OBIT:

By Brad Buehse Staff Writer

A mass transit system for Carbondale may be further in the distance than the project committee thought. A part of the study will set the scope of a feasibility study. Illinois Department of Transportation officials said the Mass Transit Committee acted too early and missed the point of a feasibility study.

The committee, Carbondale city officials, the vice president of campus affairs and Chamber of Commerce representatives intended to prepare a report of all questions concerning the proposed transit system Tuesday in an meeting in An
tony Hall, but they discovered they had taken the wrong approach.

In reply to the committee's detailed list of feasibility study topics, Jan De Laurentis, a representative from IDOT's Division of Public Trans
portation, said the committee should be more generic, and it was up to the prospective consultant firms to compile the scope.

If the committee is satisfied with the information gathered by a consultant firm, De Laurentis said, then the firm could be hired to complete the study by setting all the options of the plan and choosing those which are most feasible.

De Laurentis said IDOT chooses consultant firms by seeking the most qualified and by negotiating the price of their services.

Undergraduate Student Government President Jill Hall said he was disappointed with the meetings conclusion because he thought the committee would finally come out with an actual document.

Hall said the committee "discovered the system is more comprehensive and better suited for the community as a whole as a result of the meeting."

When the subject of funding the study was brought up, De Laurentis said IDOT could not assist financially because the process takes about a year.

The study will be funded primarily by the University and the city of Carbondale. Clarence Dougherty, vice president for campus services, said he was disappointed with IDOT's refusal to fund the study.

Dougherty also stated the concern that students would lose current of the system despite the fact that they should provide the bulk of the funding.

Gus says the mass transit system already has taken the wrong roads.

NITZ denies connection to murder

By Scott Perry and Kimberly Clarke Staff Writers and UPI

Richard Nitz took the stand on his behalf and accused someone else of murdering Michael Nitz during testimony Tuesday.

Nitz is charged with the April 6 murder of Nitz, whose decapitated body was found in the trunk of his car near Rockey Comfort Road in Union County.

Before a packed courtroom, Nitz said it was Danny Walker, not him, who killed Nitz.

Walker, 17, in previous testimony, said Nitz had bragged about shooting a homosexual man in the head and then decapitating the body to get rid of ballistic's evidence.

States Attorney Charles Garnett has described Nitz as a "homosexual hater," and based his position on this assumption.

Nitz said that he had no part in the murder, and he had never seen Nitz.

Notwithstanding his hatred for homosexuals, Nitz said "no worse than any other straight person."

The only thing Nitz admitted to being guilty of was accepting stolen property.

Personal belongings believed to be Nitz's and items supposedly bought with his credit cards were found in the Nitz residence during a police search.

Among the items found were

Computer 'recording studio' comes to School of Music

By Beth Clayvin Government Editor

Making music will be made easier with a new Roland Instrument Digital Interface computer system now available at the School of Music.

The system is made up of a keyboard and modules that interact and play each other, harold Miller, jazz specialist at the School of Music, said.

"One keyboard plays three modules," he said.

The system has 64 sounds and has the ability to change key or mood pitch with the touch of a button, he said.

The MIDI system was made available by Byassee Keyboard Company in Marion, which is loaning the equipment to the school.

Miller said it will be especially useful for composing music.

"In a way, it's a recording studio," he said, explaining the tape-recording abilities stored in one of the modules.

Miller is offering the use of MIDI to the public in a lab at Altgeld Hall.

He said the first 20 people who show interest, probably those who are studying music, will be able to reserve a two-hour block per week to use the system at no charge.

"It will be on a first-come, first-serve basis," he said.

Miller also hopes to offer class next semester that will teach music students how to

Haitian troops expel three
more of their own officers
PORT-AU-PRINCE, Haiti (UPI) — Troops sympathetic to
rank-and-file soldiers who engaged a weekend coup expel
three of their own officers in a growing purge of the military
Tuesday, reports and sources said. At the same time, the
number of apparent revenge-related killings mounted to seven
since the coup with the discovery of two bodies of young men
with their heads cut off and the shooting death of a police
detective.

MonteRREY officials fear outbreak of malaria
MONTERREY, Mexico (UPI) — Health officials braced
for possible outbreaks of malaria in this city in the
next few months.

TWA worker accused hijacker showed gun
FRANKFURT, West Germany (UPI) — Ulrike Derickson, the
flight attendant praised for her courage in the last TWA
hijack, testified Tuesday that Mohammad Ali Hammadi
secretly brandished the pistol that killed a U.S. Navy
officer and kicked and beat passengers.

Commission recommends large budget cuts
WASHINGTON, Poland (UPI) — A member of the bipartisan com-
mittee drawing a blueprint to cut massive budget deficits said
Tuesday it will recommend withholding money from Social
Security, Medicare and defense. "That's where the money is,"
said Robert Strauss, co-chairman of the National Economic
Commission. "That's where you've got to go to reduce a deficit
that is running at about $150 billion this year.

Well of firetrucks protects rural subdivision
VACAVILLE, Calif. (UPI) — Firefighters set up a well of fire
trucks Tuesday to save some 50 rural homes from a wind-
awakened arson blaze which ravaged 100,000 acres of brush and
grass just north of the San Francisco Bay area.

Nontraditional students don’t match stereotype

By Kathleen Delo
Staff writer
Larry Allsup drove 18-wheelers and charter buses for 30 years, off and on. Then Allsup, 46, contracted a viral disease that became a degenerative eye disease, Allsup said. His $5,000 a year job and he and his wife went from two incomes to one. He did not have a high school diploma.

Allsup said he went through periods of denial, anger and self-pity. He had to get a new career.

He took the general educational development exam on a Wednesday, picked up the diploma two days later and the following Wednesday, he enrolled at the University.

Now he is majoring in social work, which he can do if he becomes completely blind. He intends to work with visually impaired.

The once-promising image of nontraditional students is the bored housewife and disabled homemaker.

In reality, 60 percent of the nontraditional students at the University are men, which mirrors the regular undergraduate population, Mary Helen Gasser, director of Nontraditional Student Services, said.

Nontraditional students are older students who have delayed school for a variety of reasons, Gasser said. This Traditional students are those aged 18 to 21 or those who go to college right out of high school.

"I wasn't ready to go to school before. I went into the military and grew up," Dan Gloser said he and his wife Pam picked this University because it has good programs in both their fields of study.

"I wasn't ready to go to school before I reached the age of military and grew up," Gloser said.

Robyn Williams said she picked the University because it was closest to her home and she had gone here before.

The last time I was here, Old Main burned down. There were a lot of demonstrations and a lot of philosophic speeches. Now it is very conservative and capitalistic, Williams said.

Barb Hansen also went here before. "I missed graduation," she said.

"It seemed the natural place to come to. I had credits here," she said.

Ana Hoover said she came here after working and taking classes at Carl Sandburg College.

"I was handing out resource material to kids who came to the college and I thought they were lucky. I realized I could get a tuition waiver as an employee, so I started taking classes. But then I realized I couldn't live on what I was making and I quit and went to work full time."

"If my parents hadn't died, I wouldn't be able to be here. I have friends who said about that but I know that my parents would want me to go to school," Hoover said.

According to a February report on student financial aid by the Illinois Financial Aid Association, nontrad students will make up 50 percent of college students by 1992.

Gasser said the increasing number of nontraditional students will not compete with traditional students, and there will be fewer traditional in the population by 1996.

"Graduates are trying to recruit nontraditional students for that reason, she said.

Nontraditional students have been waiting to enter the working world and can contribute more to class discussions, she said. They tend to be job oriented and motivated to learn, she said.

