LETTERS TO THE EDITOR
OPENING OF THE SARNATH VIHARA AND
BUDDHIST INSTITUTE.

Dear Sir,

I have pleasure to bring to the notice of the Buddhist world through your journal that the great Buddhist Temple and Institute called Mulagandhakuti Vihara, now being built by my Society at Sarnath (the old Isipatana Migadaya) near Benares where the Lord Buddha delivered his World-Message, will be completed in October next at a cost of over a lakh of rupees, and His Majesty the King of Siam will be invited to perform the opening ceremony.

This great Vihara marks an epoch in the history of Buddhism. The ancient Migadaya after a thousand years of desolation has come back to the Buddhists through the efforts of the Anagarika Dharmapala, and the opportunity now offered for the Buddhists to start religious and intellectual activities there is a unique one. The Vihara is a magnificent structure with ancient Buddhist architectural decorations carved on Indian red stones, and the frescoes will be done by famous Indian artists. Its excellent site is a gift from the Government of India.

The leading Buddhists and scholars might kindly help us to make the royal function a success by:

1. Sending the names of intending visitors to us in time to make arrangements for them.
2. Preparing learned papers on Buddhism to be read during the Ceremonial Week. Subject of the paper and author’s name to be sent to us one month before the ceremony.
3. Nominating delegates to participate in the general Buddhist conference to be held in this connection.
4. Sending valuable books, paintings and other relics for the Institute.
5. Giving the widest publicity to this matter in their countries and
6. By collecting subscriptions for the general building fund.

The delegates who are not able to attend may send messages which will be printed as a symposium. The exact date of the ceremony will be notified later.

Mr. Editor, any service you might kindly render in this connection would be gratefully acknowledged by my Society.

Yours faithfully,

P. P. SIRIWARDHANA,

4A, College Square, Calcutta. 13th June, 1930.

Hon’ble Secretary. Maha Bodhi Society.

Christian education is defined in the closing sentence of the present volume as "the systematic, critical examination and reconstruction of relations between persons, guided by Jesus' assumption that persons are of infinite worth, and by the hypothesis of the existence of God, the Great Valuer of Persons." The exposition of the book as a whole hinges on the contrast between transmissive education, designed to perpetuate a culture or important elements thereof, and creative education whose goal is the reconstruction of life and of the conditions under which it is carried on. Transmissive education is of various types but in each case it "hands on our faults, but conceals them, and by concealment adds to their prestige"; "it employs either force or evasion in the interest of effectiveness"; "its eyes fixed upon content," it is "slow to apprehend the forces at work"; "thinking to make men obedient to God," it "brings some men into subjection to others." Creative education is the building of a better future on the basis of the present and through a knowledge of the past. It involves a recognition of the worth of persons and of the fact that persons become such through the making of decisions, through intelligent participation in the life about them, and through the assumption of social responsibilities. Professor Coe argues forcefully that it is the path of perpetual discovery and perpetual creation which represents vital continuity with Jesus. He offers a stimulating account of how Christian education might be made more creative and how the Church might, in consequence, enjoy increased vitality. Of philosophic interest are suggestions as to how the experiences involved in creative educational procedure reveal realities and afford an approach to God.

This debate, in which the first two authors mentioned (mathematicians from the University of Illinois and from Indiana University) argued in favor of the theory and the last two (an astronomer from the University of Chicago and a physicist from Indiana University) opposed the theory, gives to the intelligent reader an unusually lucid and interesting account and appraisal of the work of Einstein. The debate was originally arranged by the Indiana chapter of Sigma Xi, where it was staged shortly before the manuscripts were made available in print.

In this book Professor Dewey scrutinizes our democratic state, the historical factors upon which its emergence depends, the sources of its present failure to function, and the indispensable conditions for its realization. Of additional interest are significant redefinitions of such concepts as "individual" and "social," "private" and "public," and the "state"—all of this in the light of the writer's "consequence" theory. Though constructive as well as critical, this study does not regard as significant or legitimate the search for a concrete program purporting to bring political salvation.
SOCIAL problems will be separately analyzed in special issues of the *Journal* during 1930. Within the province of this publication lie both the central field of ethical knowledge and practice and the bordering fields of law, politics, economics, literature, and religion. The first of these related topics is Law and the Community.

**IN THE APRIL ISSUE**—the ethics of law enforcement analyzed.

THE UNIVERSITY OF CHICAGO PRESS
"SCIENTIA"

INTERNATIONAL REVIEW OF SCIENTIFIC SYNTHESIS

Published every month (each number containing 100 to 120 pages)

EDITORS

F. Bottazzi - G. Bruni - F. Enriquez

IS THE ONLY REVIEW the contributors to which are really international.
IS THE ONLY REVIEW that has a really world-wide circulation.
IS THE ONLY REVIEW of scientific synthesis and unification that deals with the fundamental questions of all sciences: the history of the sciences, mathematics, astronomy, geology, physics, chemistry, biology, psychology and sociology.
IS THE ONLY REVIEW that by means of enquiries among the most eminent scientists and authors of all countries (On the philosophical principles of the various sciences; On the most fundamental astronomical and physical questions of current interest; On the contribution that the different countries have given to the development of various branches of knowledge; On the most important biological questions; On the great economical and sociological international questions, studies all the time the first attempt at an international organization of philosophical and scientific progress.
IS THE ONLY REVIEW that among its contributors can boast of the most illustrious men of science in the whole world. A list of more than 550 of these is given in each number.
The articles are published in the language of their authors, and every number has a supplement containing the French translation of all the articles that are not French. (Write for a free copy to the General Secretary of "Scientia," Milan, sending 12 cents in stamps of your country, merely to cover packing and postage.)

SUBSCRIPTION: $10.00, Post free

Office: Via A. De Togni 12, Milan (116)

General Secretary: Paolo Bonetti

SCIENCE PROGRESS

A QUARTERLY REVIEW OF SCIENTIFIC THOUGHT, WORK, AND AFFAIRS

Edited by Lieut.-Col. Sir RONALD ROSS

Published at the beginning of JANUARY, APRIL, JULY, OCTOBER

Each number consists of about 192 pages, contributed by authorities in their respective subjects. Illustrated. 6s net. Annual Subscription, including postage, 25s, 6d.

SCIENCE PROGRESS owes its origin to an endeavor to found a scientific journal containing original papers and summaries of the present state of knowledge in all branches of science. The necessity for such a journal is to be found in the fact that with the specialization which necessarily accompanies the modern development of scientific thought and work, it is increasingly difficult for even the professional man of science to keep in touch with the trend of thought and the progress achieved in subjects other than those in which his immediate interests lie. This difficulty is felt by teachers and students in colleges and schools, and by the general educated public interested in scientific questions. SCIENCE PROGRESS claims to have filled this want.
