**New Lake Considered At 4 Sites**

Depending upon development programs, a new lake might be built within several miles of the SIU campus.

One site would be three or one-half miles to the southwest of Carbondale, the creek flows into the Big Muddy River.

Ice said data from two and a half months of field work has been compiled. He hopes to have a feasibility study within 60 days.

Four probable sites are under consideration in the tentative study. Ice said the largest would be 1,000 to 1,500 acres in surface area. This is also the site closest to Carbondale, he added.

The feasibility study will determine which of the four sites might be suitable, Ice continued.

SIU has submitted letters of intent and endorsement of the proposal, indicating its present and future needs and the potential for development, Ice continued.

Because of this interest, SIU has two representatives on the steering committee which will be working on the proposal. They are Paul W. Isbell, director of business affairs, and Dr. W. A. Muller, executive director of the SIU Foundation.

Ice said the sponsors are the City of Carbondale, the Tackett Conservation District and the Water Conservation District Board (five members), and a

**Training of Unemployed Begins Monday at VTI**

Kerner, U.S. Official to Join Conference

Gov. Otto Kerner and an official of the U.S. Department of Labor will participate Monday in a conference on an assistance project for the unemployed in Franklin and Williamson Counties at VTI. President Delaney W. Morse, in announcing the conference, said that the federal government, through the manpower development and training program, had given SIU more than $2 million for the project.

He said the money would be used to provide testing, interviewing, counseling, basic training, vocational training, and job placement services to people in the two Southern Illinois counties.

Morriss said Kerner had agreed to speak on the program on Monday. A luncheon is being held to launch the project.

William J. Tudor of SIU's Area Services Division will welcome the participants at the Science Lecture

Set at 7:30 p.m.

"Origin of Life" will be the subject of tonight's National Science Foundation Lecture at SIU.

The speaker will be Lowell E. Bailey of the University of Arkansas. He will explain, "students and others, the subject of life, the origin of life, the development of life, and the future of life on earth."

At next week's season the lecture will be "Scientific Inquiry" and the speaker will be A. Norval of Stephens College, Columbia, Mo.

**Some Elliott's Team Of Oxen from Grand Tower**

Gee, Haw, Rah! Rah!

**Driving Lessons With Oxen and Mule Put 30 Peace Corps-Trainees in High Gear**

Some 30 young men training for the Peace Corps here will get their first real introduction to farm work today.

But it won't be riding gleaming new tractors or powerful combines. In fact, they'll be trying to coax two teams of oxen, a team of ponies and a mule to pull plows through the local terrain.

In addition they'll be learning the fundamentals of blacksmithing as well as how to harvest crops with scythes and sickles—the kind that take pure manpower to operate.

According to John J. Paxson, associate professor of Agriculture Industries, who is coordinating the events, the students will be divided into three groups. The blacksmithing instructions will be given in the Agriculture Industries Division of the University Center, the glowering will be done west of the Dairy Center and the harvesting south of the new Horse Center on the University Farm.

For a farm operation as mechanized as the SIU Farm, providing the type equipment the Peace Corps trainees need is proving to be something of a problem, in fact, the oxen, por s and a mule had to be borrowed.

"Sam Elliott from Grand Tower is bringing one set of oxen," said Paxson. "They are a beautifully matched pair, red with white faces and weigh 2,300 pounds each. Willy Elliott of Murphysboro will show the students how to drive them."

The other team is being brought here by P.O. Whitten of Columbia, Ill., Paxson added.

The teams of ponies and the mules are being borrowed from Rollin Illyke, a Carbondale farmer.

The Peace Corps trainees will be given three days of experience working the animals as well as blacksmithing and harvesting.

**Why such a primitive approach?**

"Well, they will be working in Niger and Senegal, two underdeveloped African nations and back home the type equipment they'll probably have to use there," Paxson said.

**Morris Visiting Puerto Rico Island**

President and Mrs. Delaney W. Morris are in Puerto Rico today to visit the Peace Corps training program.

Morris flew to the island from New York where he attended the World's Fair.

Jules Pagano, deputy director for special projects, Division of Training for the Peace Corps, invited Morris to the island.

**Thinking Cool Helps, Doctor Says**

By Larry Widrig

Not to be bunking up an old tree, but dog days are here again.

The weather man says temperatures will continue to be in the high 80's and the humidity is a sticky 90 per cent.

Where can a body take to get relief from the torrid weather? Here are some hints on how to get relief from the heat.

Through the years various methods have been used to cool a cool head and body. Some of these techniques include:

Spend your time in a pond or lake, breathe a good night's sleep.