"They provide a touch of seriousness to the educational process," she said.

Gasser said that nontraditional already make up 50 percent of the student population at community colleges. At this University, nontrad make up 23 percent of the undergraduate population, she said.

"I can graduate and professional students, 30 and older; undergraduates, under 24 and married or divorced; and nontraditional students in a 1986 study by Chery Barber of the University of Illinois at Chicago," he said.

"Traditionally, this study, 23 percent of the total student population at SU-C in 1978 to nearly 28 percent in 1986, showed a steady increase to 30 percent in 1992." Nontraditional students tend to have different needs and different characteristics.

According to the Farbough study, "An interesting finding was that more nontraditional males than the younger male students were enrolled in the College of Education, a typically female concentration."

"Similarly, more nontraditional females than younger female students were enrolled in Engineering and Agriculture, which have been considered male concentrations. Apparently, this new population of students felt less compelled to adhere to historical gender stereotypes than do their younger counterparts," Gasser said. "Nontrads tend to be very, very impatient with red tape. They go right to the top."

Helen Hansen said when she was here 17 years ago, tuition and room and board for the year was probably $150. Williams and tuition was about $150 per semester. Students could rent rooms instead of buying them, she said.

One of the biggest problems is parking.

"People who live on campusarkin the same spots we do," Williams said.

Mary Anne Sellers said nontraditional students are perceptive about finding jobs because they are older when they graduate.

Allsup said he had completed 20 years of schooling but realized if he lost his sight, he would have to start over in a new career, and he is getting old to start over at square one.

THE ECONOMIC BENEFITS OF BARGAINING

Which of the following statements do you believe?

1. The day we begin bargaining everyone's salary will go up 20 percent.
2. Faculty at universities with collective bargaining earn 13 percent more than those at universities without bargaining.

If you believed the first statement, you are living in a fantasy world. Collective bargaining is no magic panacea. It is a process where gains are won slowly and with hard work. But GAINS ARE WORTH IT.

If you believed the second statement, you probably view the world through rose-colored glasses, but in this case you'd be absolutely right. This is one of the conclusions arrived at by the study of the Illinois University and University Personnel Association (non-profit organization), a conclusion borne out by other studies, including some by the AACUP.

And what about fringe benefits? Did you know that some of our fringe benefits have been won by virtue of collective bargaining? The benefits are in the pay packet of nontraditional students at the University, where a policy has been developed to have fringe benefits for students.

We can use the same survey that faculty and staff salaries are determined by a 1996 AAUP survey, out of 161 universities with three of more doctoral programs, SIU-C ranked 138. The only reason we weren't at the bottom with the University of South Dakota was because two of our sister schools—Northern Illinois University and Illinois State University (néither with collective bargaining)—got wedged below us.

For almost eighteen years we have been talking to faculty and staff about the union and collective bargaining. Sometime when we talk about the economic benefits of collective bargaining, we are accused of erasing materialism. Perhaps, but look at it another way. We want the best for this university—it's students, its staff, its programs, its buildings—and the best comes high. It would be nice if students could come here without having to work at two jobs and to have $15,000 in debt. It would be nice if we could attract and keep the best and the brightest faculty. It would be nice if our facilities. It would be nice if we have a library building that would serve our needs for the next half century. However, are we likely to achieve any of this by waiting for it to happen. What we have to do is to set priorities and figure out where failure has been the legacy of the last fifteen years?

The public university systems with unionized faculty and staff have generally been successful in enhancing the budgets for higher education not only for salaries but for the entire educational enterprise. (Sorry, we won't guarantee higher salaries for the president and chancellor, though.)

If you think the funding picture at SIU is and has been a cheery one, you're undoubtedly mistaken. We can use the same results from a 1996 AAUP survey, but that leaves about 97.3 percent of the faculty and A staff who ought to be ready to throw in with us.

Nation's hand guns still out of control

Congress knuckled under to the National Rifle Association when it rejected an amendment that would have required a seven-day waiting period on the purchase of handguns. That is no surprise; the NRA takes gun-control legislation as seriously as motherhood and spending millions lobbying to prove its point.

The real question is whether Congress gave up on gun-control legislation as a short-term political decision or whether it really believes that the American public of gun owners can be so easily swayed by a timing change that it is willing to trade away its Constitutional right to bear arms.

We noted in the past that there were gun owners who are well-armed and those who are just beginning to take up the sport. While the latter may have a vague notion that if a gun dealer knew the man standing at the counter, the dealer would be out of business, the former are a different breed.

If Congress wants to show a little moderation, a waiting period would not affect those who have plenty of guns to protect their homes and loved ones before the waiting period expires.

"What felon in his right mind is going to produce his own name?"

MCCOLLUM AND his cohorts offered a plan that further boggles the mind. How, in just 180 days is the Justice Department going to determine if someone who has a big-bore handgun is a convicted felon, including those who have decided to walk the straight and narrow? Fingerprint checks would be out. Imagine the squawk from gun owners who would put up a store clerk suggested information was not only provided by customers willing to apply their fingerprints to a card.

And, law enforcement personnel realize that fingerprint checks would identify a criminal, who is on best-information avoidance mode.

We are not surprised that law enforcement organizations support laws similar to the recently defeated Brady Amendment. Police do not like the idea of easy access to guns and bullets that can rip through body-proof vests.

And, if police are not especially warm to the idea of a well-armed general public, they are opposed to taking away the rights of the public.

Police do not want to be in a hurry. They want the public to show a little moderation. A waiting period would not affect those gun owners who are already well-armed. Those police executives say that 80 percent of gun thefts are by people who have protected their homes and loved ones before the waiting period expires.

Waiting periods are designed to protect both those among us, who in a moment of passion might open fire at anything that moves, and those who are the intended recipients of the bullets.

There's nothing like a few sleepless nights to make a person aware of the futility of a plan to go out in a blaze of glory.

As it is, all we have from Congress is a pledge that it is working on a plan that will better protect us. Keeping handguns out of the hands of felons is a start. But, it stops short of the kind of control the country needs over the burgeoning gun industry in order to keep machine guns out of the hands of drug dealers.

We should forget the "When Guns Are Outlawed, Only Outlaws Will Have Guns." mentality of the NRA and realize that outlaws have guns now and a well-armed public isn't doing much about the rising crime rate.

Drought, famine, floods, quakes: Can Nostradamus be correct?

By Richard Nunez

MOTHER NATURE has not been kind lately. Drought, famine, floods, earthquakes and hurricanes have marked much of 1988. The National Geo­graphic predicted that these conditions would only be predicted to occur at the end of this century — would prevail before Judgment Day.

Could Nostradamus have been correct?

Some Christians have been looking to the sky lately, waving the day of Rapture: the day when a select group of people will be allowed entrance into the heavens while the rest remain to face seven years of tribulation before the battle of Armageddon.

MOST PEOPLE would laugh at the "40 and right­ly so. These folks are not unusual as most people would believe, but rather by the mass facade, drapes, volcanoes eruptions and earthquakes have served as occasions for religious sects to proclaim the End of Days as we know it.

But a closer look at the events of the past year might remind a pest even to a list of just a few of the earthquakes that have piled up lately are:

- THE 7.9 EARTHQUAKE that hit Mexico in September 1985, killing more than 15,000 people and causing millions of dollars worth of damage.
- EARTHQUAKES ROCKED Nepal, killing more than 1,000 people.
- The earthquake was a stark reminder of last year's earthquake that hit Mexico, which still feels the effects.
- The number of airplane accidents continued to increase; the recent air show accident in Italy was one of the most grisly ever captured by television.

