Layer announces faculty, staff cutbacks

By Larry Nateh
Daily Egyptian Staff Writer
Chancellor Robert G. Layer announced Wednesday a cutback in faculty and staff salaries because of expected budget limitations next year.
A memorandum issued by the Chancellor and signed by the University President and the Ad-
mnistrative Council stated:
1. No new positions are to be authorized except to meet prior commitments.
2. No replacements will be made for faculty or civil service and administrative
employees who retire or resign, except in cases of exceptional merit.
3. First-year term employees will not be renewed.

Vice Chancellor Willis J. Malone said it was not certain how many faculty and
staff would be affected by the new policy. He indicated an estimate may be
available Thursday. Malone said the decision was made Feb. 11 by the Ad-
mnistrative Council and that it also applies to the Edwardsville Campus.

The Chancellor's memorandum said the decision was "based on a careful
analysis of the availability of funds for 1971-72 and projections of credit-hours
production for 1971-72."

Exceptions to the policy must be ap-
proved by "exempted members of the University Administrative Council," the memo said.

Malone explained that this means that any exceptions to the policy
require "unanimous approval of Chancellor Layer."

According to Malone, an official definition of first-year term appointees is any person appointed on a term basis

and who was given an indication that when that appointment would expire.
Malone said some persons could either be full or part time employees who have
been appointed for one year or for one or more quarters.

Malone said exceptions to the cutback would be arbitrary. There can be no
blanket or generalized guidelines for the exceptions, he said, but all decisions
would be based on careful review.

"If it cut off all first-year term ap-

pointees in a particular program or

made. Appointments must be confirm-
ed by the Senate.

Appointed to six year terms are Ed-

vin C. Berry, a 66-year-old black

businessman from Chicago, Illinois;

Rowe, a 47-year-old Jacksonville attor-

ney and insurance company owner;

and Dr. Earl E. Walker, a Harrsburg

physician who until recently served as

a Senator in the University Board of

Trustees.

Earl E. Walker are Republicans and

Berry is an independent.

The other Board members are lawyers

and bankers, Melvin Lockard, 84, of Ma-

toon; F. Guy Hitt, II, of Benton; and

Lindell Sturgis, 71, of Metropolis. Their
terms expired Jan. 11.

Chancellor Robert G. Layer said he

was "delighted that a black man has

been appointed to the Board." He said

he could not comment any further since

he knew none of the appointees per-

sonally.

James Brown, chief of Board staff

said Sturgs. Lockard and Hitt would at-

tend the Friday Board meeting in Car-

bodore Board legal counsel Richard

Grundy said the present Board members

would serve until the appointees are

confirmed by the Senate.

Ogilvie's action completely alters the

make-up of the SIU Board in areas of

age and occupation, and for the first
time gives SIU a representative from

northern Illinois.

Average age of the Board is reduced

from 72 to 58 years and the occupation of

the majority of the Board as bankers

is changed. The new Board will have

one banker, two doctors, one lawyer,

one insurance executive, one business

executive, and a farm organization

executive.

Ogilvie served as director of the

Chicago Urban League for 14 years un-
til last year when he retired to accept a
position with the Johnson Product Com-
pany of Chicago as assistant to the

president.

Berry said he had been asked by

Ogilvie last Saturday to serve on the

SIU Board and said he would like to see

SIU "become one of the truly

significant universities in this nation."

He said he was interested in the

education of the poor and minority

groups because "they have to get their

education for the most part from public

institutions."

He said he was aware of the number of

black students enrolled at SIU, presently encompassing 11 per cent of the

school's total enrollment.

"I don't think this is as large as it

ought to be," he said. "Carbondale has

Let it be a trend

Lab schools staying open

Parents of University School students have asked the Board of Trustees to reconsider the decision to close experimental and laboratory schools before making a decision on whether to close the SU.

A letter sent recently to Board members says that a trend toward closing such schools on university campuses is being noted.

The letter, signed by James N. Rodgers, professor of chemistry, refers to a 1965 survey by the American Association of Colleges for Teacher Education, that shows that fewer laboratory schools existed between 1948-1966 than in the previous five years. The survey also pointed out that some new schools have been opened.

Elmer J. Clark, dean of the College of Education, recommended the school's closure at last month's Board meeting in Edwardsville.

Clark favors closing the laboratory schools, which are one of the reasons. University of Illinois students are the School should close.

The letter suggests that instead of closing the school, the school's role in the College of Education could be changed. Instead of using the school for student teaching and observation, as in the past, the letter said, there should be new emphasis on educational research.

"These schools can make a unique and crucial contribution to education through research and experimentation on teaching methods, teacher training methods, and SIU Engineering Club to hold annual banquet

The Little Red Wagon may offer Chicago run

Carbondale Transit Co. (Little Red Wagon Lanes) may begin weekend service to Chicago, according to Richard Bramen, president of the company.

Bramen said the service would be run between Carbondale and several Chicago area locations. The fare could run $7 to $8. One way service would have lower rates and get prices, he said.

Bramen was unsure when service could begin. He said that there are numerous legal complications involved in setting up this type of service.

"I thought it would be easy to do," Bramen said, "but it's just tricky to be operating in Carbondale right now.

The success of the plan according to Bramen would depend largely on student support. I want to provide a service," Bramen said, "They've (the students) let the BT run them all the way, you have to give the audience a chance to have an alternate.

Bramen said he hoped it would be possible to provide service to Ft. Lauderdale, Fla., during spring break 1972, however, that such service would not begin for at least 1 year.

'Population explosion' is a myth, a diversion

To the Daily Egyptian:

So often I read that by the year 2000 the population of the United States will be 250 million and that this is a population beyond our ability to care for. Yet given the population of countries like England, Germany, and the Netherlands and given our area and natural resources, a population of 300 million does not seem all that great.

I think that the so-called population explosion in the United States is more or less a myth propagated by "abortion on demand" people and this diverts our attention from the real problems of our country and their solution.

There is no correlation in the United States between population and a human standard of living. In the 1930's the population of the United States was much smaller than today. The proportional standard of living was not higher but lower. In 1940 the unemployment rate was 5.5 percent. In 1960 the unemployment rate was 3.6 percent. Neither rate had much to do with population. About one family in ten was below the poverty line in 1960 compared with about one out of four in 1947.

The solution of the problem of a human standard of living for all citizens of the United States whether 250 million in the year 2000 or 300 million in that year or some other time is much more than that depends on a reform of our governmental, economic, social, and educational institutions. If these institutions are reformed and, if the rich and the super-rich do not continue to dominate the United States, we can have a decent human standard of living for even 310 million Americans in the year 2000. If these reforms do not come about, there will be widespread turmoil and a war for survival in the year 2000 even if the population is only 250 million or less.

