Hesburgh, president of Notre Dame University and a commission member, but it also created pressures that led to her quitting the radio station.

Mrs. Olivarez worked for the next four years with a Phoenix foundation to help the poor. Her work, including organization of the first national conference on bilingual education, drew national attention.

By now the war on poverty and the fervor for minority representation and hiring quotas was intensifying the land.

As she freely acknowledges, "I'm a package deal — both a woman and a member of a minority. I'm going to milk it until the volcano is out — for the sake of the improvement of New Mexico.

Her resume includes being a member of a U.S. Labor Department task force on the unemployed, an adviser to the U.S. Civil Rights Commission, and consultant to both the U.S. Bureau of Census and Purdue University, the latter on municipal law.

She also was, among other things, a panel member of the White House Conference on Food, Nutrition and Health and vice president of the Mexican-American Legal Defense and Education Fund.

The old anxiety about being a high school dropout returned, she recalls. There was a new wave of youngsters with graduate degrees in social work and she felt she was working with people who looked down on her.

In 1967, she had a chance meeting in an airport with Father Hesburgh. "I blurted out my frustration," she said. With his help, she was admitted to Notre Dame's law school and for three years she endured "the misery of trying to learn when you've never had the discipline.

The hard-earned law degree was the first ever granted to a woman by Notre Dame.
A message for the influencers:

Today, millions of people who have never had a course in economics are influencing the structure of our economic system by their action, inaction or reaction. Yet the well-being of each individual and family depends on sound economics. Realizing that "the doctor" needs to know "the patient," The Business Roundtable is sponsoring messages that discuss inner workings of our American economic system.

They are giving this special "morning course" before the country's largest reading audience in Reader's Digest.

With today's unemployment, and with millions of young people getting ready to enter the job market, we must make it possible for companies to invest far more of what they earn today so that they can produce more tomorrow.
Student government seeks volunteers for appointed jobs
by Ren Morgan
Daily Egyptian Staff Writer
Student government is seeking assertive, independent students who have an interest in serving and contributing to student affairs at SIU.

If a person meets the qualifications and doesn't mind working without pay, they may be able to obtain a student appointee job, said Student President Doug Diggles.

Student government is organizing for fall and appointment positions are open on 21 boards and committees, dealing with areas of student interest, said Barbara Tally, an executive assistant in the government office.

Appointees serve as student representatives to the various boards and committees which help formulate university policy. Tally said. Some of the committees which need student members are the Budget Advisory Committee, SIU Board of Trustees and the Search Committee to Select a Director for the Student Center.

"The student government appointees to each committee are essential for student representation in all areas of University Life," Tally said.

The most important qualities that an appointee should have are interest in the area time and toughness, Diggles said.

"We don't want someone who is going to be intimidated by a person's title," Diggles said.

Tally, who became an executive assistant this summer, said she is seeking foreign students, blacks and women to fill some of the positions because they have not been given many appointments in the past.

"The typical appointee has been a white male, so I'm carrying out some affirmative action on my own," Tally said.

In the past appointees have felt isolated from the rest of student government and have felt they couldn't rely on the student government for support when it was needed, Tally said.

This year the problem will be solved by having appointees send reports after each meeting and meet personally with the student government executive to review committee actions every five meetings Tally said.

Each appointee will receive a packet of information about his committee including a list of the membership, their telephone numbers and the past actions of the committee, Tally said.

Israel signs Sinai settlement
JERUSALEM (AP) - Israel initialed Secretary of State Henry A. Kissinger and Egypt today. It was a diplomatic triumph for Kissinger and a step toward peace in the Middle East. Egypt was expected to follow suit a few hours later.

In return for aid to Israel with withdrawal from the desert peninsula, Egypt has committed itself to a ten-year plan of political concessions including a promise not to threaten force or military blockade against Israel.

"Having taken this step, Kissinger said today, "the official American official acknowledged, however, that Israeli sensitivity itself might be a barrier to the final withdrawal.