FAMINE still haunts much of Africa. Holes are being ripped in the ozone layer, fueling debate about the greenhouse effect. Medical trash is washing up on the nations' beaches. Seal puppies are washing shores dead. George Bush may be our next president. AIDS: Dan Quayle may be our next vice president.

Scared? Reaching for the Bible yet?

NOSTRADAMUS predicted that Armageddon would be ignited by the third anti-christ — the previous two being Napoleon Bonaparte and Adolf Hitler. According to Nostradamus, the third anti-christ will come from the Middle East and wear a blue turban. If Khadafi or Khomeini ever sport a blue turban, then we might have reason to begin believing in Nostradamus.

MOST LIKELY, all the disasters and catastrophes that have piled up lately are coincidences. Judgment Day, Armageddon, Rapture: They are all merely myths — which will eventually come true. But, amid all the apocalyptic predictions of people probably would stop for a second to scratch their head. Could Nostradamus have been correct?

Letters

Centerfest was an honest effort

An employee for Student Center Special Programs, I would like to extend my sincere apologies to Mr. Geoffrey Nathanson, the linguistics professor who so kindly reminded me about Centerfest. I was not only a semantic and cultural specialist, but also what our attempt at a few lunch specials atmosphere was actually a direct trans­lation of my hangover, an effort for food, doctoring the soul.

Goodness. Thank you, Professor Nathanson, for pointing this out. If our budget is limited and that the Health Department might have become a bit undue we have uncharted the floors to smoke the Kalaup pig you speak of, we might decide not to include a little good, clean fun for our students. You were so right. Perhaps next year, you might help us lower the cost of our program. You might also like to serve as cultural advisor. We specialize in gossip, I wouldn't want to make the mistake of sprinkling pipe cleaners over everything any longer, especially since real Hawaiians don't do such things.

After all, the purpose of Centerfest should not have been to provide a light-hearted night of non-booking; it should have been to come as very close as possible to Hawaiian cultural and culinary authenticity. Again, pardon our ignorance.

Sincerely, Mr. Nathan, I'm disappointed that as a faculty member, supposedly a supporter of student growth (and that includes cultural growth for students), you found it necessary to denounce an honest, long-planned University event on such petty grounds.

Frankly, Mr. Nathan, if Liliuokalani is really supposed to be Kauai-Kona, I don't even know where it's located. And honestly, in this situation, neither would you. Barbara Brewer, graduate student, Journalism.
Fires, floods, famine, drought could have a deeper meaning

TO those of us who view religion primarily as a spurious way to prop up a decaying society, the Rapture was very disappointing. As if we didn't know about the Rapture! Where have you been if the papers have been full of it?

Here was the deal: according to some biblical scholars, many of whom wear funny-shaped hats, last week was supposed to be marked by The Rapture, a divine rescue of the Saved that would signal a seven-year world-wide tribulation and culminate in the Second Coming. The Tribulation was expected to be Armageddon. And by "tribulation" I mean fires, floods, famines and plagues. (One thing you have to give the Bible: it's got a terrific plot.)

THE TERMINALLY religious were then supposed to be taken to Heaven all of a sudden — and thus spared the orruling unpleasantness. The Open-Minded among us had a different experience that matched the evidence: we watched the Ascension of the Saved and frankly looked forward to it. We felt that, at the very least, it would improve the future of the planet's sense of humor. (You know, if it weren't so tragic that the German proverb says: "Heaven for climate; Hell for society.")

To make a long story short, it did not happen. The week came and went and the True Believers stayed, their doughnuts spoiled by the relief of the spared.

I SUPPOSE you think I'm the sort of an atheist who is going to make fun of the folks who believed in the Rapture, people who gave away their furniture, canceled their magazine subscriptions in anticipation of a trip to the Big Rock Candy Mountain. You think I'm going to say things like "God probably didn't want Heaven's IQ to fall 10 points in one day." Or "It would have been tough: or Dan Quayle, being all of his supporters at once like that."

Well, you're wrong. I'm too lazy a guy to take shots. Besides, The Rapture people, with their bizarre hype, deserve a book, "At Reasons Why the Rapture Never Is '88," by a former NASA rocket engineer, Edgar C. Whisenant, who is on a mission to convince (Whisenant certainly it's: he's said to have written more than a million books.)

CONSIDER THE evidence:
During the past few weeks we have seen the worst fires in the history of Yellowstone Park, the worst flood of the century in Bangladesh and the worst hurricane of the century in the Gulf of Mexico. They come in a year which promises to be, in this country, the hottest in recorded history and one that produced one of the worst droughts of the century.

Should you want even more evidence that we're on the cusp of seven years of tribulation, George Bush is ahead in the polls. And we're looking at people who say catastrophes are on the way. The worst thing you can do for the Rapture people is merely to write wrong on the details, like the day, the week, the time, happen, or even the year, but that their nightmare is indeed the shape of things to come.

A lot of scientists scoff at concepts like Rapture, and Armageddon, the greenhouse effect, the global warming that's taking place because we have wrapped the Earth in a shroud of pollution that traps energy. One expects an increase in catastrophic incidents around the new year if it ever comes, they say. They seem to find that reassuring.

DID THEY ever think of this: Maybe The Rapture and the greenhouse effect are the same thing; God's or Nature's way of telling us it's too late. Maybe in our relentless pursuit of greed as a way of life we have indeed triggered the Doomsday mechanism and we have yet to realize it. Perhaps this reason we see the planet as one last trip to Heaven last week is because no one was worthy. Maybe we are all guilty.

Think about it. By the way, the Rapture people think World War III is going to break out on Oct. 4 this year. (Pearl Harbor Day to George Bush.) Have a nice day.

Donald Kaul
Tribute Media Services

The many letters and open-ended whining about University spending have become an epidemic. The open-ended whining is symptomatic of the sentiment breeding among students. The one thing that does not come into these letters, however, is any real solution to the problem. The result is a whining, open-ended attitude which I propose these various routes:

1) We need a lasting, stable budget. We need to be given a realistic budget, taking into consideration the state of Illinois. Using tuition is only a short-range solution. University budgets have become a damaging precedent. The attitude throughout the state has led to the teaching of the students to make up for a lack of state government support or fund-shaped hole; last week, there needs to be a binding resolution that a certain portion to some percentage of institutional costs, such as 30 to 35 percent. There also needs to be legislation to limit the percentage that tuition can be increased per year by tying rates to some index, such as the Standard-Educator Price Index, which is one factor used in determining financial aid at many Illinois State Universities. Limiting the percentage that tuition can be increased each year, mid-year or high increases would be illegal.

2) There does, indeed, need to be a firm commitment by the Governor and the General Assembly to pay higher education to meet needs after tuition. The voice to which this concern is going to be obvious voting and lettuugg officials know that you will vote. The only way to keep them in check is to keep reminding them how they got there in the first place. Sadly, this is difficult to document or quantify. You need to have faith in your rights as a voter. Also, let them know you are watching them. For example, know that Sen. Ralph Dunn and Rep. Philip Rich mond are known to support a tax increase for higher education; know that Richmond failed to show up for a committee vote on the bill (HB 1222) that would have limited the percentage that tuition could be increased, a bill he told me that morning he had no problem with. This bill, by the way, needed one vote to rise from committee. A stable, realistic budget is well managed. I agree that SIU-C needs to stay competitive with other state universities. Part of that is by paying competitive salaries: but we need to get what we pay for. We have already been damaged by the flight of some faculty to other universities. And the students (how dramatic!) have taken our wages and paid our bills only to see a decrease in experienced faculty, a drop in support to Morris Library, and damaging cuts in course and program whinnings. It seems as though you'll get the money, SIU-C, now use it responsibly until we're cut out of this state discrea.

