Budget cuts hit grad assistants hard

By Kathleen DeBo
Staff Writer

University departments have been experiencing budget cuts for almost six years and this has led to a gradual decline in the availability of graduate assistantships, Patricia Carroll, associate dean of the Graduate School said. Although the total number of graduate assistantships last year was not great, some departments have been hit hard.

Gordon White, associate director of Institutional Research, said the number of graduate assistantships declined from 1,468 in Fall 1986 to 1,441 in Fall 1987. He said the office will not know the number of graduate assistantships received this fall until October.

The College of Science has lost more than 15 graduate assistantships in the last year, Russell Dutcher, college dean, said.

"We just have to have graduate teaching assistants for a significant number of our undergraduate classes," Dutcher said. He said has of graduate assistantships and support courses were the biggest budget concerns of the college. Budget cuts depend heavily on the regular faculty and equipment budgets much, he said.

Marvin Kincaid, chairman of the speech communication department, said the department has one more graduate assistant than last year. He said his department receives more funding for teaching because it uses graduate assistants to teach two general education classes, interpersonal communication and public speaking.

Leland Coffer, dean of the School of Art and Design, said the department's budget depends heavily on graduates to teach courses. The use of budget cuts are taken in other areas.

John Jackson, dean of the College of Liberal Arts, said the number of graduate assistants cut by 10 percent. This means the college has 16 to 20 fewer graduate assistants and graduate students have fewer sources of income, Jackson said.

One problem is the state approval programs. If the state does not add the money to pay for the new programs, he said. Departments then have to take money from other areas to pay for graduate programs, he said.

About 20 classes were canceled because of lack of faculty and graduate assistants to teach the classes, he said.

Jet explodes shortly after take-off killing 13, 94 survive

GRAFENWOEHR, Germany (UPI) - A Delta Air Lines 727 jet with 107 people aboard crashed on takeoff Wednesday at Dallas-Fort Worth International Airport, possibly due to engine trouble, exploded and burned, killing 13 people, officials said.

A Delta spokesman confirmed the death toll stood at 13, including 12 adults and one infant. Nine adults and two children treated 98 people taken from the crash site, including the 94 Delta listed as survivors, but it was possible some of those treated were rescue workers.

The Delta spokesman said 91 people were treated at hospitals and released, and 33 were admitted with various injuries, including burns and broken bones. Most of the passengers were from north-central Texas.

Nitaan Peerwani, Tarrant County medical examiner, said seven people died from burns and six from smoke inhalation.

The dead included a flight attendant and three members of one family - Patrick Scott Morgan, 29, his wife, Barbara Morgan, 28, and their 1-month-old daughter, Tiffany. of Richardson, a Dallas suburb.

Delta officials said hotel rooms were rented for the survivors, but that some of them continued on their travels aboard other flights.

Flight 1141 originated in Jackson, Miss., and changed its flight crew and took on a full load of fuel at DFW. It attempted to take off for Salt Lake City, but crashed about 1,000 feet south of the end of the runway at 9:03 A.M. CDT, apparently without gaining significant altitude.

Local farmers doubt drought aid

By Lorla Roberson
Staff Writer

The $3.9 billion drought relief package for damage done to crops this summer doesn't seem to have impressed some of the local farmers.

The Drought Assistance Act, described by Ken Gray, D-West Frankfurt, as "the largest farm disaster aid program ever adopted," was drafted to provide monetary aid to farmers who have lost substantial portions of their crops because of this summer's drought conditions.

Jackson County farmer, Leland Cofer, who has already lost 70 acres of soybeans, said he probably will apply for the aid but doesn't really believe the program will amount to much.

"I'm told to the county Agricultural Stabilization and Conservation Service and they really don't know what's going on," he said. "They say help is on the way, but it probably won't amount to anything."

John Bauer, livestock farmer at Springdale Orchards, said he will probably look into the program.

"I believe in the program and I've filled out the papers," Bauer said. "But it's going to take time to get everything ready for the application."

Firm: Law on liability ineffective

By Scott Perry
Staff Writer

Requiring liability auto insurance does not work, a representative of an insurance research firm said.

The law will not be effective "If you look at the other 39 states that have 'it," Bill Siroie, regional manager of the Insurance Information Institute in Chicago, said.

The bill, signed into law by Gov. James Thompson last Thursday, requires all 7 million Illinois motorists carry auto liability insurance or face fines or revocation of their vehicle registration.

The law ended a fight between advocates of the mandatory insurance bill and the insurance agencies that has been going on for 17 years.

"Legislators faced great pressure on them to attack the auto liability insurance or face fines or revocation of their vehicles," Siroie said.

Walesa, Polish authorities to discuss reviving union

WARSAW, Poland (UPI) — Government leaders agreed during talks with Solidarity founder Lech Walesa Wednesday to discuss reviving the outlawed union, and the labor leader called for the end of strikes that began more than two weeks ago. The breakthrough on the strikers' key demand came during the first face-to-face contact between government leaders and Walesa since the imposition of martial law in 1981.

W. Germans ban stunt flying at military bases

BONN, West Germany (UPI) — The death toll from the Ramstein air show crash rose to 52 Wednesday, and Defense Minister Rupert Schoel declared that stunt flying would be permanently banned at all military bases based on the ban he announced Monday against stunt flying not only to the West German military but to the United States and all other allies.

Anti-apartheid groups bombed in South Africa

JOHANNESBURG, South Africa (UPI) — A bomb that church leaders blamed on right-wing slums exploded at the headquarters of South Africa's Council of Churches and other anti-apartheid groups Wednesday, injuring 31 people and causing extensive damage. Many of the victims were asleep in neighboring buildings when the explosion occurred.

Violent protest in Chile kills 3 demonstrators

SANTIAGO, Chile (UPI) — The death toll rose to three Wednesday in violence that followed the nomination of 1973 coup leader Augusto Pinochet as the sole candidate for a presidential plebiscite, officials said. The opposition called the nomination by the ruling junta "a challenge to the moral conscience of the nation" and urged people to vote against the general.

AIDS researchers need two layers of gloves

WASHINGTON (UPI) — Laboratory workers handling the AIDS virus should wear two layers of latex gloves because many gloves are marred by tiny defects that could allow a virus to reach the skin, a scientist said Wednesday. In a letter published in the British journal Nature, U.S. researchers said they found pits up to 15 microns wide and 30 microns deep on both the inside and outside of the gloves — pits the researchers claim could potentially widen into holes.

Student loan errors cost government millions

WASHINGTON (UPI) — Banks, credit unions and other firms involved in the Guaranteed Student Loan Program are overpaid millions of dollars a year because the Education Department fails to check erroneous billings, a government study said Wednesday. The General Accounting Office said an investigation found that during one three-month period in 1985 the Education Department overpaid to lenders at least $1.8 million in interest subsidies on outstanding guaranteed student loans because the lenders submitted erroneous billings.

Wildfire in West reach 1 million-acre mark

By United Press International

Raging wildfires across the West went over the 1 million-acre mark Wednesday for the first time in drought-parched 1988 as the beigenosed Forest Service sought 4,000 firefighter recruits to begin training. With two new fires in Montana and another in Washington, 65 major blazes were fanned over 1,060,410 acres in 13 western states outside Alaska, the nation's firefighting headquarters said.

