Jobs scarce but not extinct

By Wes Smith
Daily Egyptian Staff Writer

What happens after you’ve painted your last canvas, played your last game, or sung your last song? Will you get a job right away? That isn’t necessarily so.

The current job market has been labeled the worst in 30 years by many experts. This cloud appears to be one that will soon pass, as the economy recovers.

SIU coal supply back to normal

A threat to the supply of coal available to SIU, brought on by striking members of the United Mine Workers Union (UMW) last November, has eased—temporarily.

"The rates are back to normal," Eric B. McKee Jr., Chief Physical Plant Officer, said Monday. "The coal supply is real good, and the bins here are full!"

SIU was forced to bring in 1,600 tons of coal from its storage yard in Deloton early December because of the shortage. McKee attributed the supply crunch to the UMW strike.

The strike has since been settled, with the nation’s 120,000 UMW workers receiving a 64 per cent increase in wages and price benefits over the next three years.

Commenting on a bill proposed by Kenneth Buzbee, which asks that an additional $396,000 be added to SIU’s budget to offset rising coal costs, McKee said, "I think the extra money will be needed."

"Our (SIU’s) coal supply is back to normal," he said.

City police search for suspects in weekend slayings of women

By Mark Kaslowski
Daily Egyptian Staff Writer

Carbondale Police continued a search for suspects in two cases of apparent murder reported Monday in which two women, one an SIU student, were killed.

Theresa M. Clark, Ambassadors apartments, no. 20 was found dead by her roommate Monday about 2:30 a.m., Chief of Police George Kennedy said.

The 22-year-old graduate student in economics and Anne Emling, a 22-year-old sophomore in recreation, were no suspects in either case. The autopsies in both cases were being performed Monday. Results were expected by Tuesday.

Clarence Sanders, a 27-year-old graduate student in economics and Anne Emling, a 22-year-old sophomore in recreation who live in the apartment below Clark’s said they did not notice any unusual noise Saturday.

Ragdale said he believes Clark died Saturday night.

Sanders and Emling said they know little about Clark or her roommate. They said they didn’t know their names.

Clark, the daughter of Mr. and Mrs. Joseph Clark of Rollingbrook was an honors student working on a masters degree in speech therapy. She received her bachelors degree at SIU in speech therapy. She graduated from Rooflingbrook High School in 1970. She had four sisters and two brothers.

"All surveys seem to indicate that hiring is up and bachelors degrees seem to be more in demand. There is a demand for engineers in petroleum and power companies but things look bad for people in automotive related fields and in consumer products, especially in luxury items," Wohlwend said.

Ralph Arnold, who counsels students from the School of Technical Careers (STC), agreed things are tight in the automotive job market but not necessarily straight across the board.

"In the medical fields, such as dental..."
Republicans to hold hearings here

By Laura Coleman
Daily Egyptian Staff Writer

An Illinois Republican task force which was appointed by the party's
goals and principles, will hold a regional meeting at the State
Holiday Inn from 6 to 9 p.m.

Mayor Maxene Fernstrom, administrator of the hearings, said anyone interested is
encouraged to testify. A limit of five
hearings, said anyone interested is
hearing in
five minutes has been set for those
an antitrust case.

against possible terrorist

mistake in April

\[ \text{New News Roundup} \]

Drug raid suit dismissed

ALTON, Ill. (AP)—A U.S. District
Court judge dismissed Monday a $1
million suit filed by a former Collin-
villle couple against federal drug
agents for preventing their home by
mistake in April 1972.

Judge Robert Morgan ruled that the
Herbert and Eleana Giglottos failed to serve
proper notice of the suit on the
defendants and added the dismissal was
warranted because no attorney ap-
appeared to represent the Giglottos at pre-
trial conferences conducted Monday to
set trial dates for their suit and related

Giglottos said his lawyer, James R.
Gombard, Belleville, apparently was not
notified of the conference.

"We are going to pick it up and we are
going to go ahead with it as quick as
possible," Giglottos said. "He didn't

heard of a trial or he would have been
there today."

Court sources said, however, that the
dismissal was final and that further
litigation in the case would require the

Morgan set trial for June 2 for a
$4 million suit filed by Mr. and Mrs. Donald
Askev of Collinville and their son,
Michael, and June 16 as the date for
court action in a $1 million suit filed by
the Johns Medicine, a four-year-old resident.

The suits allege agents working for the
now defunct federal office of Drug Abuse
Law Enforcement raided their homes

and, in the cases of both the
Askews and Giglottos, by mistake.

Market trading heaviest ever

NEW YORK (AP)—The stock market,
roared to a record Monday of buying
that produced the heaviest ac-
tivity in New York Stock Exchange
history.

Brokers gave a large part of the credit
to falling interest rates and a jubilant
welcome on Wall Street to a federal
appeal court's ruling in favor of
ternational Business Machines Corp. in
an antitrust case.

The Dow Jones average of 30 in-
dustrials jumped 36.66 to 892.66 for its
largest gain since it took a 28.99-point

leap last Oct. 9. and its eighth biggest

Big Board volume hit 32.13 million
shares, edging the old record of 31.73

Gainers overwhelmed losers 1,476 to
189 among the 1,880 issues traded on the
NYSE, and the exchange's composite
index surged 1.38 to 40.12.

One of the most evident forces behind
the surge was the slide in interest rates
of late which has pushed yields on in-
terest-bearing investments down sharply.

Sadat visits France

PARIS (AP)—Closely guarded
against possible terrorist attack,
Egyptian President Anwar Sadat began
a three-day state visit to France
seeking jet planes and tanks and a
European role in Mideast
peacekeeping.

Sadat, on his first excursion into the
Western world since taking office over
four years ago, was greeted at Orly
Airport by President Valery Giscard
d’Estaing and his wife.

Police sharpshooters stood on roofs
adjoining the VIP lounge and platn-
mats almost overnight of the presi-
dentials. The ceremonies took place
less than half a mile from where Arab
gunmen twice tried to blow up Israeli
airliners within the past two weeks.

Sadat condemned the attacks and said
they were aimed against his search for a
political settlement in the Mideast.

Southern Democrats losing power

WASHINGTON (AP)—Southern
Democrats, once the single most
powerful bloc in the Senate, are
experiencing a further loss of power in
the new Congress where they recently lost
two seats and now number 18.

They are now represented by the
chairman of six of the 18 committees,
compared to 12 chairmanships just
five years ago. Even control of the
six is tenuous.

Four of these men are in their 70's and
some have already announced they are
serving their last terms.

This is a far cry from the situation that
has existed through most of the last
three decades. The South traditionally
has sent young Democrats to the Senate
and kept them there for years, as legendary
statesmen they rose automatically to high position
through the seniority system.

New state tax proposal planned

SPRINGFIELD, Ill. (AP)—Plans
were announced Monday to introduce
legislation in the General Assembly to
replace a senior citizens tax relief
measure vetoed Friday by Gov. Daniel
Walker.

Lt. Gov. Neil Hartigan, a leading
proponent of the grant program, said in
an statement he met with legislators and a
coalition of senior citizens groups and
that identical legislation will be in-
troduced.

Rep. J. David Jones, R-Springfield,
announced that he would introduce such
legislation in the House, saying “The
state’s senior citizens relief is even more urgent
now than when the legislation was first
introduced.

Walker said he vetoed the $34 million
program “redundantly” to avoid a tax
increase.

Call it a rebate, a discount, a price
cut or a clearance sale, but prices of
some consumer products are coming
down after a year of across-the-board
increases.

Companies say some of the mark-
downs reflect a sharp drop in raw
material prices and that drop is begin-
inig to be passed along in the form of
lower consumer prices.

J.C. Penney Co. rolled back its home
sewing fabric prices as much as 33 per
cent this week, citing lower prices it is
receiving from its manufacturers.

Items normally on sale in January,
such as winter clothing, sports equip-
ment, snow tires, linens and furniture,
have been cut as much as 60 or 60 per
cent, advertisements show.

A spokesman for Hecht Co.,
Washington, D.C., department store,
says pocket calculators have been cut to
$26 to $39.

"We think people feel they can af-
ford to fly, and we wanted to bring
prices down so they feel they can. After
all, it’s better to fly on less fare than to
fly on no fare at all," said a spokesman for
American Airlines, the first to file for
the lower fare.

Ground transportation is also becom-
ing a little less expensive.

Foreign car dealers are cutting
prices to compete with the rebate
programs offered by major American
automakers.

A Schenectady, N.Y., American
Motors dealer has augmented his
company’s rebate program with his own
version of a two-for-one sale.

Some of the matters discussed at the
hearings have been the position of
women in the higher organization on the
party, a statement of principles, abortion,
and pertinent legislative changes for restructur-
ing the party organization.