Sitting with your feet out the window, as your feet are cooled, is the rest of the body.

Walking around in wet clothes. The problem here is being Rykoff, the farmer.

Keeping your normal daily dietary.

Wear any color clothing you desire, but the pastel colors feel cooler than dark colors. Dark colors absorb more readily than light colors, but the difference in temperature is so small that color doesn't matter.
Women in Physical Education

Find Plenty of Jobs Available

The demand for women in physical education has reached a point where it was possible for one SIU graduate to take her pick from 17 good job offers.

That's the report from Dorothy Davies, chairman of the Department of Physical Education for Women.

Miss Davies said all 26 of her graduates last year readily found employment. Even though one third of them were restricted in their choices because they found jobs in the same communities in which their husbands were employed.

"Graduates in our field are able to get jobs almost anywhere," Miss Davies said. "Physical education for women is recognized as one of the five professional areas in the country where the shortage is most acute."

She added that salaries are often among the highest in the teaching field because of the competition for trained teachers.

For the past six years, SIU's Placement Service has listed women's physical education as one of the top five areas of specialization for women's physical education majors. It has more than doubled in the past five years-but "the increase is still not sufficient to catch up with the increasing demand."

"Miss Davies said the number of physical education majors is increasing. It has reached a point where it was possible for one SIU graduate last year to take her pick from 17 good job offers."

Foreign Students
Want Roommates

Most of the 150 new foreign
students who will enroll at
SIU in the fall have two
typical requests: an Amer-
ican roommate and a place
with cooking privileges.
According to Mary Wake-
land, director of the Interna-
tional Student Center, a great many of
these students have written
to her requesting a roommate, preferably
an upperclassman or a graduate
student.

Some of these foreign stu-
dents come from such
countries as Germany,
France, Japan, Korea, India,
Turkey and Pakistan.

Any student interested in
having a foreign student for
a roommate can get in touch
with Mary Wake in the
International Student Center
or Anita Kuo at the Housing
Center.

FBI Investigates Possibility Of Red Influence in Rioting

NEW YORK—The FBI is probing possible Communist influence in this city's racial violence, which continued Tuesday night in Brooklyn's Negroes by police.

Acting Mayor Paul P. Screvene said the Harlem disorders had been incited in part by "fringe groups, including the Communist party." He suggested that the FBI agents might investigate the source of money for some street rallies and for some of the "very inflammatory, anti-American...and seditious statements."

The FBI investigation began on orders from President Johnson.

Professional agitators—including Communists—were reported to be cutting the tone in the rioting.

An unconfirmed report that the extreme right also had a hand in stirring the violence came from the Daily News.

"In an unholy alliance, one high source disclosed, both the extreme left and the extreme Southern right wings have been supporting the Black Muslims, because they are the most violent muscular unit," it said.

"In fact, the Muslims have bragged of receiving money from a Texas millionaire whom they don't hesitate to identify," The News did not identify the man.

The newspaper said 50 paid workers of the 700 on orders from President Johnson were "in a three-judge panel heard arguments on a stay order significant in their investigation.

"Here, each Friday at 4 p.m., the professional agitators and the extreme Communists themselves pay envelopes," it said.

The Rev. Richard A. Hildebrand, president of the New York branch of the National Association for the Improvement of Colored People, blames both Communist and white supremacists for the Harlem troubles.

Sheppard's Freedom Hinges On Ruling of Appeals Court

AKRON, Ohio—San Shep­ pard's freedom was at stake Wednesday when the 6th U.S. Circuit Court of Appeals heard the three-judge panel hear arguments on a stay order significant in their investigation.

"Here, each Friday at 4 p.m., the professional agitators and the extreme Communists themselves pay envelopes," it said.

The Rev. Richard A. Hildebrand, president of the New York branch of the National Association for the Improvement of Colored People, blames both Communist and white supremacists for the Harlem troubles.

Police Probe Bizarre Killing

NEW ORLEANS—The pol­ ice homicide squad is con­ tinuing its probe of the bizarre slaying of Dr. Mary Jutel Sherman, formerly of Evanston, Ill.

She was an orthopedic sur­ geon and leader in cancer research.

Her abandoned car was found seven blocks from her apartment late Tuesday. Police said it was the first signif­ icant break in their inves­ tigation.

The body of Dr. Sherman, a 31-year-old widow who lived alone, was found before dawn in her bedroom by roomies.

She had been stabbed eight times and then set afire.

Rubes Takes Lie Test

DALLAS—Jack Ruby told FBI polygraph operators that he had no intention of killing accused presidential assas­ sin Lee Harvey Oswald until moments before he fired, the Dallas Times Herald reported Wednesday in a copyright story.