Gov. to change reform bill for Chicago school system

CHICAGO (UPI) — Gov. James R. Thompson Wednesday announced he will make a number of changes in the Chicago School Reform Act before he signs it and takes "the first meaningful step toward reform."

Harness racing is odds-on favorite

By Beth Clavin
Entertainment Editor

Grand Circuit Harness Racing and the World Trotting Derby are expected to be favorites among the public at the Du Quoin State Fair, according to Duane Johnston, assistant general manager of racing.

Racing began Aug. 30 and will end with the World Trotting Derby on Sept. 3. The attendance at the races was 1,000 on Tuesday, with a total attendance of 32,100 that day.

Tuesday's race included the Illinois bred colts. Illinois bred fillies raced on Wednesday. The races today through Saturday are the Grand Circuit Harness Racing.

Blazing Roy, from Charleston, had the fastest mile on Tuesday with a time of 1:53.8. Bit A Dance came in second.

The World Trotting Derby, which is in its eighth year at Du Quoin, is by far the most prestigious race of the fair. It includes 5-year-old trotters and is the second richest race in the world for this type of horse, being exceeded only by the Hambletonian.

Quarter and placed third at the Hambletonian.

Johnston said racing this year will be a lot more exciting.

"It's Tuesday and Wednesday races, the general quality a lot better than in the past," he said.

"The World Trotting Derby will also be a lot better than three years past," he said. "We've seven superstars enter in the race."

Johnston expects large crowds because of the competition and also because of a lot betting available for the races this year.

"Trifecta is the most popular form of betting," he said. "The better must pick the first three horses."

A trifecta winner receives the largest payoff.

Pig races for the races today and Friday is noon, with post times 12:30 p.m. Saturday for the World Trotting Derby.

The full attendance at the fair thus far is 88,290.

Area forests need trims, not buzz cuts

BESIDES BEING well-known for its image as a party school, SIU-C also is known as one of the more scenic universities in the Midwest. The Shawnee National Forest, located just south of the University, is the primary reason for this designation.

Endangered species controversy erupted about clear-cutting of the Shawnee National Forest. Clear-cutting is a harvest operation involving the cutting of timber for environmental and economic reasons. Those who support clear-cutting claim the process is necessary to allow forest regeneration and to meet the recent rise in timber sale.

THOSE WHO oppose clear-cutting claim the process can change the ecosystem of the area, because what may grow back after clear-cutting may not be the same as what existed before clear-cutting. Those who argue that certain species of plants and animals, including endangered ones, may be destroyed.

The Forest Service's 10-year management plan for the Shawnee, signed Aug. 15, is a sound compromise that should satisfy both sides. The compromise calls for more selective, even-aged management, which means the amount of acreage to fall under the axe will be reduced and, in certain areas, only the best trees will be selected for harvesting.

TRASH ON THE BEACHES

KANSAS CITY STAR

THE MEDICAL refuse that has been washed up on East Coast beaches this summer illustrates how laws can be ignored or poorly enforced. It is a sad commentary on the American way of life that there is not more said about it. They also neglect to have deep concern for the welfare of our forests, would allow them to be mismanaged.

ACCORDING TO Carl Bueckley and James Fraelie, professors in forestry, the ideal amount of land used for clear-cutting is about 25 acres, which is about the amount of land the new management plan allows for.

Still, Forest Service officials have done a fine job maintaining the forest throughout the years and, although highly doubtful that these officials, who are well-educated and likely to have deep concern for the welfare of our forests, would allow them to be mismanaged.

Letters

Prof: Clear-cutting issue requires clearing up for proper forest care

FORESTS ARE LIFELESS. They are new (less by 8,000 feet in a single season), clear-watering, growing, rotting, and dying. To illustrate a simple article, the greatest diversity of plants and animals is found in old, dead and growing deep woods. Forest rejuvenation provides habitats for the upland woodlands of kinds of species. A list of the Cave Valley knock-up group is a list of presumed endangered species such as the Swan wooster's which is not generally endangered as claimed. The work of the Forest Service to date shows that the Swan woodoo's are not as endangered as claimed.

RIGHT NOW there are still wildernesses and tracts of rural areas that are undeveloped. Committees for the Shawnee National Forest (or sections including the Cave Valley) were selected on the basis of an extensive inventory of natural forests by the Forest Service for preservation purposes. After we have saved good forests and given a chance to endangered species, there will be even more.

Too bad for our cherished Manti-Nezah! the timber that legal, which need work for, could be his.

Synergy gets support, but still needs money

Jackson County 7th Mental Health board have threatened the nature of the agency. If this occurs, we may be forced to close our doors at this time. However, the support received from the community this last year has been realized in providing services and staff that have been essential to the continued services of Synergy. Present staff members, volunteers and other contributors have been essential to the success achieved this last year. Many of the volunteers have given the most of their time, energy and support for the growth and the success of Synergy.
Student killed in car accident

By Scott Perry
Staff Writer

A University student died Tuesday when his automobile hit a utility pole, sustaining an automobile accident. The victim was identified as E. Bleyer, 24, who was driving west on Prison Road when his car apparently went out of control, the Williamson County Sheriff reported.

The car driven by Bleyer reportedly went into the eastbound lane, striking a guardrail on the side road at 11:30 a.m. Tuesday, when the vehicle was struck by an eastbound vehicle driven by John Simmons of Harrisburg.

Both drivers were transported to Marion Memorial Hospital for treatment of injuries. Bleyer was later transferred to Barnes Hospital in St. Louis, where he died at 6:30 a.m. Thursday. The other car then was struck by an eastbound vehicle driven by John Simmons of Harrisburg.

Neither of the drivers were hurt, but they may have some minor injuries.

A report contended, "We were quite shocked to hear about her death, said one person.

Bleyer, a native of Marion, was a 1982 graduate of Marion High School and a member of the P.U.P. squad, and was ranked twenty-third of 25 students in her graduating class.

Survivors include her parents, James and Ethel Bleyer; two sisters, Anna Marie and Mary Margaret; and three brothers, James B., Joe and John.

Drought, Page 1

the program, but also doubts it will really help.

Farmers had these farm programs for years and can't see where they've helped anyone (the government) kidding a lot of people about the programs like that. The money would probably do some good for something else to help farmers from somewhere.

Betty Lankin, legistative assistant, said there is no actual limit to the bill. "This $4 billion is actually just an estimate," she said, that the USDA doesn't expect the aid to go over that.

According to a news release from Governor Coburn's office, the bill will be financed with savings from reduced federal crop subsidies.

"Since not all crops are being reduced because of the drought conditions," Lankin said, "the USDA won't be using as much money for drought payments, so the money they don't use will be used for the bill.

Bob Frank, extension county agent, said the aid will be a partial assistance to farmers but they may still be getting short-end of the stick because funding for the relief program is money that was a reduction of subsidy for agriculture.

Farmers will have to apply for the program at their county Agricultural Stabilization and Conservation Service office, Steven Hendrix, program supervisor of the ASCA in Springfield, said.

"Crops eligible for the program will be wheat, feed grain, soybeans, and tobacco," he said. "Just about anything you can grow in Illinois.