I wonder if the birth rate continues to go down if not will there come a time given a higher birth rate in the past when there will not be enough young and middle-aged people to support a growing population of old people whose numbers will be great because of a previous higher birth rate and increased longevity.

I also believe that, when one begins to predict populations and the ability to sustain populations forty, fifty and even a hundred years ahead, that this is a scientific fact but an educated prediction or guess. There is simply no way to know what discoveries and advances in food production, etc. will come in the next fifty or a hundred years. Who in 1871 or 1930 could have predicted the scientific advances, etc. that have been made since then?

Opinion

New chapter in SIU history?

March I may open a new chapter in the history of SIU. The new chapter may be very long or extremely short, depending on the degree of cooperation and concurrence that will come from the University Senate.

Chancellor Vaider has chosen March I as the date for filing of the first draft of the original senate which will function until permanent members from each constituency can be selected.

The University Senate, the legislative remedy suggested by the Joint Task Force on Governance, has been established by various and dangerous to the academic freedom of faculty members, of creating still more concerns among the constituent groups. Valid as the criticisms may be, the result of self-interest and concern for the good of only a small segment of the entire campus community.

Therefore, the voting faculty are quite naturally reluctant to "relinquish" any power or add new voting members to their ranks. The system is to be concerned with "matters of educational policy which are not assigned to the level of the faculty or college." The system will also be concerned with non-academic policy matters of concern to the campus community. Clearly, in areas where they now have jurisdiction, the faculty will not suffer any power loss.

Perhaps we are also questioning whether the slow, demeaning task of legislation will distract them from their primary tasks of teaching and conducting research—in short, will it interfere with their "scholarly duty"? Or will the senate may some time demand on those chosen to represent the faculty but those who wish to participate should be willing to give of their time in the first place? Not all faculty members will be interested but not all U.S. voters choose to run for mayor or congress. Nevertheless, those who wish to run for office find the time.

Crucial, too, is the state. Students point to the low voter turnout, crying "Appeal to the people that there is real support and the low support the senate would have difficulty emanating in the state."

There is voter "apathy" in our state, local and national elections every time there is less than 45 percent turnout. It may be that our faculty are trying to operate. And the results of this bodies are binding as law.

Concern also develops over the question of whether the new senate will increase the adversity between the campus community. The danger of bloc voting and special interests is present. But any body representing the faculty.

There are many interest groups and lobbies operating to influence the U.S. Congress but no one denies that the existence of a body representing all the people. Congress has been functioning nearly 200 years and, regardless of its success, at least the early leaders and voters gave it a chance to work.

Admittedly, the University Senate idea is experimental. The task force recognized the fact and provided for change as the senate gains working experience. Hopefully, it will be a powerful and ideal solution to every campus ill but it is a possible solution.

A university is composed of many different communities. Each community will be given a voice in the senate. Failure or success will depend on the cooperation and trust of the members of the senate and the rest of the SIU population.

Skepticism is a deterrent to the workability of the new proposal. What the Senate needs is constructive support. The new chapter at SIU may read "Died at birth" if the groups who approved the proposal in the first place do not stick together at least to begin change the system.

Opinion and Commentary

EDITORIALS — The Daily Egyptian encourages free discussion of current issues through editorials on these pages. Editorials labeled Opinions — are written and signed by members of the student news staff and by students enrolled in journalism courses and represent opinions of the authors only.

LETTERS — Readers are invited to express their opinions in letters which must be signed with name, classification and major, or faculty rank, address and telephone number. Letters should be typewritten and their length limited to 250 words. Letters should be signed with name and should not be anonymous. Letters are edited for length and are urged to make their points in terms of issues rather than personalities. Acceptance for publication will depend upon the limitations of space and the timeliness and relevance of the material. Unsigned letters will not be accepted, and authorship of all letters must be verified by the Daily Egyptian. It is the responsibility of the Daily Egyptian to determine content of the opinions pages. Other material on pages four and five includes editorials and articles reprinted from other publications, syndicated columns and articles, and inter- pretative or opinion articles authored locally.

Page 4, Daily Egyptian, February 18, 1971

We did it again, sport! All the way to the moon and back!

SIU government runs parallel to U.S. form

To the Daily Egyptian:

I have been reading, with some interest, the remarks and comments of elected student government leaders about the proposed "democratic parliament." I have been noticing, with some amusement, that those in power (little that there is of it) such as the president of the student body are against its formation. It would seem that we have a parallel here between the SIU form of government and that of the national form. In America you must obtain publicity to win. This is obtained by being famous or rich. In this a problem was defeated in a primary by a millionaire who spent hundreds of thousands of dollars on advertising.

At SIU it seems to be the same case. You must be famous or rich if you want to have any chance of being elected student body president. According to what I know of the proposed system, anyone can present himself to the new senators and explain his plans and ideas or be ran for the senate and explain them as a senator.

I think that I could have some decent ideas about running student government but I cannot be elected. I am the way of the American form of government. I am the way of the American form of government and I am the way I am.

What place does the present form of government have for me? Do I run with the other 'independents' and get a total of 75 votes out of 7,000 cast or do I become a clown and try to attract attention that way.

It is no wonder that President Schereschel opposes any change in his form of government. I am sure President Nixon would also oppose any change in the present form of government. After all, they are in and we are out.

There must be a change to allow the average student to hold high office. I think this idea of parliament is one way to do it.

Our last comment—How many hundreds of dollars did your party spend on the election? Mr. Schereschel'

Pre-Law
Decentralization—maximum autonomy for the two campuses of SIU under a single Board of Trustees—is now a reality at the University Advisory Council (UAC) in preparation for a report to the Board of Trustees Friday.

A number of administrative changes will be made to form a central, administrative structure to replace the Office of the President—defunct since the Council’s creation last September.

In capsule form, the Council will be deliberating on an issue that has waxed and waned in prominence for over four years at SIU—how much campus decentralization is advisable.

An examination of reorganization at SIU reveals that several major developments have occurred.

The UAC has already decentralized at least 28 of the 66 administrative units now controlled by the Office of the President.

Certain University-wide functions have been identified that can stand alone. But there is no corresponding central officer to head them.

UAC officials generally feel that they have reached a point where further progress toward decentralization is dependent on setting up some sort of a common administrative structure to handle the central functions.

The question of whether or not SIU will retain the position of Chancellor, or continue in an integrated form, a central administrative organization might be taken in the face of the various alternatives being discussed.

Over-shadowing this decentralization in the potential impact of deliberations currently underway in Committee N of the Illinois State Board of Higher Education is the possibility of creating the entire governing system in Illinois higher education.