The story was from the Times Herald's Washington bureau and did not state how the paper obtained a tran­ script of the questions and answers.

Rights Act Upheld

In Test Cases

ATLANTA—A three­ judge federal court ruled Wednesday the 1964 Civil Rights Act and order a restaurant and a motel to comply with the statute.

All College Doors Aren't Closing

CHICAGO—Many colleges and universities have slammed their doors on thousands of applicants because of a lack of space.

But a survey by The As­ sociated Press indicates Wednesday there still is room in many other institutions of higher education, particularly in less-populated states.

The survey indicated the school rush isn't as heavy as it seems.

In some instances, college prospectuses have given the wrong impression about different colleges in the hope of getting into one of them.

A high school senior, seeking admission to the Uni­ versity of Massachusetts or to one of the 10 state colleges in the Bay State came up against odds of almost 3-1.

The university received 12,000 applications for 2,600 openings in its freshman class entering in September.

The state colleges, primarily for teacher training, admitted 3,700 of 18,000 applicants.

Georgia Tech closed its registration books.

Georgia College did likewise by 4, the earliest cut­ off date in its history, Emory University took similar action March 10.

Villanova University, for instance, had to consider­ a reduction in new applications in the spring.

Providence R.I. College re­ jected more than 1,000 re­ quests for admission.

"In all divisions of Rutgers (New Brunswick, New­ ark, Camden) by Feb. 12 we had received 14,000 applica­ tions from fully qualified stu­ dents," a spokesman said, "yet have room for only 3,550 in the next freshman class making the men's colleges."

New Brunswick cut off applica­ tions Feb. 15.

The University of Illinois has announced it may have to turn away 2,600 would-be students at its Urbana and Chicago campuses.

Dartmouth is rejecting ap­ plications by the glurtle. In some schools, such as the Uni­ versity of Mississippi, enroll­ ment will beHit by a shortage of housing.

Others, lack of adequate class­ room facilities is a big factor.

But the biggest factor is that children born early in the postwar baby boom now are knocking on college gates.
Push Buttons May Turn Housework Into a Hobby

By Leonor Wall

Our futures hold a great many mysteries and advances in medicine, technology and science. Such advances will inevitably find their way into the homes of tomorrow. Predictions by engineers not only anticipate dust-free, germ-free, push-button-cleaned homes but, with the increased development of plastics, they expect bubble homes to be planned and built 200 miles above the earth.

The future, they prophesy, will see the disappearance of major housekeeping functions such as cooking, washing and ironing. Housework will become merely a hobby. What effect will such developments have on the homemaker of today and tomorrow? The effect, perhaps, will not be felt by our home economics students just yet. Anna Carol Fults, chairman of the Department of Home Economics Education, said, "Such homes and advancements are farther in the future than our present home economic curriculum is designed for."

As far as a push-button existence is concerned, Betty Jane Johnston, chairman of the Home and Family Dept., concedes that "homes will change very drastically in the future." However, she feels that even with push buttons women will continue to do a great deal of work themselves because they find certain home activities satisfying. They would not want to stop performing them even if it were not necessary.

In the era of push buttons, "great emphasis will be placed on what people will be doing with their leisure time," she said. "Perhaps," she continued, "people, after living in comfort to the nth degree, will want to seek the more primitive life such as camping or travel to a place where super highways have not invaded."

In reference to the plastic bubbles, Miss Johnston feels that they are perhaps 100 years away and at present are a little unsubstantial. "Plastic bubble homes are certainly a possibility in the very distant future," Rose Padgett, chairman of the Department of Clothing and Textiles, remarked.

In accordance with Miss Johnston, she said that with all the conveniences predicted "you can't do away with the practicality of cooking, sewing and cleaning. The job has to be done by someone and the satisfaction one gets from doing it for a family is important."

The practicality of the problems involved with outer space living needs further investigation, Miss Padgett feels. She is concerned that there may be so many ways for people to visit one another and that being confined there might lead to a demoralization of the inhabitants.

Although not entirely enthusiastic about living under such conditions, Miss Padgett feels that when it becomes a successful venture there will be plenty who will follow the idea.

Living 200 miles above the earth offers no attraction to Thomas G. Wodetzki, a senior from Danville. He prefers being among the trees, streams and rocks of the earth. He also feels that contact among people is more important than having an address in the sky.

Why would people want to live so far away from earth? It is not for expansion purposes, Wodetzki reasoned, because there are plenty of places in the great plains area for habitation. However, he thinks, people might be tempted for health reasons to make their home in the sky where, perhaps, the air is germ-free and the temperature constant.