In the short run, we can restore state General Revenue Fund support, we need to look at our selves as consumers and demand quality and choice for what we are paying more and more for. — John Grigs, Academic Affairs Com­missio nier, Undergraduate Student Government.

Funding crisis needs solutions instead of open-ended whining

The many letters and open-ended whining about University spending have become an epidemic. The open-ended whining is symptomatic of the sentiment breeding among students. The one thing that does not come into these letters, however, is any real solution to the problem. The result is a whining, open-ended attitude which I propose these various routes:

1) We need a lasting, stable budget. We need to be given a realistic budget, taking into consideration the state of Illinois. Using tuition is only a short-range solution. University budgets have become a damaging precedent. The attitude throughout the state has led to the teaching of the students to make up for a lack of state government support or fund-shaped hole; last week, there needs to be a binding resolution that a certain portion to some percentage of institutional costs, such as 30 to 35 percent. There also needs to be legislation to limit the percentage that tuition can be increased per year by tying rates to some index, such as the Standard-Educator Price Index, which is one factor used in determining financial aid at many Illinois State Universities. Limiting the percentage that tuition can be increased each year, mid-year or high increases would be illegal.

2) There does, indeed, need to be a firm commitment by the Governor and the General Assembly to pay higher education to meet needs after tuition. The voice to which this concern is going to be obvious voting and lettuugg officials know that you will vote. The only way to keep them in check is to keep reminding them how they got there in the first place. Sadly, this is difficult to document or quantify. You need to have faith in your rights as a voter. Also, let them know you are watching them. For example, know that Sen. Ralph Dunn and Rep. Philip Rich mond are known to support a tax increase for higher education; know that Richmond failed to show up for a committee vote on the bill (HB 1222) that would have limited the percentage that tuition could be increased, a bill he told me that morning he had no problem with. This bill, by the way, needed one vote to rise from committee. A stable, realistic budget is well managed. I agree that SIU-C needs to stay competitive with other state universities. Part of that is by paying competitive salaries: but we need to get what we pay for. We have already been damaged by the flight of some faculty to other universities. And the students (how dramatic!) have taken our wages and paid our bills only to see a decrease in experienced faculty, a drop in support to Morris Library, and damaging cuts in course and program whinnings. It seems as though you'll get the money, SIU-C, now use it responsibly until we're cut out of this state discrea.

In the short run, we can restore state General Revenue Fund support, we need to look at our selves as consumers and demand quality and choice for what we are paying more and more for. — John Grigs, Academic Affairs Com­missio nier, Undergraduate Student Government.
Dukakis endorsed by NEA; captures 86 percent of votes

By Scott Perry
Staff Writer

Vice President George Bush might consider himself to have a future "education president," but an education initiative doesn't consider Bush to be the president for education. During their Sept. 8 meeting, the National Education Association asked President Harry Truman, the Democratic candidate, to become the president and to endorse the NEA. 

The endorsement was made available to the over 1.9 million NEA members. Dukakis said all seven of the Democratic candidates returned their questionnaires and did the videotaped interview. However, none of the Republican candidates had complied with the NEA process.

"Futrell said, Bush finally attempted to respond to the NEA because "600,000 of the 13 million members are Republicans and you don't just blow your nose or fan your hand at 600,000 votes."

Dukakis, on the other hand, "explained our questionnaires, seriousness and respect," Futrell said.

"After having sent several times with Dukakis, Futrell said she believed "Michael Dukakis will be a president that will work side by side with the education community to improve American education."

Among the issues the organization supports are: 
- Federal support for local school districts.
- Meaningful federal education programs to help meet the special needs of rural and minority students.
- Placement of a secretary of education that will "encourage and inspire this country and Congress" to help create quality education for America's students.

"Bush, on the other hand, has come out against the NEA because he has attempted to respond to the NEA market in a way that is not as effective as the NEA's market response," Futrell said.

"Dukakis has been described as very supportive and "always had his door open" by those who worked closely with him in Massachusetts.

Candidates plan for debate

Flag maker visited by Bush; Dukakis unveils health plan

United Press International

Republican presidential candidate George Bush, visiting a once wire-wrapped symbol of the nation's economic and spiritual renewal, said Tuesday Americans should use proper pride in justice and love mercy.

"Critical to the American economy is the president's economic recovery. Bush, who has been described as very supportive and "always had his door open" by those who worked closely with him in Massachusetts.

WASHINGTON (UPI) - The economy expanded at an annual rate of 3 percent, a healthy pace but slower than previously reported, while inflation heated up in the second quarter, the government said Tuesday.

Real gross national product increased $29.1 billion from April to June following a 3.4 percent hike, or $33.1 billion in the first quarter, according to the Commerce Department. The department's Bureau of Economic Analysis reported Aug. 25 that second-quarter GNP was 3.3 percent.

The downward revision was based on new information showing a weaker performance for exports and nonresidential fixed investment. The downturn was offset partially by stronger personal spending, the department said.

"We expected that growth would be revised down because they revised up the trade deficit for June," Michael Evans, of Evans Economics in Washington, said.

Two other revisions in the GNP report indicated inflation topped 5 percent in the quarter in the steepest price acceleration in six years. Analysts, however, were not greatly alarmed.

"There is no evidence we're headed back to double-digit inflation," said Norman Robertson, chief economist of Mellon Bank in Pittsburgh. Robertson said price increases are now advancing at about 5 percent per year and he expects inflation to rise to about 5.5 percent in 1989, a cause for concern but not panic.

"A 5 percent inflation rate is a warning signal," he said. The fixed weights index rose 5 percent compared with 3.5 percent in the first three months of the year.
MUSIC, from Page 1

use MIDI. "It's important to train students how to use MIDI," he said. "They need hands-on experience."

"MIDI is everywhere," he said, "and it's going to be around for awhile."

Miller said other schools, such as the University of Illinois and SIU-E, have had MIDI systems in the past, but this is the first opportunity for SIU-C to use the equipment.

He said SIU-E has several keyboards for use by students, and recently has been equipped with a recording studio, which he believes is a result of the administration's interest in the project.

"Their priorities are in different places than ours," he said. "We're concerned with other things at this campus."

Miller said that although SIU-C is behind in obtaining the equipment, the system will be completely "first class." He is confident he can get acoustic instruments, but to work in addition to them, "I know of 25 to 30 professionals easy that'll come in contact with MIDI," he said. "Everyone uses this knowledge."

In addition to this equipment, the School of Music plans to buy Macintosh software to use with the system.

"It will give us pristine and a lot of other uses," Miller said.

He said he would like to get more modules to use with MIDI in the future, if an exchange can be made with the Byassee Company.

"For more information," call Harold Miller in the School of Music at 536-7560.

Speeding leads to drug bust

By Kimberly Clarke
Staff Writer

A routine speeding offense Monday led Illinois State Police to confiscate eleven pounds of cannabis and $30,000 in cash.

Angelitos Coils, William McCrum and Ricardo Trinidad, whose ages were withheld, were stopped on Highway 97 going south toward Marion in Williamson County.

The men are being held for $120,000 bond each at the Williamson County jail.

They are charged with possession of 360 grams of cannabis and possession with the intent to deliver.

Their destination was not known.

NITZ, from Page 1

two speakers believed to be purchased with Miley's credit cards. Nitz said he gained possession of the speakers as a payment of debt from Betty Boyer.

