Nixon defends tariff at Springfield rally

By Fred Brown
Daily Egyptian Staff Writer

SPRINGFIELD — President Richard M. Nixon defended his recent order for tariffs and for wage-price controls Wednesday, denying that the action was unconstitutional.

"We are not trying to build a wall around America to eliminate competition," Nixon said in a crowd estimated at 10,000 in and around the Old State Capital Building.

The President was in Springfield to sign into law a bill establishing Abraham Lincoln's home as a national historical site. He also toured the Illinois State Fair where he visited two livestock exhibits.

Nixon said that America must have economic strength to maintain its military and diplomatic strength and to remain number one.

"When we cease trying to be number one, we will cease being a great nation," Nixon added.

The bill signing took place in the Old State Capitol Building in downtown Springfield.

Parking decal prices lowered

By Sue Roll
Daily Egyptian Staff Writer

The Traffic and Parking Advisory Committee voted unanimously Wednesday to accept Chancellor Robert G. Laver's recommendation for a further reduction in parking decal fees to $45 for blue decals, $30 for red decals and $10 for silver decals, effective fall quarter.

The committee took action in a special session with the chancellor.

Laver had previously recommended that red decals be lowered from $35 to $30 and the blue decals be lowered from $60 to $50.

The committee also approved a proposal by the chancellor to dissolve the Traffic and Parking Advisory Committee, reforming it as a subcommittee under the University Senate's Campus Management and Planning Committee.

Laver told the committee that, "The President's momentous decisions over the weekend have had a dampening effect on the campus. He said there is enough 'financial hurt' involved to cause him to revise his parking fee recommendations."

"It is difficult to maintain a hardline stance on such things as parking decals in the face of such financial realities," Laver said.

Laver said the reduction would be effective for one year and that the University Senate would consider long range revisions concerning sticker fees.

Board to discuss freeze effects

Tuition increase expected to stay

By Sue Roll
Daily Egyptian Staff Writer

The effect on SIU of President Nixon's pro-wage freeze was expected to be discussed at the Board of Trustees meeting at 9:30 a.m. Friday in Railroad A of the Student Center.

James Brown, chief of Board staff, said any change in the present policy for increased tuition would require Board action but he said he had not expected any to take place.

"It has now become clear that if we wish to proceed with the tuition increase, we would not be going against the executive order," he said.

Statements were issued Tuesday from the Departments of Commerce and the Treasury saying that tuition increases at colleges and universities would be exempt from the President's order.

Approximately 77 per cent of the money generated from the tuition increase would have been used for faculty and staff pay increases. Because of the President's action these increases cannot be implemented.

Brown indicated that this would not cause the tuition increase to be rescinded. He said the money could be used for other purposes or not spent at all.

T. Richard Mager, SIU legal counsel, agreed that the tuition increase could be legally implemented both because of its exemption from the wage-price freeze and the fact that a substantial volume of action has probably taken place.

He said the housing rate increases would stand because five-sevenths of the housing contracts had already been paid. He said proposed increases for the rents of the University-owned Elizabeth and University Courts apartments could probably not be made.

He said that with a few exceptions all increases in faculty and staff salaries must be frozen.
Layer: universities' role is changing

Chancellor Robert G. Laver said he had the problem facing universities in mind when he talked about his role in the university's development. He said he was not saying that the university had a plan to develop programs, but that the university had a plan to develop programs in the same way that South American universities develop programs. He said that students are the instigators of educational change. He said that society in general supports affirmative actions and that the university is a strong supporter of affirmative actions.

The general public will determine how the university will evolve in the role of leaders of social change, he observed.

Layer noted that the Illinois Board of Higher Education has recognized the problems associated with size of universities and commented that the Carbondale campus has about reached its maximum size.

He called attention to two major new programs—the medical school and the law school. The medical school is farther along in its development, he said, but the law school now has a library and a framework of organization. Layer said that the new programs are the College of Human Resources Development and what he termed "a college of educational opportunities." He said that society in general supports affirmative actions and that the university is a strong supporter of affirmative actions.

The chancellor said President Nixon’s executive order for a price freeze and other economic policies had created problems in the university’s budget, and it will have to make up for the mid-season future.

We are in doubt as to what kind of fund we will have for the coming year,” he said in reference to the university’s 1971-72 budget and questions about whether a proposed tuition increase now can go into effect.

However, the university’s minimum budget for 1971-72 is about $4 million short of what it was at the end of last year, the chancellor said.

"At the present time, there is so much confusion coming out of Washington that we don’t have anything definite to go on," he commented.

Police may have fired first shots

(Continued from Page 1)

Hance said there was no evidence of a shooting at any other time. Hance told the press that the death of the man who jumped from the roof was all that was known.

Defence Attorney J. J. Hanley compared the testimony for Hance with a report Hance made the afternoon of the hotline.