Wodetzki estimates that in the era of push buttons, 200 years technology might reach the stage where a plastic bubble situated and retained in the atmosphere would be a reality.

Students to Form Delegations Today

John Huck, general chairman of the Student World Conference, said members of the steering committee will be on hand in Room H of the University Center from 10 a.m. to 1 p.m. today to help students form delegations for the conference. The conference will be Friday and Saturday.

As a result of several inquiries from students, Huck said the steering committee felt that newcomers to campus are at a disadvantage in forming delegations.

Students who wish to participate in the conference may indicate their interest to any member of the steering committee. As soon as four persons are signed up, a new delegation can be formed.

Huck also announced that a library with more extensive information on the conference subject—the role of the student in various nations—will be open in Room F of the Activities Area from 9 a.m. to 4 p.m.

Library material includes reports, magazine articles and other written material by students from various nations. Items may be checked out by the delegates for use during the conference.
Down a Yellow-Brick Road

Campus Drive is getting to look like a yellow-brick-like cloud of yellow clay caked to its surface. Loose dirt has been allowed to seem to grow. Passing carsraise clouds of the stuff like dust bombs near a nearby Proprietors of car washes couldn't be happier_undoubtedly for the same reason that cars couldn't be unhappier.

Not only does the dirt on Campus Drive pose a problem for auto drivers, it brings unhappiness to pedestrians as well. A cloud of misty clay seems to hang over the place. A group of dust is every bit as unpleasant as having to drive through a cloud of dust. While the problem seems to affect the pedals, while quite sophisticated as being splattered with relatively clean water in the wake of passing cars, the solution seems to lie with great gobs of yellow mud. Perhaps in the future the University ought never to construct a sidewalk anywhere near a street if such generous quantities of soil cannot be splattered on the asphalt and yellow grass.

In addition to problems of dirt, Campus Drive is rather unsightly. While visiors to the SUI campus may well be impressed with our well-kept lawns and modern architecture, there may be, but be adversely affected by the bricks of yellow clay on Campus Drive. Many Carbondale residents, many students who arrive after all, gather their first impressions of SUI by motor­%

Infantile Moralisim?

Does the campus suffer a case of infantile moralism? Is it possible to see an example of it.

Native Hardwoods Being Tested In Building of New Horse Barn

When SIU's herd of purebred American Saddle Horses move into their new barn they will become a part of an experiment that could have far-reaching effect on at least one midwestern industry.

The new barn, now under construction on the School of Agriculture Experimental Farms, will be more than just a home for horses. It also is a part of an experiment to test the usefulness and durability of native hardwood timbers for farm structures.

The Carbonado Forest Research Center, a unit of the U.S. Forest Service, is designing and building prefabricated panels for the 40 by 12 foot stalls in a study of construction methods and the durability of native hardwoods for such stalls.

Robert Merz, forester in charge of the Center, says the study is based on the hypothesis that hardwoods will withstand more rough usage and wear and tear than softwoods which are often used in barn construction.

Kaplan

Kaplan will spend a month touring the western U.S.

HORSE HOUSE – SIU's new horse center (upper left), two miles southwest of the campus, is nearing completion. It also will be used to test the durability of native hardwoods. Ed Helton (above) is assembling one of the prefabricated stalls to be used in the barn.

Irish Editor Elected a Director Of Weekly Newspaper Group

Liam Bergin, editor of The Nationalist, at Carlow, Ireland, was elected to the board of directors as the International Conference of Weekly Newspaper Editors concluded its annual meeting at SIU. He is the only person from outside the United States currently holding office.

Landon Wilks of the McClain County News, Calhoun, Ky., was elected president, succeeding Howe V. Morgan of Spara, Ill.

Think Cool When It’s Warm, Doctor Advises

(Continued from Page 1)

Alcohol and heat don’t mix. A light layer of clothing is cooler than a swimsuit, as it protects you from reflected light.

A glass of water an hour should be consumed during the day. If strenuous work is performed causing perspiration, your body should be replenished with salt.

Stay active with some type of light exercise.

Shower and baths are good for your body, but not more than two a day. The water should be between 80 and 90 degrees.

Avoid the beach during the hot period of the day—11 a.m. to 2 p.m.

Thinking cool also helps you endure the hot, sticky weather, says Dr. Leo, Psychologically, you can overcome the heat without air conditioning in a couple of days if you don’t think about the heat, Dr. Leo added.

"It’s a good idea to get rid of all your thermometers so that you don’t know what the temperature is," added Dr. Leo.

If the above techniques don’t work, you can always write to the University of Alaska, and its administration there can arrange cooler weather for you.