Kissinger said, however, that this might be expected, and that it slightly complicates the Israeli position but might not make it significantly worse.

About 100 American civilian technicians will be positioned at early warning stations in the desert to guard against surprise attack.

There will be three posts operated entirely by U.S. personnel and another American station at one end of the Golan pass and with Egypt at the other.

Israel will return to Egypt the Abu Nejbe oilfield which supplies more than 11 percent of Israel's fuel needs.

President Ford said Friday that the agreement "reduces the risk of war" and telephoned Egyptian President Anwar Sadat in Cairo.

"But if it's the agreement that has been achieved, the President declared, "the alternatives were turmoil, increased tension and ultimately a greater chance for war.

The initialed in Israel followed a seven-hour Cabinet meeting during which the Israeli government accepted the agreement. Foreign Minister Yitzhak Rabin and his two chief aides.

The agreement was obtained Sunday after Kissinger returned to Jerusalem after completing his sixth round trip between the two sides in the 12 days diplomatic shuttle.

Activities

Tuesday
A.A.U.P. Luncheon, noon, Student Center Ohio Room.

University Women, Thursday lunch, noon to 1 p.m., Student Center Ohio Room.

Sigma Phi Sigma, Meeting, 3 p.m., Student Center Ballroom.

Student Center Board, Dinner, 5 p.m., Student Center Wabash Room.

New Student Activities Peer Group Leader Evaluation, 6 p.m. to 7:30 p.m., Student Center, Illinois Room.

Campus Briefs

The film "Macbeth," will be shown Wednesday at 7:30 p.m. in Davis Auditorium and Thursday at 3:30 p.m. in the Morris Library Auditorium. The film, which is free, features Richard Burton as Macbeth. It will be co-sponsored by the English Department and the College of Liberal Arts.

W.D. Klimstra, director of the Cooperative Wildlife Research Laboratory, has been appointed to the Fish and Wildlife Partnership Council. Science Advisory Committee for a term of two years. The Committee consists of diverse individuals from professional in the field of natural sciences and will meet for sessions in Washington, D.C., two or three times each year.

The Administrative and Professional Staff Council will hold their first meeting of the year 1:30 p.m. Wednesday in the Personnel Services Conference Room, 811 S. Elizabeth.

The SIU Parachute Club will meet at 7:30 p.m. Tuesday in the Student Center River Rooms. All are welcome to become new members and sign up for first-jump instructions.

The Parents' Day committee meeting will be held Tuesday at 2 p.m. in the Parachute Room B on the third floor of the Student Center. Parents' Day has been set for Oct. 4. Toby Peters, chairman, said that anyone is welcome to attend the meeting to help aid in ideas.

Museum video art exhibition makes viewer part of show

CHICAGO (AP) — The viewer becomes part of the show in an exhibition of video art at the Museum of Contemporary Art.

The exhibition includes the works of artists using video tapes and television sets in various ways as a new form of individual visual, sometimes surreal, expression.

Over the past three years the video-art movement has gained momentum. The present exhibition, assembled by the Institute of Contemporary Art in Philadelphia, was seen also in Cincinnati and will be shown later in Hartford, Conn.

In a work by New Yorker Dan Graham, the viewer walks into a small, brightly lighted, mirror-walled room where black and white video camera projects onto the screen of a television monitor set images of the viewer with a thirty-second delay.

This piece, along with one by Peter Campus, recalls the old carnival fun houses, where participants saw themselves in distorting mirrors.

Campus, also of New York, has devised a large room in which larger-than-life images of viewers are projected against a wall.

The most pleasing work is that of Nam June Paik, an avant garde Korean musician living in New York. He has contrived a "TV garden," which is composed of 15 color and five black-and-white TV sets placed randomly in a sunken garden of lush vegetation.