Hance questioned Hance about a statement that the negro was "upset five days after" as opposed to his testimony about the "warning shot." Hance said the blast was a "warning shot over the building suspect’s heads. Asked if either of the two suspects had returned gun fire during their flight, Hance said no.

Hance also asked if Hance was able to identify either of the men from an identification card given to him by the Surgeon General. Hanley said it was too dark to determine if one of the suspects wore a dark brown coat described in the Hotline Police Report. He said that because of these "running and jumping positions," he could not tell whether one of the suspects was about 6 feet tall.

Hanley said he fired the shot because the suspect carried guns and refused to halt.

Defense Attorney Michael Deutsch asked Hance if he was aware that negro children lived at 40th and Washington where he took cover on the roof.

State Attorney Richard E. Richman’s objection to the question was overruled by Judge Everett Levenson who said he was not aware of the children.

Reisman said Tuesday he intends to cross-examine the defense attorneys to prove the defendants shooting was in self-defense.

Prommer recessed the court until Thursday morning at 9 a.m.

HEW begins Canut-Amoros investigation

By Sue Bell

A three-woman compliance review team in the Department of Health, Education and Welfare (HEW) began its investigation of former President Martin Canut-Amoros' charges of sexual harassment at the University Wednesday.

The team will review University administrators' handling of the case, as well as interview University personnel and the complainant, Estee Lortens, leader of the team, during the week. The team is interviewing can-
not be disclosed until the team returns to Washington.

Other members of the review team are Marlene Johnson and Ellen Risinger.

The team will continue its investigation Thursday and possibly Friday, Mrs. Lortens said.

Mrs. Canut-Amoros was formerly a professor of applied science in the School of Engineering and Technology until her resignation was accepted by the Board of Trustees at its July 14 meeting.

Aside from her disputed reassignment, which she says she never intended to make, she claims the University discriminated against her because of sex in denying her a summer position and in regard to her salary, which she says was substantially lower than that of male professors in the school.

The compliance review team will return in the middle of September to investigate cases filed by other faculty members and review the conditions of all women employees, including faculty, staff and civil service personnel.

It has been reported that more than 170 women faculty members have filed with the Civil Rights Division of HEW.

Although University ad-
mistritors refused from comment on the compliance review, Chancellor Robert R. Layler, William E. Malone, vice chancellor; T. Richard Magee, SIU legal counsel, and Thomas Jefferson, dean of the School of Engineering and Technology, were expected to talk to the team about the case.

The team met with Jerry Lacey, compliance officer, and Mrs. Canut-
Amoros early in the day.

Mrs. Canut-Amoros said she was impressed with the amount of knowledge the team had about the details of her case and that con-
fident a finding would be made in her favor.

Special team to prosecute violators of price freeze

WASHINGTON (AP) — Creation of a special 12-member enforcement team was announced at the Justice Depart-
ment Wednesday to press any court actions needed against violators of President Nixon's 60-day freeze on wages, prices and rentals.

Staff personnel will be hired by a spokesman. But the government still was struggling to end the public's confusion — and its own — over just which pay raises and price markups have been declared illegal. Some labor unions reported Nixon's request for a strike moratorium.

There were behind scenes maneuvers in Washington and Europe to stabilize the sliding dollar. Japanese Ambassador Nobuhiko Uda, after conferring with Secretary of the Treasury John B Connally, denied reports that Japan would resume the yen upward.

Upvaluation of the yen and other strong currencies which would reduce the dollar's value and make American products more com-
npetitive in world markets was a key objective of Nixon's action Sun-
day cutting gold.

Other developments

Labor—Harry Bridges, head of the West Coast longshoremen, spotted the administration's request to end his 48-day strike and said it would continue in full force.

The United Auto Workers threatened to walk out if any extension of the 90-day freeze prevents implementation of the UAW's new agreements with the automakers.

Other leaders of the AFL-CIO prepared for a face-to-face meeting with top Nixon administration Thu-
say in protest against what they call the unfair terms of the freeze and Nixon's request for a moratorium on strikes.

Military Members of the armed forces were declared exempt from the freeze. The Pentagon said serv-

vices will continue to get all pay increases for promotions, benefits and bonuses despite the freeze, which will apply to civilian defense employees.

Dealers may charge more for 1972 autos

Despite the price freeze ordered by President Nixon, a 1972 automobile is going to cost many more than the 1971 model; a check of car dealers showed Wed-
nesday.

"We'll be discounting the 1971 models," said Ford dealer John Lyon, manager of Northland Ford in Detroit. "On the '72 models we'll just be holding a little closer to the sticker prices."

Ford and General Motors, the two biggest domestic carmakers, have said they will hold the 1972 sticker prices to the 1971 levels in keeping with the price freeze called for Sun-
day by the President.

Nixon asked for a 90-day freeze on prices and wages at the levels existing on Aug. 16.

American Motors and Chrysler have not announced sticker prices for their 1972 cars.