Fernstrom said recommendations will be
heard from the task force by the end of
February, and added that one of the
goals of the hearings will be to establish
and implement a Republican philosophy
and further the concern for the two-
party system.

"People want an explanation of what
the Republican Party stands for,"
Fernstrom said.

Consumer prices begin to come down

**Humane Society fighting dog problem**

By Jerie Jayne

Daily Egyptian Staff Writer

Stray dogs seldom starve to death in Carbondale. Most of them are caught and put to sleep before they become problems.

Eugenia Hunter, president of the Jackson County Humane Society, said recently, "We put a lot of dogs to sleep. We put some young ones away that might grow up being problem dogs."

In December the Humane Society destroyed 176 dogs. Paula Wright, Humane Society manager, said, That was a light month.

The current Humane Society, located west of Carbondale on Rural Route 2, cares for an average of 400 dogs per month. The dogs are either stray or owned.

Wright said the shelter is closed to the public every Monday to control the number of dogs that must be put down.

"We keep pets for a week to see if it has an owner. On the eighth day we either put them up for adoption or put them to sleep. You can usually tell during the first week if the pet will be adoptable or not."

Every Monday the animal's fate depends on how much space is available at the shelter, her and the personalities of its type are usually adopted and if the dog has a history of being vicious or sick.

"If you don't know for sure that the animal is well trained or care, you feel better knowing the animal is dead and not suffering. This is the idea we implement ourselves with.

The animals are destroyed by a machine called a shot gun intravenously. Wright said death is instantaneous.

Hunter said two causes for the surplus at the shelter are strays and ignorance of dog owners. She expressed concern about owners who let unspayed females run wild.

Few dog owners are fined for allowing dogs to run loose. During 1974, 501 warning tickets were issued to dog owners in Jackson County. Fines may be as high as $500. An average of about 15 owners are fined $22 each year.

Hunter said, "The minute people see a pattern of dog control, they know when to get their dog out."

Students aren't particularly to blame for the stray dog problem. Students at the University and the college are the largest contributors to the problem of not keeping their dogs on leashes.

The Humane Society destroyed an average of 90 dogs are destroyed in per month. In December, most of the student population was gone, only 45 dogs were picked up in Carbondale.

Trentacosti, who supervises the two dog catchers, said this drop in December doesn't necessarily mean that students are the main cause of the problem.

"There usually is a larger problem in warmer weather. Last fall we had a very serious problem with stray dogs. Right now it's not too bad. Come spring our problems will probably be every bit as serious."

Both Hunter and city also negated any claims blaming students solely for the stray dog populations.

"The problem lies with irresponsible people of all ages in every section of the town. Some people come from the best streets in Carbondale. They want other people's dogs controlled, but they think their own should be able to run free."

Hunter said stray dogs do damage in many different forms. They spill garbage, damage property and transmit disease.

"Some persons may be keeping the rabies that happened to get lost. That would be the ideal situation," she said.

Clark is charged with stealing $800 by forgery from the Carbondale Police. Clark allegedly forged a signature on a check that was to be given to Gilders Johnson for some land she sold to the city in 1973.

In the warrant issued Friday concludes an investigation which was reopened about two weeks ago at the insistence of the Carbondale City Council.

Carbondale Police Chief George Kennedy said he was unsure why the investigation was stopped July, 1974, since he wasn't a member of the department then.

Former Chief of Police Joseph Dakin, who was in office at the time, could not be reached for comment.

City Manager Carroll Fry said he turned the investigation over to the Carbondale Police in April, 1974, and "assumed at that point the case would be pushed." The case was broken in a little less than two weeks after it was reopened, Fry said. "As far as the city is concerned, the case has been solved."

**Police identify body of student found charred in fire-gutted auto**

By Mark Kazlowski

Daily Egyptian Staff Writer

Jackson County Sheriff's police have used the services of a detective and a medical examiner to identify an ex-student student who was killed in a car which exploded and burned.

The badly-charred body was identified as Stephen P. Anderson, Route 3 Carbondale.

The report indicated the possibility of homicide even though the Illinois Bureau of Identification and Arson examined the car and said the fire probably was caused by a "highly overheated engine igniting either engine oil or gasoline."

Sheriffs' Deputy Curt Graff said no destructive devices were found on the car. It was determined that the engine was over­

ured and sprinkled gas on the hot surface causing the fire.

The 1973 auto owned by Brian King, a friend of Anderson, was stuck in a field along U.S. Route 61 west of the Lakeland Hills subdivision.

Graff said King apparently left the car at Anderson's house with the keys in the ignition. Graff said neighbors reported seeing two people trying to start the car about 4 a.m. Police are searching for the second person.

The sheriff's office was notified about 6:30 a.m. Saturday by Marie Goodman, Route 3, that a car had exploded and was burning.

Police have been unable to explain why the car was in the field and why Anderson was driving it.

The report said Anderson died as a result of the fire which apparently started in the car's front end.

Jobs scarce but not yet extinct

(Continued from Page 1)

hygiene, and in office specialties like computer and electronic sciences our people are limited only by their imaginations and market in demand.

"Many of our students decide to get jobs in the area and pass up better paying opportunities farther away," he said.

"We believe chemistry and geology the job opportunities are very good because of the need for these specialized resources," he explained. "But the openings in zoology and 'biology sciences aren't as numerous as mathematics and the number of people graduating in those fields.

"It's a case of the.Domino effect. This outstanding phenomenon now in some sciences such as mathematics and engineering. It seems that would be a rare science that has more openings, and chemistry, biology and psychology are as spaces fill, more people graduate in those fields."

"The situation is caused by the lack of interest in agriculture as a career choice among students," he said.

"There is a low supply of instructors in industrial sciences, especially in location, and vocational courses along with some science, mathematics and mathematics.

"There are enough art, music and vocations openings in advertising and radio-television are open.

Lyle Wohlgemuth suggested that students enrolled in the job market and women are having much success finding jobs in radio and television.

Communication fine arts students may find only replacement positions open this year. Placement offices in that field report openings in advertising-public relations fields but no upward trend.

Problems on the farm are never simple, no matter how much the Department of Agriculture (USDA) would have the consumer believe to the contrary. More often than not, they go deeper than a John Deere plow and wider than a broadcast herbicide.

The current cattle slaughter planned near Anna is no exception. The low prices paid to cattlemen and surplus of beef on the market are rooted in the economic troubles of the past few years and the growing trend to agri-business and corporation farms.

No clear sides, no good guys or bad guys, have emerged. Former President Richard Nixon can be blamed for the price freezes which created an artificial shortage of beef last year. Farmers did not sell their animals at a time when they normally would have. The unsold cattle gained weight. When they finally did reach the market they weighed more than normal, increasing the total tonnage on the market.

The more weight to a steer the fewer steers necessary to satisfy demand. The shortage soon turned into a large surplus.

This surplus can be blamed for an anti-farm worker attitude. Critics have charged the USDA of an unholy alliance with the corporations, trying to squeeze the small farmer out of existence. Not only does the farmer lose the land he spent a lifetime building, but the consumer loses the cheap food prices competition in production makes possible.

The National Farmers Organization (NFO) has proposed a solution for the small farmer with too many cows. Dig a pit and shoot them. To even a casual observer this seems designed to obtain public sympathy and increase the NFO’s support. Understandably, the pit and shoot proposed blood-bath will have the same effect as in other places in the country where slaughters have been performed.

People possibly sympathetic to the farmer’s plight will be turned away by the massacre planned in the pit.

Precious few winners will come out of this situation. The NFO will lose because it will plummet to an even lesser standing in public esteem. The hungry will lose the purchase of surplus beef. The proposed blood-bath will have the same effect as in other places in the country where slaughters have been performed.

While sitting at the Busy Bee Laundromat one night we discovered we had much in common—an oppressive and abnormal background. We knew we were missing something. Suddenly we figured out what it must be—the White Knight wasn’t there to zap out our clothes clean.

We knew that if anyone could help us HE could. We waited through the night, but he never showed.

When we went to open our Maytag washer the Salvo giant tried to grab us. We realized then we'd have to make it on our own.

Persons of the world unite. We have nothing to lose but the insanity that attacks us by the minute. If they don't, the conquered animals with little else to do in life but eat and reproduce are already being slaughtered, with one eye to the benefit of the rest of us.

A good example to point out an alternative solution is given by the late John Deere. This past weekend, the group trucked in cheese from Wisconsin and sold it at less than retail prices at the Illinois State Fairgrounds in Springfield. By eliminating middlemen, the farmers were able to clear a decent profit and prove to consumers that retail prices are simply too high.

We can only hope concerned farmers of the area will see the folly of this action and grant a stay of execution. If they don't, the conquered animals will be more gruesome.