Rumblings begin in 1966

Decentralization has only recently taken on critical importance at SIU but, in order to understand the impetus for change, one must begin by examining the history behind this drive toward campus autonomy.

Early rumblings about decentralization can be traced to developments as far back as 1966.

Master Plan Committee (predecessor to the current committee) submitted a report to the State Board in late 1966 calling for the separate governance of the two campuses at SIU and the creation of what the committee called the "free standing" campuses.

While this report was never implemented by the State Board, the idea was broad and far reaching.

An informal faculty group on the Edwardsville campus first openly raised the issue of decentralization in the fall of 1968.

President Ralph W. Ruffner, "a significant number of faculty on the Edwardsville campus were growing restive. There was, in my opinion, a groundswell toward decentralized administration."

He said the question of decentralization was never a "yes" or "no" in the minds of faculty members but a question of how much decentralization was required when they will be separate universities. Ruffner said.

He traced a good deal of the "flak in 1968" to misunderstanding about the term "free standing administration."

"Free standing" needs definition

"The question of free standing looked at totally would mean having two separate boards of trustees.

So the problem facing the institution was to jam that free standing concept within the one Board of Trustees," said Ruffner, who at that time was vice president for area and international affairs.

Complicating this picture were the guidelines set during Phase I of the State's Master Plan for Higher Education, adopted a year earlier, which said in part that no new free standing universities would be created within the next five years.

Willis Malone, then assistant to the president and one of the key players of that year, said such a ruling would not exclude the creation of an "associate board of trustees for the Edwardsville campus because Edwardsville would not be a new institution."

Edwardsville Chancellor John S. Rendleman said that, while there has been some discussion about separate university status for Edwardsville, no University board has taken a position supporting separation.

Speculation about the eventual splitting of SIU continued, however, in 1967.

President Delyle Morris sent out a faculty newsletter in Jan. 1967 discussing the faculty's opinion on the issue of autonomy.

A special faculty committee was established to review the reaction but its role was expanded shortly afterwards to deal with an overall consideration of changes in University organization.

Issue submerges in 1967

The issue of autonomy for the campuses remained largely submerged the rest of that year, however. Morris reviewed various aspects of the problem for many months, according to Ruffner, finally recommending the creation of a chancellor system in May of 1968. The Board of Trustees authorized that proposal June 30.

This was the first step towards decentralization.

Creation of the chancellor system focused decentralization largely on the area Head of schools and colleges on each campus began reporting to their chief, the newly appointed functional vice president who represented a central system organization.

Most of the time VTI goes quietly about its business of providing top notch, relevant instruction for the people of Illinois but several weeks ago it received a good deal of publicity —none of it bad— because of a fine decision made by the two programs.

Each VTI program is to be shielded off from the local junior college or college in the area with more moves in the offering.

Such moves are possible under the new system because the programs and limit their enrollment to area residents, leaving VTI and its student body with little more than the name in the calendar.

I am personally concerned about the possible loss of this unique and vital institution because I come from a background of Bittermaschists, bakers, secretaries, mechanics and carpenters.

My interest is not that of the student, but the contribution they make to our society. In this technological dog and age when there is such a shortage of trained computer mechanics, skilled workers and craftsmen and a glut on the job market of college educated people with unattractive skills, I think all of VTI's programs should not only be maintained but expanded and new physical facilities be built for them although the programs, equipment and faculty are of the highest quality even now.

On June 6, 1968, President Morris further formalized the University Committee on Governance and Reorganization, which established depth three units within the structure of the University that had not been initially assigned to the committee for evaluation and to make recommendations concerning the ultimate organization of these units within the institutional framework.

In October, 1968, the committee issued a report recommending expansion and an investigation by the State Board, the SIU Trustees commissioned a report on Governance and Administration of the University in January of 1969.

The Chicago consultant firm of Creșșap, McCon, and Faget made its recommendations in June of 1970.

Their report outlined six administrative levels, all under the control of a Chief of Board Staff reporting directly to the Board of Trustees.

This move completed, for the most part, the decentralization of the administrative structure and the creation of a chancellor system two years earlier. The academic areas would now fall under the General Studies Program. The Board of Trustees has commissioned reports from each chancellor and will make advice and recommendations to the Board of Trustees is expected.

In July, 1979, the Board established the Office of Chief of Board Staff, as recommended by the Creșșap-Faget report, and created the University Advisory Council, Duties once held central and administered by the Office of the President were split between the Board Staff and the UAC.

The Council was created for a transitional period to June 1, 1979. Under the charge given by the Board, the UAC was charged with assuming the chief executive authority once vested in the President.

The Board Staff, under the direction of James Brown as Chief of Board Staff, was empowered to act largely as a representative of the Trustees in the area of governance.

The UAC was charged with the major responsibility for University administration.

System vice presidents named

Under that broad area of responsibility, the Council's main focus as a transitional body was to implement the decentralization plan.

Finally decentralization had reached the point where it was legitimized by a specific mandate from the Board of Trustees.

To aid in that Gargantuan task, the Board authorized the creation of five system vice presidents. VTI's, for each campus. I. P. Brackett was named vice president at Carbondale and Ralph W. Ruffner was appointed system vice president at Edwardsville.

In a message to the Champaign and Clarence Stephens, chairman of the UAC, Brackett and Ruffner plus the two chancellors make up the Administrative Council.

Brackett and Ruffner are chiefly responsible for organizing the management and procedures necessary to carry out decentralization.

They have been without problems, however, and the decentralization process has reached a critical stage that has necessitated a review of the Council's role and the question of its eventual replacement.

The results of that review will be the subject of the Council's June 5 meeting.

The major task now confronting the Council is the question of how to organize the upper administration of the University to face the future with confidence.

I am hoping the Council will answer to the question. Should it have a president?"
Holy Buddhist scarf protects Cambodian soldiers in battle

By R. Steiner
Copley News Service

PHNOM PENH, Cambodia—The hazards of soldiering have always been great. They are even more so if you happen to be a Cambodian soldier.

You are equipped with a Communist Chinese, American, Belgian or Chinese-made knife—all of different calibers—and 25 rounds of ammunition, if you’re lucky. You also have a few bandages and if you were fortunate enough to get a month’s training in South Vietnam, a steel helmet.

Finally, the government issues you a holy Buddhist scarf. If your religious beliefs are strong enough, it will protect you from enemy bullets.

Then you climb into a bus or Peugeot truck and head off to the front.

The front is a village the enemy has just taken. The buses and Peugeot trucks stop and the battle begins.