Lankin said the bill also has provisions for livestock farmers and producers.

"The bill specifies that eligible livestock includes cows, horses, pigs, and poultry," she said. "It also provides funding for pastures damaged by the drought and that will not exceed $1,000 per farmer.

Farmers who lose more than Bob Frank, county extension agent, said the aid will be a partial assistance to farmers but they may still be getting the "short-end of the stick" because funding for the relief program is money that was a reduction of subsidy for agriculture.

35 percent of a crop will be eligible for compensation for a part of their losses, farmers with losses of 50 percent or more would get additional aid.

Farmers who receive aid from the program are required to purchase federal crop insurance in 1989 to help reduce government relief costs in the event of another weather disaster.

Hendrix said that as far as he understands it, the funding will be distributed on a farm-by-farm basis and farmers will receive their aid in the form of checks instead of the usual certificates.

"We haven't heard that there will be a flat rate allocated per state," he said. "It depends on the amount and if they meet the eligibility requirements.

Henry Dillinger, grain dealer in Southern Illinois, said he is expecting farmers in his area to get about 40 bushels per acre of corn. "That is down significantly from last year," he said. "Normally I would yield about 100 bushels per acre.

Corn harvesting will probably begin here in early October, he said, but they've already started harvesting in the threshing and it doesn't look good.

Their crop report said they only yielded 20 to 30 bushels per acre," he said.

Insurance, from Page 1

Country Companies Inc. said the law is mostly supported by those who have had the misfortune of being hit by uninsured motorists.

"They are under the misperception that there is a law saying everyone has to have insurance they can drop their uninsured motorist coverage," he said.

In Illinois, there is still a statute requiring all Illinois motorists to carry uninsured motorist coverage, which, as Sirois points out, serves to show legislation by the state.

"If the law works, you don't need it (uninsured motorist coverage)," Sirois said.

In Illinois, the law states the insurance companies must estimate there are 2 million uninsured motorists on Illinois roads. The law, the state contends, will cut the number of uninsured motorists in half, leaving only 1 million uninsured motorists on the road.

It is often the case, Sirois said, that people don't get insurance because it is too costly.

"You buy insurance to protect your assets. If you have no assets, you ignore the regulation," said Sirois.

But the cost is tied to the types of cars people are buying and the vehicles that come with an accident, he said.

"In Illinois, 87,000 family sedan are anymore. "

Sirois said cars are becoming more expensive to purchase and more expensive to repair. Medical and legal costs are also climbing. When it is all added up, he means higher rates, he said.

Illinois is ranked somewhere in the middle of the dozen states in premium rates, Sirois said. California, New York, Massachusetts and Florida rank among the top.

But Leckrone said he expects little change in the premium rates. "Most of the changes will be distributional costs to allow the law to work, Leckrone said.

To allow police instant access to insurance records, Leckrone said, there will have to be an agreement between the state's computer systems with the insurance companies computers. He said that would mean a slight increase in the rates.

"We will and Sirois agree there will be only a slight rise in rates caused by the addition of the new drives," Sirois said.

There is already a system in place to dispute high rate drivers to the different insurance companies under the Illinois Auto Insurance Plan. Drivers with bad records are placed in a pool with the rates regulated by the state.

"Hopefully it (the bringing in of more high risk drivers) won't affect the better drivers' rates," Leckrone said. "But when you start throwing those into a company, you will have to make some adjustments."
Group fights new sweetener

WASHINGTON (UPI) — A consumer group, citing concerns about cancer, asked the government Wednesday to reverse its approval of a new artificial sweetener and urge food manufacturers not to use the product.

In a formal objection filed with the Food and Drug Administration, the Center for Science in the Public Interest called on the agency to withdraw its July 28 approval of the artificial sweetener, marketed as "Nutrasweet," as low- or no-calorie sugar substitutes.

CSPI, a non-profit group with 110,000 members, claims the studies the FDA relied on in approving Sunette were "seriously deficient," but nevertheless "indicate the synthetic sweetener causes cancer."

Two killed by drugged-up driver

CHICAGO (UPI) — The driver of a car that crossed the median on the Kennedy Expressway and plowed into another car, killing a doctor and his wife, has been charged with reckless homicide after tests showed he was under the influence of cocaine, authorities said Wednesday.

Anthony Dunn, 31, of Chicago, who remains in fair condition at Cook County Hospital, faces two counts of reckless homicide and one count of reckless homicide of a fetus, and Lisa Howard, a spokeswoman for Cook County State's Attorney Richard Daley.

Killed in the collision Thursday morning Dr. Paul Chisolm, 41, and his wife, Kristine, 40, who was nine months pregnant.

The Chisolms' 2-year-old child, Billy Crowley, is listed in fair condition at Cook County Hospital.

Doctors said the accident has left the boy paralyzed from the waist down.

A toxicology report obtained by the State's Attorney's office showed Dunn was under the influence of cocaine when his car veered out of control, triggering the four-accident, Howard said.

Dunn already had been charged with several traffic offenses, including driving on an suspended driver's license and plates.

Athlete addicted to steroids

BOSTON (UPI) — A bodybuilder who used massive doses of steroids that appeared to cause side effects in his body, has been arrested on a drug charge.

The 23-year-old athlete reported using andabolic steroids for three years, including 75 milligrams of Dianabol daily, 50 milligrams of Primobolan and taking 20 milligrams of Anadrol orally each day.

The bodybuilder came to doctors because he could not stop taking the drugs, according to reports. "The influence of cocaine, and suffered heroin-like symptoms," the report said.

Dunn was arrested for driving while under the influence of drugs.

Emergency blood drive set

By Brad Bushue
Staff Writer

The American Red Cross has scheduled a post-Labor Day blood drive at SIU-C to replenish dwindling Southern Illinois blood supplies that resulted in part when a liver transplant patient required a record-breaking 1,300 blood products, an equivalent of about 500 donors, the drive's coordinator said.

The blood drive was coordinated to replace the blood used by the patient in patients and to ready medical facilities for the increased accident rate predicted for the Labor Day weekend, drive coordinator Vivian Ugont said.

Red Cross will make a 2-day stop at SIU-C next Wednesday and Thursday from 10:30 a.m. to 4:30 p.m. in Ballroom D and the International Lounge in the Student Center where donors can roll up their sleeves and possibly save a life if they are older than 17 and weigh more than 110 pounds, Ugont said.

The drive will be sponsored by the Associates and the Joint Benefits Committee who will provide workers for the collection event, Ugont said.

Ugont said appointments can be made for "speedy, express service" on the first floor of the Student Center Tuesday through Thursday or by calling Personnel Services.

The Carbondale drive also will collect blood from donors Tuesday at Memorial Hospital 11 a.m. to 4 p.m. and Friday at St. Francis Xavier Church from 1:30 to 6:30 p.m.

Ugont said the Red Cross anticipated a 4-day total of 1,115 pints of blood.

Psoiaris linked to brain tumors

WASHINGTON (UPI) — People who undergo treatment for severe psoriasis are five times more likely to develop brain tumors than the general population, researchers reported Wednesday.

Psoriasis, a chronic skin disorder characterized by red, scaly patches, affects as many as 4 million Americans. The cause of the disease is unknown.