The sticker or suggested maximum retail price is by law the maximum that can be charged for a car. But the actual price the buyer pays is decided in haggling between the dealer and his customer.

Dealers will sell a 1971 car for a minimum profit now and clock raise to the base price on 1972 models, said Bob Horvath, general sales manager for a large Oldsmobile dealer in Miami, Fla.

A general military pay boost pen-
ding in Congress and originally targeted for an Oct. 1 effective date is likely to be given an effective date after the Nov. 12 expiration of the freeze period.

Trade—Most of Europe's foreign exchange markets were shut down for a third day. The Common Market's executive commission warned that the new American 10 per cent surcharge on imports could diminish world trade and muddy the trade liberalizations achieved in the 'Kennedy Round' tariff negotiations.
**Opinion**

**Austerity by any other name would be affluence**

The most significant aspect of James Brown's house and the cost of its repair, as pointed out to thousands of university officials, is that it is not particularly out of the ordinary.

A university where $1 million is spent to house faculty president, $16,000 is barely a drop in the bucket. But to the layman it seems that several sums of this magnitude, added together, make a difference in a time when James Brown himself has placed at austerity levels.

During a time when University officials profess to be overweighted with worry over how the University is ever to survive under the present limited budget, such expenditures seem a bit out of line with its period of austerity. Fifteen thousand dollars in repairs on a one-room house seems a trifle excessive.

It is reasonable to argue that the University must maintain its buildings to keep them from deteriorating to a state beyond repair. But one could also wonder if a carpent, new driveaway, landscaping and some other "delayed maintenance necessities" are so necessary to provide a house for an official who is paid a fringe $18,000 a year when faculty pay raises have been rejected, tuition is rising, scholarships are becoming scarce and educational programs are being cut.

It seems the University administration is worried about losing limited funds but orders to limit these expenditures which directly affect comfort and welfare of the administration.

But what about the $3,000? When repairs on the house were done, nobody could seem to estimate their cost. Yet University Architect William Hart was able to pronounce the unofficial $15,000 to $20,000 estimate "100 percent off!" One marvels at our architect's logic since this would place the cost of repairs at either zero or $20,000 to $40,000. But if he has been the case in the past, repairs are contracted as a means of winning and repaying favors within the University, this latter figure might not be so absurd after all. One shudders to think of the cost involved if the original schedule of renovations was to be continued as planned.

Was the University so shy about releasing even semi-official information about this cost? If University officials are so helplessly ignorant of financial matters as they pretended to be in their "official," and therefore safe release of the cost of the project, no wonder the University is in such a poor financial state.

According to the physical plant which did the work, the labor and materials were billed only $13,940.75. At $12 per hour the labor charge was $738.40. All told, the contract was for only $14,678.15. Yet the University Architect shocked the administration by announcing a repair budget of $20,000.

"It seems like the public house only after officials decide to make it public.

Supplying a house free of charge to a high administration official is not a small matter. As one can see, it would be a matter to repair a house is not unusual. Neither is being around the bush when straight answers are needed.

They should be

**A view of ecology from young eyes**

*Opinion*

People today are expressing an obsessive concern for the quality of their surroundings. They are becoming aware everywhere from anti-litter signs in parks and along highways to labels on beverage containers Ecologists and ecology groups have held rallies and marches, made films, written books and published articles to convey their causes.

But the neglect, abuse, pollution and ignorance continue. Some people don't understand, some don't care and some, it seems, are too young.

Near Carbondale there lives a four-year-old boy named Greg and his three-year-old sister. They have never read an ecology book, attended a rally or been aware of Earth Day celebrations. Yet they are concerned.

Often they take Sunday afternoon walks or drives with their parents through the Southern Illinois countryside. Sometimes they ride through the strip mine country to view rippled, overburden earth. Other times they hike through the little McDonalds golf course, the little lined paths of Giant City State Park, the Pine Hills or bluffs along the Mississippi River. Sometimes they visit Little Grassly and Crab Orchard lakes to wade or fish with their father.

The youngsters express great excitement when seeing the birds, squirrels, rabbits, cattle and deer which occasionally catch their eye on these journeys. At home in the late afternoons they frequently chase elusive butterflies and grasshoppers. In damp weather they happily watch crayfish in a stream. During late June and early July one of their favorite pasttimes is catching lightning bugs which they place in a ventilated container to observe until bedtime when the bugs are released. In the winter they sit for hours watching buds on a feeder outside their kitchen window.

This summer Greg was given a young rabbit whose nest had been destroyed by a hawk mother, and told he could do with the rabbit whatever he wanted. Greg carried the rabbit in his arms rushing it and talking to it as he followed a wagon p Independently hunting a grate spot near where the rabbit was found. Here he boxed it to the ground and released the young rabbit saying: "Your momma will come back and take care of you."