In the press and the USDA cannot come up with some kind of equitable plan, and soon, we would hope that the farmers of Illinois at the very least, donate the slaughtered meat to charities.

Short shots

No matter how big a tax Congress passes on gasoline, we can be sure they will never put a tax on the gas they pass.

Springfield sure has its problems. They take two weeks to elect a speaker and then two years to ignore what he says.

Daily Egyptian Staff Writer

Walker veto hurts elderly

Gov. Dan Walker, citing the perilous shape of Illinois’ economy, vetoed a bill calling for tax relief to farmers and the elderly. The bill, passed by last session’s General Assembly-making it override proof-called for a $34 million program of tax rebates to be paid on a graduated scale.

Walker said he vetoed the bill “reluctantly” because the state cannot afford it. He added that he hoped the tax relief program proposed by President Ford, now before Congress, would supply tax relief to all citizens, not just “for one group at the expense of all others.” He also said that if the economy picks up, he might push for legislation similar to that which he vetoed. This is one case where our governor is putting too much stock in the federal government and ignoring people in his own domain.

Old people are hurt more than anyone else by the nation’s current economic mess. Fixed incomes, without cost of living escalators figured in, are slashed to almost nothing by the 12 per cent inflation strangling our pocket books.

We are the only industrialized nation in the western world without socialized medicine, making it that much more difficult for our old people to survive. We send more content to forgetful women, relying on shabbily operated nursing and convalescent homes to provide for the generations passed before us. The fact that there are three times as many nursing homes as hospitals in this country serves as a point in proof.

Li. Gov. Neil Hartigan has come out against the veto, claiming the state can afford to give relief without additional tax increases. As his justification, Hartigan pointed out a 1974 year-end report by the state comptroller forecasting a $239 million balance in the revenue fund ending fiscal 1975.

Walker has dealt the elderly of Illinois a severe blow where they can least afford it. True, it is “wrong” to provide help for one group while ignoring all others, but the aged have less of a chance than anyone else in this youth oriented society of ours. Perhaps the governor ought to trim some fat from other areas in the state’s budgets, supplying enough capital to provide some relief for the elderly. They can use it.
Repression blights Argentine life

By Ricardo Aquino

In the first part of a two-part series

Most of the international students who come to the University of Buenos Aires to study for a degree find that everything is not quite what they expected upon arrival. Newspaper and magazine reports do not cover it thoroughly, radio stations hardly allot more than scarce minutes; in sum, it is the area's news system as a whole that is bland to flat.

Shocking news came from Argentina recently. Dr. Silvio Frondizi, a former Argentine President, was assassinated last week. The next day, WSU reported that the victim had a brother in teaching at the Philosophy Department of Buenos Aires. The reasons for the assassination were not mentioned nor were there any details of the shooting. The brother, who happened to be Dr. Silvio Frondizi, was a member of the Faculty of Philosophy.

He was Soon after the announcement of his brother's death, a local university newspaper reported that Dr. Frondizi had lately been defending some alleged guerrillas during their trial, something illegal in any civilized country. The apparent reason for his death was his having continuously accused the Argentine police forces of torturing the alleged guerrillas. The local newspaper said that it was even possible that Dr. Frondizi was the assassin, but this is not a likely theory.

The week that followed the assassination was a period of mourning and reflection. The Faculty of Philosophy, where Dr. Frondizi had taught, was closed for two days, and the students wore black armbands in his memory. The Argentine government declared a day of mourning, and the Argentine police forces were placed on high alert.

The Argentine government also announced that an official inquiry would be launched to determine the cause of the assassination. The Argentine President, Juan Domingo Perón, was expected to return from his trip to the United States as soon as possible.

The assassination of Dr. Frondizi has raised questions about the role of the Argentine police forces in the country. The government has been accused of using excessive force and torture against political dissidents and activists.

The incident has also highlighted the tense political climate in Argentina, where political violence and repression are common. The country has a history of military coups and political assassinations, and the current government is no exception.

Letters

To the Daily Egyptian:

It has already been announced in the press that the local AAUP chapter is attempting to recruit new members to the AAUP. This is a welcome development for the college community, as it will help to ensure that our faculty have a voice in the decision-making process.

Needless to say, the AAUP is an organization that is committed to the protection of academic freedom and the rights of faculty members. It is important that we all work together to ensure that our college remains a place where our faculty members can freely express their views and engage in scholarly activities.

I urge all faculty members to become involved in the AAUP and to support its efforts to promote academic freedom and the rights of faculty members.

Karyn D. Dyer, President, AAUP

Letters to the Daily Egyptian

The Daily Egyptian encourages expression of opinions from all members of the University community. Writers are encouraged to be relevant and concise in the presentation of their ideas.

Letters may not exceed 250 words and will be subject to editing for clarity, brevity, and proper grammatical usage. Writers should submit original works. By submitting a letter, you are granting permission for the Daily Egyptian to publish your ideas in any of its possible publications.

Letters should be addressed to the Daily Egyptian. Address: Daily Egyptian, 17 E. Main St., Paducah, KY 42001. E-mail: editor@daily-egyptian.com

CFUT in there, too

Response to male plucking

To the Daily Egyptian:

I have to admit, my mind was blown when I read that Charlie Pride was "no agent." In other words, the majority of the AAUP supporters at WSU were opposed to collective bargaining.

This tactic is not unusual, for in the last few years there have been a number of AAUP chapters that have taken collective bargaining matters directly to their members with the support of their national association. Once the collective bargaining matter was obvious that they could not win their way to a fair agreement, the AAUP chapters were accused of being the bargaining agent for the SIU faculty, but we will never sabotage an election to prevent the victory of another organization. We hope that the local AAUP chapter feels the same.

Herbert S. Donow
President, CFUT

Charlie Pride

To the Daily Egyptian:

I have to admit, my mind was blown when I read that Charlie Pride was "no agent." In other words, the majority of the AAUP supporters at WSU were opposed to collective bargaining.

This tactic is not unusual, for in the last few years there have been a number of AAUP chapters that have taken collective bargaining matters directly to their members with the support of their national association. To the Daily Egyptian:

In response to Frances E. Kuzmek's letter (Jan. 22): After reading your editor, I am in total agreement with you: plucking the male eyebrows is a form of discrimination.

I don't think that the act of plucking the male eyebrows is discriminatory. It is simply an act of self-expression. The act is not discriminatory because it does not harm anyone else. It is a personal choice that should be respected by all.

As a male, I can understand the desire to have a clean-shaven face. It is a personal choice, and I do not believe that it should be made illegal.

I am not a lawyer, but I am familiar with the laws of discrimination. I do not believe that the act of plucking the male eyebrows is discriminatory. It is simply a personal choice, and I do not believe that it should be regulated by the law.

I do not believe that the act of plucking the male eyebrows is discriminatory. It is simply an act of self-expression. The act is not discriminatory because it does not harm anyone else. It is a personal choice that should be respected by all.

Market cater to health food 'nut'

**By Sue Voyles**
**Daily Egyptian Staff Writer**

Are you a health-food nut with no discipline? Do you wander into grocery stores with your list firmly in hand, only to come home with potato chips and Heinz beets?

If so, the People’s Mart of Carbondale, a natural food co-operative, is for you. Located in the Student Christian Foundation on Illinois Avenue, the co-op meets every Friday afternoon to pick up last week’s grocery orders and order for the coming week.

“Makanda will conduct the SIU America 'debut' Feb. 4 as part of president Giant City and due Tour " for teaming the tourism and convention he phoney 161. southeast America. living peak.” Michael Wadiak of the Isthmiurn Karate School said, “And with that, you get a lot of phonies. Legally, anyone could form his own school, promote himself to tenth degree black belt and start charging people money for lessons, he explained, in the panelled office of his dojo at 116 N. Illinois. “It’s just like starting a corporation and promoting yourself to president," he said. "There is nothing to stop him, and the public has to know what to look for." The most with the elaborate choreography, tend to give karate a distorted image, he said.

“Stay at home tour’ set for adult education slate

“Wayman Presley Shows You America” debuts Feb. 5 as part of the SIU adult education series. The president of Presley Tours, Inc., in Makanda, will conduct the class.

Presley will present slides, movies and personal narrative to show what he believes is the best of northeast, southeast, southwest and southeast America. The fifth class session will cover Southern Illinois. Past actions have won notoriety for Presley’s ability to organize U.S. Citizens Inc., “to defeat racial prejudice, by going into college campuses at the polls," and in 1973 he proposed an additional aisle in the Illinois State Fair Grandstand. Past experiences have been held for clergy and laity, who have been able to criticize their own performances with the help of a videotape recording.

