Faculty Car Registration
For Fall Starts Monday
New Decals to Have Circular Shape

Registration of faculty and staff automobiles for the fall term begins Monday, according to Edward McDevitt, supervisor of the Parking Section.

Registration cards and regulations will be available to auto owners at the Parking Section office in the center of campus beginning Friday.

McDevitt said special arrangements may be made with the Parking Section to have one representative of a department collect the completed cards and the $3 fee from department and stall members and deliver them to the Parking Section office, where the decals will then be issued to the representative.

"Decals will not be mailed to the departments," McDevitt emphasized.

If a person has traffic citations on his record, the vehicle will not be registered until the fines have been paid and the record is clear," McDevitt said.

McDevitt also released the point that "registration will not be completed on a vetesterate the information on the registration card is incomplete."

McDevitt said the faculty decals for the coming year will be blue as they are this year. However, the shape will be different.

"The 1964-65 faculty-staff decals will be rather circular in shape with wings in the center for the number," he explained.

They are about the same size as the current decals," he added. "However, some persons insist on putting them on their car windows without taking into account the Department," he said.

If they do that this year the decals will cover more space."

Assistant Librarian
To Join SIU Staff

Sidney Matthews, librarian, at the School of Library Science, was appointed assistant director of the University Library effective Sept. 14.

A graduate of Randolph-Macon College, Matthews obtained both bachelor's and master's degrees in library science from the University of Illinois and is nearing completion of the doctorate in library science at the same university.

Before going to VMI, he had experience in various library departments at Ohio State University, the U. of L. and Virginia Polytechnic Institute.

At VMI, he holds the rank of associate professor and is a lieutenant colonel in the Military.

Matthews replaces Elizabeth O. Stone, associate director of University Library, who retired this summer.

Gus Bode

Gus defines extremism as "a campus politician's desire to come up with an issue."
Muriel West's Book on Henry James Novel Is Entertaining, 'Off-Beat' Literary Criticism

It has often been said that the success of any scholarly book frequently is directly related to the number and length of its footnotes.

Now comes Muriel West, assistant professor of English, with a new book that may just sell that trend right back on its bibliography.

Mrs. West, a small, modern woman with a long and distinguished teaching career in her credit, has written a newly published scholarly work that is without footnotes or bibliography.

In the groves of academia this is about as rare as an feral tiger in Thompson Woods.

Her work, entitled "A Stormy Night with The Turn of The Screw," is a refreshingly unacademic approach to the Henry James novel, "The Turn of The Screw."

Robert Faran, chairman of the Department of English, has described it as "an unusual and interesting scholarly work."

And Mrs. West describes it in this fashion:

"It is off-beat, but it is not 'beat.' Make no mistake about it. It requires serious and careful thought and research."

The book reports to be the manuscript of an unknown author found in one of the boxes bought at an auction. The unknown author is what Mrs. West calls "a harumscarum among literary men."

She shockingly lists the first person and does not bother to document what he has to say about the Henry James novel, she continued. The "differentness and eccentricity" carefully and conscientiously fills in the documentation, she states in parentheses and occasionally adds her comments of her own, Mrs. West explained.

Southpaws Not Forgotten When SIU Buys Chairs

By Ed McCormendle

I have tried writing upside down back with both my hands and I can write both hands at the same time. I can't read much, but I can see how people write.

Being left-handed is not really a problem once the practice is learned. Not knowing how to write with my right hand and never having tried I can't see how people write with their right hands, to be frank.

The University is aware of my left-handedness and I hope southpaws even influence the kind of chairs purchased by the University.

According to Rino Bianchi, administrative assistant to the vice president, all new buildings will be equipped with 10 left-handed and right-handed student in a right-handed pencil sharpener.

The figure of 10 per cent is obviously a national average and covers the general population.

"Apparently this percentage is so small, as we have students who are right-handed," said Herbert W. Wohlwend, assistant registrar. "We have attempted to accommodate for the left-handed student."

Knowing the University's awareness is the 10 per cent minority that is left-handed should give us some comfort. Perhaps we'll feel better as we watch your elbows in space and write upside down.

Volleyball Finals

Start at 6 Tonight

Finals in the Thompson Point women's volleyball tournament will be held at 6 tonight, today on the court behind Lentz Hall.