On walks with their father they are quick to notice a dropper in the tank of your toilet

By Arthur Hopper
Chronicle Features

"Good morning, sir. I represent your local Ecology Center. We wish to enlist your support in creating a better environment - you know making this a better place in which to live." We'll have a list of things you and your neighbors should do to improve the quality of your environment. Some are extremely easy. For example, the first thing you should do is put a brick in the tank of your toilet."

Me: "What?" We put a brick in the tank of your toilet.

"Me: "I called it a sham.""

"But at last. This will save at least a quart of water every time you flush. That in turn will facilitate our treatment plants."

"Really? I assume we can we can always make use of our neighbors to put bricks in your toilet."

"No. Not one. Of the 34 of us and it was tried."

"You see. DDT leaches into the oceans. Oh, yes, don't forget to have yourUnix tools, odd tools that are free of phosphates and enzymes and are certified biodegradable. We recommend base H."

"I been clean for years."

If we all use biodegradable soaps, it'll help make our rivers and lakes blue and sparkling again."

"But what's all the fuss about?"

"You want your furniture to be new? If you want to wash the labels off all you bottles."

"But the fact that you can bring them to the Center for recycling. Then you'll want to flatten the cans, tie up those old eggs and - Oh, that reminds me. Are you using nothing but pure white toilet paper?"

"I would dream of nothing else."

"The dye in the other kind is very polluting. Let's see, about low-level gasoline."

"We don't want to poison the folks in the suburbs are really pawning their garbage, washing their old bottles and stuffing bricks in their toilets."

"It's that makes them feel good to know they're joined together with their fellow men to help clean up the environment. Don't you think it's a good idea?"

"I mean we are running out of space."

"You can go clean up environments, you're sure they're starting in the right place."

Nothing immoral about family planning

By Paul Corcoran

Copley News Service

NEW YORK — Dr. Alan Guttmacher, national president of Planned Parenthood Federation of America, Inc., says that the husband and wife who have five or six children are being added to the problems of an overpopulated world.

Even if the average number of children per family is 1.1 per couple, U.S. population will reach 511 million by the year 2050, Guttmacher said.

But the New York obstetrician, in an interview, emphasized the organization's determination to promote promiscuity, nor to infringe on religious or moral convictions.

"Abortion is still perfectly acceptable conduct," Guttmacher said, even for a "turned-off" generation.

"Fidelity in premarital relations as a commitment is not uncommon, and those who exercise it are not outside the hands of society's norm."

Nor does he prescribe abortions—the premature termination of pregnancy—unless the expectant mother feels there is no other choice. "Abortion is a last resort, not a substitute for family planning," he said.

But Guttmacher said he is convinced that a combination of circumstances makes planned parenthood essential on a worldwide basis.

The improvements in nutrition have led to earlier marriages and a "longer period of sexual activity," said Guttmacher. The burden of overpopulation was described as another reason for population control.

The fact that nutrition among the middle class is superior to that of minority groups may contribute to the greater number of whites who have exhibited interest in family planning.

"The problem has been a change in the profile of members of planned Parenthood," said Guttmacher.

"The number of whites is up, and the number of blacks is down."

Some blacks appear to resist birth control because they feel it is an attempt to curtail their political leverage.

Despite all such factors, said Guttmacher, Planned Parenthood is doing well. As of 1965, it was recorded that the bullets-of-board increase of 22 per cent over a 10-year period and the national membership now stands at 414,000, of whom 100,000 are "new," or added since 1960, said Guttmacher.

"The religious affiliation is not necessarily a factor, including Roman Catholicism."

"There is a marked difference in the number of (Roman) Catholics who are members of Planned Parenthood chapters," said Guttmacher, in relation to population. "Not 1 per cent of the population is Catholic. There is only a difference of 4 or 5 per cent in the membership of Catholics in Planned Parenthood."

Guttmacher, a fatherly looking white-haired man,

believes one thing is essential if world populations to be controlled: "You have to get to the kids early."

And when Guttmacher expanded on that axiom, it becomes clear he does not mean special classes in sex education necessarily provide the best answer to birth control.

"This should not necessarily be a special course, but the child should learn from many sources over the early years," he said.

This does not mean you teach a 10-year-old the intimate details of sexual relationships, but it does mean, says Guttmacher, that a child in the fifth or sixth grade might be instructed on world population problems while he learns multiplication.

"As the child matures, he should be given more information until the sophomore year of high school, when a course on sex and how to prevent unwanted pregnancy is advisable, Guttmacher said.

"The idea, he continues, is to make available to everyone the information on contraceptives to prevent unwanted children."

Guttmacher, however, foresees no instant solution to the people problem—or a way to achieve immediately what he calls "population equilibrium."

The current leader of an organization which evolved from New York's League For Voluntary Planned Parenthood (1914) does add, however, that the population problem is "not yet at the panic stage nor will it be for about 20 years."

But he cited projections which indicate how serious—in his opinion—overpopulation could become. On the basis of 2.4 children per family population in the next 30 years would reach 566 million in America alone.