The consultants, Mr. Brigid Somerset and Mrs. Helen Harvey, say that “sensitiveness and lack of confidence" affect many people, but much can be done to alleviate these problems.

If a barrel of bananas spells a good time for you, call Barbara Bullis, 457-5304 for more information.

Bruce Lee brought karate into the living rooms of America, and brought many Americans into phoney karate schools.

A Carbondale speculator said the recent rise in popularity of karate is due to the television shows and the various Bruce Lee Dragon movies, and many karate instructors are exploiting the public.

“I think karate is reaching a peak,” Michael Wadiak of the Isthmiurn Karate School said. “And with that, you get a lot of phonies. Legally, anyone could form his own school, promote himself to tenth degree black belt and start charging people money for lessons, he explained, in the panelled office of his dojo at 116 N. Illinois. “It’s just like starting a corporation and promoting yourself to president," he said. "There is nothing to stop him, and the public has to know what to look for." The most with the elaborate choreography, tend to give karate a distorted image, he said.

Must be the water

MENTOR, Ohio (AP) - Families living in the 8700 block of Arrowhead Drive in this suburban city feel there may be something special about their location: five of the six have had twins.

Lately parents are Mr. and Mrs. Gary Fay, whose home the past three years has been in the middle of the group. "They told me not to move in or to expect to have twins," she said. Their two boys were born in mid-February.

Instructors at Lakeland Community College in nearby Kirtland figure the probability that five of six mothers would have twins in that area is in 50 million.

"Woman picking up the pieces: one widow speaks"

Research finds minor variations in heartbeat means future attack

CHICAGO (AP) — Researchers in St. Louis have found a way to identify in advance many persons who might die of sudden heart attack, so that, if day their lives might be saved. Some 65,000 Americans die annually from heart attack, and half of those are sudden death.

At Washington University school of medicine in St. Louis, Dr. G. Charles Oliver, a cardiologist, and his colleagues have been following persons who have been treated in the hospital for myocardial infarction, a common type of heart attack.

While their findings are preliminary, and the research is continuing, Oliver said they have found that those who have relatively frequent minor variations in heartbeat, called premature ventricular contractions—PVCs, are the most likely to die later of sudden heart attack.

Now that this indicator has been identified, Oliver said in a telephone interview, it remains for medical researchers to determine the best of several possible means for preventing the fatal heart attack.

Premature ventricular contractions often precede more serious arrhythmias which can lead to cardiac arrest.

Brandt seeks applicants for systems coordinator

SIU President Warren W. Brandt has called on faculty and staff members to suggest candidates for a management information systems coordinator.

"The need for improved systems in the fiscal and student areas has been recognized," Brandt said in a Jan. 24 memo. "Administrative decisions increasingly would be developed on sounder bases if a management information system and the requisite component systems were available.

"Depending on a candidate's present commitments, the coordinator's position may be a full or part-time assignment. Brandt explained. The coordinator will report directly to the SIU president. Brandt said.

Qualified persons must have experience with computers, administration and administrative systems. residency required. The president invited interested persons to contact him by mail or telephone for appointment. Brandt also would be helpful to have all candidates identified by Feb. 1.

"Directors of departments active in information systems may serve as advisers in selecting the coordinator, Brandt said.

The coordination is needed immediately," he said.

War photo show opens

A photo exhibit of 30 poster-size photos documenting the holocaust of World War II will be shown in Ballroom A from 10 a.m. to 8 p.m. on Wednesday and Thursday. Also included in the exhibition is a film entitled "The Warsaw Ghetto." The movie will be shown as twice and is free to the general public. Scheduled showings are at 11 a.m., 12 noon and at 1, 4, 7 and 8 p.m.

The exhibit portrays the systematic extermination of the Jews and other "unwanted" groups of the German Third Reich...
Monitor warns bride of husband's death

WAUKESHA, Wis. — Karen Atkins, 28-year-old bride of two
months, said she knew something was wrong when she awoke to
the crackle of voices on the police
dispatcher at her apartment early
Sunday morning.

"They were discussing coming out
to our home," she said, "I just sat
there then and waited."

Her husband, a police officer for
the Town of Summit, had left the
night before for his midnight to 8
a.m. shift.

Officer Robert "Rocky" Atkins,
Jr., 28, and his partner, Wayne
Olsen, 32, checked in with the
Waukesha County sheriff's
dispatcher at 12:20 a.m., then weren't
heard from again.

The dispatcher finally roused
Police Chief Edward Greenwald
from his bed telling him Atkins and
Olsen had been out of contact for
more than four hours.

Greenwald, like other members of
his force of four full-time and two
part-time officers, had been ap-
prehensive about a recent increase
in crime, including a fatal shooting
and a rash of burglaries — three of
them at the town hall.

Atkins normally worked alone on
the early morning shift, but occasionally assigned Olsen, a
part-timer who worked the lake
patrol during summer months, to
accompany him on his rounds.

Greenwald picked up another
member of his force and headed for
the police station.

When they got there, they found
Olsen dead in some bushes next to a
blood-stained squad car. And
Atkins' body was found down an
embankment not far away. Both had
been shot to death.

About 10 officers started combing
the area for evidence, and before
nightfall a 16-year-old boy had been
taken into custody. Officials said he
admitted shooting the two officers
and another man who was slain Jan.
11.

The youth remained in custody
Monday pending a detention hearing
before Waukesha County Judge
Robert McGraw.

Dist. Atty. Jerome Cahill said he
would file a delinquency petition
with the Juvenile Court alleging that
the youth was delinquent because he
admitted taking the lives of three
persons and committing four
burglaries.

Though an assistant district at-
torney said the Juvenile Court would
be asked to waive jurisdiction so the
youth could be tried as an adult,
Cahill refused to comment, saying
he had 48 hours to prepare the
delinquency petition.

Columbia University administrator to speak

Lawrence A. Cremin, president of
Teachers College at Columbia
University will be the guest speaker
at the third annual George S. Counts
Lecture Thursday at 8 p.m. in the
SIU-C Student Center Auditorium.

Cremin has been a member of the
Teachers College faculty since 1949.
He served as chairman of the
college's department of philosophy
and social sciences from 1958 until
September, 1974.

Among his many works, Cremin
authored "The Transformation of
the School," a history of the
progressive education movement
in the U.S., which was awarded the
Bancroft Prize in American History
for 1962. He is presently working on
a comprehensive history of
American education.

Cremin has taught at Harvard,
Stanford, Bank Street College of
Education and the Seminar in
American Studies at Salzburg,
Austria.

The lecture honors the late
Professor George Counts, who
retired from SIU-C in 1971. He had
served on the faculty of Teachers
College, Columbia University, New
York, for 28 years before coming to
SIU-C as Distinguished Visiting
Professor of Education in 1962.

A 6:30 p.m. dinner preceding the
lecture will honor Mrs. Louis Counts
and Dr. Cremin.

India's freedom celebrated

The India Student Association
celebrated India's 20th Republic Day
Sunday.

D. P. Nayyar, president of the
Association said the celebration was
held at the University Baptist
Church, 700 S. Oakland.

"The program began at 3 p.m. and
consisted of the singing of the Indian
National anthem and refresh-
ments," Nayyar said.

India gained its independence
from the British on Aug. 15, 1947 and
on Jan. 26, 1950 declared itself a
republic.

Cahill said the youth had admitted
shooting Atkins and Olsen from
ambush outside the township police
station, and killing Ronald Hoeft, 43,
on Jan. 11.

Hoeft was killed after someone
stole his car from the driveway of
his home in the Town of Summit. He
had followed the thief in his truck
and died when shots were fired
through the windshield, police
reported.

Daily Egyptian, January 28, 1975, Page 11
US's 200th anniversary to be unusual, exciting

CENTRALIA (AP) — From the surface of Mars to the shores of Tahiti, the United States is planning to celebrate its 200th anniversary with what promises to be the biggest, not to say most unusual, birthday party ever.

An American Revolution Bicentennial Administration catalogue lists nearly 1,000 observances, productions and projects that have ARBA sanctions and the organization promises more.

Among them is event 000079, the soft landing of an unmanned Viking space craft on Mars on July 4, 1976. Event 000032 is a more modest but still ambitious journey: a crew of 24 expects to complete a two-month paddle from Hawaii to Tahiti in a wooden Polynesian canoe on the same day Viking touches down.

To be sure, there is a lot of more conventional activity. Restoration projects abound. Nearly anything that stands still, and several that don't, are preservation candidates.

Among the things Americans are doing:

**Early school**

NEW HARMONY, Ind. (AP) — The first free public kindergarten in the United States was established in this historic community in 1826 by MacTure, a Scottish geologist and philanthropist. MacUrce's school, based on the principles that children should never be taught what they cannot comprehend, was also the first in this country open to both boys and girls.