An 11-year study, sponsored by the National Institute of Arthritis and Musculoskeletal and Skin Diseases, tracked about 1,300 people who had been treated for severe psoriasis, defined as psoriasis affecting more than 30 percent of the body.

All the subjects had undergone at least one session of a combination of drug and ultraviolet light therapy, called PUVA, and most had also used topical tar shampoos and brines to treat their discomfort, said Dr. Robert Stern, the dermatologist who headed the study.

"The number of CNS (brain) tumors in those subjects has developed at a far higher rate than should be expected," Stern said.

The study found a five times greater rate of brain tumors among people with severe psoriasis than in other people their age without severe psoriasis.

Researchers do not know what causes the higher rate of brain tumors among people with severe psoriasis. No higher risk was found among people with mild or moderate psoriasis, who usually do not undergo PUVA therapy.

"This has been puzzling us for some time. We do not believe it is related to PUVA therapy," said Stern, who works at Beth Israel Hospital.

Council walks couple route

Proposed rezoning freeze requested by local residents

By Richard Goldstein
Staff Writer

The City Council went from walking around Carbondale to approving a Halloween ordinance.

The 4-hour meeting Tuesday started with an hour-and-a-half tour of the proposed route of the east-west couple, a project that would make Main Street one-way westbound and Walnut Street one-way eastbound.

The council made its way west from the Charter Bank at 500 W. Main St. to Brook Lane, west east down Walnut Street and then completed the loop by taking South University Avenue back to West Main Street.

On Brook Lane one woman, fearing the traffic would intrude on the quiet neighborhood, pleaded, "This is a nice neighborhood, think about us." After completing the tour, the council reconvened in normal session and passed a moratorium on rezoning in the proposed couple route could be implemented.

There will be a public hearing on the proposal Sept. 20, at the request of the West Central Neighborhood Association and the Central Carbondale Historic Area Association.

The groups said a moratorium would prevent speculators from buying land next to the proposed couple route.

The areas that would be included in the moratorium are University Avenue on the east, Cherry Street on the south, the alley west of Brook Lane on the west, and Main Street on the north.

The council also took action to approve the Halloween Core Committee's recommendation that businesses within the "Halloween Fair Days Area," South Illinois Avenue and East Grand, cease operations no later than 1:45 a.m.

Colon cancer is hereditary, scientists say

BOSTON (UPI) — Genetics apparently plays a more important role than previously thought in determining who gets cancer of the colon and rectum, researchers reported Wednesday.

The findings, from researchers from the University of Utah Medical Center in Salt Lake City, estimated in a new study that an inherited susceptibility is involved in 50 percent to 100 percent of all colon and rectal cancers.

Previously, researchers thought that only 5 percent to 10 percent of the cancers were caused by an inherited genetic component known as colorectal cancer, has been identified.

There are about 147,000 new cases of colorectal cancer each year in the United States and more than 50,000 deaths, making it the second most common and deadly form of cancer after lung cancer.

"The evidence strongly suggests that an inherited susceptibility to colorectal cancer is common," said Lisa A. Cannon-Albright, a research associate at the University of Utah who published her findings in The New England Journal of Medicine.

The researchers studied 670 persons from 34 families in which there was either a history of colorectal cancer or at least one member had growths that often become cancerous, known as adenomatous polyps.

"Our study suggests that an underlying genetic susceptibility is present in the majority of persons with common colon adenomatous polyps and colorectal cancer," the researchers wrote in reporting their findings.

The findings reinforce the recommendation that people from families with a history of this type of cancer undergo frequent examinations to diagnose the cancer in its earliest, most treatable stages.

"I think basically it reinforces suggestions that relatives of patients with colorectal cancer should be screened," Cannon-Albright said in a telephone interview.

"From a research point of view, the important implication for us is inherited susceptibility plays a more important role in the expression of cancer than most people believed," she said.

Environmental factors are also probably important, she said. People are likely born with an inherited genetic susceptibility to developing polyps. Diet and other environmental factors probably influence whether the polyps become cancerous, she said.

Meanwhile, in a companion study in the same issue of the journal, researchers at Johns Hopkins University in Baltimore identified four genetic defects that appear to be involved in various stages of colorectal cancer.

They found a mutation in the "ras" gene in 47 percent of the tumors. Sections of chromosome 5 were missing in 20 percent to 25 percent of the cancers. They found a specific region of chromosome 17 is missing from 73 percent of all the cancers and 47 percent of adenomas and carcinomas. Sections of chromosome 17 were missing in 75 percent of the cancers.

Engineering prof now college dean

By Migual Alba Staff Writer

James Evers, associate professor of civil engineering and mechanics, will step into his new position of associate dean in the College of Engineering and Mechanic, today.

Evers is replacing Marvin E. Johnson, who retired. Johnson has been associate dean since 1982.

"We're fortunate to have a person with such excellent qualifications," Johnson said, "I'm confident the transition will be smooth.

Evers, a native of Old Texas, Ala., received both his bachelor's degree in mechanical engineering and doctoral degree in engineering mechanics from the University of Alabama. He also earned a diploma from the von Karman Institute for Fluid Dynamics in Rhode St. Genese, Belgium.

"I'm interested in the quality of the program," Evers said, pointing out that a part of his job is to "look out for the students.

Evers began his teaching career at the University in 1980 as a fluid mechanics specialist. In 1979, he received the Amoco Outstanding Teaching Award. This year he received the Ralph R. Teets Award from the Society of Automotive Engineers.
Three states top collider list
Michigan, Texas, and Illinois all vie for Super Collider

LANSING, Mich. (UPI) — Michigan is one of the top three states competing for the $4.5 billion Superconducting Super Collider along with Illinois and Texas, state officials announced Wednesday.

"Each of the states, except for Michigan, has a very serious flaw with either its geology, or environmental factors," said John Hanieski, executive director of the Michigan SSC Commission. He said Michigan's Stockbridge site probably is at the top of the list for the project. "We have a good chance to be the preferred site," he said.

Hanieski made his comments in response to the U.S. Department of Energy's Environmental Impact Statement (EIS) that was released last Friday. The EIS analyzes each site in the seven competing states — Arizona, Colorado, Illinois, Michigan, North Carolina, Tennessee and Texas — and outlines their strengths and weaknesses.

The 50-mile collider ring would require 16,000 acres of land — 8,000 of which would be purchased by the state and transferred to the federal government. Hanieski said that Michigan's closest competitors, Illinois and Texas, both have problems.

Illinois currently hosts the nation's only collider ring, Fermi Lab, and department officials have acknowledged that the Illinois collider would have to be shut down to construct the new facility. Scientists have opposed such a plan.

Hanieski said the EIS also shows that of the 1,386 letters received by the department from Illinois residents, 80 percent or 1,110 opposed the construction of the project, while only 18 percent or 253 supported the project.

A review of Texas' site qualifications, Hanieski said, showed that there might be some geology problems in constructing the tunnel.

1988 drought comparable to Dust Bowl
By United Press International

The central Illinois communities of Springfield and Peoria are enduring a drought worse than that of December of 1988, the National Weather Service said Wednesday.

The drought of 1988 has made the period from January through August the driest since records have been kept for Springfield, said forecaster Dan McCarthy, and the summer months of June through August were the second driest in history.