The current average of 2.4 does represent a decrease from the family of 3.3 children in 1957, he noted.

Guttmacher also referred to a 1966 study which he said showed that 20 per cent of those questioned had children they did not want.

"It is the doctor's contention that the primary responsibility for early sex education still should rest with informed parents."

"But I'm not sure the parents have a great interest in their children," he said. "They have abdicated that responsibility. The code of responsibility for sexual behavior now rests with youth themselves."

Unfortunately, he said, "the youth feel free and emancipated long before they are mature emotionally."

Guttmacher said he does see hope in a trend toward smaller families.

He is not perturbed that a stable, educated population would just about put Planned Parenthood out of business. That is a purpose of the whole program.

A 900-mile trip to nowhere

By Jenkin Lloyd Jones

Los Angeles Times

ROSY-FINGERED DAWN, as Homer had it, kisses the Maryland mountains as I swing on to the interstate and gather speed past a sign, "Antietam 12 miles."

This would be the time to visit that great battlefield. To sit upon the fateful ridge in the quiet semidarkness, listening to the birdcalls and reflecting upon Lee's battle plans, wrapped around the clinker bottles.

But no such privilege for me! The bus is in my mouth.

My ears are laid back, my eyes rolling in a frenzy.

For, like all my brother demons of the interstates, today I'm a wheelin' man.

THE DAY BRIGHTENS as I swing away from the Pennsylvania Farm. I see the Breezewood I find the Pennsylvania Turnpike teasing in spite of yawn's from the motels that the next 500 miles across northern Pennsylvania is killing them.

So it's pass—swing—sway right—signal—pass. To the south in the quiet glades are Braddock's grave and the graves of the other famous on that day.

When the very young Virginia colonel by the name of Washington once surrendered to the French. It was time to swing—swing—swing—right.

THE MONONGAHELA at Monessen. Six miles north in Donora where some years ago after days of a low, wet inversion a sulfurous cloud from the stacks of the mills began killing people. It was America's first real fright at air pollution—a har-
Department of Engineering constructs own computers

By Dana Brinkley
Student Writer

Have you ever thought of the institutional advantage of having an analog computer as opposed to a digital computer? Or have you ever pondered the economical advantages of making your own analog computer? Thomas M. McCalla, assistant professor in the electrical science and systems engineering department, is undertaking these problems.

McCalla said that the department bought three partly finished analog computers from Simulator Inc. of Chicago two years ago.

"We bought them partly finished because it was the only way we could afford them at the time. Besides they still did the job we needed them. We had planned to buy more parts from them," he said. However the company went bankrupt and the parts needed weren't available anywhere.

"This forced us to do something that has come to be an advantage economically, and that is to make our own parts." McCalla said that if the three machines were bought completed they would have cost approximately $80,000, but the partly finished computers cost only $50,000.

"It's too big a project to do by ourselves, we have various staff members and students helping out. This is good because they get experience and some of the labor's free," he said.

There are two basic types of computers, digital and analog. He said that the analog has certain advantages over the commonly used digital computer. McCalla explained that with an analog computer, an individual can watch the computation by the amount of voltage put out by the machine. "With this type of computer you can watch the flow as the machine computer the data input," he said.

The analog computer also serves as a laboratory to teach students and is a good computational tool. He said the problem with this machine is that only approximately five percent of the engineering faculty in the United States know how to use one. However with a digital computer you only get numerical data. The only thing an individual sees is the finished product.

McCalla said that in two years the department plans to have eight computers.

Actually we are in the process of making the other five already completed. Because we make the parts to finish the three computers we have now, we are making more of the same parts for our additional computers," he said. McCalla said that if the engineering department bought all eight machines, they would cost approximately $250,000.

By finishing the three it has now and making the other five, the department will be saving approximately $100,000. The three analog computers are now basically for instruction, but when finished will aid in research. There isn't enough equipment in these three computers to do any real research. We put a simple problem in them and it took all three machines to solve it," he said.

McCalla said the other five machines will be built from scratch.

"We have to do a lot of things we are doing to the three we have now. The biggest part is getting started. Once you do it's easy to build more when you've acquired the techniques," he said.

Close inspection

Thomus McCalla inspects in minute detail every part of an analog computer which is being built in the Electrical Science and Systems Engineering Department. He is checking a subassembly containing operational amplifiers. (Photo by Mike Klein)

Language Center teacher is a man of many interests

By University News Service

A man of many parts, Ronald Dean Coleman started out to become a mathematician, turned to linguistics, played the organ, wrote poetry, gave fishing and swimming, and now is taking up photography.

A two-degree graduate of SIU, Coleman is a reading supervisor at the Center for English as a Second Language (CESL), whereowlersfrom foreign lands take intensive courses in English for up to six months to help them overcome the language barrier when they start classes at University students.