Yard by yard you advance. The sound of small arms fire and exploding mortar rounds deafen you. You empty your weapon at a low 100 yards ahead and reload.

Your friends get wounded. Some die. They are carried to the rear. You are glad you are not one of them.

At nightfall you dig a very shallow foxhole. You’ve not had anything to eat since morning.

It seems like an eternity before the sun slowly rises, but you don’t notice it. The enemy has again sized firing. You push your head a little deeper into the dirt, trembling with fear.

A Buddhist amulet in your mouth and the government-issued scarf around your neck, you pray to Buddha.

Suddenly all is still.

You count your ammunition. Each soldier has about 200 rounds left. One soldier walks to the rear, where he tells there is no more ammunition, no more food, and not a drop of water to be had. The road back to Phnom Penh has been cut by the enemy.

The news is accepted stoically at the front.

That night the enemy launches another mortar attack, but this time it is followed by a ground assault. A U.S. C-130 gunship arrives halfway through the battle.

Waterfalls of red tracers rain upon the enemy-occupied village. Flares, illuminating friend and foe alike, float gently to earth.

Assumption is running out. Two soldiers decide to withdraw, but their colleagues are seen by the enemy and both are shot down.

You hear something. You turn a hand grenade. Suddenly you are a shadow, then two more. You don’t make a sound. Your face is pressed into the dirt of your foxhole. You hear and feel when the bullets hit you—you lose consciousness.

The next day you awaken among more than 100 other wounded men.

You have pain in your shoulder, side and leg. Your uniform has been cut away and the blood-stained bandages show where you’ve been hit. On the other side of the road lie the plastic-covered bodies of the dead.

A rescue helicopter manned by South Vietnamese hands in a paddy

The walking wounded fight for a place in the chopper.

Those too weak to move are carried. The cool breeze of the propeller blades carries away the stench of rotting flesh.

You lie on the floor of the helicopter as it races from the battle scene.

You are going home.

You are lucky. Many of those on the ground will never see home again.

---

Battle call

Cambodian infantrymen rest by the roadside as the enemy retreats. Although wounded, they still fight until the evacuation helicopters arrive—sometimes two or three days later. (Copley News Service photo)

FAA in 37 counties invited to Ag Guest Day program

By University News Service

Invitations to an Agriculture Guest Day program at SIU Feb. 27 have gone to high school Future Farmers of America chapters in 37 Southern Illinois counties, says Emil Natter, president of the sponsoring SIU Collegiate FFA Chapter. Included in the 37-counties area are 188 high schools with vocational agriculture programs, mostly in that part of Illinois south of U. S. Highway 40.

Natter says the Guest Day program will be primarily in the Agriculture Building, beginning with registration from 9 to 10 a.m. and concluding at 3:30 p.m.

City officials agree student candidacy good for all

By David Burton and Sam Cox
Student Writers

Although Carbondale city officials view student candidacy in the upcoming primary election as a significant step, they don't think winning is probable.

Mayor David Keene strongly supports the presence of SIU students on the ballot in this year's primary election. "This kind of involvement is in the best interest of the community," he said.

Councilman Hans Fischer, a candidate for mayor, and Councilman William Eaton also agreed that it is good for the community to have students run for election to city office.

"I certainly am in favor of students being involved in this," Fischer said. "I think there is a direct relationship between the needs and the vote of the students in the community. City government must respond to these needs, and I think the idea of student candidates is a step in the right direction."

According to City Manager William Schmidt, direct involvement by students in city government is at the heart of the democratic process.

"We have always said in this country that the polling booth is the place where our decisions are made, and I don't think this is out of date," Schmidt said.

Eaton continued, stating "I think there has been something constructive to contribute. I do think that the students of today are concerned and responsible," he said.

"Will the student candidates win?" This is when pessimism takes over.

"It is difficult to estimate how many votes the students will receive, but I don't think it will be enough to win," City Attorney Ron Briggs said.

Councilman Joseph Ragland commented, "I am going to be difficult to find anyone who will vote for students in the area in which I live."

There is no antagonism built up against students from the riots of last year.

Jones also believes that the student candidates will be defeated. "I personally don't think that any student will win, but there is always the possibility," he said.

Jones added that he thought the students would receive some votes in the eastern part of the city, particularly in the northeast section of the city, especially from the younger voting public there. "Students have been looked on favorably, because they have come into the community and helped with the building up of a young, rat-control and other such problems," Jones said.

In his opinion, student candidates have made a severe tactical error in running more than one candidate for one office," Mayor Keene said.

"They apparently don't realize it, but they are running against themselves," the mayor continued.

"I felt there was a great chance for a student to win this year." But by the end of the campaign, the mayor had changed his mind. He now believes the student candidates would not win this year.

"Some Carbondale taxpayers view SIU students as 'temporary citizens' who have no right to an official voice in city government."

"There is still substantial resentment throughout the community as a result of last spring's disorders.

"Most students are not permanent residents and would not be around to pay the tax proposals they instigate," Ragland said.

Eaton, speaking on the same point, said, "Some people believe there is no burden placed on students when taxes are raised, but this is not altogether true. When taxes go up, the students' housing rates also go up."

Briggs posed a question which he said is asked by many Carbondale taxpayers: "What assurance does the voter have that the student will be around after his education is completed?"

But according to City Manager Schmidt, "dorm students' involvement in government is a movement because of temporary residency is a contradiction. One of the reasons the University was placed in this area of the state was that you could not make your home in Southern Illinois after receiving your degrees," he said.

"I hopefully we can provide better environment opportunities in the area during the next few years so that this goal might be fulfilled," Schmidt said. "Therefore, it is only natural for students to be interested in the government of the city in which they attend school.

According to Mayor Keene, "The temporary residency issue holds no water at all. We have much to learn from students. They can view our problems in a way that other citizens can't.

Keene continued, "I would liken this to industries which send young men into communities for three or four years and then move them. The result is that everybody, most of all, the community gains.

"The assumption is made that the average citizen of Carbondale is a real old-timer," Keene said. "But actually the facts show that the average citizen of the city has lived here less than 10 years."

Leitner has been a Carbondale resident for eight years, Fera for seven, and Thomas for three years.

Even if the student candidates could substantially discount the label of "temporary resident," they would still have to contend with antagonistic feelings in the community stemming from the May disturbances of last year. Most of the city officials feel that the disturbances have taken a lot of traffic away from the students and that this will effect the election.

"Violence never builds," said Police Chief Joseph Dakin. "It can only destroy. This behooves the students to run in such a way in the election as to build back some of what was broken down last spring." Dakin said that he welcomes students into the race and indicated that he would feel comfortable working with any of the students if they were elected.

Mayor Keene said that "It will take a long time before last spring is forgotten."