Teams competing for first place are from Kellogg third place and from the first games Tuesday after dropping one game.

In the first games Tuesday night Smith and Kellogg will play 15-3 and 15-12, Kellogg 3 beat Kobel-1 by 15-3 and 15-12, 15-11 and 15-6. They'll be equipped with one game to 15-3.

Film Classics Will Feature Carbo in ‘Queen Christina’

Film Classics will feature “Queen Christina” at 8:00 p.m. over WSU-TV. This is one in a series of great roles also featured in John Gilbert and Lewis Stone, the story being a Swedish World Folk Music Slates Mike Settle On WSU Radio

World of Folk Music will feature “Mike Settle” at 11:30 p.m. today over WSU Radio.

Other highlights:
10:30 a.m. Pop Concert.
12:45 p.m. European Review.
1 p.m. Afternoon Serenade.
2:45 p.m. World of Folk Music.
3:30 p.m. Concert Hall: Bruenker, Symphony No. 1 in C Minor; Chauvon, “Camino Suite.”
4:30 p.m. Hovanesian, “Mysterious Mountain.”
7 p.m. Georgetown Forum.
8:30 p.m. Ravel, “Pavane for a Dead Princess” and “Rhapsodie Espagnole.”
Marais, “Cinq Danse Anciennes”; Piber, Concerto for Piano and Grecian Bading, Symphonic Variations.

Freedom Walker Conviction Upset

The conviction of a former SIU student for breach of peace in an Alabama “Freedom walk” has been reversed by the Alabama Court of Appeals.

Carver Gene Nebelt of Carbondale was one of 10 “Freedom walkers” convicted a year ago of breach of the peace. They were fined $200 each.

In handing down the reversal Tuesday, the court said that facts presented in the case against the 10 white and Negro defendants “do not sufficiently show the commission of any offense,” the Associated Press reported.

Alumna Sees Changes at Southern, Students Have More Things to Do

What changes have taken place on campus between Model T days and the space age? A former student, Minnie Lauder Knight, currently attending the aerospace workshop, has been able to observe these changes.

Atting SIU during 1926 and 1927, Mrs. Knight (then Minnie Lauder) was social editor of the Egyptian. She also served as cheer leader; in fact, her picture is Page 5 of the 1904 Obelisk.

She is greatly impressed with the growth of the campus. She says that when she attended for the first time only one building was Old Main, the science building, the gymnasium, Anthony Hall, Shary Auditorium, Allyn Hall, and the library, now the ROTC building.

One course at SIU Isn’t Down to Earth; Teachers Study Aerospace in Workshop

There is at least one course on campus that does not claim to be down to earth. According to Revello, China has several hundred years head start over both Russia and the United States in the space race.

In 1500 Wan Hoo became fascinated by the moon. At that time the Chinese had firecrackers and rockets. Wan Hoo attached 47 rockets to a chair and fastened himself to it by a seat belt.

He carried two large kites so that he could coast back down from the moon. All of the rockets were lighted and he took off. Because he was never found, legend says that Hoo made it to the moon, how now?

Many of the people attending the workshop are teachers who wish to advance their knowledge of space and rockets.

Mary Jane Phillips, a kindergarten teacher from Pana, says, “I hope to be able to institute a program that will be better able to teach aerospace facts.”

The photographer who was taking a picture of the lecturer clicked the shutter, but the flash bulb did not fire. “You see,” remarked the lecturer, “we aren’t the only ones who have misfires.”

THE SIU ARENA OFFERS A WIDE VARIETY OF PHOTOGRAPHIC SUBJECTS, THE LINES ARE INTERESTING, THE MATERIALS PROVIDE CONTRASTS SUCH AS BRICKWORK DESIGN LEADING UPWARD TO THE CURVING EDGE.

As the finishing touches are done to the Arena, one realizes that the University will have a sort of "GOLDEN DOME" of its own. The Arena seems to project upward from the ground, but the dome rises out of the setting and dominates the landscape in its immediate area.

The SIU Arena---A Golden Dome

Photos by Je Rahman

The new SIU Arena seems dedicated to the proposition that a building should be beautiful as well as useful. As such, it is fair game for the photographer, who seeks lines, and contrasts, and interplay of light, and here and other things that attract his eye and consequently, the lens of his camera.