Coleman started working at the center as an undergraduate student, and after completing his bachelor’s degree in mathematics decided to take a master’s degree in Linguistics and the Teaching of English as a Second Language.

His job is to help the foreign students whose command of English is uncertain to acquire enough proficiency in reading, writing, and speaking the language that they can cope to the best of their ability.

The fourth annual Junior College Press Day at the SIU School of Journalism is set Sept. 28 at Lake Land College, Mattoon, which is co-sponsoring the event.

Featured speaker will be Martin Gardner of the University of Illinois journalism faculty, a prize-winning war correspondent and author of "Mathemagics: The Magic of Mathematics." Tourists replace miners as source of income

CRIPPLE CREEK, Colo. (AP) -Five railroads served this mining district at one time, and now the old depot serves as a museum with tourist the main force instead of for Cripple Creek’s old population.

Hudson to speak at Bethel Church

Galen H. Hudson, assistant professor of history, will present a biography of the African Methodist Episcopal Church at the 11 a.m. Sunday service at the Bethel A.M.E. Church, 201 E. Jackson.

His presentation will follow the 1973 Man’s Day activities of the church. At 1 p.m., Saturday, the same will hold an Abraham Auction for people to donate cherished items for sale. This will be in keeping of the story of Abraham offering his son as a sacrifice.

Proceeds of the sale will go to the treasury of the church.

Milwaukee Journal photo collection on display at SIU

By University News Service

A collection of 36 color and black and white photographs by three Milwaukee Journal photographers is on display in the lobby of the new wing of the Communications Building.

The show is the work of Robert Miller, Fred Van Gundy and George Curran, all graduates of SIU in cinema and photography. The collection includes portraits, news and pictorial items.

Also in display along the hallway north of the lobby is a series of photographs by students in the basic photography 250 course.

BONAPARTE’S Retreat
It's President's day at Springfield, fair

(Continued from Page 1)

Springfield. Also present at the signing were Gen. Richard B. Ogilvie, who introduced Nixon, and U.S. Rep. Paul Findley, who sponsored the bill in Congress.

Before the signing, Nixon made his remarks clarifying his Sunday night economic message, in which he announced 90-day wage and price controls and new tariffs on imported goods.

Nixon compared present circumstances to those which faced Lincoln at the time of the Civil War. He characterized Lincoln as a peace-loving man, who, nevertheless, was forced to wage war.

"America today, Nixon said, is at a crossroads. We can continue to have war, as in the past, or try to bring about a generation of peace, he said.

The President quoted Lincoln saying, "America is man's last, best hope on earth." This is still true today, Nixon said.

"America is the only nation which has the strength to build a world of peace," Nixon concluded.

After signing the bill, the President motorcade, which included his daughter Julie Nixon Eisenhower, traveled through Springfield to the State Fairgrounds.

Crowds along the parade route, which police estimated at 100,000, were friendly and pro-Nixon. Signs and placards voicing support for the President were displayed by many along the route.

Earlier, at the Old Capitol Building, police arrested four anti-Vietnam demonstrators. They were part of about a dozen people who carried signs demanding Nixon get out of Vietnam.

Springfield police said the four were charged with creating a disturbance, but refused to give any further information. Names of those arrested were not immediately released.

There were no other incidents at the Old Capitol Building. Police estimated the crowd at 10,000.

At the Fairgrounds, the Nixon motorcade made two stops at livestock exhibits and one near a Boy Scout camp. During these stops the President shook hands with members of the crowd, part of the 100,000 attending the Illinois State Fair.

During one of the stops at the Fairgrounds, Nixon praised American agricultural productivity. Speaking at a 4-H booth, the President said farming is not a dying art.

"America leads in agriculture production and will continue to do so with the help of youthful farmers, such as your yourselves," Nixon said.

After more visitation with the crowds at the Fairgrounds, the motorcade went to the Springfield airport, where the President boarded his official plane, "The Spirit of '76," to fly to his next stop on a cross-country political trip, which ends Thursday in California.

At the Illinois State Fair, Nixon (bottom left) stopped to meet a youthful admirer at a livestock exhibit. The President (bottom right) waves to a crowd of well-wishers in downtown Springfield.
DMZ area blitzed by B52 raiders

SASAKI (AP) — B-52 Stratofortresses bombed their biggest target of the war on enemy positions in the Demilitarized Zone today, but the North Vietnamese appeared to be holding their fire against South Vietnamese bases.

The B-52s dropped napalm and bomb and heavy artillery by the North Vietnamese during the morning, in the face of the imperial north.

About 25 of the 900-ton-based B-52s from North America's base in Southeast Asia have been attacking the north Vietnamese to prevent them from moving to the south, to the border zone, or to the North Vietnamese air base.

The B-52s struck a series of targets in the northern half of the Demilitarized Zone, half the area now in South Vietnam.