Councilman Eaton agreed. "Many people throughout the city are extremely bitter about last spring's disturbances and would ask, 'How can students seek responsibility when they have demonstrated that they cannot handle it?'"

What about student candidates in the future? The city officials seemed to agree that, whether or not the students are elected this year, their presence in the race will influence city government during the future months. Most officials also indicated that students will fare better in future elections.

According to City Attorney Briggs, this campaign is the first one in the state's history in which students have run for city office. "I think it is a good idea. There is a new awareness of government by youth which hasn't existed before."

Briggs indicated that he thinks it will take some time for citizens to acquaint themselves with the idea of students running for office. "I feel that in the not too distant future people will witness the students and welcome them to public office."

Councilman Fischer said. "By their presence in the campaign, the students are raising issues which might not have been brought up by the candidates in the past."

Schmidt also said that people are gradually becoming more accepting of students' genuine concern. "I think many people who witnessed the disorders last spring, while angry, also realized that the students were concerned and that a channel for involvement must be made available."

Keene commented, "I believe the result of a student being elected would be better government. Young people are not hampered by failures and discouragement, plunge right in. They make mistakes, sure, but the good results far, far outweigh the mistakes."

Councilman Jones indicated that the community will benefit from having the students in the race. "I think everyone has something to give--it doesn't matter how long your hair is. If they don't get together and work out our problems, there will really be trouble."

All of the officials expressed various degrees of approval of the student candidates, and all agreed that some good would come from having them in the race.
Philosophical talk, film to feature ecological beliefs

By University News Service

Philosopher Houston Smith will discuss oriental and western perceptions of the environment in a Thursday talk at SU.

Smith's presentation, "Man-Now Ecology in World Perspective," is part of a continuing interdepartmental mental symposium on "Man and His World." Smith will speak at 8 p.m. in Auditorium Room 844 at the Normal Heights National Physics Building. The presentation will include a film.

Smith, a member of the Massachusetts Institute of Technology humanism department, was formerly on the philosophy-student staff at Washington University. He has written on various aspects of philosophy and the purposes of higher education.

He will speak at an SIU philosophy department colloquium Thursday at 4 p.m. in Room 208, Human Ecology Building.

Board appointees wish to better SIU

(Continued from page 1)

done better than most universities in this area, but during my term of service I have been able to compare us with the very best institutions and some doing poorly in this area and others.

He said he looked forward to working with a "good, perceptive Board and its administration in it."

Berry has been a member of the Committee of Governance for the Illinois Board of Higher Education and the Black Legislative Clearing House. He has also been active in Chicago civic circles.

He holds a degree from Oberlin College and DePauw University and a master’s degree from the University of Pittsburgh. He was formerly a member of the Board of Trustees at Riddle College in Illinois.

D. Blasley Miller, former Carbondale commissioner and mayor, is running for a City Council seat on his experience and a program of community improvement.

Miller said that because Carbondale will have a new mayor and two new councilmen after the April 30 election, it is important that those with experience in city government be elected to the Council.

Miller was mayor from 1959 to 1962, and a city commissioner from 1955 to 1959. A member of the Carbondale Chamber of Commerce, he said he would work to improve the city and understand one another.

Two town meetings will be held to bringing factors together. Miller said he had been contacted by individual meetings especially for people who wish to talk to their neighbors but without banning anyone from any of the meetings. He said that it would also be good for city officials to meet with SIU students on campus.

Another area that Miller said needs worked upon is the lack of employment in Carbondale. He said that industry in particular should be brought to the city.

"We could do this through personal contact with industry and the educators here at SIU in Carbondale," Miller said. "We could also advertise, perhaps in the papers, to bring more industry into Carbondale."

Miller said that SIU students could help attract industry to Carbondale. He said that students could call their parents about Carbondale and perhaps use any influence their parents might have to direct industry toward Carbondale.

"We want the opportunity to show people what a good city Carbondale is," Miller said. "The University—the IU—we're all one, and that's how it should be."

Eckert's SUNSHINE CARNIVAL

All winter long we send our own trucks to Florida for the finest, juiciest, tree-ripened oranges and grapefruit. It's all extra large, extra fancy, and it's the freshest citrus in town.

A new shipment will be sold right off the truck this Thursday, Friday, and Saturday. Buy 'em by the case for tremendous savings.

Siu dean named to city board

By Dave Mahan
Daily Egyptian Staff Writer

"I'm interested in how the police relate to the people they serve," said Dr. k. F. Zimmerman, assistant dean of students in the Office of Campus Undergraduate Students and newly-appointed member of the Carbondale Board of Police and Fire Commissioners.

Zimmerman was appointed to the three-man Board Tuesday night by a vote of 3-2 at the Carbondale City Council.

Zimmerman said that he has been interested in the actions of the Board for some time. He said that he has worked with both Carbondale and SIU Security Police, especially in the area of students' problems.

Budget problems plague U-School

By Chuck Huchercraft
Daily Egyptian Staff Writer

Chancellor Robert G. Layer said Wednesday he is submitting the recommendation to the city of Carbondale to close the University School because of budgetary and program considerations.

Layer, responding to a letter from John McAffrey, student body vice president, protesting the closing of U-School, said, "I have been convinced from my discussions with the dean that this action would be in the best interest of the school."

He was referring to Elmer J. Clark, dean of the College of Education, a supporter of the recommendation.

The letter was one of three McAffrey has written recently in accordance with legislation passed by the Campus Senate Feb. 3. At that time the Senate passed a resolution supporting the maintaining of U-School on campus.

Layer said most research by the faculty is not being done at U-School. He added that the number of students there is too small for "good experimentation."

It is also difficult, he said, that funds to carry out programs "people prefer" can be obtained. He mentioned the fact that the Illinois Board of Higher Education has recently cut budget requests.

He said area public schools are willing to accept the U-School students. Clark, he said, would have to "fine tune" the high school program to meet the needs of area schools.

To this reason Layer said he had for submitting the recommendation is that Clark and the faculty in the education department are "out of date in their recommendation to close U-School."

Clark said, "We can conduct research more effectively in the public schools.

His main reason, for suggesting that U-School be closed, he said, was that the funds for the school "should be used for the education of all University students."

In his letter to Layer, McAffrey explained the purpose of U-School saying it is a valuable teaching instrument in the department of education where there should be experimental teaching programs.

McAffrey said that experimentation can only be carried out at U-School. "The attempts in the past to use the public school system as such a laboratory have been met with repeated failure," he said.

SIU U-School has failed as a laboratory for new and innovative teaching programs because of improper administration. He said Clark and William Matthias, principal of U-School, have not provided the leadership needed to the implementation of new ideas or programs.