The site of many early 19th-century developments in education and social progress in America, New Harmony is now experiencing a massive historic restoration and economic revitalization under Historic New Harmony Inc., a private non-profit organization.

"The Daily Egyptian incorrectly reported that Mary Baccus of Student Center Catering organized the reception for President Warren W. Brandt and his wife Esther, held Friday in the Student Center. Baccus was in charge of food service only. Anna Carol Fuqua, Home Economics Education Department Chairman, was responsible for organizing the reception, sponsored by the Board of Trustees."

Beg your pardon

The Daily Egyptian incorrectly reported that Mary Baccus of Student Center Catering organized the reception for President Warren W. Brandt and his wife Esther, held Friday in the Student Center. Baccus was in charge of food service only. Anna Carol Fuqua, Home Economics Education Department Chairman, was responsible for organizing the reception, sponsored by the Board of Trustees.

Bend me, my friends. I am not to blame."

Seward group is erecting a "standing concrete monument" of the state's ensign. On display in Plattsburg, N.Y., will be 200 examples of Native American art, each bearing a flag or patriotic motif.

Perhaps the most encompassing project is in New York City. It's described as "The Flag as art. Open competition, exhibit in any medium, earthworks, planting a flag of flowers, wrapping public buildings in bunting."
Schmidt says RA's hassles are all worthwhile for the pay

By Scott Bandle
Student Writer

Dave Schmidt, a 22-year-old first-year graduate student majoring in outdoor recreation and resource management, is working his way through SIU as a resident assistant at the Thompson Point dorms.

He is an RA for the third floor of the Pierce Hall. For $125 a semester, he is the first line of authority on a floor of upperclassmen. It's a job that he has held for two previous years at different dorms.

Last year at Brown Hall, he was the R.A. for a floor that held the SIU football team.

"They did a lot of damage to the floor and the dorm," he said. Although he couldn't say the exact amount of the damage, he feels that it was at least over $1,000 worth of damage to the whole dorm. Since then, the football team has had their own dorm.

One year ago at Abbott Hall, Schmidt also had some problems with the residents.

"Three of the people on the floor were really stuck on hard drugs. It was a situation that could easily throw a bad image of the whole floor," he said.

At Pierce Hall, Schmidt has another noisy floor, but he doesn't think it is really bad.

"No floor is noisy, Noisier than a women's dorm, and I think there is generally more bustle," he said.

One experience that Schmidt will not forget was when a floor of Pierce Hall put it, "I wouldn't want to be there." He doesn't know how much they would pay Schmidt.

Schmidt feels, though, that the price is right. "I admit that there are problems, but overall, I generally don't mind it."

It was originally the main motivation for one Schmidt's roommates to move into a dorm.

"I was a spoilt kid."

Karl Brown, a law student and second-semester RA, also pointed that the only reason he is an R.A. is in the first place, he was able to agree that the floor is noisy and he has had to go to the head RA to ask them to hold it down.

"We are a couple of people on the third floor who simply believe that the right of freedom is absolute (or course, it isn't)," Brown said.

Schmidt agrees that it is bad when the noise gets loud enough to have that point on his mind. He noted out that nobody can be in two places at the same time. As a student, he has classes to attend to.

He feels, though that there are times when the R.A. should be in every day.

"I think that other than the nights we're on duty, an R.A. should be available to help with problems," said Schmidt.

He said most of the problems he gets are in the line of service requests for maintenance rather than any emotional or socially-oriented troubles.

"An R.A. wants to have a helping role, then he should be in charge of underclassmen," he said.

As guardian of the rules written in the Thompson Point handbook, and as he jokingly says, the Carbondale Criminal Code, Schmidt realizes that there is a barrier between the residents and the RA.

"There is a barrier, but it can be minimized by showing that you're going to give everyone an even break and using your judgment well," he explained.

He guarantees that being on both sides of the fence, as an R.A. and a resident, he can be an effective link between students and the head R.A. of Thompson Point.

"You have to be flexible. By the time students enter college, they generally know right and wrong. There are times to let the rules slip by, but the residents play floor hockey because it brings them closer together, even though maintenance doesn't like it. If it gets rowdy or whatever then I play it by ear. Supposedly, I was accepted for this job because of my judgement," he said.

Joe Hayas, head R.A. of Pierce Hall, talked about Schmidt.

"Like Dave, in certain situations, he comes across as not being too flexible with the rules, but I think that, in general, he's a pretty straight guy." Schmidt agrees, at least, with the last part of the statement.

"I don't drink or smoke dope. I don't care if others do as long as it doesn't affect other people's lives," he said.

He emphasized that his views do not cloud his judgment of resident's activities.

Schmidt said he has an empathy for some of the residents that go on a dorm.

"Dorms have the worst possibilities of getting rid of excess energy," he said. "Most of the residents come from homes, some of us would get restless and there would be no place to go. The only things that are open 24-hours a day, are the outdoor basketball and volleyball courts," he said.

Schmidt also criticized Thompson Point's game room.

"The game room is inadequate. All they have is pool and one pool table machine," he said.

He doesn't think that the R.A. is different from the average students.

"I don't consider myself different. I tried to get away with the same stuff when I was a resident. I don't think I'm more moral, either, because that's too private. I think I'm more mature than others," he said.

Schmidt feels the job has been good for him. It has forced me to quit making hasty judgments. It also has taught me to see the other guy's point of view.

Heart Month

Alpha Tau's jumps assist Heart Month

Alpha Tau Omegaa Fraternity will begin its second annual "Jumps for Thumpa," trampoline marathon. It will begin at noon in the University Mall Shopping Center.

The one-hundred hour trampoline-a-thon will be part of the "Heart Month" fund raising drive during February. Donations will be accepted during the marathon by Heart Fund volunteers. All contributions made during the event go to the Heart Fund to aid in further research against heart disease.
The Food and Drug Administration has announced that sales and promotions of the Dalkon Shield Intrauterine Contraceptive Device (IUD) will be resumed, but the Health Service will not be giving counsel, said Dr. Don Knapp, medical director. The Health Service stopped giving any advice on the device back in March, 1970, when the manufacturer, A.H. Robbins Company, voluntarily suspended sale of the product because of an FDA report that serious abortions were reported in the small percentage of women who became pregnant while using the device.

Two years ago, the manufacturer of any of the Dalkon Shields in before the FDA testified that they had not known of any serious problems. But last month, Dr. Wayne R. Tedder, of the Robbins Company, told the Senate Commerce subcommittee that the sales of the Dalkon Shield are down by 90 percent since the FDA warning in 1970, and that he expected it to be 99.8 percent

The FDA said that it had received reports that the Dalkon Shield may have caused 750,000 pregnancies and that 100,000 women may have had IUDs implanted in error.

The Health Service has not prescribed another type of IUD and has no plans to do so, said Dr. Tedder.

Knapp said that the Health Service has determined that the Dalkon Shield will be approved by the FDA but that the company will make no more proposals for it.

Knapp said that the Health Service will continue to offer contraceptive counseling and to provide the IUD device because it has been used extensively and has been shown to be effective.

Knapp said that the Health Service will continue to offer contraceptive counseling and to provide the IUD device because it has been used extensively and has been shown to be effective.

Knapp said that the Health Service will continue to offer contraceptive counseling and to provide the IUD device because it has been used extensively and has been shown to be effective.
A short course in the nickel candy bar. And where it went.

Beginning in the February, 1975 Reader's Digest, a new series—that amounts to a minicourse in today's economics.

"Thanks a lot!" you may say. "But I'd just as soon study Siberian rug-weaving as wade through economics." Why economics? Because no subject affects our daily lives more—and is understood less.

One thing for sure, this is not going to be one of those put-to-sleep economics courses. No boring theories or confusing charts; no jargon-filled textbooks. We'll be telling the story of our economic system in clear, human terms, illustrating it with actual case histories and experiences gathered firsthand by the Digest.

If you're concerned (and who isn't) with what's happening to prices and to the economy—and why—better start boneing up on these information "lessons" appearing every month in The Digest. They're sponsored by the Business Roundtable—an organization of 150 outstanding executives of leading U.S. companies.

We call this series "Our Economic System: You Make It Work." You'll call it fascinating.

and labor savings. That's what's called improved productivity. Now wait a minute. Don't head for the exits. We're not talking about men turning screws faster or rummaging around with ladders and oil cans like characters in an old-time movie. We're simply considering how all of us here in America affect the prices of things we buy through the way we work. Just ponder, for example, what happens when a mix of technology, planning and worker motivation spells high productivity. Major manufacturers of hand-held power tools in Germany, Japan and England have not been able to penetrate the American market because high-quality American-made hand tools are competitively low in price.