The area hit is an arc around the South Vietnamese air base on the western border of the allied defense

Army copter crash fatal for 37 soldiers

PEGNITZ, Germany (AP) — A U.S. Army helicopter carrying American troops to a field exercise exploded Friday in a field near the town of Pregnitz, near Stuttgart, in the Grafenwoehr training area near the Czechoslovak border. Abroad were seven men and 13 members of the 16th Artillery Brigade, said a spokesman for the U.S. Army European Command in Stuttgart.

Several hours after the crash, the helicopter's remains were found at the scene and fallen trees were cleared from the area.

Arab heads of state meet to discuss federation details

DAMASCUS, Syria (AP) — The heads of state of Egypt, Libya and Syria met Wednesday night to examine the final draft of a new constitution designed to unite the three countries in the Federation of Arab Republic on Sept. 1.

Their first session was largely ceremonial. The three leaders will take up matters of substance Thursday and are expected to announce a formal approval Friday.

Although the federation is the main concern, President Anwar Sadat of Egypt, President Hafez Assad of Syria and Col. Muammar Kaddaf of Libya are bound to devour time in the current tension between Syria and Jordan over the Palestinian guerrillas.

Border clashes between the two nations erupted last week and each still has substantial numbers of armed troops deployed along each's 110-mile long frontier.

A land war, said to have been planted by Palestinian guerrillas who tried to cross the Jordanian border and stopped the troops near the northern Jordanian town of Karak, Wednesday but the border area was otherwise quiet.

A high level delegation from Damascus is setting in on the federation discussions as it has since the idea was first taken up in Tripoli, Libya in 1980.

Campus Beach attendance down from last summer

By Robert Hallwechs
Student Writer

Attendance at Campus Beach at Lakehore-Campus is down from last year, John Herbst, supervisor of Campus Beach, said.

Crowds are averaging 130-200 persons at any given time, Herbst said, and he estimates that only about 500 people come to the beach daily.

Herbst said crowds averaged 250-300 people, and daily attendance at the beach last summer was 350-500. He was at a loss to explain the decrease in attendance, saying that perhaps it was due to a low summer quarter enrollment.

Herbst, which is open from 1 p.m. to 7 p.m. daily, is staffed by 25 lifeguards, 50 graduate assistants, and the supervisor. At least seven and sometimes ten guards watch the waters during swimming hours, he said. No accidents or near-drowings have occurred at the beach this summer, Herbst stated.

Last summer the beach had a problem with dead fish, but this summer too much algae in the water is a small nuisance, Herbst said.

The beach runs periodic student I.D. checks, and finds that the large majority of people have no SIU I.D.'s, the Supervisor said.

"If we checked all the time and enforced the rule that everyone must have a student I.D., there'd be nobody here," Herbst said.

He said he believed that a large number of those swimming in the lake are not SIU students, but Carbondale high school students and community people.

As long as everyone enjoys themselves, I guess it's o.k., Herbst said. "That's the whole idea."

One of the Campus Beach lifeguards is a diver and puts on his tanks and mask to hunt for people's lost glasses and rings, the supervisor said.

"We've found a lot of expensive prescription glasses for people, and they usually give him a little something to thank him. Herbst said. He also said the beach has a small lost and found department.

Sen. Muskie may visit SIU fall quarter

The College Democrats of SIU are hoping to bring an announced presidential candidate here. Edward Muskie to campus in the fall. Muskie has not finalized his campaign plans and the appearance is only a possibility yet. Tony Konas, president, said.

The SIU Democrats met Tuesday evening in McCarthey and have persons attended. Attendance is low summer quarter. Konas explained, but he expects membership and activities to increase come fall.

Besides inviting Sen. Muskie to speak, the group has extended invitations to Lt. Gov. Paul Simon, State Auditor Michael Howlett, State Sen. Cecil Purcell and State Treasurer Allen Dixon. Democrats gubernational Hopeful Daniel Walker, who appeared at SIU earlier summer quarter, has promised to return to campus, Konas said.

Statewide College Democrats President John Zink also a precinct captain, said he has found Democrats of various political leanings in support of Santen. Zink said Walker and others both intend to run for governor regardless of whether they are stated by the state party or not. Walker may run as an independent, Konas and Zink guessed.

SIU Democrats are presently selling bumper stickers which bear the slogan. "Happiness is a New Governor. They plan to hold a meeting this week to plan the fall work to register new voters and lobby on legislation involving students.

Illinois College Democrats plan to work to overturn a 1974 State Supreme Court ruling that prevents students from participating in voting. Where they go to study. Zink said. The group's primary concern is that if a student receives financial assistance from his parents and goes to their home for the summer, the student is not when he is sick, but his parent's home in his legal residence. College Democrats hope to have the ruling overturned. Zink said. He says he has the support of three legislatures and is talking with the ACAA.

Traveling theater
to visit 15 towns

A performance schedule of 10 productions in 15 towns has been an-
nounced for the 15th annual fall tour of the traveling repertory company in SIU’s Department of Theater.