Concerning McAffrey's charges against Clark and Matthias, Layer said, "I have no feeling that this is true."

Clark said he did not know why McAffrey wrote the letter, and that McAffrey had not discussed the matter with him previously.

Law officials will discuss joint plan

A new proposal concerning civil disturbances will be discussed by local law enforcement officials Thursday.

Representatives of the SIU Security Police Office of Chancellor Illinois State Police, National Guard, Carbondale's mayor and city manager's offices and the Jackson County Sheriff will attend the meeting.

The meeting is closed to the public, but a press conference will be held after the meeting at the University Center.

Library reopened: Electricity restored

University workers restored electrical power to Morris Library and the building was reopened Wednesday morning.

Salley Matthews, assistant library director, said workers installed a temporary circuit to provide electricity for the first three floors of the seven-story building at about 10 p.m. Tuesday.

Carbondale fire officials said the fire, which began about 7:30 a.m. Tuesday, started in newly-installed switches in the library basement.

Matthews said the only damage from the fire was to the mechanical room in the basement of the library.

Frosty ice, Qwent water, Stars' reflections. Natural designs and a sunny afternoon. These were the nature subjects of Daily Egyptian photographer John J. Lapinet. A quiet walk along SIU's Lake on the Campus provided Lapinet with inspiration. Viewing the subjects in abstract closeups provided the motivation. The camera and film captured the subjects. The calendar provides the reminder that Wednesday may well have been the last time these subjects will be on display until next winter.
No U. S. airpower limitations

WASHINGTON (AP) - President Nixon and South Vietnam's leaders have no limitations on potential use of American airpower anywhere in Indochina—except to bar use of tactical missiles, administration officials said.

At a news conference Nixon was asked about speculation that South Vietnamese might use American missiles on their own. 

Nixon said he would decline to speculate on what the Saigon government might feel impelled to do to protect its own national security.

But he made it clear that, should the South Vietnamese army push north, American forces would be ready to fight and would have to meet with his approval if American forces were involved in any way.

Asked if he thought operations in Laos might prompt Communist China to enter the conflict, the President said those questions appeared to be aimed at him and that the Chinese should not be interpreted by the Communist Chinese as a threat to them.

He added that he did not believe the Chinese would see the last-minute exacerbation as a threat.

Nixon was questioned at the outset about the limits he would place on American involvement in Indochina. While insisting that the United States would use neither ground troops nor nuclear warheads in Laos or Cambodia, he said, "I'm not going to generate the limitations on our use of air power.

Then he added that, of course, tactical nuclear weapons would be one of the questions.

Priest advocates government overthow

By Ronald Richard

The Providence Journal

PROVIDENCE, R.I. (AP)—The Rev. David Francis is a tall, lean, almost solemn priest who prays that before his mission is almost over he can bring to the church in the overthrow of the government of the United Nations.

The aesthetic looking Jenin admits to being an agitator, an apostate, a man who prays that before his mission is almost over he can bring to the church in the overthrow of the government of the United Nations.

After a dozen or so years in a anti-war bubble, according to Father Francis, he came to the realization that it is an important to live the gospel as it is to preach it.

"Any system that preaches and practices the green poon and teaches with napalm doesn’t always have to be overthrown," he said.

At a recent, he was asked about overthrowing the government, he declared, it is to renounce a status, that renunciation is the supreme civil law of the land.

Making the U.S. truly democratic, he said, is the second major task.

"We see the overthrow as being accomplished through the building up of a mass movement of people in their control of their own governments through the whole society," he said.

American agriculture needs to use natural resources on the basis of both its pollution prevention potentials and the raising of new opportunities for people in agriculture to be concerned about the environment. The practice of agriculture must be consistent with the demands of the whole society.

Agricultural scientists and farmers need to become ready and willing to remove the facts with which the new enemies begin to arise in the drama against all chemical pollution, the pollution of the soil, and, especially, the pollution of our bodies. They have already done a very good job on DDT, he said.

When someone mentions toxic chemicals, Dr. Barks, you say, "Sure, they may be harmful under certain conditions, but plain old kerosene is about twice as toxic as DDT and over 20 times as toxic as malathion," he said.

Agriculturists should be able to clearly explain the differences between toxic and hazardous. It is crucial that farmers and farm families be concerned about the protection of their land and their health. It is crucial that they be concerned about the protection of their land and their health. It is crucial that they be concerned about the protection of their land and their health.

And there is no reason to brush aside ecology, and agriculturalists can no longer sit back and bask in the accomplishments of past years. They need to get informed and work hard to get the facts as they apply to the environment. Leasure said.

The said fertility researcher today must be concerned with more than just rapid responses and the maximum return to the farmer from fertility management. He also needs to be concerned with the long and short term, with minimizing, or at least, reducing, the loss of fertilizer usage on the nitrogen levels in surface tillage, the development of new fertilizer products, in the areas, and in the area.

Agriculturalists need to get facts on how much herbicides and pesticides, as they are now in agriculture, actually pollute.

Waste disposal is a problem affecting agriculture in more ways than one, he said, because most waste of both rural and urban centers is inevitably disposed of in rural areas. And a good waste situation is more than a question of what you do with the waste, but also with whom the waste will affect.

Farmers and agricultural scientists should be leading the way to solving the problems of waste disposal that is connected with animal feeding operations.

Agriculturists need to help determine how to handle municipal wastes without running either the highways or the precious beach of the landscape. Leasure said.

But, the reason of protecting valuable farmland land from the encroachment of expanding cities and highways systems. Country wide running of other land use designation should be encouraged to be reduced to limit the urban-rural friction. It is time to start planning on a large scale how much land to preserve for farming and how much urban centers already on the area should be allowed to grow.

Plans advancing for SIU med school

By University News Service

In Springfield, Dean Richard Moy and a small staff are working to assemble a faculty and arrange a clinical program for the new School of Medicine of SIU's medical school without walls. Dr. Moy, who is working closely with the SIU Health Service, presently at the University of Illinois, and is also the head of the center for medical education at the University of Illinois, is developing the way for the opening of medical education in a way that is compatible with the present state of medical education.

Dr. Moy is developing a medical curriculum with existing out-of-state clinical agreements with area hospitals, because the center's clinical program is to answer questions posed in from curios adults and prospective medical students.

Dr. Barks is continuing all his other professional work, which includes the management of the practice of medicine and the operation of a hospital.

Springfield was selected for the major clinical site because the two hospitals there have a total of 940 beds which provide for a wide variety of cases. Working with the two hospitals, these longer-term arrangements have been arranged. Students will go there following a basic year of study at Carbondale.