One of the major forces behind this situation is the Black & Decker Manufacturing Co., of Towson, Md. For the past 16 years, sales of its products have grown at an amazing 17 percent a year, and during that time the price of many of these products have dropped steadily.

The company knew it better productivity. In part, this comes from the wise investment of funds in new machines and advanced research. But beyond that, Black & Decker's managers have been able to constantly set goals for themselves and meet them—not necessarily by doing things faster, but by doing them better. A typical problem: Company engineers knew they could vastly improve safety from electrical shock by doubling the thickness of insulation inside hand tools. But this would have added 10 percent to manufacturing costs. Solution: Redesign of the tools, streamlining assembly and standardizing many small parts so the same ones could be used in different tools. Price of the safer tools remained the same.

While such improved productivity has paid off in increased sales and profits, it has also paid off for employees. The company payroll in 1951 was $14,5 million for 3,000 workers. Last year's payroll was $74,4 million for 20,000 employees.

And look at the payroll for the consumer. In 1951, Black & Decker's basic electric drill for do-it-yourselfers cost $10.95. Now it costs $49.12. A standard saw that sold for $41.95 in 1951 now costs $110.98. And remember, these price changes occurred during a 16-year period which saw the U.S. Consumer Price Index rise 72 percent.

But the productivity payoff can also mean a lot more than new jobs and higher pay. Sometimes it spells survival. Consider the tune em- ployes of the Ideal Corporation, a maker of precision automotive parts, in Brooklyn, N. Y. Saddled with an old plant and rising costs, Ideal re- placed its 16-inch old-time building a modern plant in the Midwest. The move would vastly reduce the cost of trans- porting its products, and the cost of the factory was expected to be about $15 a square foot. Putting up a new plant in Brooklyn, on the other hand, would run at least $55 a square foot, and related operating costs looked certain to leave the company in an extremely difficult competitive po- sition. But Ideal had a loyal and skilled work force. It elected to re- main in Brooklyn. Says John Wenzel, president of the company: "We decided to gamble on our ability to engineer processes that would reduce our costs." In other words, the pro- ductivity of Ideal's managers, engi- neers and workers kept their jobs in Brooklyn. And the company is thriving in its new plant. Since these no-means-isolation examples, there is disturbing evidence that America is slipping into a productivity crisis. While our productivity has historically grown at a healthy rate of about 4 percent annually, in recent years the growth rate has been falling. Last year we had no productivity gain at all.

Too many American businesses have been falling because they could not achieve the higher productivity that would enable them to afford the higher wages and shorter hours demanded of them. But others have hiked prices to pay the higher wages, with a resultant loss of business to for- eign competition. Now out of every ten baseball mitts sold in this land in 1967 and Henry Aaron are foreign made. They are 14 out of every 10 motorcycles, one out of six cars. Since 1947, foreign industry has cut its costs by 60 percent, and the American auto industry can't even afford to keep up.

This message is prepared by the editors of The Reader's Digest and presented by The Business Roundtable.

IVIC EK LEADS SALUKI GYMNASTS TO VICTORY OVER EX-TEAMMATES

By Ron Sexton
Daily Egyptian Sports Editor

It was like the Lakers vs. the Weas when Will Chamberlain was traded.

Neither did Jim Ivickev's former team, the '99ers, who his squad had no chance of winning.

One surprising factor the surprising tournament of 1,300 fans who showed up for the meet,天鹅, gymnastics rendezvous, Ivickev dominated the last four events in this meet to lead the Salukis to a 213-75-306-16 meet.

"I thought we beat them, and they beat us," Ivickev said. "I think we were going to do it hard way."

Bridge tournament set

Registration for the local contest in the 27th Annual Intercollegiate Bridge Championship will be taking place at the Student Center Bowling Alley and Activities office. You have no need to enter for participants.

The winning pair in the 27th Annual Intercollegiate Bridge Championship will receive an expense-paid trip to the American Bridge Grand Slam Tournament at Miami Beach and the Charles R. Goren traveling trophy to keep. The winning pair will receive a $1,000 scholarship grant from the American Bridge Grand Slam Tournament at Miami Beach and the Charles R. Goren traveling trophy to keep. The winning pair will receive a $1,000 scholarship grant from the American Bridge Grand Slam Tournament at Miami Beach and the Charles R. Goren traveling trophy to keep. The winning pair will receive a $1,000 scholarship grant from the American Bridge Grand Slam Tournament at Miami Beach and the Charles R. Goren traveling trophy to keep.

Registration will be held in the Student Center Recreation Center, Feb. 3 and 5 at 7:30 p.m.

Spikers winless

The SIU Volleyball Club came up short against Saturday's Eighth Annual St. Louis Volleyball Association Invitational Tournament. The Salukis won a win, but they also learned the value of competition.

The volleyball Salukis had problems with setting and bumping all day, player coach Gene Korinek said.

The Saluki squad lost all eight of the games in their division. The teams in their division were from Dallas, Texas; Ft. Wayne, Ind.; Independence, Kan.; and Southeast Wisconsin. The team from Independence won the division with a 7-1 record.

"I don't get on them too much," he said, "but I do point out their mistakes. I think they know they can be a great team it's just question of putting things together."

The coach said the team is now aiming their sites at the Illinois meet which comes up in early February. The Salukis host Indiana State this weekend.

Ivickev also added that his goal is for the team to break 13 school records. They now have ten to go.

Delgado set new records earlier in the season and Sweater set one this past weekend.

The Salukis have also made some headway in the national rankings. Delgado ranks sixth in the nation in both the 200 and 500 yard freestyle and second in the nation in the 200 butterfly.

Swimmer is fourth in the country in the 100 freestyle and tenth in the 500 yard relay.

The 400 yard freestyle relay team ranks eleventh.

Delgado and Sweater have also qualified for the NCAA championships in a total of eight events.

Delgado has met the standards for the 200 butterfly, 200 and 500 individual medleys, and the 100 and 500 freestyles.

Sweater's time also put him in the top 10 list of the 100 yard backstroke, 200 yard medley and 200 yard freestyle.

The Saluki men's team also scored a 9.35 and Laurien an 8.02. Overall, performance was most pleasing.

Glen Tidwell gave the home squad the depth it needed for the comeback as he swam second in the 100 backstroke.

Jim McFaul finished close on Tidwell's heels in the 200 backstroke, swam his 100 yard freestyle, and was also a member of the 400 medley.

Rick Fox added the 100 yard backstroke, 200 IM, the 200 fly, and the 400 free relay.

Tidwell and Gary Wallace ran 1-2 in the 50 yard自由泳 as the Salukis won away going.

"I felt we were going to get the team near the end, but you never know," Meade said. "I felt that if we were in a position going into the last big bar, we were okay."

Tidwell did a good job all around, and so did McFaul in floor exercise and vaulting. "He's a good athlete," Meade said, "but Remi is also happy with Marvin's performance. He's better on the 1000 free, which is the first time this season."

The Salukis are now 3-2 in the season, as they prepare for next Sunday's meet against defending national runnerup Arizona State University.

"We'll have to be improved next weekend but we can be a great team, they are just a great floor exercise team, though their sidemount men are not so good."

"I got a real shot at the World Championships," Sweater said. "I don't do my best at拿出."

The Salukis were just too much for us to handle. They have a lot of depth in every event."

"We figured the Michigan meet would be kind of easy, because the closer to the meet we are, the more we prepared for it all week."

The Salukis lost by identical scores of 148-132 and 145-132, respectively.

The Salukis lost by identical scores of 148-132 and 145-132, respectively.
Women cagers net four wins over Illini, SEMO

by Martha Sanford

Daily Egyptian Sports Writer

The SIU women's basketball team captured its first weekend on the court with two wins apiece as they netted their way to wins over the University of Illinois and Southeast Missouri State.

Friday's game against Illinois ended in a close 41-41 tie for the Salukis after leading 24-17 at the half.

The Salukis' tough zone defense proved to be effective as the Illini did not take the lead until the last ten minutes of the game. Before the game Illini coach Steve Douglas said the girls would have to shoot over the zone instead of trying to penetrate it.

High scorer for the Salukis was Nancy Rust with 15 points followed by Pam Berryhill and Jim Winkler with 12 points each. The Salukis played at somewhat of a disadvantage as their tallest player Kathy Von-der-Ack had to leave the game with eight minutes remaining. Winker also fouled out with one minute remaining to be played. In the last seconds of the game right wing Kay Anderson suffered an ankle injury and was unable to play in Saturday's game.

The Salukis' second game against SEMO ended in a 64-35 victory for the Salukis. The final score could almost have been anticipated from the 40-30 half time score. Von-Derrack and Winker were the Salukis' top scorers with 14 and 13 points respectively.