"So far in 1988, Springfield is having the driest year on record with only 13.30 inches of rain measured," said McCarthy, adding this year has been drier than the Dust Bowl year of 1936 when 13.31 inches of rain was reported.

With dry weather in the forecast for the final night of August, forecasters said rainfall of only 3.92 inches for the three-month period was second only to 1897 when 3.87 inches of precipitation dribbled on the area.
Two features highlight Salukis' offensive attack

By David Gallantini

With everything riding on the "wishbone" this season, the Salukis are hoping their new offense won't turn out to be a turkey.

"When we determine that it is not the best then we'll figure something else out," offensive coordinator Fred Riley said. "The players believe in it because it lets them use their talents the way they wish.

In the wishbone, a fullback and two halfbacks are behind the quarterback in formation, providing the offense with a triple option. Riley said the two halfbacks could be moved up to the line of scrimmage, thereby giving the offense four wide receivers on a play.

"That's the beauty of the offense," Riley said. "It is built around the run option and we put great emphasis on that aspect of the game."

Riley said the key to the offense is getting the defense to over-commit people in one area of the field. "Once you define where that over-commitment is, it results in a big play. There is a domino effect and it is a chess match the rest of the way."

Riley said the Salukis hope to have a good mixture of passing and running plays. "We hope to throw about 15 to 20 times," Riley said. "Over that would mean we were behind and throwing late to the catchback."

"The attack suits the personnel we have given and that is a big key. They were recruited by (former coach) Jim Derr and his staff and the format fits these people."

Riley said the burden of the wishbone is carried by the quarterback and fullback. "The quarterback has to get in the right play and make the right checks while the fullback is the workhorse." The current depth chart shows senior Chuck Harnick at the top fullback with freshman Ken Parks and junior Marvin Bilups battling for the second string position.

Riley said the halfbacks would have to adjust to not running the ball all the time. Freshman Garrett Hines is currently at the top spot at right halfback and sophomore Antonio Moore is leading the pack at left halfback.

"We have three pretty qualified fullbacks and most defenses are not that deep at linebacker," Riley said. "If we can continually run a fresh fullback out eventually the defense will get tired of it."

Riley said the offensive line has the easiest job since there is little recognition of defensive set-ups involved. "There are only so many ways"
Fewest number of new coaches in Divisions I-A and I-AA since 1961

The NCAA, in its annual preseason football media guide, reported few coaching changes in Division I-A and I- AA for this season.

Only nine of the 104 Division I-A schools changed coaches, the fewest in history since the NCAA started keeping records in 1977.

The previous low was 11 changes for 12 teams in 1964.

In Division I-AA, 12 schools changed coaches, which was only the second time I-A-I topped I-A in coaching turnover.

WISHBONE, from Page 2

you can line up and cover everyone," he said. "There are not a lot of twists and movements."

A key in the offensive line is having big guards to keep defenders tied up. Riley said Pete Janmaat, a 6-foot-7, 280-pound junior and Reese Youman, a 6-7, 270-pound junior are currently the top left and right guards on the Salukis' depth chart.

"I'd say we have some pretty big guards," Riley said.

Sophomore quarterback Fred Gibson said although he had no experience with the wishbone before, it didn't take long to learn. "It's a matter of learning who we see and how to read them," he said. "We are over that obstacle."

Gibson said he thinks the wishbone will pay off for the Salukis. "I think we are going to come out and be explosive. It's just a matter of execution."

Although the team is not quite comfortable with the offense now, Rhoades said that will come with time. "If it causes the defensive team problems, then that is fine," he said. "We are using it more to get us going in the right direction."

Two sets of musical coaches took places in Division I-A during the off-season.

The first started with the firing of Ohio State coach Earle Bruce, who eventually ended up at Division I- AA Northern Iowa. Ohio State then hired Arizona State coach John Cooper. Arizona State's, to fill its vacancy, gave defensive coordinator Larry Marmie the head job.

Another series started with Kansas firing Bob Valesente.

Salukis face toughest slate among conference schools

By Troy Taylor
Staff Writer

Whatever the outcome of the SIU-C football season, no one will have reason to accuse the Salukis of having played a walk schedule.

In the Gateway Conference, SIU-C and Indiana State have the most competitive slates of opponents, a Daily Egyptian study showed.

SIU-C, which had a 3-4 overall record last year, and Indiana State, which was 4-7, each earned three rating points to share a first-place ranking.

Illinois State came in at 17 points, followed by defeating champion Northern Iowa, at 14, Southeast Missouri at 13, Eastern Illinois at 12 and Western Illinois at 11.

The comparison of schedules was based on points. It rewarded teams for facing opponents that had performed well in 1987. It penalized teams for playing schools below Division I-AA level, such as Division II or III.

For example, SIU-C received three points for playing Division I-A schools on the road. But Western Illinois had a point deducted for opening against Grand Valley State.

The rating system awards points on the basis of an opponent's success in 1987. Teams that made a Division I-A bowl appearance merit three points.

Based on points, an opponent's last season, the basis of his overall composite rating, and the percentage of all opponents, the Salukis earned four points; more than 50 percent, then five points.

For example, Liberty University, which plays Western Illinois and Eastern Illinois, was treated as a Division II opponent for the purpose of this study. Even though Liberty will be Division I-AA this season, it was Division II last season.

SIU-C was the only team in the conference not to have a Division I opponent on its schedule. The rating reflects the consistent level of competition SIU-C will maintain this season.

Thus, SIU-C ranked higher than Northern Iowa, even though the Panthers open the season at Pittsburgh - a game worth four points on the schedule. The rest of the Northern Iowa's schedule is softened by playing three straight Division I-AA opponents and one Division II opponent in its final match-up.

SIU-C opponents also chalked up the highest win percentage, 53.3 percent. Illinois State was second at 51.1 percent. No Gateway team was below 41 percent.

The Salukis open the conference slate Sept. 3 at Western Illinois. The Leathernecks, serious contenders for the conference title after posting a 7-4 mark in 1987, beat SIU-C 21-15 last season.

On Sept. 17, Murray State comes to Carbondale. The racers were 6-5 last season.

### 1988 Schedule

- Sept. 3 - at Washburn, 6 p.m.
- Sept. 17 - Murray State, 1:30 p.m.
- Sept. 24 - Drake, 6:30 p.m.
- Oct. 1 - Arkansas State, 1:30 p.m.
- Oct. 8 - at Eastern Illinois, 5:30 p.m.
- Oct. 15 - Illinois, 1:30 p.m.
- Oct. 22 - Northern Illinois, 1:30 p.m.
- Oct. 29 - at Kentucky, 7:30 p.m.
- Nov. 5 - at Southeast Missouri, 1:30 p.m.
- Nov. 12 - Illinois State, 1:30 p.m.
- Nov. 19 - Northern Illinois, 1:30 p.m.
Preseason hoopla is designed to create fans to abandon a realistic outlook for their favorite team and fantasize for a season of fantastic finales.

For those who think enthusiasm clouds vision worse than a poor pair of prescription glasses, the Gateway Conference race will come down to either Northern Iowa or Western Illinois. A battle of the Bruces, if you will, since Earle Bruce coaches the falks from Cedar Falls and Bruce Craddock has a chain on the Leathernecks.