The color is in a variety of hues so that the effect is psychedelic, as tapes of poet Allen Ginsberg and rock musicians play in this monotonous setting.

Paul Kos of San Francisco has created a unified, ominous work communicating the regimentation of dictatorship. He has placed a TV set with a one-inch screen in a large room. The viewer must take measured steps over evenly spaced boards to reach the set, which plays a tape of a typewriter endlessly printing MAR MAR MARCH, while a figure in silhouette marches across the top of the page.

Two other rooms are equipped with three television sets each where viewers may watch 20 hours of videotapes by 25 artists.

Federal jury investigating Hoffa mystery

DETROIT (AP)—A federal grand jury investigation into the disappearance of former Teamsters President James R. Hoffa opens Tuesday.

Meanwhile, FBI agents appear no closer to a solution of his mysterious fate than when Hoffa vanished a month ago.

As the jury begins its work, funeral services will be held for Hoffa’s mother, Virginia Hoffa. She died Thursday at the age of 85. Family friends said she never was told about her son’s disappearance, and some say she died of a “broken heart.”

Hoffa has been missing since July 30, when he failed to return home from a luncheon date. Hoffa’s family said he was to meet a reputed Detroit Mafia leader, Anthony “Tony Jack” Giacalone, at a restaurant in suburban Bloomfield Hills.

But Giacalone, identified in Senate testimony as a key man in the Detroit underworld, denies having had an appointment to meet the ex-labor boss the day Hoffa vanished. Joseph Giacalone has demanded the return of his auto, a central figure in the case, was seen driving the car near the restaurant where Hoffa vanished at about the time he disappeared. O’Brien, a central figure in the case, was seen driving the car near the restaurant where Hoffa vanished at about the time he disappeared. O’Brien has been challenged by Hoffa’s family to take a polygraph test about his activities that day. So far, he has refused the challenge.

Specially trained dogs traced Hoffa’s scent to the back seat and trunk of the car.

Robert Ozer, who heads the Justice Department’s Organized Crime Strike Force in Detroit, says he intends to keep the car because he believes it contains clues that could be important to the grand jury investigation on Hoffa’s disappearance.

Death of star visible in zenith for two weeks

OKLAHOMA CITY (AP) — Jack Stone, a professor at Oklahoma State University in Stillwater, Okla., sized skyward as he stepped out of his house one night last week and saw a suspicious light in the sky. He was one of the first to witness the death of a star.

"I saw it within 10 seconds," Stone said Sunday.

Stone, a professor of astronomy, an agricultural sciences has been interested in the heavens for nearly a decade.

At first the star-gazing hobbyist thought the barely visible light was a slow-moving satellite passing, but it was stable in the sky and growing brighter.

A quick check with an astronomer friend in Stillwater revealed that Stone had indeed seen something unusual last Thursday night.

Another professor at Oklahoma State, Ron Small, has also observed with Stone, and Stone put it, "ad-morning that" from his backyard. He, too, had seen the new point of light.

But Stone wanted to confirm his belief the light was a nova—a star in the last throes of self-destruction. So he checked with the Smithsonian Astrophysical Observatory, in Cambridge, Mass., Friday.

Officials there confirmed the light was indeed a nova, and one growing brighter by the hour. In fact, if the light grows all by the nova levels off at a magnitude of about 2.2. "It is quite noticeable now," Stone said. "It is a fairly conspicuous object which is easily observable with the naked eye.

He said it would be visible for about two weeks.

The best time for viewing is about 9 p.m. when the nova is straight up in the sky, Stone said. The viewer will see two stars of about equal brightness six degrees apart. That is approximately the width of the hand at arm's length. The star further to the north is the nova.

Stone says that if his estimate of distance is correct the nova which has just become visible to earthlings actually flared and died five centuries before Columbus discovered America.

"I would be surprised if it is closer than a thousand light years," he said. A light year is the distance light travels in a year. The speed of light is 186,000 miles per second.