The Salukis' played a better offensive game Saturday nabbing 35 rebounds compared to 12 for Friday's game and finishing with only 11 fouls compared to Friday's 21.

Aerobats third at invitational

by Martha Sanford

Daily Egyptian Sports Writer

With only three days practice after the holiday break the women's advanced gymnasts were able to bring home a third place team win from the Northwestern Invitational.

They were topped by Central Michigan and Western Illinois in the nine school competition.

Advanced coach Mary Lyon said, "I think the girls did real well considering we had only three days practice after break. Most of the other schools had a week prior." Nine girls attended from SIU five in the advanced class and four inter-

Badminton team smashed at Ball State

by Martha Sanford

Daily Egyptian Sports Writer

Plagued with an injury and ineligibility, the SIU badminton team did not fare too well at the Ball State Invitational held last Saturday.

Three teams attended the Muncie team to see Western Illinois win with a team score of 34 points. Ball State finished their first round in 36 points followed by SIU's team score of two.

That's a Hoosier on top and a Saluki on the bottom. An Indiana grasper looks to grab hold of SIU's Dale Eger's wrist during Saturday night's match at the arena. Eggert lost the match but the Salukis won the meet, 24-9. (Staff photo by Jim Cook.)
By Dave Wiesnec
Daily Egyptian Sports Writer

It was the beginning of the end.
That phrase or cliché or maxim or cliche or maxim or
whatever it might be called was very fitting for Saturday night's wrestling match between the SIU Salukis and the Indiana Hossiers.
Junior Joe Goldsmith powered his way to a 3-2 opening match victory and the Salukis were on their way to a 29-6 win, boosting their team record to 16-3-1. SIU's winning streak now stands at seven, Indiana's record dropped to 2-10.
After Goldsmith's win, Indiana won the next two matches but Southern rallied to take six out of the next seven matches.

Indiana won a total of three matches on the night and those came against Saluki considered underdogs when individual records were examined.
In the 114-pound class, Dale Eggert, 7-3, gave Hooiser Marty Hutsell, 17-7, a run for his money but a reversal early in the third round by Hutsell and a late take down by the same, proved to be costly for Eggert.
The first two periods were scoreless with Hutsell maintaining most of the time and the final result was a 5-1 Indiana decision.
SIU's Dennis Lewis was another underdog in the 126 class, as he put his mark of 6-2-2 up against Indiana's Jeff Eggert.

Saluki grapplers put the clamps on Indiana; win seventh in a row

By Dave Wiesnec
Daily Egyptian Sports Writer

Once again the first period went scoreless but Angel almost finished off Lewis midway through the second period after he had Lewis in a headlock for a pin. Lewis managed to wiggle out of that precarious position but Angel was awarded three points for a near fall. Lewis never could recover and lost his elbow to 6-1.
SIU lost one more match on the night, that one in the 187 class. Both the Salukis' Jay Friedrich and Hoosier Mike Sheahan carried losing records into the match but Sheahan came out the winner, 5-1.
One of the tenor matches of the night was between sophomore Saluki Ruffin and Indiana's Sam Komar. The match was close from start to finish and Ruffin gave SIU fans a scare when a timeout had to be called with 31 seconds left in the period for an injury with the score tied at 64.

Lewis was locked into a struggle by Ruffin a "muscle sap" in his leg but Ruffin got the last takedown and picked up two more points for an 8-6 victory, giving him a 34-1 record on the year.

SIU's Fred Hoef and Jim Horvath were one of the three pairs in the 190 and 126 weight classes without too much difficulty. Hoef claimed the match from any Saluki by putting the hold on a 9-5 win. Horvath reclaimed the first of two shutouts by SIU, whipping Indiana's Mark Mendrygal 6-1.

The Salukis closed out the meet with three straight wins. Mark Wiesen slipped by Hoosier Dennis McGuire, Tim Sutluga defeated Mark Mitchel 6-0 and freshman Ken Karwowski claimed his second pin of the season, this one coming over Doug Quart early in the second period.

Long was especially pleased with Karwowski's effort. "Good, good," he exclaimed after he had received exactly what he needed to build his confidence.

Long said it "seemed like the guys were a little tight. Maybe the matches last week, that many in a row (tax), effects. Things got going pretty good and then there was a drop off."

SIU had been idle for more than a week since returning from the holiday road trip. The Saluki grapplers will have another break until they host Kansas State Thursday night at the SIU Arena.

Card Gibson to remain for one year

ST. LOUIS (AP) — To hardly anyone's surprise, hard-throwing Bob Gibson said Monday he'll pitch one more season before ending his illustrious baseball career.

The 39-year-old Gibson revealed his plans at a news conference announcing the signing of his 1975 contract was announced.

And, with Cards General Manager Bing Devine at his side, the two-time National League Cy Young Award winner said he probably won't remain in the Cards' rotation.

"I don't think I'm in any position to pass myself off as a prospect to manage at the major league level," a relaxed, trim-appearing Gibson said.

"And, let's face it, I'm 39," he added. "The money that's offered at the coaching level just isn't what I think I will need once I've finished my playing career.

"Gibson, the game's winningest active pitcher with a 296-151 record in recent years maintained banking and broadcast interests in Omaha, Neb., his hometown.

"As things stand now, I'll probably be right in the middle," he said. "Although I've been doing some broadcasting the past four years, I haven't had any contract offers in that line.

"The holder of a multitude of major league records, Gibson, in 1974 was hobbled by knee surgery performed after an injury suffered the previous season.

Still, Gibson was able to compile an 11-5 record with a 3.83 earned run average in 26 starts, adding 13 saves and recording a 3.83 ERA in 41 appearances. Gibson is 122 wins away from breaking the season and on July 17 set the Cincinnati Reds' Cesar Geronimo to become the major league career win leader, recording 3,000 strikesouts.

"I don't throw quite as hard as I once did," he acknowledged Monday, "but I still have pretty hard and I think I have a pretty good idea of where I'm throwing my pitches.

"It's a lack of concentration," he said in respect to the injury that limited his effectiveness.

"When it comes down to a point where a guy beats you last game of the year, it's not going to happen," maintained Gibson, who suff ered 13 losses last season.

"This was one of the reasons I've decided to give it up," explained the 6-foot-1 right-hander, who will be entering his 17-season major league career.

Or build on your education with our new BACHELOR OF SCIENCE IN TECHNICAL CAREERS.
Whatever happened to VTI?

So what's a school of technical careers?

We're glad you asked that, because we're here to tell you about the School of Technical Careers, which we think is just about the greatest thing ever to hit higher education.

Remember VTI, that school that only Southern had, where you could work and study hard for two years and come out with an associate degree, ready to go to work? You could be an undertaker or a commercial artist or an architectural technician or do electronic circuitry for the moon rockets.

Well, VTI grew and grew and proved its concept of education so convincingly that it became the School of Technical Careers.

STC is still one of a kind.

It is the only school in an Illinois university that has two year career-oriented programs. It's the only school in the state—and one of the few in the nation—that offers a baccalaureate program that lets you draw your own educational blueprint and delivers the courses you need for whatever career you want to follow.

STC does all sorts of things.

We are working with community colleges to give licensed practical nurses the training to become RNs.

We offer programs that let you add to or supplement your community college studies without losing credits.

We are working with the armed forces to give military personnel the opportunity to apply their service training toward a college degree.

We operate a Skills Center where people who may not even have finished grade school can learn a trade while getting back into the educational swing with high school studies and go on to college if they want to.

We are taking technical programs into the prisons so that people can come out prepared to stay out.

If it's career or technical education, that's our business.

You see, STC has the philosophy that says you know what you want to do with your life and it's our job to help you accomplish that.

We do it by staying in touch with the "real" world. We hire instructors who have experience in their fields, and who rely on the advice of professionals who are working in the field. We use the resources of a major university to package this for you.

The electronics program you get this year isn't the electronics program you would have taken last year or the one you can take next year—because as the world changes, we change with it.

A dentist who serves on one of our advisory committees said the other day that STC really stands for "some teachers care." He's almost right: all our teachers care.

That's whatever happened to VTI—it's alive and well, hidden in the School of Technical Careers, where we still believe that what we're about is serving our students.
Here, there, everywhere... we're moving!

A couple of years ago you wouldn't have had a bit of trouble finding the School of Technical Careers. You'd just jump on the free bus and ride from the Carbondale campus out to the scenic VTI campus in beautiful Crab Orchard Wildlife Refuge, and there you were—except for aviation technology, which is another story.

A couple of years from now it'll be easy again. We'll be in our new buildings by scenic Campus Lake down near the beautiful SIU Arena—except for aviation technology, which...