But in Carbondale, hope reigns supreme. Rick Rhodes appears to be a coach who fits in well, and his message to Saluki fans seems to be catching. Things may be a little rough at first, but the Salukis are capable of being winners.

It’s sort of a dare to dream scenario. So in the spirit of things, here’s my fantasy season — given that the team gets the ball rolling in Macomb on Saturday.

Sept. 2 at Western Illinois. The Leathernecks’ star quarterback, Paul Singer (whose father is Col. Larry Singer, inspector general of the Illinois National Guard), gets a sudden urge of patriotism and enlists in the U.S. Army for the game. Craddock, a former Marine, watches helplessly as the Salukis win 14-6.

Sept. 7 vs. Murray State. Prior to this Hall of Fame game, Rhodes finds Assistant Director and former star Saluki quarterback Jim Hurt dressed in civilian clothes. Even though Hurt threw six interceptions (“It’s just like the old days,” he said), the Salukis win easily, 21-3.

Oct. 1 vs. Arkansas State. Can anything stop the Salukis? Apparently not. Though the Salukis trail 7-4 in the final 30 seconds, an Arkansas State player picks up a fumble and runs the wrong way for a safety. Salukis win 7-4.

Oct. 8 vs. Eastern Illinois. The Salukis are now rolling over opponents like a semi-truck, this time they win 26-0. Coach Rhodes says: “Troy State, er, I mean SIU, is going to win the championship.”

Oct. 15 vs. Indiana State. The only thing the Sycamores can do is vow revenge during basketball season. The Salukis hold on to win 10-7.

Oct. 22 vs. Northern Illinois. Northern’s All-America 4-liner, John Ivance, flubs a 25-yard field goal attempt as time expires. The Salukis win 14-12. No one seems to notice the cheerleader that carelessly left that banana peel on the field.

Oct. 29 at Kentucky. The fall finally comes. The players’ minds are back at the Halloween celebration instead of on the game. No treats for Coach Rhodes as Kentucky wins 42-0.

Nov. 5 at Southwest Missouri. The Salukis play poorly throughout. But in the closing seconds, Southwest Missouri coach Jesse Branch disconnects his headset. The Bears’ quarterback then calls the wrong play, which results in an interception that gives the Salukis a touchdown. Salukis win, 23-21.

See DREAM, Page 7.
RHOADES, from Page 8

make a decision," he said. "They may support us or go against us, but any way is better than being uninformed."

Rhoades will not appear to students in blatant form at Thompson Point at 7:30 p.m. on Sept. 7. "I'll talk to any group who would want me to talk with them," he said. "Theoretically, it would be great to do every night."

Being the top sport at SIUC is not the issue, Rhoades said. "We have a Division I basketball team and a baseball team that has sent teams to the college world series. We were national football champions in 1983 but have also had a lot of problems," he said.

Rhoades said his family, comprised of his wife, Aims, and two sons, Bobby and John, are big supporters wherever he goes. Aims hasn't missed many games and doesn't mind driving whatever it takes to get to wherever it is that we're playing, he said.

"Bobby is going to be on the sidelines with me this season, not as a coach, but as the keeper of one of our charms," Rhoades said.

COACHES, from Page 8

Rhoades to stay on as assistant coach. He starts his eighth season as a full-time Saluki coach.

Sherrell is the only staff member left from SIUC's 1983 I-AA national championship team.

DREAM, from Page 6

Nov. 12 at Youngstown State. After playing a lossless season the Salukis make a remarkable turnaround. They blew the Ohio powerhouse 30-10. Senior Ired Crease says the Salukis were inspired. "Coach Rhoades said if we played another terrible game, we would have to walk home."

Nov. 15 at Northern Iowa. This is it, the conference championship game. Both Northern Iowa and the Salukis are undefeated in league play. It's a great game until the third quarter, when the Saluki mascot runs out onto the field and bashes the head referee. After that incident, the Salukis can't buy a call. Northern Iowa wins 49-33. "It's unfortunate we lost," Rhoades said. "This gives us something to shoot for. We'll come back strong next year."

JIM BENAVYCOGLIO, special aide. Benavycogli took his first coaching job at his alma mater; San Francisco State University, working as defensive and special teams coordinator for six years then moved to University of Washington. He begins his fifth season at SIU-C.

Censers shift strategy

WASHINGTON (UPI) — Leaders of the book-banning movement, unable to win ideological battles in court, have begun to campaign, the organization said, the report, titled “Attacks on the Freedom to Learn,” is the sixth annual nationwide study on censorship and other ideological attacks on public education. It was based on news reports from around the country and independent research by the organization’s staff.

The group said the shift in tactics is due to two decisive court rulings: public schools are not the agents of any particular religion or sect.

“Organized national groups are less obviously involved in local challenges this year,” the group said. “In light of their defeats in the courtroom during the past year, they have retreated their efforts.”

Law to hold banks in check

WASHINGTON (UPI) — Banks for weeks have been collecting $14 to $27.50 for bounced checks. People for the American Way said “would-be system opponents now are less obviously involved in local challenges this year,” the group said. “In light of their defeats in the courtroom during the past year, they have retreated their efforts.”

The Federal Reserve Board estimated banks were collecting $250 million a year in interest on the fees customers who inadver-

antly wrote bad checks, ranging from $14 to $27.50 for bounced checks.

The new federal law requires all U.S. banks to make money available the next business day for cash, and banks were also collecting $145 million a year in fees for checks that bounce.

Banks had been collecting $145 million a year in fees for checks that bounce.

“Banks will no longer be allowed to play hide-and-seek with customers’ checks,” said Leslie Gainer, a lobbyist for the U.S. Public Interest Research Group, one of the organizations that pushed for passage of the new law.

WEBQ to broadcast games

Sportscaster Bill Cromer and Mackie Nicholes were named as the announcing team for Saluki football broadcasts, radio-station WEBQ-FM and SIU-C athletics said in a joint press release.

Cromer, who has 17 years broadcast experience, has been at WGLB for five years. He will have play-by-play responsibilities.

Nicholes, a 1979 graduate of Lamar University, says he plans to handle color commentary. Nicholes broadcast Saluki sports for three seasons in the early 1980s.

New swim assistant named

Randy Julian, a 1979 graduate of Lamar University, is a new assistant coach for the SIU-C swimming team.

Julian has been the head coach at Dad's Club YMCA in Houston, Texas for the past five years. He was a two-year swimming letterman at Lamar.

Julian, a native of Dallas, Texas, will work on his master’s degree in health education here. His coaching responsibilities will be in recruiting and administration.

Motorcyclist at Du Quoin

Bob Shobert, who holds the national one lap motorcycle record at 104.727 mph, will be at the Du Quoin State Fair at 6 p.m. Thursday, Shobert set the record in Du Quoin, breaking the previous record set at the Illinois State Fairgrounds in Springfield.

Tennis coaches prefer separate training methods in team practice

By Megan Hauck
Staff Writer

About the only similarity between the men’s and women’s tennis practices these days are requests and balls.

Men’s tennis coach Dick LeFever prefers his players to concentrate more on strokes.

