BOOK REVIEWS

Even though this volume of Proceedings omits such papers read at the Congress as have elsewhere been published, the material is so rich that one cannot but be impressed with the quality and the range of philosophic thought in present day India. In addition to Rabindranath Tagore's presidential address, the Proceedings contain eighteen papers in the field of Indian philosophy, ten papers on logic and metaphysics, eight papers relating to the philosophy of religion, four papers read in the Section of History of Philosophy, and three in the Section of Ethics and Social Philosophy. The volume should be made accessible to all serious students of philosophy.

This debate, in which the first two authors mentioned (mathematicians from the University of Illinois and from Indiana University) argued in favor of the theory and the last two (an astronomer from the University of Chicago and a physicist from Indiana University) opposed the theory, gives to the intelligent reader an unusually lucid and interesting account and appraisal of the work of Einstein. The debate was originally arranged by the Indiana chapter of Sigma XI, where it was staged shortly before the manuscripts were made available in print.
Clarke's Ethical Philosophy (II)....................Ernest Albee
Objective Uncertainty and Human Faith......David F. Swenson
Peirce's Place in American Philosophy.........J. H. Muirhead

“SCIENTIA”

INTERNATIONAL REVIEW OF SCIENTIFIC SYNTHESIS

Published every month (each number containing 100 to 120 pages)

Editor: EUGENIO RIGNANO

IS THE ONLY REVIEW the contributors to which are really international.

IS THE ONLY REVIEW that has a really world-wide circulation.

IS THE ONLY REVIEW of scientific synthesis and unification that deals with the fundamental questions of all sciences: the history of the sciences, mathematics, astronomy, geology, physics, chemistry, biology, psychology and sociology.

IS THE ONLY REVIEW that by means of enquiries among the most eminent scientists and authors of all countries (On the philosophical principles of the various sciences; On the most fundamental astronomical and physical questions of current interest, and in particular on relativity; On the contribution that the different countries have given to the development of various branches of knowledge; On the more important biological questions, and in particular on vitalism; On the social question; On the great international questions raised by the World War), studies all the main problems discussed in intellectual circles all over the world, and represents at the same time the first attempt at an international organization of philosophical and scientific progress.

IS THE ONLY REVIEW that among its contributors can boast of the most illustrious men of science in the whole world. A list of more than 350 of these is given in each number.

The articles are published in the language of their authors, and every number has a supplement containing the French translation of all the articles that are not French. The review is thus completely accessible to those who know only French. (Write for a free copy to the General Secretary of “Scientia,” Milan, sending 12 cents in stamps of your country, merely to cover packing and postage.)

SCIENCE PROGRESS

A QUARTERLY REVIEW OF SCIENTIFIC THOUGHT, WORK, AND AFFAIRS

Edited by Lieut.-Col. Sir RONALD ROSS

Published at the beginning of JANUARY, APRIL, JULY, OCTOBER

Each number consists of about 192 pages, contributed by authorities in their respective subjects. Illustrated. 6s net. Annual Subscription, including postage, 25s, 6d.

SCIENCE PROGRESS owes its origin to an endeavor to found a scientific journal containing original papers and summaries of the present state of knowledge in all branches of science. The necessity for such a journal is to be found in the fact that with the specialization which necessarily accompanies the modern development of scientific thought and work, it is increasingly difficult for even the professional man of science to keep in touch with the trend of thought and the progress achieved in subjects other than those in which his immediate interests lie. This difficulty is felt by teachers and students in colleges and schools, and by the general educated public interested in scientific questions. SCIENCE PROGRESS claims to have filled this want.