Additional arrangements, however, that first-year students while at Carbondale, will be exposed to the clinical medicine. For this purpose, the Carbondale area is ideal because of the number and variety of clinical facilities available.

Just for starters, there are Doctors Hospital, Carbondale, with 180 beds and Marion Veterans Hospital with 184.

While all work of getting started appears to be overwhelming, all of the persons now involved are enthusiastic. Beyond the multidimensions, in the new medical school that will benefit Southern Illinois particularly not only with more doctors but also more medical assistants in a great variety of health-related fields.

Dr. Barks is encouraged but believes that it will be receiving interest and calls not only from persons with questions but also with genuine offers of assistance.

Pollution groups find apathy a problem

By Marti Henn
Student Writer

Pollution groups have problems: solving the problem so far seems more concerned and aware of the environment is involved in various activities and programs.

The Zero Population Growth (ZPG), the SIU Committee for the Future, and the Environmental Teaches at SIU.

However, activities become solitary as some groups have experienced difficulties getting participation.

The ZPG chapter of Zero Population Growth founded two years ago and is one of the 200 ZPG chapters in the United States. The local chapter has about 40 mem-

bers.

Paul Armetta, president of ZPG, said the club concentrates on an existing Zero Population Growth national organization's goals.

"We find that our forums on con-

versation are very popular," Armetta said. "So many people are in-

terested in controlling the population growth and hearing about the different viewpoints of contraception, and these forums are about the best way to reach the public and explain the problems.

Currently, we're endorsing the revision of abortion laws. Abortion is one of the most common means of birth control in the world today. In the U.S. alone there are more than a million abortions each year and approximately 10,000 of these women are dying at the hands of quacks.

"When will people realize we can-

not go on like this?" Armetta said.

Our number one problem is population, and the other problems—pollution and conservation and public health, can only be controlled by the stabilization of population.

Photo ID's may solve mass identity problem

By John Carett
AP Business Analyst

NEW YORK (AP)—You can fake a signature and change a number but even a plastic surgeon cannot forge a face, and so, in a limited sense, a person's uniqueness is more appreciated in this highly im-

personated world.

Photographs are now accom-

panying credentials, and millions of identification cards and checks, and the trend seems likely to affect many millions of people.

This is a tense, suspicious world, and those with whom you interact want to be sure that they are interacting with the person they claim to be. A color photograph, im-

mediately handed to a security guard, plastic, sometimes watermarked, is rapidly becoming the proof.

An illustration: The scene in a large Western city is reminiscent of a camel's saucyenny. Vandalism is running very high, with more than 1,000 a year. Leasing teenagers shag couches, etc., but hotel officials are wary of

accusing guests.

Some teenagers often change flowers, skating and swimming lessons radish, surfboards means to fictitious hotel room numbers.

Parents sometimes stay at nearby motel and send children to participate in social programs, dances, etc.

Solution: The hotel now uses in-

stant photo identification cards. As an illustration, for rooms, the camera takes a Polaroid color photo of the special, clearly guarded equipment, bonds it to the plastic in an instant.

Since the picture is not merely humiliating between plastic sheets but blinding who plastic, any at-

tempt to substitute another photo invalidates it.

An attempt at revealing might meet the entire disc anyway.

Without the card in that hotel you must be asked to leave. The lobby has been cleared of unreasoned vagrants, vandalism has almost been ended, the noise level has dropped.

"It's a great way to prevent identity theft,

and it helps control movement of people from a few years ago. They are more likely to know where and what is happening here.

Chuck Papricki, staff assistant in the Rehabilitation Institute and co-

chairman of the Environmental Teaches, said approximately 3,000 Cardale community members, students and faculty members participated in 

the Teaches, but few became involved afterward.

"Members in the actual organization were volunteers," Papricki said. "We had ap-

proximately 80 sign up in the beginning but only 60 did the actual work involved.

Participation in the activity was very good." Papricki continued. "However, very few followed up by continuing in problem-oriented ac-

tivities. I am interested in the long-

range results and Earth Junctures may be able to accomplish what the Environmental Teaches couldn't.

Earth Juncture was formed in 1980 as a summer program to teach children about the environment and have fun working with it.

"Stuffed kids into a classroom and trying to bring the world and its problems in doesn't work," Papricki said. "Society as a whole will have to face the environmental and population problems and by setting children on the right path these problems are common to all man.

John K. Lassen, chairman of Plant Industries, agrees that changes are needed but said these changes take time and certain stages must be reached before being totally effective.

Lassen cites four stages of func-

tional development of social change as noted by Dr. M. Hyman of Indiana University. "We talked to a few people, then we talked to a few more people, then the full group meets, and finally it becomes a problem.

It is necessary to go through this procedure," Lassen said, "and that would be wrong to expect people to do it in one day." Lassen feels that people are now in the second stage of the en-

vironmental effort.

Most students at SIU probably would agree that there is a need for reform and change within society because humans are polluting the environment, over-populating the earth, and killing both the plants and wildlife.

But what types of changes are needed to bring about active par-

ticipation in correcting the problems?

Ray Lenz, graduate student with the Conservation Outdoor Laboratory, feels non-participation in some of the groups and activities at SIU.

Lenz said restructuring the present educational and value systems is necessary if the student is to ac-

cept the environmental goals.

"The activities such as the Environ-

mental Teaches last spring drew few who were concerned, but only on a limited basis.

Swimmers head to Georgia for Southern Intercollegiates

By Ernest J. Schwartz

Daily Egyptian Sports Writer

With their dual meet season now in a happy memory, the SIU swimming teams will set their sights on the Southern Intercollegiate Championsh

The Salukis have won the event the last eight years in a row, with this year's event being held at the University of Georgia. The meet will be held this Saturday and Sunday.

We had a terrible day, said Eades, in reference to the type of effort the Salukis put out in the 200 medley relay.

The 200 medley relay will need a good performance from Eades and the other two swimmers.

Mets pitcher says

Use football-type option

GREENWICH, Conn. (AP) - Tom Seaver, the New York Mets' ace pitcher, said Wednesday he would adopt a plan patterned after pro football's option. It gives baseball players some control over their own destinies.

Seaver said baseball's reserve clause prevents players from jumping from one team to another, prevents players from earning what they are worth on the open market.

He took the reserve clause also has contributed to a deterioration in the relationship between management and the players.

"The ball players relationship with the owners is probably as bad as it has ever been in sports," said Seaver at his home here.

"A player is bound to a life in a team unless that team wants to trade him, and then he has no control over the trade.

"And you have big corporations coming in and taking over baseball teams. Instead of having someone in charge of a team who fully understands the problem of the players and was brought up in baseball, you have some corporation president running the show.