“We are all excellent tennis players,” he said. “They all know what to work on.”

LeFever said he tries to help different players with different strokes, but said each player knows what to work on and does so.

LeFever, whose 1986 spring squad lost the Missouri Valley Conference championship, stresses doubles play during practice. The Salukis lost a crucial doubles match in the final round of the MVC, deciding the tournament by two points for Wichita.

“We play at least a set a day of doubles,” he said. “If we’d won that last doubles match, we wouldn’t have lost the conference championship.”

Auld is an advocate of conditioning, both on and off the court. During practice at the University Tennis Courts, players are required to run a mile.

A circuit consists of about 10 different stations, with players doing a certain type of conditioning exercise for 45 seconds. After a 30 second break, the player goes on to the next station, Auld said.

“They run the circuit at the very end of practice,” Auld said. “It makes them push themselves — something they might have to do in a third set situation.”

Auld also stresses running and aerobic drills.

“I think that you have to have conditioning besides playing tennis,” she said. “You get into shape by conditioning.”

During the winter, practices consists of weight-training, aerobic workouts and running drills. Auld said the team participates in aerobic sessions at the Student Recreation Center when they aren’t running, weight-training or playing a limited amount of indoor tennis.

LeFever: said he rarely requires his players to run drills during practice. It’s usually after time off from the courts that he incorporates running, he said.

“We’ve had a little trouble with players getting injured while sprinting,” LeFever said.

“We’ve tried to be Jp kind of an individually prescribed thing.”

Clariication

In the August 25 issue of the Daily Egyptian, a mention of the Saluki football team’s NCAA classification was incorrect. The Salukis are in Division I-A, and the story should have read that the Salukis are not prepared to compete at Division I-A.
Rhoades is quick to point out that he and his staff are not telling their players how to run their lives. "Caring for others, discipline and making sacrifices; those are things I strongly believe in," he said. "We can show them how to do these things in football and hope they branch out into their entire lives."

Rhoades' career highlights:
- 1984: Led Mountain Brook High School, Birmingham, Ala., to a 14-0 unbeaten record and a state championship.
- 1981-82: Was offensive coordinator at the University of North Alabama. The team compiled a 15-5 record over the two year stretch and set several offensive records.
- 1983: Was named offensive coordinator at Troy State.
- 1984: Helped guide the Trojans to the NCAA Division II championship. The team set several defensive records which still stand.
- 1985: Took over as head coach at Troy State.
- 1988: Guided the Trojans to the first of two consecutive Gulf South Conference championships.
- 1987: Coached the Trojans to their second NCAA Division II championship in three years. He was named Division II "Coach of the Year" by the American Football Coaches Association, Chevrolet and The Football News.

Rhoades has served as linebacker coach, receivers coach, running backs coach and defensive backs coach. He has been an assistant at Jacksonville State University, an assistant at Auburn and at North Alabama, where he led the team to two state play-

First-year coach Rick Rhoades gives some words of encouragement to Salukis' quarterback Fred Gibson.

Salukis receive guidance from Rhoades' staff

The football team has almost an entire new coaching staff. Coach Rick Rhoades assistants are:

FRED RILEY JR., offensive coordinator. Since being named by his former coach on April Fool's Day, Riley has been responsible for coordinating the offense.

Riley, 28, has been the quarterback and running back coach at the University of Tennessee-Chattanooga for the past four years. He has also been a graduate assistant at Auburn University, an assistant at Jacksonville State University, and had been named offensive coordinator at Delta State before accepting Rhoades' appointment.

JIM TOMPKINS, defensive coordinator. Tompkins has 52 years of high school and college coaching experience.

Tompkins took his first head coaching job in 1966 at Charles Henderson High School in Troy, Ala., where he led the team to two state play-

Jeff Mcinerney, linebackers coach. For the past five seasons, Mcinerney has served as linebackers coach at Division II Troy State.

GREG MCMAHON, wide receivers coach. McMahon enters his fourth season as full-time college coach and his first as wide receivers coach at SIU-C.

ROD SHERILL, offensive line coach. Sherill was chosen by Rick Rhoades to be his offensive line coach.

See COACHES, Page 7
U.S. takes hard line in Geneva

GENEVA (UPI) - The United States announced a major policy turnaround Wednesday by formally linking reductions in strategic nuclear weapons to the dismantling of a Soviet radar facility in Siberia.

The new hard line announced in Geneva was clearly decided at the highest levels of the Reagan administration and came after a week of inconclusive talks at the third five-year review of the 1972 Anti-Ballistic Missile treaty.

A statement by the U.S. delegation denounced the insertion of a radar array near Krasnoyarsk as a violation of the ABM treaty.

"The United States statement believes the Krasnoyarsk radar constitutes one of the ABM treaty," it said.

"The Krasnoyarsk violation is a serious, particularly when it is recognized that the radar constitutes one of a network of such radars that have an inherent potential for attack assessment in support of ballistic missile defense."

The United States has also made it clear that the continuing existence of the Krasnoyarsk radar makes it impossible to conclude any future arms agreements in the START or Defense and Space areas, the statement said.

Unlike the Soviet Union, the United States has never tied agreements at the Strategic Arms Reduction Talks, which began in 1985, to other offensive or defensive weapons systems.

Washington has always rejected Moscow's attempt to link reduction of long-range nuclear weapons to limits on the U.S. Strategic Defense Initiative, popularly known as Star Wars, space-based anti-missle program.

Moscow insists that advanced testing of Star Wars would violate the ABM accord, which should be extended with "strict compliance" for at least nine or 10 years.

By rejecting linkage, the United States was able to secure the Intermediate Nuclear Forces ban on ground-launched medium and shorter-range missiles - which the Soviet Union originally made conditional on Star Wars limits.

U.S. arms spokesman Terry Shroeder was only authorized to issue a short reply to questions about the policy switch.

"The Soviet Union's deployment of a large phased-array radar near Krasnoyarsk constitutes a significant violation of a central element of the ABM treaty," the statement said.

The United States has also made it clear that the continuing existence of the Krasnoyarsk radar makes it impossible to conclude any future arms agreements in the START or Defense and Space areas, the statement said.

Unlike the Soviet Union, the United States has never tied agreements at the Strategic Arms Reduction Talks, which began in 1985, to other offensive or defensive weapons systems.

Michigan bans surrogate contracts

LASING, Mich. (UPI) — The nation's first ban on surrogate parenting pay-pays to effect in Michigan Thursday, voiding all pregnancy-for-profit contracts and making any party to such an arrangement subject to prosecution.

The law, approved by the Legislature June 9 and signed by the governor June 26, makes it a felony to arrange a surrogate contract for profit and a misdemeanor for a mother or couple seeking a child to participate in one.

Under the new law, surrogate parenting contracts for profit would be unenforceable, although people who have negotiated and signed contracts before Thursday would not be subject to prosecution.

The American Civil Liberties Union filed suit Aug. 4 to block the ban, contending it discriminates against men and violates the right of procreation, and a Wayne County circuit judge will hold a hearing on the law Sept. 19.

The executive director of the ACLU's Michigan branch, Howard Simon, said he expects the attorney general's office would not prosecute anyone under the act until the judge rules on the suit.