Nitz, 27, also testified about a tape that was supposed to have belonged to Miley. The tapes were found by authorities in Nitz's car.

Nitz said he was with his wife during the night in question.

Nitz said he was given the tapes by a woman who had lived with him and his wife.

The woman, Boyer, who babysat for Nitz, testified previously that she saw Nitz beating a man with a bat in front of the Nitz's trailer.

Nitz said he was with his wife Rita Jo during the night in question.

Mrs. Nitz is also being held in the Williamson County jail in connection with the murder. The cause against Mrs. Nitz will be held in November.

Closing statements in the case will be held at 9:30 a.m. Thursday in the Williamson County Courthouse.

Exhibit promotes awareness of Israeli-Palestinian conflict

By Diana Mivil
Start Writer

The Palestine Student Association has converted Ballroom D into an open book of information with the hope of making University students aware of the more than 40 years of conflict in Palestine.

"American government blindly supports Israel no matter what they are doing. The United States supports the Israelis with tear gas and weapons; they are using to try to drive the Palestinians out of their own homeland," Ashraf Nubani, member of the association, said.

According to a handout distributed at the information table, almost half of all U.S. military and economic aid goes to Israel.

Nubani said, "Americans should have a say to where their dollars are going."

Nubani said Palestine is an Islamic issue. "We are fighting as Muslims; our right to vote is our right to live," he said.

The Palestinian Liberation Organization differs with the views of the Islamic movement because the PLO is willing to settle for half of Palestine while the Islamic movement wants all of their land back, Nubani said.

"This land is the same land my grandfather used to plant in and now they are being kicked out."

Posters set up in Ballroom B and article clippings from various publications, depicting bloody scenes and violence, tell the story in color.

A television has been set up to continuously play an edition of Nightline that explains the conflict's history.

"American government blindly supports Israel no matter what they are doing."

- Ashraf Nubani

Nubani said Palestinians in the West Bank and Gaza Strip do not have the same rights as the Israelis.

"They can't vote, they aren't represented in the Israeli parliament, they can't elect their own governmental parties. They have no political or legal rights. Less funds are used for Palestinian education, schools and hospitals are less equipped. Everything is second rate for the Palestinians," Nubani said.

Soybean disease is baffling

University profs involved in search for cure of SDS

By Loria Roberson
Start Writer

As researchers at SIU-C continue their search for a cure, a soybean disease continues to severely damage soybean fields, a University professor said.

"Sudden Death Syndrome, whose origins continue to stump researchers at the Plant and Soil Science Research Studies, has the potential to wipe out an entire field of soybeans, Oval Myers, Professor of Plant and Soil Science, said.

Myers said researchers have not declared what causes the disease is caused by a bacteria or a fungus.

"Our early work indicated there was a bacterial problem," Myers said, "but 90 percent of the people (say it's a fungus)."

Researchers are looking at over 100 varieties of soybeans to determine which are naturally superior to withstand SDS, said Paul Gibson, assistant professor of plant physiology.

Gibson said preliminary findings showed that some varieties were more susceptible to SDS than others, but, at this point, none of the varieties studied appear to be totally immune.

SDS shows up markedly when moist, cool weather follows the reproductive season, much like Southern Illinois has experienced this past year.

Regardless of what causes SDS, Gibson said it is definitely a soil-borne disease.

SDS shows up markedly when moist, cool weather follows the reproductive season, much like Southern Illinois has experienced this past year, Gibson said.

Myers and the first Gibson said preliminary findings showed that "two tops of the leaves may appear brown, as though a leaf thrower has swept over the top of the field," he said. Upon close examination, the disease also enters the seed pods and affects the beans. "Various times that result in seed pods falling off of the plant, causing total devastation," he said.

Substantial soybean losses due to SDS have been reported in the southern one-third of the state, Gibson said. He said they have heard of some cases in St. Clair County and, in previous years, as far north as Clinton County.

Although Gibson said some Illinois farmers may expect to lose up to 15 percent of their soybean crop, Myers said the disease is not really going to affect anything much greater than it already has.

Myers said the disease was first noticed in the Mississippi Valley in the late 1970s but became severe enough in 1985 to warrant research. Funding for the research at SIU-C was provided by a $16,000 grant from the Illinois Soybean Program Operating Board.

Savings bonds provide help in paying educational costs

By Kathleen Delbo
Staff Writer

Tuition and fees increased 99 percent at Illinois' public institutions, 184 percent at public universities and 132 percent at public colleges and universities, Insurance spokesman said. It is an increase from 1977 to 1987, according to a government savings bonds brochure.

The rising cost of higher education has led Illinois to offer savings bonds that have specific benefits if used for educational expenses.

The first sale was in January and the second sale is this past week.

The sales were so successful, another may be held next year. Rob Clement, director of Wisconsin Higher Education Commission, said about 46,000 bonds were sold in January. Some people bought more than one, he said.

Commissioners are trying to ease the crunch of higher education by offering pre-paid tuition plans. We're using savings bonds. They are good investments and have advantages.

One advantage of college bonds, as compared to other investments such as certificates of deposit, is that bonds are not taxed by the state or federal government, Clement said.

If the student attends an approved Illinois school, the state will pay an annual $100 to $500 to the college to reduce the student's educational expenses, he said. The first $25,000 received are considered an asset in the state financial needs test, he said.

The bonds are zero coupon bonds, which mean purchasers do not get interest paid, but do get the interest added on until it reaches face value.

There are so restrictions on whether the bonds have to be used for education or not, Clement said. First Chicago Bank estimated 95 percent were bought for educational purposes, he said.

Janet Fimtnety, of Student Work and Financial Aid, said she had the impression that a lot of the parents were buying the bonds for their grandchildren's educations. Fimtnety estimated that 15 to 20 percent were sold to grandparents, she said.

"It's a good, tax-free investment even if it isn't used for education," she said.

The minimum number of years until maturity is five and the maximum is 20, she said. The time until a certificate of deposit matures can range from six months to a year.

In the January sale, the five-year bond offered 6.3 percent interest and the 30-year bonds reached 7.9 percent, he said. The interest rate is not adjustable and does not change until the bond matures.

Additional information can be attained by writing to the Illinois State Scholarship Commission in Springfield or to the Illinois Board of Higher Education.

Award given for research

Honors reception will be held for math professor

University News Service

Walter D. Wallis, professor of mathematics at the University of Illinois, won the 1988 Outstanding Researcher Award, given by the College of Science. An informal reception to honor him will be held at 9:15 a.m. April 30, at the Student Center Mississippi River Auditorium.

The researcher award, first given in 1963, recognizes faculty members for outstanding research achievements over a number of years. It includes cash to assist in research-related travel.

Wallis is an authority in combinatorial theory—a field that has applications in computer science, operations research and modern physics. In 1967, he won a $48,000 grant from the National Science Foundation for his research on combinatorial designs.

His other research interests include graph theory, cryptography, computer programming languages and other combinatorial models in geography and computer

The researcher award, first given in 1986, recognizes faculty members for outstanding research achievements over a number of years.

Police put boy genius in protective custody

SANTA CRUZ, Calif. (UPI) Authorities have placed a 11-year-old boy named Adragon De Mello, a June college graduate in protective custody and have placed his father under psychiatric examination, it was reported Tuesday.

The boy was placed in a foster home after police served a search warrant Monday on the home of Agustin De Mello, 39, after extensive interviews with the boy and a number of law enforcement officials believe there might be some evidence of child neglect, the Santa Cruz Sentinel said.