"The players make a good living - I make a good living. That point can’t be argued," Seaver added.

Moore sets AAU running mark

Mark Moore, SIU's against Olympia,奥运, 光明-马克. 莫尔, 莫尔, made a shattering of an AAU 10-mile road race last Saturday in Champaign by getting out in the morning 20 minutes off the previous record set by Donald Kistler with his 62:43 running under the banner of the Illinois Road Runners' Club.

Charles Warthum of Indiana State, the 1970 Midwestern Conference Indoors cross-country champ, finished second, three minutes off Moore's mark.

Gymnast wins before graduation

SIU's Locke eager for NCAA crown

By Fred Winterberg

Daily Egyptian Sports Writer

If it hadn't been for an SIU senior by the name of Bill Minnick who inadvertently knocked Locke off the balance beam during a heptagonal affair Thursday night against Indiana State.

After that, the majority of the other SIU gymnasts had fallen asleep, and it was Locke who scored a 9.8 in the parallel bars, was the event and keep the Salukis in contention in the meet which they won, 172.4-169.5. Locke is the first Saluki to break a four year career at SIU, which" began, strangely enough, with SIU coach Bill Minnuck bonding Locke in the same gymnastics title when Locke was at Southeast Missouri State.

The meet was hosted at Forest View High School, and Minnuck was thoughtful of the judges. When someone asks me to name a form qualifying for the same scholarship, I have a gymnastics title.

It’s a busy judging, much more so than what I thought was really strange enough in a heptagonal affair Thursday night against Indiana State.

"But when I came here, I tried working on the parallel bars. I tried every exercise for as long as I liked that p-bar better.

Dedlock had trouble maintaining his susces Monday night against Indiana State, other than noting that he was doing his old routine which he had been doing for a long time. "I was going to do a new routine," he said, "but at the last minute, somebody conked me to the old one so I did.

The new one has a different type of mount, explained. "You see, with the old one, I bend my knees all the time which knocks two of the two points off right off the bat. I’ll probably use the new one this week against Oklahoma. A radio-relayman major. Locke says his major interest lies in art. I like to paint and draw, he added. "Anything creative.

Does creativity help him in gymnastics?

"Well," he said, "you mustn’t be too creative as a gymnast, because people think that it’s just a matter of doing something over and over until you do it right.

I don’t care who you are, if you practice something long enough, you’ll get it right and I mean you’re doing something long enough, you’ve done it for a long time now, said Dedlock.

The senior gymnast says he’s ready to go in Los Angeles after graduation because that’s where he plans to carry on his gymnastics career.
Salukis top Cards, 113-90; MC crown two games away

By Ken Stewart
Daily Egyptian Sports Writer

The magic number is now two. Scoring at times almost at will, the Salukis trounced Ball State's Cardinals, 113-90, Wednesday night in Macomb, Ill. The win put SIU two games away from clinching the Midwestern Conference's first basketball title. Defeating Northern Illinois in Dekalb Saturday will assure the league leading Salukis at least a tie for first place.

It appeared from the first minutes of the game that SIU would have little trouble with a Cardinal team that has lost more games than any other squad in the school's history.

Wrestlers pin Redbirds, 20-14

The SIU wrestling team climbed over the 300 mark Wednesday night with a 20-14 victory over Illinois State University at Normal, Ill.

The Salukis grabbed six of the ten weight classes with 138 pound Rich Casey getting his victory via the pinning route.

Southern's scoring was rounded out by Rusty Cunningham, KenGerdes, Steve Jones, Vince Testone and Loren Vanyure all gaining victories.

The triumph pushed the wrestler's record to 7-0 and set Long Long's crew up to tackle a rough Iowa State team at 7:30 p.m. Friday in the SIU Arena.

This is SIU's freshman Nick Woods in action on the high bar. Woods is one of a number of people who have come on strong for SIU coach Bill Meads. Another is Dan Locke. To find out about Locke, flip to page 18 and read Fred Weirngod's story. (Photo by John Lagnonci)

Correction
Bill Mehrten of the SIU International Soccer Club was quoted in yesterday's Second Thoughts as saying, "We're not trying to be like the other sports. We're asking for a flush fund or anything like that. We just want to play ball.

It should have read, "We're not trying to be like the other sports. We're not asking for a flush fund or anything like that. We just want to play ball.

Mike Klein
Second Thoughts

Here we go again

If someone gave you $100,000 under the stipulation it would never be spent, you might think he was kind of nutty. What good is money that can't be spent?

It's no more valuable than approving freshmen for varsity football and then passing a motion in vote against a similar proposal on a league basis when the Midwestern Conference draws together for its May meeting.

That's exactly what SIU's Athletic Committee did in its Tuesday meeting. By a 7-3 vote, the group nullified an earlier decision which prohibited freshmen from varsity football competition here.

Then it approved the second motion for a negative conference vote because the emphasis in the league has always been towards university division status in all sports and thus in a college division rule.

Last month, the NCAA approved use of freshmen on college division varsity football and basketball teams "maintaining to help us cut some of the tremendous costs we face in intercollegiate athletics today," said Donald Boydton, SIU athletic director.

Concerned about image

Two weeks ago, the Athletic Committee voted the men's weights, too, 7-3, on the premise that the football program and overall University image would suffer from using a college division rule.

The same proposal for university division schools lost by six votes at the NCAA conventions.

Coach Dick Towers readily admits the rule would apply in only "a few isolated cases." Even so, every possible legal method should be used to develop a winning program.

"We're not going to put an immature person in there to foul out the ball on the one-yard line," Towers told the committee. "But if we have a real fine football player, we'll just be penalizing ourselves by not using his talent.

Towers thinks the measure because he thinks Florida and Southern Illinois could develop a national speed and size that Towers "might convert him like we did (Lionel) Antone."

And he's not the only recruit Towers thinks could step into a varsity uniform next year. Barry Crisman, a Pennsylvanian prep school scholarship offers from Notre Dame, Alabama, Michigan State, Michigan and Purdue, is a corner State.

"He wants forensic and we're one of the better forestry schools in the country," Towers said. "That plus the possibility of playing as a varsity really appeals to him."

The Athletic Committee, in approving the negative conference vote, also agreed it would abide by whatever the conference decides.

Northern Illinois is sure to vote "no" as did the universities because it's the only way to gain nothing from approval. The Huskies are university division in football.

That would leave it up to Ball State, Illinois State and Indiana State to "yes," passing the motion, 2-2. All are football university division.

Maybe those three can still save the measure which could only strengthen the entire conference. But Northern Illinois stand to gain by passage. Even SIU, despite its negative vote...