Sales, she says, are going quite well (Copies are distributed through area groceries and drugstores).

Divided into sections titled "Sacred, Young Love, Patently and Patti", her poems reflect her rural heritage with homespun language, simple rhythm and often a touch of earthy humor.

Born in Cape Girardeau, Mo., Mrs. Bell attended school through the ninth grade and made her education herself.

"I studied up on some subjects so I could pass the teachers' exam and I taught school," she said. "That was about 1905 I guess."

"It was a county school down at Rockledge. If somebody didn't take me in a horse and buggy I'd have to ride a freight train in the caboose. Some very amusing things happened."

There was the time, she says, she was chased to class by a pack of wild hogs; something which seems farfetched now that it did at the time.

Later she married and moved to Mount Vernon where she was active in the church, the school and civil rights efforts. She organized the forerunner of the local PTA and raised two children. Through the years she continued writing as a hobby.
Wildlife can fall prey to careless motorists

By Daniel Hoffmann

The Illinois Department of Conservation urges motorists "to get a good look at Illinois wildlife. The eyes of a wildlife species can be crossing the highways."

Motorists like Hubbell of the Cooperative Wildlife Research Lab, and thousands of motorists driving new homes in the fall and their paths often intersect highways, where they can be struck by passing autos. "Opossums, skunk, groundhogs, coyotes, stray dogs and bears are killed in the roads in and around the cities," said Hubbell. Hubbell noted, noting that many of these animals travel at night when motorists chances of spotting them are greatly reduced.

Deer are often found along the roads and in the woods. Hubbell said, adding that if deer are killed by autos last year, accounting for 35 percent of those lost in ways other than hunting. "One of the peak periods when deer are struck by autos is during the rutting season, in late October through December," Hubbell said. This is the period when the male become sexually active and starts chasing females in heat. They follow the scent of females across roads and are hit while trying to cross." Gerry Bill, wildlife management biologist at the Crab Orchard Refuge, reminds motorists that the area is set up specifically for wildlife. "Travelers on any road should stick their neck out. They're unpredictable," said Bill. "You don't know what they're doing. Some are crossing to the other side of the road and others will dart in front of a car to get to the other side. If you see a deer, slow down." Bill said that motorists should watch for high cover and level grass next to the road, because animals often use these areas for food and nesting.

Hubbell explained that rangers at the refuge can do three things to minimize the chance of collision between deer and auto. In the fall, rangers begin cutting vegetation near the roads. "As much as manpower allows," Gill said. They can also erect signs where there is a high frequency of deer activity to warn motorists. Finally because deer and other wildlife often freeze when blinded by the headlights of cars, reflectors are placed along the roadways to freeze animals by reflecting the light into their eyes.

Talking to the area runs a greater chance of a collision with wildlife," Gill said.

A disregard for signs like this cause many wildlife deaths each year.

Turkish equal rights of 1961 haven't erased social sexism

ANAKA, Turkey (AP) - Kemal Ataturk founded the modern Turkish state in 1923, but millions of Turkish women are still living as if the Ottoman sultans still held sway.

Ataturk granted women full civil rights as part of sweeping reforms to westernize the coun- try. But in Turkish villages today women still plow the fields, follow barefoot behind their husbands to the barns, and are sold into marriage - often by sends of relatives.

"There are two Turkeys, the big cities and the rest of the country," said a miniskirted Ankara professional woman who considers herself liberated as an American sister. "We have very few legal battles to fight. The problem is overcoming the social barriers, and all the prosperous women as virtual slaves."

Article 12 of the 1961 constitution stipulates equality un- der the law regardless of sex, race, religion or language. The Turkish civil code states that "the husband is the chief and provider of the family and his wife owes him obedience. But in fact she is free to dispose of her own property which she inherits equally with male mem- bers of the family."

But the move to put women on an equal footing with men dates back to Ataturk. As part of his plans for the Turkey as a secular society, he barred female students from wearing the veil.