The touring company will offer two plays for adults and children. An adult comedy, “American Dame” by Phillip C. Lewis, is a chronicle of a woman’s life since Eve Figuette’s in the play humorously shows women and their situations from antiquity to the com-

Younger audiences will see “Mother Goose Follies,” a play written by Eugene Jackson, a doctor-
tal student in theater at SIU. The children’s production uses flashback to present all the famous fairy tale characters and stories in modern versions.

Some of the towns the tour com-
pa will perform in include Carlin, Harrisburg, Springfield, Caro, Wolf Lake and Highland.

Jo Mack, SIU theater manager, said negotiations are underway for

A little lighter, a little more delicious.

Falstaff, it’s some gorgeous hunk of beer.
Board expected to discuss price-wage freeze effects

(Continued from Page 1)

He also said that the city’s increased water and sewer rates could not be put into effect as a result of the wage-price freezes.

Aside from the effects of the wage-price freezes, the Board will discuss the operating budget request for 1971-72, an air pollution control proposal for the Physical Plant, undergraduate admissions policies, Illinois Public Interest Research Group (IPRG), the location and improvement of McKee residence and the establishment of a baccalaureate degree in computer sciences.

Other matters to be discussed are student group housing and room rates of the Elizabeth and Churchill Halls.

Open Hunt to honor

The Southern Illinois Open Hunt will honor SIU President Emeritus DeWitt W. Morris at an exhibitor’s party Saturday evening in the Holiday Inn at Murphysboro.

In addition to this event, which

cities Morris for his contributions to outdoor activities, the Open Hunt will feature a horse exhibit. Hunters and jumpers will be performing at the Martin Fair Grounds Friday, Saturday and Sunday from 8 a.m. until 5 p.m.

2 music majors
to give recitals

Michael Craig, baritone, of Homewood, accompanied by Kathleen Warner, pianist, of Carbon¬dale, will present his senior recital Aug. 25.

Kenneth Park, percussionist, of Murphysboro will also present his senior recital Aug. 30 at 8 p.m. in the Home Economics Auditorium.

The recital program will consist of works by Albright, Thaerschehn, Straussiovsky. Krebs, Payson and several traditional rudimental drum solos.

All recitals will be presented at 8 p.m. in the Home Economics Auditorium. The recitals are open to the public without charge.

Starrick recovering from tick fever

By Ken Stewart
Daily Egyptian Sports Writer

Greg Starrick is well on his way to recovery following a bout with "tick fever" earlier this summer.

The SIU basketball player, who won the NCAA free throw championship in the major college division last winter, was bedridden with the disease for two weeks.

"Greg came home one day completely covered with ticks after working with the Marion city survey crew in a subdivision," said Mrs. Wendell Starrick, the athlete's mother.

"We pulled at least 150 ticks off him," she said.

Mrs. Starrick said her son came up lighter the next week and said he had jiggers on him.

Jiggers are very small blood sucking insects in the same family as ticks and fleas.

"But they weren't jiggers," she said. "They were the heads of the ticks we had pulled out of him before.

"Ticks bury their heads into the skin of their victims to draw blood. If a person isn't careful in removing the insect from his skin, the tick's head will stay in the flesh and cause an infection. Such was the case with Starrick."

"He had a temperature and was sick in bed for two weeks," said Mrs. Starrick. "For fourteen days he could do nothing.

"The symptoms of tick fever are similar to typhoid and Rocky Mountain Spotted fever, but Starrick was lucky.

"Now he's up and recuperating," said Mrs. Starrick. "He still has blood tests every seven days. Last week the test revealed the blood was still not up to normal.

"He lost four pounds, but he regained six," she said.

"We're really taking care of him," she said. "The doctor's been wonderful, We couldn't get Greg into a hospital because there was no room.

"Greg's mother said the doctor won't let Starrick play basketball for another two weeks.

"The doctor did say Starrick will be ready for school next month and basketball practice according to Mrs. Starrick.

"He can't wait to get a basketball in his hand," she said. "You know how kids are. When they start feeling good, they think it's all over.

"The doctor has allowed Starrick to return to some physical activity."

Reds blank Cards, 5-0

CINCINNATI (AP) - Don Gullet scattered seven hits as the Cincinnati Reds blanked St. Louis, 5-0, Wednesday night and shelled Bob Gibson who had buried the first no-hitter of his career four days ago.

Bernie Carbo stroked a home run in the third inning and George Foster capped a four-run rally with a two-run triple in the fifth.

Saluki hardware

here is the happy number at SIU where Donald N. Boydston, director of athletics, displays the nine national collegiate championship trophies (on the left) won since 1960 along with the nine team championship cups on the right awarded on the first year of Midwestern Conference competition in 1970-71.

The Salukis won all team championships contested in the conference with the exception of golf. The remaining two trophies (center) were earned for runup honors in NCAA national championships in baseball and gymnastics this year. (Photo by Mike Kain)