But right now it isn't that easy. Because we're scattered in temporary quarters all over the VTI and Carbondale campuses while we wait for those new buildings to be finished.

Data processing and law enforcement are at opposite ends of Foster Hall, which you get to see to believe. Architectural technology is in a corner of Tech A. Electronics is in Tech B. Secretarial is split between Woody Hall and General Classrooms (a bracing stroll through the heart of the campus), and nursing is in Pulliam.

Automotive, mortuary science, dental hygiene, tool manufacturing and several others are still out on the VTI campus. And aviation: that's staying at the Southern Illinois Airport over toward Murphysboro where it's always been.

It isn't as bad as it sounds. There's still the free bus, and we'll give you a map of the campus so you can find your program.

And if you get here this fall you can watch the work start on that new building where we're going to get back together again with enough room and equipment to take all the students who want in.

---

We've got a new kind of Bachelor's.

Are you one of those people who knows exactly what you want to do with your life but can't find a college program that will give you exactly the education you need to do it?

Or are you just finishing up an associate degree technical program and finding out that most universities want you to throw away half of it and go another three years for a bachelor's degree?

Maybe you're a veteran with service training who's discovering that many schools want you to take the same thing all over again to get credit.

Have you got some college and a lot of work experience and want to finish a degree without wasting hours in a classroom where the instructor has less practical knowledge than you?

Have we got a deal for you! It doesn't take a great deal of looking around to see that there are many people who aren't served by the traditional baccalaureate programs. Realizing that, the School of Technical Careers has come up with a truly unique program that fills this need. You won't find another like it in Illinois, and only a few anywhere else in the country.

The idea is simple. Instead of telling you what you need, you tell us and we see that you get it. You set your goals and work with advisors who are knowledgeable in your field to put together your own program.

In its first year there are over 250 people enrolled in the program leading to the bachelor of science degree in technical careers—and no two of them have the same course of study. How's that for breaking out of the mold?

There are only a few limits. We don't take beginning freshmen in this program. You will have to meet general education requirements set by the University. And if you don't already have work experience in your field, an internship offers experience with credit. Beyond that, your program is largely up to you.

What more can we tell you? If this looks like your thing, get in touch with us and tell us what you want.

Dental Laboratory Technology
Physical Therapist Assistant

Aviation Technology

Dental Hygiene

Electronics Technology
These are the programs everyone wants!

Allied Health Specialties
This is a new program that will give you the basic health education and technical training needed to let you work in support of health professionals. Frankly, since it’s still in the process of being put together with our advisory committee, we can’t tell you all that much about it.

Architectural Technology
Certified by the American Institute of Architects, with licensed architects on its faculty, this program will prepare you to work with architects as something more than a back-room draftsman.

Automotive Technology
Course instruction, where you combine classroom theory with controlled laboratory experience that emphasizes “why” more than “how,” makes this a unique program. With this in-depth study, you will have much higher technical knowledge than the conventional mechanic and more manual skills than an engineer.

Avionics Technology
STC combines the expertise and equipment available in its electronic and aviation technologies in this program to train skilled technicians who develop, install, and maintain the sophisticated systems required for modern aviation. It’s a wide open field.

Commercial Graphics—Design
Here you are, at the point in your life where you’ve decided what you want to do in the 40 or so working years ahead of you. You are already convinced that it’s going to take some good, solid education to get started, and you’re beginning to realize that you’ll probably have to study along the way to keep up in your field.

You can choose from among 20 associate degree programs at the School of Technical Careers. Choices are one of them will get you headed in the direction you want to go. We won’t give you a lot of details here, if you want to know more about any or all of them, drop us a line and we’ll load you down with brochures.

We say you can choose, but for some you’ve got to be quick. Really, it’s hard to get into several of our programs because we can take only so many students. As fall’s beginning class for physical therapist assistant has been closed since last October. There are nearly 500 applicants waiting to find out whether they’ll be among the 30 freshmen admitted to dental hygiene this year. About half of these programs will be full for next fall so you’re reading this. Plan ahead. If you’re a high school junior, get in touch with us now for year after next.

Aviation Technology
Fully accredited by the Federal Aviation Administration, this program prepares you to qualify for the FAA airframe and powerplant certificate. All courses are taught in our own laboratory-classroom-hanger facility at the Southern Illinois Airport. Flight training is available through the School of Technical Careers, but is not part of the aviation technology program.

Construction Technology—Building
Here’s where you can pick up the knowledge to qualify for a reasonable position in supervision, estimating, or management in light building construction. It’s not a building trades program, it takes up where that left off.
Construction Technology—CIVIL

Want to help design and build dams and bridges? Or maybe help put up a skyscraper or have a hand in finishing the Interstate system. If that’s your thing, you’ll want to find out more about this one.

Correctional Services

There’s a whole new thing going on these days in dealing with the people who get involved in our criminal justice system. The prison guard who was selected for brute strength is being replaced by people qualified to help the offender. Opportunities abound for men and women in institutional, parole and probation work with adults and juveniles.

Dental Hygiene

One of the most satisfying of the health professions, dental hygiene is also one of the most popular and difficult to get into of the programs at STC. Plan to apply early. It is fully accredited by the Council on Dental Education of the American Dental Association.

Dental Laboratory Technology

Southern is one of the pioneers in collegiate education for dental laboratory technicians. Graduates find excellent employment opportunities and working conditions. Many set up their own labs. Accredited by the Council on Dental Education of the American Dental Association.

Electronic Data Processing

The computer is here to stay and Southern has the most modern and sophisticated units. In this business, data processing program you gain a basic knowledge of languages, computer applications, and operating systems.

Electronics Technology

No other school in Illinois offers a university-level electronics program of this type, where you combine electronics theory and laboratory experience for the knowledge to develop a career in any of hundreds of electronics applications. You get into bio-medical with this one. A bio-medical advanced specialty will begin next fall.

Law Enforcement

Just what it sounds like this program will equip you with the special knowledge the modern police officer needs to deal with the complexities of modern society. It does not include basic skills such as firearms or crowd control training. You will spend one semester working in supervised internship with a police agency.

Media Technology (Library Assistant)

If you’re interested in technical photography, graphics, or working with audio-visual equipment in libraries, schools, business or industry, you can get the basics you need in this program. It’s another field that offers wide-open opportunity to the go-getter.

Dentistry

Southern College of Dental Medicine is one of the most recognized dental schools in the state. You’ll be trained in all phases of general dentistry, and you’ll also have an opportunity to specialize in the branch of dentistry that interests you. The program is four years and offers both the bachelor’s and master’s degrees. It’s fully accredited by the American Dental Association.

Mortuary Science and Funeral Service

This is the only mortuary science program offered in a public university in Illinois and is accredited by the American Board of Funeral Service Education. You can take a year of general education and related courses in a community college and come to STC for the professional studies. Students serve an internship in a funeral home in addition to on-campus work. This is another program that can’t take all its applicants, so get your bid in early.

Nursing

You must have practical nursing training or its equivalent in education and experience to get into this program, which will prepare you for certification as a registered nurse. It is conducted in cooperation with the four community colleges which combine with STC to make up the Southern Illinois Collegiate Common Market. Contact us, Rond Lake, John Logan, Southeastern, or Shawnee.

Physical Therapist Assistant

The first university-based program of its kind in the nation, STC’s program uses Southern’s Clinical Center as a laboratory to give its students practical experience in addition to clinical internship in a hospital, rehabilitation center or extended care facility. Forget it for this fall: apply now if you want to get in next year.

Secretarial and Office Specialties

Unique because it gives you the chance to build a specialization of your own on a core of basic shorthand, typing and other office skills, this program gives you that "plus" to carry you beyond the run-of-the-mill secretarial job. Court and conference reporting is offered as an advanced specialization in preparation for the National Shorthand Reporters Association test.

Tool and Manufacturing Technology (Numerical Control)

If machine shop, tool and die work, and manufacturing processes interest you, here’s the program that can get you into the field in a big way. Numerical control machines are included among instructional tools and equipment in the program’s modern laboratory.
What does it cost?

So now you've looked at all the pictures and read about the programs and decided that the School of Technical Careers is the place for you. Consider the big question—what's it going to cost you?

Not exactly a pittance, but not really a bundle, either. And there's help in the form of student work and scholarships.

If you're an Illinois resident, tuition and fees at Southern Illinois University will cost you $380 per semester for full-time enrollment. That's $760 for a year. Off-campus housing runs about $1,300 per year for room and board.

Several STC programs have added costs for tools, uniforms, supplies, and the like. The stuff you buy, you keep, of course. It'll help you get started in your new career after graduation.

You'll probably want to figure on a few more bucks for a new pair of shoes, a pizza or two, and maybe a trip home to get your laundry done.