"I presume the attorney general's office would refrain from any prosecutions," Simon said. "It would be a waste of his time and a waste of any court's time. And I think it would be unfair to anybody he prosecute.

But Chris DeWitt, a spokesman for the attorney general's office, said his office would prosecute anyone who violates state law.

"The law goes into effect as of September 1 and anyone who violates that law could face same day, legal action," DeWitt said.

Michigan bans surrogate contracts

Chicagoland blamed for Wisconsin ozone

MADISON, Wis. (UPI) — A state senator says the federal government should deny millions of dollars in aid to Illinois because the Chicago area, along with the Clean Air Act and southeastern Wisconsin is choking from the negligence, "Illinois has ignored federal directives to reduce emissions of volatile organic compounds which cause ozone air pollution and is in violation of the federal Clean Air Act," Senate Majority Leader Joseph Strobl, D-Racine, said Wednesday.

Strobl wants the U.S. Environmental Protection Agency to withhold federal construction grants, sewage treatment grants and federal highway funds from areas that fail to meet legal requirements.

The EPA public information officer in charge of the ozone law division was not immediately available for comment.

Is It True...

That Students In The 1980's Only Care About Themselves?

We don't think so!

In fact, we're setting up a new frug-al alcohol program to help students help each other...by sharing information and experiences and providing resources where students can get accurate, unbiased information.

This new program is called S.O.S. - Self Over Substance.

We'll have three parts to the S.O.S. program. Some will be available next week; others are in their developmental stage. They are:

1) A weekly column in the Daily Egyptian called "Ask the Drug Wise"
2) S.O.S. Peer facilitator program - a group of students trained to provide more information and natural resources.
3) Resource Center containing pamphlets, books, posters and audio tapes for checkout.

Become part of the Seja Over Substance Prevention Program

We'll provide the training, information and materials and empower you to a network of other concerned students. You'll provide a little of your time, energy and care.

If you would rather have more information, call the Wellness Center.

Ask for Cheryl or Joe

Chicagoland Witness: Navy swim school's area baptism

Lett, Cmdr. Steve Matthews, testifying at the court-martial of a lieuutenant charged with dereliction of duty, said most people pulled from the water can assult in their own rescue.

Lt. Thomas Torchia, 21, of Princeton, Ill., is accused of failing to issue policy prohibiting the use of force to train recruits and failing to let a recruit drop the course upon request.

The recruit, Lee Mirecki, 19, of Appleton, Wis., had a panicked heart attack and drowned March 2 after in-structors allegedly yanked an equipment rack and tossed him in a pool during a routine called sharks and daisies. In the routine, in-structors act like drowning victims and try to pull students under water.

After Mirecki's death the Navy closed the school and re-evaluated its procedures. Among other things, instructure no longer are per-mitted to touch students in the water.

Prosecutors claim Torchia should have written a policy prohibiting the use of force and should have known Mirecki had a fear of water.

The defense claims Torchia simply was using the same teaching techniques that had been in force since 1982.
Spikers open vs. hobbled opponent

By Lisa Warna
Staff Writer

The Memphis State women's volleyball team is having serious personnel problems. The Lady Tigers enter tonight's season opener with the Salukis minus three top players.

The match starts at 7 p.m. at Davies Gymnasium.

"We are in trouble," said Sherry Finebrook, the information director at Memphis State. "We only have six or seven ready to play."

Rhoda Kottke, a 6-foot sophomore, is suffering from blood poisoning and will not play this weekend.

Nancy Walker, a 6-foot senior, quit the squad after her grandmother died Sunday. Jenny McCoy, a 6-6 junior, will be out for three weeks with a sprained ankle.

Another Memphis State player, whose identity was not released, could miss the match because of a case of hepatitis.

That leaves 5-9 setter Clare Dirksen, Cara Krenson, Marie Zvolinski, Kim Lemon and Sarah Tjelmeland as probable starters.

Despite the loss of personnel, Memphis State coach Jim Callender is more concerned with the Salukis' prowess on defense.

"They are good on defense," Callender said. "They are scrappy, tenacious and don't give up."

Memphis State is coming off a 21-16 season, finishing third in the Metro Conference. It has been two seasons since the Salukis' head coach, Manley, is coming off her 15th season as the Salukis' head coach. "An additional three or four practices would allow me to say more comfortably we are ready, but nonetheless, we are slightly ahead of our preseason schedule," Hunter said.

The Salukis' starting middle blockers are 5-11 junior Nina Brackins, 5-11 senior Beth Wimsett, and either 5-10 sophomore Amy Johnson or 5-11 sophomore Margaret Conley.

"They're getting antsy," said Sonya Locke, assistant coach. "They want to get on the court and get competitive."

The Salukis' outside hitters will be 5-10 sophomore Lori Simpson and 5-6 senior Teri Whibbs.

The setter will be Sue Silliard, a 5-6 red-shirted senior from Barnhart, Mo.

Crouse will shrug off injury; can play Saturday

By David Gallianetti

Senior nose tackle Brad Crouse suffered a sprained wrist at football practice Tuesday, but is expected to play against Western Illinois on Saturday.

Men's trainer Ed Thompson said if Crouse does play, it will probably be with a cast on the wrist to protect it from further damage.

Head coach Rick Rhoades said the injuries are a part of football. "You can't avoid them completely," he said. "There is no rhyme or reason for injuries."

Despite preparing for the season opener against Western Illinois, Rhoades said the practice schedule is nothing out of the ordinary. "Monday and Thursday are light days," he said. "Friday is very light."

Rhoades said practices are more mental than physical now that the preseason is over, but the team still has much to work on. "This team is still a football team," he said. "We are not a veteran team."

The Salukis seem to be coming back after their inconsistency showed through in Saturday's scrimmage.

Rhoades said, "We have had two good days (Monday and Tuesday)" he said. "I am encouraged by their efforts. We are continuing to make progress, and will get over our inconsistency as we get more mature and have game experience," Rhoades said.

NFL suspends former Saluki for drug abuse

SEATTLE (UPI) -- Former Saluki standout and Seattle Seahawks cornerback Terry Taylor has been suspended 30 days by the NFL for violating the league's substance abuse policy, NFL officials said Wednesday.

Terry Taylor was a first-round draft choice in 1984 from Southern Illinois University, where he was an All-American selection his senior year.

Taylor intercepted a school record 20 passes during his career at SIU-C and played a vital role in Saluki I-AA championship season of 1983.

Taylor has been a starter for the Seahawks the last three seasons and was scheduled to start Sunday's season opener in Denver.

He will miss the team's first four games and will be eligible to return for Seattle's Oct. 2 game against Atlanta.

Seahawks President Mike McCormack announced the suspension before practice Wednesday, but would not comment further.

Taylor became the 10th player suspended by the NFL this year under the substance abuse policy. NFL officials said Wednesday, New York Giants linebacker Lawrence Taylor and Washington Redskins defensive end Dexter Manley are the two biggest stars affected so far this season by the ruling.

Mel Jenkins probably will replace Taylor in the starting lineup, a team spokesman said.

Senior nose tackle Brad Crouse hasn't lost his head yet, but a wrist injury is the second mishap the college veteran has faced this season. In the third week of practice, Crouse suffered from a virus and missed nearly a week of workouts.