But the Moslem tradition of male domination still lingers in the countryside, where 60 percent of Turkey's 60 million people live.

Seventeen women, however, were elected to parliament in the 1972 elections, a number that has actually dwindled since then. Today there are only eight women deputies and senators in the 435-member parliament. But more than half of Turkey's teachers are women.

"In the courts, alone with 11 percent of its en- gineers and 16 percent of its medical doctors. These figures are increasing as more women take university degrees."

It is in the area of sexual freedom that women here con- sider themselves least emancipated in the American sense. The most extensive study of Turkish sexual habits, a 1972 report by a psychiatrist called "The Teenage Woman," told of the trials of young girls to pre- serve their virginity fear the intense and romantic legislation. Still there is no organized women's liberation movement in Turkey, no call to the barri- cades. A few years ago a Na- tional Women's party was formed, but many saw it as only a male chauvinist front. Its battle cry was "women be- longing in the home."

Book suggests assertive pose

NEW YORK (AP) - The aspi- ring businesswoman should not be afraid of asserting herself. If a female ambition is merely trying to use her sex as a lever, say Margaret Higgin- son and Thomas L. Quick, au- thors of "The Ambitious Woman: A Guide to a Successful Car- eer."

"To reach a high-status, high- profile, one-of-a-kind position a woman must stand her neck out and take risks, they add. The "ambitious woman, an ambitious woman, the authors cau- tion, is the male-headed ster- eotype of an ambitious woman and her own lack of self-confi- dence. Both sexes are condi- tioned to feel women are less competent in the business world than men, they point out.

The woman who wants to get ahead, they say, must be "smarterer" than most men, they say. "If she wants to eventually make as much as she'll prob- ably have to be more aggressive, alert, strong and deter- mined than her male counter- parts."

A touchy, difficult subject for any female is socialization with a male boss, say the authors, who note that most male work- ers can lunch with the boss or have drinks with him after work with little risk. But given the sexual attitudes of most men and women, the ambitious woman risks resentment and rumor when she sees her boss socially, say Mrs. Higginson and Quick.

"If a woman likes her boss as a person, if they have mutual interests, why shouldn't they have lunch together, a drink after work, or even dop- per for that matter," they say.

But, they add, even the con- fident woman should take cer- tain precautions, such as pick- ing the place and setting a time limit for any socializing.

In any case, in working for a man a woman should want to work variables most and avoid fostering resent- ment, bad feelings and suspic- ion, they say.

Another, less risky method for advancement is to find ways of doing things her boss does not do well; or does not like to do. But, the writers warn, "she mustn't allow her- self to become an office mech- anic, office wife, substitute daughter or assistant-lover."

Sexual differences can also create problems for a woman working alone among men, with the woman alone in all- male groups. Her tastes great.

Salukis' backfield deep and talented

Sherrill out
After having one of the finest spring practices of any Saluki football player and continuing to progress right up through Friday's practice, a promising season was abruptly ended by injury for defensive tackle Rod Sherrill.

Sherrill suffered a neck injury during Friday's practice session and underwent surgery Wednesday that he will miss his sixth year at SIU.

"This is a brutal blow to Rod and the team," head coach Doug Weaver lamented Monday morning. "We can't have confirmed medical reports exactly what the injury is or how long he'll be out. rod described it as a concussion of the neck."

SIU trainer Doc Spackman said he could not make a qualified statement on the injury and team physician Dr. William Hendrickson could not reach Monday.

"We will have to wait for the days to see how long he'll be out for," Hendrickson said."

"We hope for the best but we can't make a qualified statement on this injury yet," according to Sherrill's senior tackle.

Sherrill was taken to Carbondale Hospital in St. Louis Friday evening after completing practice, unaware of anyone that he had been injured.

Weaver said that Sherrill is back at home now and "looking fine."

The coach was not optimistic about Sherrill's return this season.