A group of children under Adragon's schoolwork and more than 20 videotapes.

On the last six years the American Poetry Association has sponsored 10 contests and awarded $100,000 to 2,700 winning poets.

$1,000 first prize will also be awarded, with $11,000 in prizes being awarded among 138 other winning poets.

"Students have been winners in all our contests," Robert Klinke, publisher for the group, said, "so I urge students to enter now. Later they may be too busy with exams."

The American Poetry Association's latest contest offers a trip for two to Hawaii as the grand prize. The $7,000 total prize will be divided among 138 other winning poets.

"Bring:
Camping gear, musical instruments, cookout food and your singing voice."

This is an alcohol-free activity (alcohol is not permitted).

For more information, contact Peter Hartiestad at SRC 536-5531. Rain date 9/30-10/1.

Police said Bill Aluffi said.

Police confiscated five loaded hand guns and suitcases full of ammunition. They also removed Adragon's schoolwork and more than 20 videotapes.

Adlogan's June graduation from University of California at Santa Cruz generated a flood of publicity nationwide. At press conference last month De Mello told reporters his research might be forced to continue his education in the Soviet Union or another foreign country because the young man has been refused entrance to Ph.D. program in the United States.

In recent weeks Cathy Gunn, Adragon's mother, whose identity has shrouded in mystery since the boy gained national attention, started legal proceedings against De Mello over drug refusals, police said in a report.

De Mello had "made a suicide pact with his son in the past" when the boy's academic career was in jeopardy, Gunn told police.

Amnesty International works for human rights

By Jon Maguire
Staff Writer

This year marks the 40th anniversary of the adoption of the Universal Declaration of Human Rights by the General Assembly of the United Nations.

The human rights declaration, comprised of 30 articles, is a charter of Amnest)' International, the oldest and largest human rights organization.

To celebrate this occasion, Amnesty International has become involved in a worldwide tour called, "Campaign for Your Rights," featuring pop stars such as U2, The Bangles, Springsteen, Peter Gabriel and Sting. The purpose of these activities is to raise awareness of Amnesty International and its goals.

"It's good to have famous people, people who admire, help us do the work, because they can reach so many more people," Byler said. "They are with us because they are firmly opposed to the policies of human rights violators.

Amnesty International, a non-profit and non-profit organization, works for the protection of human rights worldwide. It works for the release of prisoners of conscience.

In a visit to the Student Center last week, Marjory Byler, regional director of Amnesty International Chicago, said the tour will allow students to participate in Amnesty International and its goals.

"We figure it's important to us that people who are on the outside can experience this," Byler said. "We figured that's what made our mission unique, as it is because of beliefs, race, sex or religion, and have not used or advocated the use of violence.

Amnesty International also works for fair trials and the abolition of cruel and unusual punishment, such as torture and the death penalty.

There is a moral line we have chosen to walk," Byler said. "It's not an easy one individually, but we have to walk it."

One of the ways Amnesty International helps is by writing letters to governments who are violating the Universal Declaration of Human Rights.

"No one likes to be told that he or she is a torturer," Byler said. "Some of the letters we've read, some get wadded up and thrown away, and some never make it to where they were sent."

Amnesty International does not stop until the offenders stop. Two actions they are working to stop are the use of nerve gas on civilians in Iraq and public executions in China.

There are five Amnesty International groups in Southern Illinois including one in Carbondale, which started in 1977. Amnesty International has also received letters from Illinois to help them start an Amnesty group.

Amnesty International was awarded the Nobel Peace Prize in 1977.

Volunteers can experience wild life in conservation jobs

By Lorla Roberson
Staff Writer

Students take a walk on the wild side in the natural resource management program offered by the Student Conservation Association.

The Resource Assistant Program provides participants the opportunity to receive hands-on experience in such areas as wildlife and fisheries, forestry, recreation management, archaeology, trail maintenance and hydrology.

"There isn't an employment agency and we can't guarantee anything," said Assistant Program Director Wallace Elton, but "usually, students use the program experience to get paying jobs in their programs of interest."

The SCA will be offering over 800 positions in over 200 national parks, forests and wildlife areas of 1988 and 1989. Elton said 150 preliminary positions will be announced in November and another 150 will be announced in December. These positions will be filled between January and April 1988.

The Student Conservation Association, headquartered in New York, is a non-profit organization that provides expense-paid volunteer jobs to young people centering on cooperation with agencies such as the National Park Service, U.S. Forest Service and Bureau of Land Management, Elton said, but the program is not limited to those with an educational interest in conservation and resource management.

"We have a lot of positions for people from all kinds of educational backgrounds," he said.

David Reinhold, senior in zoology, spent his summer at Sand Lake National Wildlife Refuge in South Dakota doing general maintenance on the refuge, including eagles for ducks, and conducting wildlife surveys.

"We figured out how many animals were on the refuge," Reinhold said. "We studied white-tail deer, ducks, geese, and also the relocation project on the giant Canadian geese."

Reinhold said the program was a good experience and he was offered a chance at a paying job from the U.S. Fish and Wildlife Service.

Participating in the program is the equivalent of having a full-time job, Elton said, but participants receive free housing, a food allowance for food and basic living expenses.

Elton said SCA volunteers provide the agency with the additional staffing necessary to complete their tasks and would not otherwise be able to do within their own budget and staffing limitations.

Even though the workers are sometimes hard, Elton said, many people other than students who could do something different. "We say the work is competitive," Elton said. "We usually have two to four times as many applicants as we do positions."

Elton said SCA places volunteers in almost every state, including Alaska and Hawaii and some volunteers earn off-campus elective credits.

Rural Americans want more help

WASHINGTON (UPI) — Rural residents feel the government is not doing enough to help them overcome the community's financial loss, three senators said Tuesday in releasing a survey that will be used to boost rural development.

Survey of 600 rural residents showed a deep concern about the community and moral values in rural areas and small towns. But residents voiced concern about the rural poverty rate, 16.9 percent, is higher than the national average. Some figures indicate industries tend to put blue-collar production jobs in rural areas while the white-collar professionals stay in cities.

"What we see in this (survey) is what Americans see. Two Americas. They see themselves economically separated from the rest of America," said Leahy, chairman of the Senate Agriculture Committee.

Peter Hart Research Associates conducted telephone interviews in mid-May for the survey, commissioned by Rural Voice, a non-profit group organized by farm wives.

Jerry Garr, the Hart official who presented the results, said the survey found 50 percent thought the government was doing a good job of treating rural problems. Nearly 40 percent thought economic conditions were good or excellent, and 81 percent rated over all conditions in rural areas and small towns as very good or proper. However, on those three questions responses of "fair" and "just OK" were rated as a sign of dissatisfaction. On the question of economic conditions, 47 percent replied "only fair" and on the question of economic conditions, 47 percent said "only fair."

Garr said the survey measured more than skies by the increase was looking beyond agriculture when it was measuring the act of its own. "The largest bloc, 86 percent, said the government should focus on other jobs and industry, 85 percent said the rural government should work on both.
The One, Two, Three Guarantee

1. You've finally decided it's time to start out the arts or business that you've always dreamed of, but time is money and you can't afford to lose any. Call us today and we'll have you up and running in no time.

2. You're a recent graduate and you're looking for a job. We can help you find the perfect position for you.

3. You're planning a major purchase and you want to make sure you're getting the best deal possible. We'll do the research for you and make sure you come out on top.