The Arena, as one studies it, offers a sweeping curve of its roof line, with a variety of intersecting lines both vertical and diagonal. The interior provides a web of steelwork that forms the roof of the structure.

A number of corners on the site were spaced when ground was broken for construction, and those now stand in clear contrast to the Arena and give the photographer an interesting contrast, and ready-made "framing" for some of his work.

As the sun moves around the building diurnally, it offers a changing pattern of shadows which also interest the photographer who is "shooting" the building.

The Arena's landscaping is beginning to show growth in places, and this gives a sense of how the building will look like when enough time has passed to permit the setting to assume its final form.

Meanwhile, the Arena will become an integral part of the life and activities of SIU. It will be used for spectator sports and a wide variety of University activities. ROTC and various University departments will eventually be housed in the structure.

And just about everybody who wants to watch an SIU basketball game will be able to gain admission.

INTERIOR IS A GOLDEN DOME, AND THE OUTSIDE IS A SORT OF TRANSPARENT WEB TO FORM A ROOF AND GIVE THE STRUCTURE ITS LOW SILHOUETTE.

TRANSPARENT PANELS ARE USED FREELY AROUND THE PERIMETER OF THE SIU ARENA NOT ONLY IS THE ILLUMINATION EASIER ON THE LIGHT SIDE, BUT THE OUTSIDE LIGHT PRODUCES THIS ORIENTAL EFFECT.

Shout in the Right Direction

The reason there are private vending companies on a campus in the first place is that they are needed. If it were otherwise, most colleges would have to perform the work of vending companies themselves. The University has deemed its arrangement with vending companies the best solution to the problem of providing students a needed service.

In just how good is the service? It is upon us to come across and operate their own vending companies to be the most dignified, enterprising, and interested of students. Just how good is the service? It has been tedious, carefree days of the break in the majority of vending facilities. Among other things, vending machines and the vending companies are out to make life more convenient for us. But the majority of vendors are out to make money, not necessarily for us.

How can we expect from it? Just how good is the service? We can expect from it to be friendly, accommodating, and good. It must be remembered that we are all that the University has asked of us.

Just how good is the service? It is upon us to come across and operate their own vending companies to be the most enterprising, and interested of students. Just how good is the service? It has been tedious, and by time the vending companies are out to make life more convenient for us. But the majority of vendors are out to make money, not necessarily for us.

It has been tedious, and by time the vending companies are out to make life more convenient for us. But the majority of vendors are out to make money, not necessarily for us.

On Other Campuses

Rewards of Leisure

The American Music Conference is offering a solution to what it sees as a major problem of our time. It is to the student and the consumer that the American Music Conference provides information on the numerous musical groups appearing on college campuses.

The Conference extends its list of recommendations to the interested students and consumers to the advice of Mr. James C. Charlesworth, professor of political science at the University of Pennsylvania and president of the American Academy of Political and Social Science.

In the final monograph of the political organization entitled "A Music of the Mind," Charlesworth states: "The music market watch a few professionals perform, themselves discouraged from engaging in any reCreation—activity because they do not possess the necessary skills of the music degree. Herein dwells a dark threat to American democracy. How, if they are not going to sit and watch professionals in action and be entertained, will they also sit and watch some bussinessbodies take the route of film from them and operate it. Mass-sport, spectacles in General, will be operated by those accustomed to recurring dictators within them.

Striking a Balance for Arts

The brightest students who enter MIT and the large universities cannot help but be aware of the ponderous emphasis on science. The majority of large grants which the universities receive are for scientific and technological research. A promising student cannot help but note that he will be in a somewhat undesirable position if he should venture into the field of human studies. Much of the funding for scientific research on this campus and many others comes from the National Science Foundation (NSF). A proposal from a national group of scholars for the establishment of a National Humanities Foundation, according to one scholar, would "be a good way to begin."

Above all, the prosperity of the arts is something that America needs. America needs a balance between the sciences and arts. The establishment of a National Humanities Foundation would be a good way to begin.

Glass Houses

People in glass houses... may be volunteers in a scientific experiment.