MISTAKE PAYS OFF
TORONTO (AP) - Jarred Organ, a University of Minnesota and a former Golden Gopher, has been picked for the opening..

Organ paused the ticket but made a mistake on the horses' numbers. The customer asked for a new ticket and Organ was stuck with the original. The horses on his ticket came home first and second. His winnings: $5.90.

The finish
It took four hours before a horse was decided and the fourth and deciding heat couldn't have been any closer as the photo finish indicates.

The race went down to the final wire and when favorite Bonefish and Yankee Bambino tied at the finish line after a grueling afternoon.

Bonefish won by a nose after running back.

Tennis coach ready to start

By Diane Friedman
Student Writer

As the women's tennis team enters its 1975-76 season, coach Judy Auld says she is both "optimistic and confident" because of the greater depth of the team and the increased ability of the players.

"Last spring," Auld said, "our top two positions were strong. This season, our top five are very strong and that's what will really make the difference."

Some of the added depth will be supplied by particularly talented newcomers to SU. They are Sue Briggis, a sophomore from Rock Island who filled the No. 1 slot at the University of Arizona last spring, and Sue Cellskay, a freshman from New Jersey who played the No. 1 position on her high school team.

Briggis and Cellskay will join SU's three outstanding returnees senior Rhonda Garcia, SU's No. 1 last spring, Sue Monaghan, a sophomore from Springfield, and Kim Mac-Donald who played the No. 3 position last season. MacDonald, however, is recovering from a broken clavicle and won't be able to compete for a starting position.

Working to ensure a season unlike the disappointing and losing one of last spring, coach Auld's team of 20 is involved in a rigorous practice program this fall. The girls' regular practice hours are daily from 4 to 6 p.m. on the University courts. In addition, their program includes a series of endurance and flexibility exercises and hours of independent practice on the courts.

The women's exhibition season, which includes Indiana, Indiana State, Murray State, Valparaiso, Eastern Illinois, and two tournaments, will open Saturday, Sept. 13 with a home match against Illinois State. The tentative time set for that match is 10 a.m. on the South courts (7-12) University area.

Connors to play Davis Cup as Trabert becomes captain

FOREST HILLS, N.Y. (AP) — Dennis Ralston, deposed after years as Davis Cup captain, has both good wishes and condolences for his successor, Tony Trabert.

"With Jimmy Connors agreeing to play, Tony should have a lot of talent to choose from," the bruisied 32-year-old Cup veteran from Rakestraw, Calif., said.

"But he must realize he doesn't have a lock on winning back the Cup.

"The circumstances make it very tough. The pressure is tremendous." Ralston said one of the heaviest burdens a captain must bear is the spoiled attitude of Americans who feel they should always win and consider it a disgrace to lose to a smaller country.

"This is the case in the Olympics. In other sports events and even in war," he added. "For around 70 years, until just recently, the Cup was monopolized by the United States. Australia, England and France "It is different now. Tennis has spread. There are at least nine nations, some large and some small, capable of winning the cup."

After leading the American team to a victory over Romania in 1972 and into the final against a powerful Australian team in 1973, Ralston saw his charges lose ignominiously to Colombia in 1974 and to Mexico this year.

Ralston had to field a secondary team against Columbia, with such players as Connors, Arthur Ashe and Stan Smith not available.

"Connors and his manager, Bill Riordan, were sore and Connors declined to play," the former captain said. "Ashe and Smith had other commitments."

"Afterward, I said we didn't have the manpower to fill the Cup for us. Connors. This upset Connors because he mentioned that Ashe and Smith also did not play."

The fact was, Smith and Ashe had other commitments. Connors had none at the time. It is one of the uncertainties of the job. In this day of open tennis, big money and many arrangements, you never know when a man is available.