HUNDREDS HOLD VIGIL FOR JAPAN'S AILING EMPEROR

TOKYO (UPI) — Emperor Hirohito, Japan's longest reigning monarch, is in serious but stable condition Tuesday for an intestinal operation to remove a cancerous tumor the size of an apple.

Hundreds of people maintained a vigil at the main gate of the emperor's residence, the palace in the heart of Tokyo, as millions in the nation of 127 million stayed close to their television sets to watch bulletins on the emperor's health.

A number of Japanese, mostly elderly, sat or knelt at a park facing the palace to pray for the emperor's recovery. Shin Waizono, 84, a tailor who had made clothing for the emperor for the past 25 years, was one of them.

"I would like to make a new suit for the emperor when he has recovered," he said. "In an encouraging sign late Tuesday, chief court physician Akira Takagi and the emperor's top two aides were permitted to return home after the monarch's vital signs showed continued signs of stabilizing.

The physicians monitored the emperor's condition throughout the day, and the administration said it would not comment on the emperor's condition if he were permitted to return home from the hospital.

At 5 p.m. news briefing, an Imperial Palace official said the emperor remained in serious but stable condition Tuesday following surgery for an intestinal ailment that has replaced recovery.

Hindus riot during statewide strike; six injured

CHANDIGARH, India (UPI) — BJP. The strike had little effect at police lines. claimed some 1,000 people.

Police also said about 200 BJP members rampaged through the central bus station, torching four motorcycles, smashing the windows of shops, vehicles and hurling rocks at police lines.

Police also said about 200 BJP members rampaged through the central bus station, torching four motorcycles, smashing the windows of shops, vehicles and hurling rocks at police lines.

The strike, called on the eve of India's national holiday, was a protest against the government's decision to allow Sikhs to visit the Golden Temple, the holiest shrine of Sikhism, which is located in the Punjab city of Amritsar.

Police reported most businesses closed Tuesday across Punjab, complying with a general strike call to protest the death of Hindu politician Lil Abhishek, a leader of the right-wing Bhartiya Janata Party of

Another favorable development came when Hirohito's 22-year-old grandson studying at Oxford was advised by the palace to delay his return home from Britain.
HOLLIS, N.H. (UPI) — William Bennett, on his last day as education secretary Tuesday, ended partisan presidential politics with a final classroom lesson in friendly, conservative New Hampshire.

In a vivid sprinkle with criticism of Democratic presidential candidate Michael Dukakis, the outspoken Bennett endorsed New Hampshire's Republican candidate for governor and taught a second-grade class.

Bennett spent much of his time on his last day as a Cabinet member comparing what he called New Hampshire's low-cost educational achievements with Massachusetts' "disappointing record" under Dukakis, the Bay State's three-term governor.

Pushing a familiar message of local control in educational studies and funding, Bennett praised New Hampshire for its high ranking on college aptitude tests in spite of being near the bottom nationally in state funding for education. "It would be a terrible thing if intellectual, culturally, educationally, New Hampshire became a suburb outpost state," Bennett said at a Nashua news conference.

Bennett — who received a front-page welcome from New Hampshire's conservative daily newspaper, The (Manchester) Union Leader — criticized Dukakis's educational record as unimpressive.

"There is not a tradition of local control and, as a result, I think the achievement levels speak for themselves," he said.

Politics surfaced again when Bennett arrived at the Hollis Elementary School, one of 300 schools nationwide honored for excellence this year, where Bennett taught his 11th class since he became education secretary.

Bennett asked a second-grade subject what subjects he had recently read about. Dragons, he said, boy.

"I lived in that Brookline-Cambridge world for eight years," Bennett said. "They don't like things like the pledge they have disdain for the simple and basic patriotism that most Americans believe they think they're smarter than everybody else."

As Bennett visited New Hampshire, the Senate unanimously confirmed the nomination of his successor, Lauro Cavazos, and just a few hours later, Cavazos was sworn in by Vice President George Bush. Cavazos is the first Hispanic Cabinet member.

Cavazos, who is president of Texas Tech University, has been described as apolitical and non-ideological but committed to a strong federal role in education — a direct contrast to the partisan and strongly conservative Bennett.

Cavazos, during his confirmation hearing before the Senate Labor and Human Resources Committee, said Bennett and his predecessor, Terrel Bell, helped bring education to the "forefront of the national debate."

"Secretary Bell issued the warning. Secretary Bennett took up the challenge and offered solutions, and I am here to ensure that education reform proceeds, and that educational excellence once again returns to America," Cavazos said.

Bennett, the target of widespread praise and fierce criticism for unorthodox approaches to educational problems, planned to hit the lecture circuit earning about $1,000 per speech and to write a book about his years as education secretary.

The 46-year-old Bennett also plans to establish a think-tank in Washington with Allison Bloom, a University of Chicago professor who wrote the highly acclaimed book, "The Closing of the American Mind."

Bennett, who switched to the Republican Party two years ago and served as chairman of the National Endowment for the Humanities about four years before being sworn in as secretary of education Feb. 7, 1985.

Outspoken, Bennett used his position as top educator to call on the nation's attention to troublesome educational problems such as: academic achievements, lack of discipline, values and morals.

Bennett never apologized for his adversarial approach and proudly pointed to successes.

Mars to make closest orbit to Earth in 17 years

WASHINGTON (UPI) — Skywatchers eagerly awaited Thursday what will be the best view of Mars this century, as the closest passing of the mysterious "Red Planet" to Earth until 2003.

Mars and Earth will be in closest proximity at 10 p.m. Wednesday, said Bill McMinn, director of the Carbondale Earth and Space Center at Triton College in suburban Chicago.

"It will be so bright, some people might mistake it for an airplane," McMinn said. "It's not something you have to strain your neck to see."

"It's just blazingly bright," he said. "The closest object in the night sky right now."

Mars, which like other planets does not generate, but merely reflects light, will be visible to the naked eye and look like a bright, red-orange star rising in the southeast about the same time as the Sun sets in the west.

Earth and Mars will come within about 35.6 million miles of each other, making this the closest visit in 17 years. The two planets, which due to Mars' eccentric orbit can be as far as 62 million miles apart, will not be so close again until 2025. For details, call 536-5531.

Sports Briefs

Floor hockey revives plans

Intramural floor hockey has been revived to a single elimination tournament and will be played on the basketball courts behind the Law School tennis courts. The tournament will be played at Pulham Hall gymnasium, but the gymnasium is under construction and is not accessible.

Intramural softball playoffs will begin Sept. 27. For more information about intramural sports, contact Sarah Simonson at 536-5331.

Aerobic sign-up scheduled

Faculty and staff who wish to participate in the morning session of "Exercise is Heart Work" should sign up by 3:30 a.m., Sept. 26 at the Student Recreation Center.

Those wishing to attend the afternoon session should sign up at 5 p.m., Sept. 26 in Room 127, Lingle Hall.

The program will be held Oct. 3. Cost is $25 per month, which includes initial and follow-up physical assessments.

For more information, contact Phil Buckenmeyer at 536-5331, ext. 53.

Away tailgate dates named

The SIU Alumni Association and the Saluki Booster Club will be sponsoring pre-game tailgate parties at the following away games: Sept. 24 at Illinois State, Oct. 8 at Eastern Illinois; and Oct. 29 at Kentucky.

The Booster Club tent will be located outside the stadium. Food and beverages will be available at 1:30 p.m. Cost is $5.

Fencing club to meet today

The SIU-C fencing club will hold a meeting at 7 p.m. tonight in Room 158 of the Student Recreation Center.

Boosters to hear Rhoades

The Saluki Booster Club meets on noon Thursday at the Ramada Inn in Carbondale. The guest speaker will be SIU-C head football coach Rick Rhoades.