The grant wants to build a $1 million Social Research Center. The money will be through living quarters for couples and their children, living units which would be constructed of glass and equipped with scientific equipment to observe the behavior of persons on the seeing end of the arrangement.

For the sake of mental health, Scientists want to observe families for 8 to 10 years to study the effects of home environment on the mental state of children.

Noble as the ends of this experiment may be, its means are creepily reminiscent of a psychologist who was always watching.

Goldwater's Foreign Policy, Challenges Johnson to Debate

SPRINGFIELD, Ill. — Sen. Barry Goldwater denounced the Democratic foreign policy Wednesday, challenging him to debate it-and offer to pay for the television broadcast.

"Foreign policy is a major issue in this political campaign," he said. "I say it must be because, I only wish it could be debated by both the candidates for the presidency."

"...I am willing to debate the President on paying for the time," the Republican Presidential nominee said.

Johnson Family’s Net Worth Reported Over $3.4 Million

WASHINGTON -- An accounting firm hired at the direction of President Johnson reported Wednesday that the Johnson family fortune totals $3,484,098.

The firm of Hawkins & Sellers said the President and Mrs. Johnson, together with their two daughters, Lynda Bird and Luci Baines, had assets of $3,482,770 as of July 31.

On the same date, the family had liabilities of $19,072, which reduced their net worth to $3,484,098.

The accounting firm said President Johnson’s assets amounted to $477,417 and his liabilities amounted to $99,336.

The detailed statistical table made it evident that most of the Johnson fortune is held in the name of the First Lady, Mrs. Johnson, as the family had liabilities of $199,672, which reduced their net worth to $3,484,098.

This gave Mrs. Johnson a major share of the Johnson fortune, with liabilities of $199,672, which reduced their net worth to $3,484,098.

KeatingChallenged in Senate Contest

Fino says Keating, who formally announced for a second term, should answer "yes or no" to certain questions, and should not "ask for reconsideration".

Fino’s move raised the possibility of a floor fight at the meeting, but nomination of Keating appeared certain.

Keating’s announcement was favorable reaction among leaders.

Relay Satellite Fired Into Orbit

CAPE KENNEDY, Fla.—The Syncom 3 communications satellite, intended to relay television pictures of the October Olympic Games in Japan quickly to North America and Europe, rocketed into a preliminary orbit Wednesday on a planned stationary post high above the Pacific Ocean.

Officials were cheered by the early success of the mission. But the "Olympic Star" satellite must execute a number of complex maneuvers in the next 14 days to shift its orbit and reach its goal as the world’s first truly synchronous communications satellite.

While Syncom 3 is a research vehicle and television is not its main job, successful intercontinental transmission of Olympic pictures would be the most dramatic performance of communications satellites.

The three-stage T.D.-shaped augmented Delta rocket barred away from Cape Kennedy at 7:55 a.m. EST to prop the drum-shaped satellite into its "transfer" orbit—a great egg-shaped route ranging from 995 to 25,075 miles above the earth and requiring 11 hours, 35 minutes for each pass.

Only three such satellites, equally spaced around the equator, would provide worldwide communications coverage.

From its high output,Syncom 3 could serve as a relay point between wide areas of North America and Asia, covering more than a third of the globe.

For worldwide space communications, U.S. and Japanese interests have committed about $600,000 to prepare facilities to televise the Oct. 18-24 Olympic Games from the United States to the United States.

Canadian and European stations plan to invest nearly $300,000 to speed the transmissions from the United States to their viewers.
Southern's Blossoming Football Program
Has New Coach, Toughest Schedule Ever

By Richard LaSusa

Headlining the long list of returning lettermen is ace quarterback Jim Hart of Morton Grove, Hart, who completed 72 of 133 passes for 1,041 yards and 14 touchdowns in his initial year with Southern last season, is rated as one of the best quarterbacks in SIU history.

The 6-1, 195-pound field general was toasted as the most valuable player on the Salukis football team last season, for his gaudy ability to run the ball club.

According to Shroyer, Hart is the kind of backfield boss that has ever coached. "Hart," said Shroyer, "has the tools and ability to be one of the finest quarterbacks in the college ranks in this field next year."

Following Hart on the list of returning lettermen is经验丰富 off...