Birds win it at U.S. Open

RICHMOND, Va. (AP)—Fred Ridley, a law student who had only four birdies in seven previous matches, built a 3-up, 18-hole lead with six birdies Sunday and defeated charging Houston All-American Keith Ferguson 2up in the 36-hole final of the 56th U. S. Amateur Golf Championship.

Ridley, a 22-year-old University of Florida graduate who now attends Stetson University, shot a one-under-par 72 in the morning round over the James River course of the Country Club of Virginia and held on despite two big breaks for Ferguson in the afternoon.

The Winter Haven, Fla., resident, who carries notes about each hole in his pocket, built his lead to 6-up by winning the first hole in the afternoon but three times saw the margin drop to two, the first time when the 21-year-old Ferguson won four holes in a row.

By Mark Kaslowski
Daily Egyptian Sports Writer

Du Quoin—With another member of the clan learning the harness racing trade from the master, the Dancer family may well be on the way to monopolizing the field.

Blonde, four-year-old Ronnie Dancer Jr. has already trained a mile in 1:56 4/5 with his grandfather, Stanley Dancer, according to Ronnie’s father, Ronnie Dancer Sr.

Ronnie Jr. waited at trackside at the Du Quoin State Fair Saturday observing his legendary grandfather capture his third Hambletonian cup, driving favored Bonefish to win in the third and fourth heats.

Dancer, who has won more than 3,000 races in his career, finished a disappointing ninth in the first heat, but came back for a second place finish in the second heat and nosing out Yankee Bambino in the raceoff for the title.

Yankee Bambino, a longshot at 35-1, returned $7.40, $13 and $8 to bettors in edging Surefire Hanover by three-fourths of a length in the opening heat.

Walter Ross drove the winner home in 1:56 while Ronnie Dancer was behind Bonefish’s stablemate, Surefire Hanover.

Noble Rogue, with James Arthur driving, returned $14.40, $8.60 and $3.80 in a photo finish over Bonefish in the second heat. The winner was timed at 1:59 2/5 on the mile clay track.

The betting never gave up on the eventual winner as Dancer and Bonefish went into the third heat favored at 1-2 odds.

Bonefish was no lower than second during the heat and turned on the speed at the three-quarters pole to charge into the straightaway where 13,444 viewers screamed as the colt hit the wire 1-1/2 lengths in the lead.

The win set up a fourth-heat race-off between the winners of the three heats with the winner being crowned champion of the richest and most prestigious race for three-year-old trotters.

The crowd created a feeling of nervous anticipation with a steady hum as the three winners trotted fresh off the track in a single file for their fourth race in four hours.

Noble Rogue took the early lead with Bonefish following a length behind and Yankee Bambino another length back.

At the three-quarters pole, Dancer, the end of the line and moved up on the outside and took the lead as the trio headed into the straightaway.

The crowd’s cheers built to a crescendo with Bonefish and Yankee Bambino head to head and sulky wheels to sulky wheel at the finish.

The anxiety grew even greater as the track announcer bellowed that the golden running of the Hambo was a photo finish.

The wait for some was tougher than for others.

Mary Roux, one of the owners of Yankee Bambino, shivered nervously in her wheelchair as she awaited the announcement of the winner.

"And the winner..." she said shakily. "Just have to wait.”

"When the announcement did come that Bonefish had won by a nose, Mrs. Roux clapped politely but couldn’t hide the disappointment she was feeling as she smiled slightly in her seat.

"I thought we won when our sulky wheels went over the finish line together," Dancer said later. "Bonefish is a long horse and I just knew he had to have his nose in front if our sulky wheels were even.

"The Dancers waited back to their stables in New Egypt, N.J., with $127,706 60 of the $225,152 purse. That figure included Stanley’s winning share of $116,096 and Ronnie’s fifth place earnings of $11,009 60.

Ronnie lauded his father as a master conditioner of horses. He explained that Stanley had been training the horses all winter in Florida to compete in the

Dancer - Bonefish could be the greatest horse I’ve ever had"