FRESHMAN, from Page 24

"I'm someone who is always excited, and the guys want me to be a part and believe in my talents."

Gabbert said during the third quarter of Saturday's win over West, "I'm seeing big and strong, and I'm not feeling apprehensive because I shouldn't be doing my own confidence platform gold next week." he said.

"I'm very excited, and the international title is only a possibility, Gabbert said during the post-game press conference. "I'm not worried about it, I'm just happy that I'm going into today with a good feel." He was shocked. Later he did that on the field."

"I'm not worried about it, Gabbert said. "I'm just happy that I'm going into today with a good feel." He was shocked. Later he did that on the field."

Lisa Judiscak coping with back injury

By Robert Jaster
Staff Writer

In her entire career as a cross-country runner, Lisa Judiscak had avoided injury. But misfortune finally caught up with her this summer while training on the beaches near Corpus Christi, Texas. "I had been running on the beach, doing as much as 69 miles a week," she said, "and I was bending over at the house one day and it really hurt." Judiscak said her mother thought it might be her appendix and she decided to have it checked. What the doctors diagnosed will probably keep her from running for the rest of this cross-country season.

"We had to come back a week early (before classes started) and start practicing," she said, "I had the athletics doctors at S.U.I. look at my lower back, where the pain was coming from, and they found some pulled and torn pelvic muscles."

Judiscak, who once ran the school's fourth-fastest time, found herself enduring the slow, grueling, but necessary, rehabilitation process. The trainers and medical staff have put Judiscak on a special exercise program which is helping her to get back to performance level.

"Originally we thought I might be ready for the start of the season, but as it got closer we started looking at it on a day-to-day basis," Judiscak said. Even with the sometimes severe pain, Judiscak continued the water therapy program that includes a 4-minute swim each day.

"I want to start running again so I can regain the aggressive edge running given me," Judiscak said. Recently, Judiscak was allowed to participate in light runs.

"I am jogging a mile one day then I add another half mile the next," she said. "But it's like not working out because I don't even breathe heavy." Both Judiscak and her coach, Don DeNoon, are hopeful she can return to the team for the Saluki Invitational on Oct. 1. But at this point, it appears there just is not enough time for her to get healthy.

"We have discussed my being red-shirted for the possibility of being the see-saw (coming back next fall)," Judiscak said, "but we won't make a decision until some time in the future." Judiscak next week.

The problem with being red-shirted is NCAA rules would not allow me to travel or participate in meets," she said. "It was hard enough for me to have the first meet from the sidelines. I don't know how I would handle not being able to go to the meets."

"My goal was to qualify this year for the NCAA nationals," she said. "For most part, though, Judiscak has maintained a positive outlook. She said the support of her parents, who live in Corpus Christi, has been invaluable.

"It felt great to have them there because they've always helped out a lot and been very supportive when I've needed them."

Lisa Judiscak stretches before practice at Andrews Stadium. She is sidelined with a back injury.

SOVIETS, from Page 24-

highest scores, including six of the 15, to move into position to win the individual all-around finals Thursday night.

Coach Leonid Arkaev insisted the three less-experienced members, Sergei Kharkov, Vladimir Noukov and Vladimir Novikov, were credited at least equal credit for the Soviet tour de force.

"I think the young guys at Seoul are very much in the tradition of Soviet excellence," Arkaev said. "Some of the older guys did some unprecedented movements never seen before."

There was, in fact, little difference, the ‘young’ awarded the younger men and their better-known teammates.

Kharkov accounted for the seventh 10 and summed fourth behind his compatriots among individual scorers. G. G. Guinov for sixth and Novikov 11th among all-arounders.

Since each nation is limited to three representatives in all-around finals, however, they will have no chance for medals.

Arkaev said both he and the team could have done even better. "I recognize that, indeed, some mistakes were made."

SIU Foundation fills athletics fund raiser position

By Megan Hausch
Staff Writer

Wayne R. Williams, a former Illinois baseball standout, is the new director of athletics development for the SIU Foundation, president Rex Bailey said.

Williams will be officially named Monday at 11 a.m. press conference at the Illinois Room of the Student Center.

Williams, the 53-year-old assistant athletic director at the University of Illinois since 1981, will work entirely for the foundation. In the past, both the foundation and athletics have contributed to the salary line for the job.

Ball said Williams' priority will be to raise money for athletics, but also to be in securing major gifts for the University.

"The position has been redeline to fit the priorities that (Athletics Director) Jim Hart and I talked about," Ball said. "The major emphasis will be athletics. He may help us raise money from major donors in other areas, but his major commitment will be to athletics."

Williams' position at Illinois was preceded by fundraising operations in St. Louis and Southern Illinois.

"The major specification was his fundraising experience with athletics," he said. "I don't want someone I have to train. He can hit the ground running."

In a press release by the University News Service, Williams denied that he was leaving Illinois because of the scandal that forced the resignation of Neale Stoner as athletics director.

"Current problems there have nothing to do with it," Williams said in the release. "I do feel a little bit bad leaving when they need me most, but opportunities like this don't come every day."

Williams cited the appointment of Hart as AD as his reason for leaving.

Williams was SIU's Most Valuable Athlete in 1965, having been baseball MVP in 1964 and football captain in 1965.

Williams has degrees in physical and health education, both from SIU-C.

Freshman QB enthusiastic with role

By David Galiffanetti
Staff Writer

Should Saluki quarterback Fred Riley have eyes to see an injury, fans need not worry. The No. 2 spot in good hands.

Fred Riley, offensive coordinator, said. "The ball indicated to me," Riley said.

Gabbert said he didn't know the previous day.

"Scott was a better athlete when he came here than what had been indicated to me," Fred Riley, offensive coordinator, said. "The previous staff said he was slow of foot, the classic thrower and not very mobile."

Riley said nearly the opposite -- he has good mobility and can move the football, which he showed Saturday," Riley said.

Gabbert said he didn't expect to be in the second slot position.

"In a way it seems unusual for a quarterback that had not run the wishbone or option to come in," he said. "I knew Fred was good and I knew the (team) didn't have any outstanding No. 2. I believed in my ability."

A Galiffanetti's play is enthusiastic, he said.

"I see a quarterback that had an idea of what he wanted when he came in," he said.

Soviet gymnasts dominate on way to 4 gold medals

SOSEUL, South Korea (UPI) -- The Soviet women entered Wednesday night almost making sure their third Olympic team gymnastics championship. The question was how many medals the women would triumph in the same standings. Two female compatriots 24 hours earlier.

The men soared over and around the gymnastics apparatus with precision and creativity they had never previously displayed in the opening round of competition Tuesday. Yet, the men's routine was not the only usual technical precision anymore.

As a result, they rolled up 9.9 after 9.9 scores, as well as a staggering seven perfect marks, to win their fourth Olympic team gold by nearly five points over East Germany.

Japan upset 1964 Olympic and 1967 world silver medalist China, which committed a number of uncharacteristic blunders, for the bronze. Bulgaria was fifth and Hungary sixth, followed by Romania, Italy, Canada and France.

The United States, rebounding from a last-place performance in the compulsory routines, used optional moves to move in 11th among 12 teams, ahead of West Germany.

The Soviet's second compulsory round score was 99.350 of a possible 100 points. Their optional routines were marked at 297.600.

Veterans Vladimir Artenov, Valerii Lukin and reigning two-time world champion Dmitri Bilozerchev earned the four golds.

USA basketball team routs Brazil to avenge loss at Pan Am Games
